

RadNet, Inc.
Form 10-K/A
November 13, 2013

UNITED STATES

SECURITIES AND EXCHANGE COMMISSION

Washington D.C. 20549

FORM 10-K/A

AMENDMENT NO. 2

ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the fiscal year ended December 31, 2012

Commission File Number 001-33307

RadNet, Inc.

(Exact name of registrant as specified in charter)

| | |
|---|----------------------------|
| Delaware | 13-3326724 |
| (State or other jurisdiction of | (I.R.S. Employer |
| incorporation or organization) | Identification No.) |
| 1510 Cotner Avenue | 90025 |
| Los Angeles, California | (Zip Code) |
| (Address of principal executive offices) | |

Registrant's telephone number, including area code: (310) 478-7808

Edgar Filing: RadNet, Inc. - Form 10-K/A

Securities registered pursuant to Section 12(b) of the Act:

| <u>Title of Each Class</u> | <u>Name of each exchange on which registered</u> |
|---------------------------------|--|
| Common Stock, \$.0001 par value | NASDAQ Global Market |

Securities registered pursuant to Section 12(g) of the Act: None

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) or the act. Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities and Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Website, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of "large accelerated filer," "accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act.

Large Accelerated Filer Accelerated Filer
Non-Accelerated Filer (Do not check if a smaller reporting company) Smaller Reporting Company

Indicate by check mark whether the registrant is a shell company (as defined in Exchange Act Rule 12b-2). Yes
No

The aggregate market value of the registrant's common stock held by non-affiliates of the registrant was approximately \$81,917,304 on June 29, 2012 (the last business day of the registrant's most recently completed second quarter) based on the closing price for the common stock on the NASDAQ Global Market on June 29, 2012.

The number of shares of the registrant's common stock outstanding on March 8, 2013, was 38,990,482 shares.

DOCUMENTS INCORPORATED BY REFERENCE

The information required by Part III of the Form 10-K, to the extent not set forth herein, is incorporated herein by reference from the registrant's definitive proxy statement for the Annual Meeting of Stockholders, to be filed with the Securities and Exchange Commission pursuant to Regulation 14A not later than 120 days after the close of the registrant's fiscal year.

EXPLANATORY NOTE

This Amendment No. 2 on Form 10-K/A ("Amendment No. 2) amends our Annual Report on Form 10-K for the fiscal year ended December 31, 2012 of RadNet, Inc. (the "Company"), originally filed with the U.S. Securities and Exchange Commission on March 18, 2013 (the "Original Filing"), as amended on April 1, 2013 by that certain Amendment No. 1 to the Original Filing which includes the information required to comply with Rule 3-09 of Regulation S-X ("Amendment No. 1" and together with the Original Filing, the "Amended Original Filing"). On November 8, 2013, the Company filed a Current Report on Form 8-K to disclose that the Company had overstated certain deferred tax assets in the financial statements included in the Original Filing and that the Company would be restating those financial statements. Accordingly, this Amendment No. 2 is being filed to reflect certain adjustments to the Company's consolidated financial statements for the year ended December 31, 2012 with respect to the impact of an overstatement of a deferred tax asset associated with the Company's interest rate swaps. The impact of the restatement is more fully described in Note 1A to the Consolidated Financial Statements contained in this Amendment No. 2. In addition to the adjustments in the Company's consolidated financial statements, this Amendment No. 2 also includes a correction to the report of the independent registered public accounting firm that was included in Item 8 of Amendment No. 1 concerning the financial statements of certain unconsolidated joint ventures in which the Company holds equity interests of 50% or less. No other changes have been made to Amendment No. 1.

This Amendment No 2. is intended to supersede, and replace in its entirety, the Amended Original Filing. This Amendment No. 2 amends and restates in their entirety Items 6, 7, 8 and 9A of Part II and Item 15 of Part IV of the Amended Original Filing, and no other information included in the Amended Original Filing has been amended. Accordingly, this Amendment No. 2 should be read in conjunction with the Company's filings made with the Securities and Exchange Commission subsequent to the filing of the Original Filing.

Cautionary Note Regarding Forward-Looking Statements

This annual report contains forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended and Section 21E of the Securities Exchange Act of 1934, as amended. Forward-looking statements reflect current views about future events and are based on our currently available financial, economic and competitive data and on current business plans. Actual events or results may differ materially depending on risks and uncertainties that may affect our operations, markets, services, prices and other factors.

Statements in this annual report concerning our ability to successfully acquire and integrate new operations, to grow our contract management business, our financial guidance, our future cost saving efforts, our increased business from new equipment or operations and our ability to finance our operations are forward-looking statements. In some cases, you can identify forward-looking statements by terminology such as “may,” “will,” “should,” “expect,” “intend,” “plan,” “anticipate,” “believe,” “estimate,” “predict,” “potential,” “continue,” “assumption” or the negative of these terms or other comparable terminology.

Forward-looking statements involve known and unknown risks, uncertainties and other factors that may cause our actual results, levels of activity, performance or achievements to be materially different from any future results, levels of activity, performance or achievements expressed or implied by these forward-looking statements. These risks include those factors listed in Item 1 — “Business,” Item 1A— “Risk Factors,” Item 3— “Legal Proceedings,” Item 7 — “Management’s Discussion and Analysis of Financial Condition and Results of Operations” and elsewhere in this annual report and in other reports that we file with the Securities and Exchange Commission.

We do not undertake any responsibility to release publicly any revisions to these forward-looking statements to take into account events or circumstances that occur after the date of this annual report. Additionally, we do not undertake any responsibility to update you on the occurrence of any unanticipated events which may cause actual results to differ from those expressed or implied by the forward-looking statements contained in this annual report.

PART I

Item 1. Business

Business Overview

We are the leading national provider of freestanding, fixed-site outpatient diagnostic imaging services in the United States based on number of locations and annual imaging revenue. At December 31, 2012, we operated directly or indirectly through joint ventures, 246 centers located in California, Maryland, Florida, Delaware, New Jersey, Rhode Island and New York. Our centers provide physicians with imaging capabilities to facilitate the diagnosis and treatment of diseases and disorders and may reduce unnecessary invasive procedures, often reducing the cost and amount of care for patients. Our services include magnetic resonance imaging (MRI), computed tomography (CT), positron emission tomography (PET), nuclear medicine, mammography, ultrasound, diagnostic radiology (X-ray), fluoroscopy and other related procedures. The vast majority of our centers offer multi-modality imaging services, a key point of differentiation from our competitors. Our multi-modality strategy diversifies revenue streams, reduces exposure to reimbursement changes and provides patients and referring physicians one location to serve the needs of multiple procedures.

We seek to develop leading positions in regional markets in order to leverage operational efficiencies. Our scale and density within selected geographies provides close, long-term relationships with key payors, radiology groups and referring physicians. Each of our center-level and regional operations teams is responsible for managing relationships with local physicians and payors, meeting our standards of patient service and maintaining profitability. We provide training programs, standardized policies and procedures and sharing of best practices among the physicians in our regional networks.

In late 2010 and early 2011 we expanded our offering of imaging related services with our acquisition of eRAD and Imaging On Call. eRAD develops and sells computerized systems for the imaging industry, including Picture Archiving Communications Systems (“PACS”) and Radiology Information Systems (“RIS”). Imaging On Call provides teleradiology services for remote interpretation of images on behalf of radiology groups, hospitals and imaging center customers. Teleradiology is the process of taking radiological patient images, such as X-rays, CTs, and MRIs, from one location to another for the purposes of interpretation and/or consultation. Teleradiology allows radiologists to provide services without actually having to be at the location of the patient and allows trained specialists to be available 24/7. In addition to providing alternative revenue sources for us, the capabilities of both eRAD and Imaging On Call can make the RadNet imaging center operations more efficient and cost effective.

We derive substantially all of our revenue from fees charged for the diagnostic imaging services performed at our facilities. For the years ended December 31, 2012, 2011 and 2010, we performed 4,142,267 , 3,740,443 and 3,315,019

diagnostic imaging procedures and generated net revenue of \$647.2 million , \$585.1 million and \$518.7 million, respectively . Additional information concerning RadNet, Inc., including our consolidated subsidiaries, for each of the years ended December 31, 2012, December 31, 2011 and December 31, 2010 is included in the consolidated financial statements and notes thereto in this annual report.

We typically experience some seasonality to our business. During the first quarter of each year we generally experience the lowest volumes of procedures and the lowest level of revenue for any quarter during the year. This is primarily the result of two factors. First, our volumes and revenue are typically impacted by winter weather conditions in our northeastern operations. It is common for snowstorms and other inclement weather to result in patient appointment cancellations and, in some cases, imaging center closures. Second, in recent years, we have observed greater participation in high deductible health plans by patients. As these high deductibles reset in January for most of these patients, we have observed that patients utilize medical services less during the first quarter, when securing medical care will result in significant out-of-pocket expenditures.

History of our Business

We are incorporated in Delaware and have been in business since 1985.

We develop our medical imaging business through a combination of organic growth and acquisitions. For a discussion of acquisitions, see Item 7 - “Management’s Discussion and Analysis and Results of Operations—Recent Developments and Facility Acquisitions” below.

In addition to our imaging business, our eRAD, Inc. subsidiary (see Note 4 to the consolidated financial statements to this annual report) is a provider of Picture Archiving and Communications Systems (PACS) and related workflow solutions to the radiology industry. Over 250 hospitals, teleradiology businesses, imaging centers and specialty physician groups use eRAD’s technology to distribute, visualize, store and retrieve digital images taken from all diagnostic imaging modalities. eRAD has approximately 30 employees, including a Research and Development team of 11 software engineers in Budapest, Hungary.

We have also assembled an industry leading team of software developers, based out of Prince Edward Island, Canada, to create radiology workflow solutions known as Radiology Information Systems (“RIS”) focused exclusively on RadNet’s internal use. All members of this Canadian based team have significant software development expertise in radiology, and together with eRAD and its PACS technology, are creating fully integrated solutions to manage all aspects of RadNet’s internal information needs. eRAD and the Canadian software development team form a Radiology Information Technology division of RadNet.

In January 2011, we entered into a new line of business with the acquisition of Imaging On Call, LLC, a provider of teleradiology services to radiology groups, hospitals and imaging centers located in Poughkeepsie, New York. The addition of the teleradiology business added a new component to our portfolio of solutions, whereby we provide interpretation services to approximately 50 hospitals and hospital-based radiology groups.

References to “RadNet,” “we,” “us,” “our” or the “Company” in this report refer to RadNet, Inc., its subsidiaries and affiliated entities. See “Management’s Discussion and Analysis and Results of Operations—Overview.”

Company Website

We maintain a website at www.radnet.com .. We make available, free of charge, on our website our annual report on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and all amendments to those reports as soon as is reasonably practicable after the material is electronically filed with the Securities and Exchange Commission. References to our website in this report are provided as a convenience and do not constitute, and should not be viewed as, an incorporation by reference of the information contained on, or available through, the website. Therefore, such information should not be considered part of this report.

Industry Overview

Diagnostic imaging involves the use of non-invasive procedures to generate representations of internal anatomy and function that can be recorded on film or digitized for display on a video monitor. Diagnostic imaging procedures facilitate the early diagnosis and treatment of diseases and disorders and may reduce unnecessary invasive procedures, often minimizing the cost and amount of care for patients. Diagnostic imaging procedures include MRI, CT, PET, nuclear medicine, ultrasound, mammography, X-ray and fluoroscopy. We estimate that the national imaging market in the United States is \$100 billion annually, with projected mid-single digit growth for MRI, CT and PET/CT over the next several years, driven by the aging of the U.S. population, wider physician and payor acceptance for imaging technologies, and greater consumer and physician awareness of diagnostic screening capabilities.

While X-ray remains the most commonly performed diagnostic imaging procedure, the fastest growing and higher margin procedures are MRI, CT and PET. The rapid growth in PET scans is attributable to the increasing recognition of the efficacy of PET scans in the diagnosis and monitoring of cancer. The number of MRI and CT scans performed annual in the United States continues to grow due to their wider acceptance by physicians and payors, an increasing number of applications for their use and a general increase in demand due to the aging population.

Diagnostic Imaging Settings

Diagnostic imaging services are typically provided in one of the following settings:

Fixed-site, freestanding outpatient diagnostic facilities

These facilities range from single-modality to multi-modality facilities and are generally not owned by hospitals or clinics. These facilities depend upon physician referrals for their patients and generally do not maintain dedicated, contractual relationships with hospitals or clinics. In fact, these facilities may compete with hospitals or clinics that have their own imaging systems to provide services to these patients. These facilities bill third-party payors, such as managed care organizations, insurance companies, Medicare or Medicaid. All of our facilities are in this category.

Hospitals

Many hospitals provide both inpatient and outpatient diagnostic imaging services, typically on site. These inpatient and outpatient centers are owned and operated by the hospital or clinic, or jointly by both, and are primarily used by patients of the hospital or clinic. The hospital or clinic bills third-party payors, such as managed care organizations, insurance companies, Medicare or Medicaid.

Mobile Imaging

While many hospitals own or lease their own equipment, certain hospitals provide diagnostic imaging services by contracting with providers of mobile imaging equipment. Using specially designed trailers, mobile imaging service providers transport imaging equipment and provide services to hospitals and clinics on a part-time or full-time basis, thus allowing small to mid-size hospitals and clinics that do not have the patient demand to justify fixed on-site access to advanced diagnostic imaging technology. Diagnostic imaging providers contract directly with the hospital or clinic and are typically reimbursed directly by them.

Diagnostic Imaging Modalities

The principal diagnostic imaging modalities we use at our facilities are:

MRI

MRI has become widely accepted as the standard diagnostic tool for a wide and fast-growing variety of clinical applications for soft tissue anatomy, such as those found in the brain, spinal cord, abdomen, heart and interior ligaments of body joints such as the knee. MRI uses a strong magnetic field in conjunction with low energy electromagnetic waves that are processed by a computer to produce high-resolution, three-dimensional, cross-sectional images of body tissue. A typical MRI examination takes from 20 to 45 minutes. MRI systems can have either open or closed designs, routinely have magnetic field strength of 0.2 Tesla to 3.0 Tesla and are priced in the range of \$0.6 million to \$2.5 million. As of December 31, 2012, we had 205 MRI systems in operation.

CT

CT provides higher resolution images than conventional X-rays, but generally not as well defined as those produced by MRI. CT uses a computer to direct the movement of an X-ray tube to produce multiple cross-sectional images of a particular organ or area of the body. CT is used to detect tumors and other conditions affecting bones and internal organs. It is also used to detect the occurrence of strokes, hemorrhages and infections. A typical CT examination takes from 15 to 45 minutes. CT systems are priced in the range of \$0.3 million to \$1.2 million. As of December 31, 2012, we had 118 CT systems in operation.

PET

PET scanning involves the administration of a radiopharmaceutical agent with a positron-emitting isotope and the measurement of the distribution of that isotope to create images for diagnostic purposes. PET scans provide the capability to determine how metabolic activity impacts other aspects of physiology in the disease process by correlating the reading for the PET with other tools such as CT or MRI. PET technology has been found highly effective and appropriate in certain clinical circumstances for the detection and assessment of tumors throughout the body, the evaluation of some cardiac conditions and the assessment of epilepsy seizure sites. The information provided by PET technology often obviates the need to perform further highly invasive or diagnostic surgical procedures. PET systems are priced in the range of \$0.8 million to \$2.5 million. In addition, we employ combined PET/CT systems that blend the PET and CT imaging modalities into one scanner. These combined systems are priced

in the range of \$1.1 million to \$2.8 million. As of December 31, 2012, we had 43 PET or combination PET/CT systems in operation.

Nuclear Medicine

Nuclear medicine uses short-lived radioactive isotopes that release small amounts of radiation that can be recorded by a gamma camera and processed by a computer to produce an image of various anatomical structures or to assess the function of various organs such as the heart, kidneys, thyroid and bones. Nuclear medicine is used primarily to study anatomic and metabolic functions. Nuclear medicine systems are priced in the range of \$300,000 to \$400,000. As of December 31, 2012, we had 45 nuclear medicine systems in operation.

X-ray

X-rays use roentgen rays to penetrate the body and record images of organs and structures on film. Digital X-ray systems add computer image processing capability to traditional X-ray images, which provides faster transmission of images with a higher resolution and the capability to store images more cost-effectively. X-ray systems are priced in the range of \$95,000 to \$440,000. As of December 31, 2012, we had 253 X-ray systems in operation.

Ultrasound

Ultrasound imaging uses sound waves and their echoes to visualize and locate internal organs. It is particularly useful in viewing soft tissues that do not X-ray well. Ultrasound is used in pregnancy to avoid X-ray exposure as well as in gynecological, urologic, vascular, cardiac and breast applications. Ultrasound systems are priced in the range of \$90,000 to \$250,000. As of December 31, 2012, we had 357 ultrasound systems in operation.

Mammography

Mammography is a specialized form of radiology using low dosage X-rays to visualize breast tissue and is the primary screening tool for breast cancer. Mammography procedures and related services assist in the diagnosis of and treatment planning for breast cancer. Analog mammography systems are priced in the range of \$70,000 to \$100,000, and digital mammography systems are priced in the range of \$250,000 to \$400,000. As of December 31, 2012, we had 181 mammography systems in operation.

Fluoroscopy

Fluoroscopy uses ionizing radiation combined with a video viewing system for real time monitoring of organs. Fluoroscopy systems are priced in the range of \$100,000 to \$400,000. As of December 31, 2012, we had 138 fluoroscopy systems in operation.

Industry Trends

We believe the diagnostic imaging services industry will continue to grow as a result of a number of factors, including the following:

Escalating Demand for Healthcare Services from an Aging Population

Persons over the age of 65 comprise one of the fastest growing segments of the population in the United States. According to the United States Census Bureau, this group is expected to increase as much as 33% from 2010 to 2020. Because diagnostic imaging use tends to increase as a person ages, we believe the aging population will generate more demand for diagnostic imaging procedures .

New Effective Applications for Diagnostic Imaging Technology

New technological developments are expected to extend the clinical uses of diagnostic imaging technology and increase the number of scans performed. Recent technological advancements include:

- MRI spectroscopy, which can differentiate malignant from benign lesions;
- MRI angiography, which can produce three-dimensional images of body parts and assess the status of blood vessels;
- enhancements in teleradiology systems, which permit the digital transmission of radiological images from one location to another for interpretation by radiologists at remote locations; and

the development of combined PET/CT scanners, which combine the technology from PET and CT to create a powerful diagnostic imaging system.

Additional improvements in imaging technologies, contrast agents and scan capabilities are leading to new non-invasive methods of diagnosing blockages in the heart's vital coronary arteries, liver metastases, pelvic diseases and vascular abnormalities without exploratory surgery. We believe that the use of the diagnostic capabilities of MRI and other imaging services will continue to increase because they are cost-effective, time-efficient and non-invasive, as compared to alternative procedures, including surgery, and that newer technologies and future technological advancements will further increase the use of imaging services. At the same time, the industry has increasingly used upgrades to existing equipment to expand applications, extend the useful life of existing equipment, improve image quality, reduce image acquisition time and increase the volume of scans that can be performed. We believe this trend toward equipment upgrades rather than equipment replacements will continue, as we do not foresee new imaging technologies on the near-term horizon that will displace MRI, CT or PET as the principal advanced diagnostic imaging modalities.

Wider Physician and Payor Acceptance of the Use of Imaging

During the last 30 years, there has been a major effort undertaken by the medical and scientific communities to develop higher quality, cost-effective diagnostic imaging technologies and to minimize the risks associated with the application of these technologies. The thrust of product development during this period has largely been to reduce the hazards associated with conventional X-ray and nuclear medicine techniques and to develop new, less harmful imaging technologies. As a result, the use of advanced diagnostic imaging modalities, such as MRI, CT and PET, which provide superior image quality compared to other diagnostic imaging technologies, has increased rapidly in recent years. These advanced modalities allow physicians to diagnose a wide variety of diseases and injuries quickly and accurately without exploratory surgery or other surgical or invasive procedures, which are usually more expensive, involve greater risk to patients and result in longer rehabilitation time. Because advanced imaging systems are increasingly seen as a tool for reducing long-term healthcare costs, they are gaining wider acceptance among payors.

Greater Consumer Awareness of and Demand for Preventive Diagnostic Screening

Diagnostic imaging, such as elective full-body scans, is increasingly being used as a screening tool for preventive care procedures. Consumer awareness of diagnostic imaging as a less invasive and preventive screening method has added to the growth in diagnostic imaging procedures. We believe that further technological advancements allowing for early diagnosis of diseases and disorders using less invasive procedures will create additional demand for diagnostic imaging.

Expansion of Teleradiology Services

As hiring radiologists has become more difficult, the use of teleradiology is expected to continue to expand to provide patients better, more specialized care and 24/7 services.

Our Competitive Strengths

Our Scale and Position as the Largest Provider of Freestanding, Fixed-site Outpatient Diagnostic Imaging Services in the United States, Based on Number of Centers and Revenue

As of December 31, 2012, we operated 246 centers in California, Maryland, Florida, Delaware, New Jersey, Rhode Island and New York. Our size and scale allow us to achieve operating, sourcing and administrative efficiencies, including equipment and medical supply sourcing savings and favorable maintenance contracts from equipment manufacturers and other suppliers. Our specific knowledge of our geographic markets drives strong relationships with key payors, radiology groups and referring physicians within our markets.

Our Comprehensive "Multi-Modality" Diagnostic Imaging Offering

The vast majority of our centers offer multi-modality procedures, driving strong relationships with referring physicians and payors in our markets and a diversified revenue base. At each of our multi-modality facilities, we offer patients and referring physicians one location to serve their needs for multiple procedures. Furthermore, we have complemented many of our multi-modality sites with single-modality sites to accommodate overflow and to provide a full range of services within a local area consistent with demand. This prevents multiple patient visits or unnecessary travel between facilities, thereby increasing patient throughput and decreasing costs and time delays. Our revenue is

generated by a broad mix of modalities. We believe our multi-modality strategy lessens our exposure to reimbursement changes in any specific modality.

Our Competitive Pricing

We believe our fees are generally lower than hospital fees for the services we provide.

Our Facility Density in Many Highly Populated Areas of the United States

The strategic organization of our diagnostic imaging facilities into regional networks concentrated in major population centers in seven states offers unique benefits to our patients, our referring physicians, our payors and us. We are able to increase the convenience of our services to patients by implementing scheduling systems within geographic regions, where practical. For example, many of our diagnostic imaging facilities within a particular region can access the patient appointment calendars of other facilities within the same regional network to efficiently allocate time available and to meet a patient's appointment, date, time, or location preferences. The grouping of our facilities within regional networks enables us to easily move technologists and other personnel, as well as equipment, from under-utilized to over-utilized facilities on an as-needed basis, and drive referrals. Our organization of referral networks results in increased patient throughput, greater operating efficiencies, better equipment utilization rates and improved response time for our patients. We believe our networks of facilities and tailored service offerings for geographic areas drives local physician referrals, makes us an attractive candidate for selection as a preferred provider by third-party payors, creates economies of scale and provides barriers to entry by competitors in our markets.

Our Strong Relationships with Payors and Diversified Payor Mix

Our revenue is derived from a diverse mix of payors, including private payors, managed care capitated payors and government payors, which should mitigate our exposure to possible unfavorable reimbursement trends within any one payor class. In addition, our experience with capitation arrangements over the last several years has provided us with the expertise to manage utilization and pricing effectively, resulting in a predictable and recurring stream of revenue. We believe that third-party payors representing large groups of patients often prefer to enter into managed care contracts with providers that offer a broad array of diagnostic imaging services at convenient locations throughout a geographic area. As of December 31, 2012, we received approximately 56% of our payments from commercial insurance payors, 13% from managed care capitated payors, 21% from Medicare and 3% from Medicaid. With the exception of Blue Cross/Blue Shield, which are managed by different entities in each of the states in which we operate, and Medicare, no single payor accounted for more than 5% of our net revenue for the twelve months ended December 31, 2012.

Our Strong Relationships with Experienced and Highly Regarded Radiologists

Our contracted radiologists have outstanding credentials, strong relationships with referring physicians, and a broad mix of sub-specialties. The collective experience and expertise of these radiologists translates into more accurate and efficient service to patients. Our close relationship with Howard G. Berger, M.D., our President and Chief Executive Officer, and Beverly Radiology Medical Group (“BRMG”) in California and our long-term arrangements with radiologists outside of California enable us to better ensure that medical service provided at our facilities is consistent with the needs and expectations of our referring physicians, patients and payors.

Our Experienced and Committed Management Team

Our senior management group has more than 100 years of combined healthcare management experience. Our executive management team has created our differentiated approach based on their comprehensive understanding of the diagnostic imaging industry and the dynamics of our regional markets. We have a track record of successful acquisitions and integration of acquired businesses into RadNet, and have managed the business through a variety of economic and reimbursement cycles. Our management beneficially owns (either directly or indirectly) approximately 28% of our common stock.

Our Technologically Advanced Imaging Systems

In late 2010 and early 2011 we expanded our offering of imaging related services with our acquisition of eRad (development and sale of computerized imaging systems for the imaging industry) and Imaging On Call (teleradiology services for interpretation of images for radiology groups, hospitals and others after business hours, for overflow and specialty work). In addition, we have assembled an industry leading team of software developers to create radiology workflow solutions for our internal use.

Business Strategy

Maximize Performance at Our Existing Facilities

We intend to enhance our operations and increase scan volume and revenue at our existing facilities by expanding physician relationships and increasing the procedure offerings.

Expansion Into Related Businesses

With our acquisition of eRad we entered the business of development and sale of software systems essential to the imaging business. Similarly, with our acquisition of Imaging On Call on January 3, 2011, we entered the teleradiology business. We intend to regularly evaluate potential acquisitions of other businesses to the extent they complement our imaging business.

Focus on Profitable Contracting

We regularly evaluate our contracts with third-party payors, industry vendors and radiology groups, as well as our equipment and real property leases, to determine how we may improve the terms to increase our revenues and reduce our expenses. Because many of our contracts with third party payors are short-term in nature, we can regularly renegotiate these contracts, if necessary. We believe our position as a leading provider of diagnostic imaging services and our long-term relationships with physician groups in our markets enable us to obtain more favorable contract terms than would be available to smaller or less experienced imaging services providers.

Expand MRI, CT and PET Applications

We intend to continue to use expanding MRI, CT and PET applications as they become commercially available. Most of these applications can be performed by our existing MRI, CT and PET systems with upgrades to software and hardware, thereby minimizing capital expenditure requirements. We intend to introduce applications that will decrease scan and image-reading time and increase our productivity.

Optimize Operating Efficiencies

We intend to maximize our equipment utilization by adding, upgrading and re-deploying equipment where we experience excess demand. We will continue to trim excess operating and general and administrative costs where it is feasible to do so. We may also continue to use, where appropriate, highly trained radiology physician assistants to perform, under appropriate supervision of radiologists, basic services traditionally performed by radiologists. We will continue to upgrade our advanced information technology system to create cost reductions for our facilities in areas such as image storage, support personnel and financial management.

Expand Our Networks

We intend to continue to expand the number of our facilities both organically and through targeted acquisitions, using a disciplined approach for evaluating and entering new areas, including consideration of whether we have adequate financial resources to expand. Our current plans are to strengthen our market presence in geographic areas where we currently have existing operations and to expand into neighboring and other areas which we determine to be appropriate. We perform extensive due diligence before developing a new facility or acquiring an existing facility, including surveying local referral sources and radiologists, as well as examining the demographics, reimbursement environment, competitive landscape and intrinsic demand of the geographic market. We generally will only enter new markets where:

- there is sufficient patient demand for outpatient diagnostic imaging services;
- we believe we can gain significant market share;
- we can build key referral relationships or we have already established such relationships; and
- payors are receptive to our entry into the market.

Our Services

We offer a comprehensive set of imaging services including MRI, CT, PET, nuclear medicine, X-ray, ultrasound, mammography, fluoroscopy and other related procedures. We focus on providing standardized high quality imaging services, regardless of location, to ensure patients, physicians and payors consistency in service and quality. To ensure the high quality of our services, we monitor patient satisfaction, timeliness of services to patients and reports to

physicians.

The key features of our services include:

- patient-friendly, non-clinical environments;
- a 24-hour turnaround on routine examinations;
- interpretations within one to two hours, if needed;
- flexible patient scheduling, including same-day appointments;
- extended operating hours, including weekends;
- reports delivered by courier, facsimile or email;
- availability of second opinions and consultations;
- availability of sub-specialty interpretations at no additional charge; and
- standardized fee schedules by region.

Radiology Professionals

In the states in which we provide services (except Florida), a lay person or any entity other than a professional corporation or similar professional organization is not allowed to practice medicine, including by employing professional persons or by having any ownership interest or profit participation in or control over any medical professional practice. This doctrine is commonly referred to as the prohibition on the “corporate practice” of medicine. In order to comply with this prohibition, we contract with radiologists to provide professional medical services in our facilities, including the supervision and interpretation of diagnostic imaging procedures. The radiology practice maintains full control over the physicians it employs. Pursuant to each management contract, we make available the imaging facility and all of the furniture and medical equipment at the facility for use by the radiology practice, and the practice is responsible for staffing the facility with qualified professional medical personnel. In addition, we provide management services and administration of the non-medical functions relating to the professional medical practice at the facility, including among other functions, provision of clerical and administrative personnel, bookkeeping and accounting services, billing and collection, provision of medical and office supplies, secretarial, reception and transcription services, maintenance of medical records, and advertising, marketing and promotional activities. As compensation for the services furnished under contracts with radiologists, we generally receive an agreed percentage of the medical practice billings for, or collections from, services provided at the facility, typically varying between 75% to 85% of global net service fee revenue or collections after deduction of the professional component of the medical practice billings.

At all but 8 of our California facilities, we contract for the provision of professional medical services directly with BRMG, or indirectly through BRMG with other radiology groups.

Many states have also enacted laws prohibiting a licensed professional from splitting fees derived from the practice of medicine with an unlicensed person or business entity. We do not believe that the management, administrative, technical and other non-medical services we provide to each of our contracted radiology groups violate the corporate practice of medicine prohibition or that the fees we charge for such services violate the fee splitting prohibition. However, the enforcement and interpretation of these laws by regulatory authorities and state courts vary from state to state. If our arrangements with our independent contractor radiology groups are found to violate state laws prohibiting the practice of medicine by general business corporations or fee splitting, our business, financial condition and ability to operate in those states could be adversely affected.

BRMG in California

Howard G. Berger, M.D., is our President and Chief Executive Officer, a member of our Board of Directors and is deemed to be the beneficial owner, directly and indirectly, of approximately 14.0% of our outstanding common stock as of December 31, 2012. Dr. Berger also owns, indirectly, 99% of the equity interests in BRMG. BRMG provides all of the professional medical services at 101 of our facilities located in California under a management agreement with

us, and contracts with various other independent physicians and physician groups to provide the professional medical services at most of our other California facilities. We obtain professional medical services from BRMG in California, rather than provide such services directly or through subsidiaries, in order to comply with California's prohibition against the corporate practice of medicine. However, as a result of our close relationship with Dr. Berger and BRMG, we believe that we are able to better ensure that medical service is provided at our California facilities in a manner consistent with our needs and expectations and those of our referring physicians, patients and payors than if we obtained these services from unaffiliated physician groups.

We believe that physicians are drawn to BRMG and the other radiologist groups with whom we contract by the opportunity to work with the state-of-the-art equipment we make available to them, as well as the opportunity to receive specialized training through our fellowship programs, and engage in clinical research programs, which generally are available only in university settings and major hospitals.

As of December 31, 2012, BRMG employed 83 full-time and 9 part-time radiologists. Under our management agreement with BRMG, we are paid a percentage of the amounts collected for the professional services BRMG physicians render as compensation for our services and for the use of our facilities and equipment. For the year ended December 31, 2012, this percentage was 79%. The percentage may be adjusted, if necessary, to ensure that the parties receive the fair value for the services they render. The following are the other principal terms of our management agreement with BRMG:

The agreement expires on January 1, 2014. However, the agreement automatically renews for consecutive 10-year periods, unless either party delivers a notice of non-renewal to the other party no later than six months prior to the scheduled expiration date. Either party may terminate the agreement if the other party defaults under its obligations, after notice and an opportunity to cure. We may terminate the agreement if Dr. Berger no longer owns at least 60% of the equity of BRMG; as of December 31, 2012, he owned 99% of the equity of BRMG.

At its expense, BRMG employs or contracts with an adequate number of physicians necessary to provide all professional medical services at all of our California facilities, except for 8 facilities for which we contract with separate medical groups.

At our expense, we provide all furniture, furnishings and medical equipment located at the facilities and we manage and administer all non-medical functions at, and provide all nurses and other non-physician personnel required for the operation of, the facilities.

If BRMG wants to open a new facility, we have the right of first refusal to provide the space and services for the facility under the same terms and conditions set forth in the management agreement.

If we want to open a new facility in California, BRMG must use its best efforts to provide medical personnel under the same terms and conditions set forth in the management agreement. If BRMG cannot provide such personnel, we have the right to contract with other physicians to provide services at the facility.

BRMG must maintain medical malpractice insurance for each of its physicians with coverage limits not less than \$1 million per incident and \$3 million in the aggregate per year. BRMG also has agreed to indemnify us for any losses we suffer that arise out of the acts or omissions of BRMG and its employees, contractors and agents.

Non-California Locations and 8 California Locations

At the 8 centers in California where BRMG does not provide professional medical services, and at all of the centers which are located outside of California, we have entered into long-term contracts with prominent third-party radiology groups in the area to provide physician services at those facilities. These arrangements also allow us to comply with the prohibition against the “corporate practice” of medicine in other states in which we operate (except in Florida which does not have an equivalent statute prohibiting the corporate practice of medicine).

These third-party radiology practice groups provide professional services, including supervision and interpretation of diagnostic imaging procedures, in our diagnostic imaging centers. The radiology practices maintain full control over the provision of professional services. The contracted radiology practices have outstanding physician and practice credentials and reputations; strong competitive market positions; a broad sub-specialty mix of physicians; a history of growth and potential for continued growth. In these facilities we have entered into long-term agreements (typically 10-40 years in length) under which, in addition to obtaining technical fees for the use of our diagnostic imaging equipment and the provision of technical services, we provide management services and receive a fee based on the practice group’s professional revenue. We typically receive 100% of the technical reimbursements associated with imaging procedures plus certain fees paid to us for providing additional management services. The radiology practice groups retain the professional reimbursements associated with imaging procedures after deducting management service fees paid to us.

Additionally, we perform certain management services for a portion of the professional groups with whom we contract who provide professional radiology services at local hospitals. For performing these management services, which include billing, collecting, transcription and medical coding, we receive management fees.

Payors

The fees charged for diagnostic imaging services performed at our facilities are paid by a diverse mix of payors, as illustrated for the following periods presented in the table below:

| | % of Net Revenue | | |
|--|------------------------------------|------------------------------------|------------------------------------|
| | Year Ended December 31, 2012 | Year Ended December 31, 2011 | Year Ended December 31, 2010 |
| Commercial Insurance ⁽¹⁾⁽²⁾ | 56% | 55% | 56% |
| Managed Care Capitated Payors | 13% | 15% | 15% |
| Medicare & Medicaid | 24% | 23% | 23% |

⁽¹⁾ Includes Blue Cross/Blue Shield plans, which represented 20% of our net service fee revenue for the year ended December 31, 2012, 19% of our net service fee revenue for the year ended December 31, 2011 and 19% of our net service fee revenue for the year ended December 31, 2010.

⁽²⁾ Includes co-payments, direct patient payments and payments through contracts with physician groups and other non-insurance company payors.

We have described below the types of reimbursement arrangements we have with third-party payors.

Commercial Insurance

Generally, insurance companies reimburse us, directly or indirectly, including through BRMG in California or through the contracted radiology groups elsewhere, on the basis of agreed upon rates. These rates are negotiated and may differ materially with rates set forth in the Medicare Physician Fee Schedule for the particular service. The patients may be responsible for certain co-payments or deductibles.

Managed Care Capitation Agreements

Under these agreements, which are generally between BRMG in California and outside of California between the contracted radiology group (typically an independent physician group or other medical group) and the payor (which in most cases are large medical groups or Independent Practice Associations), the payor pays a pre-determined amount per-member per-month in exchange for the radiology group providing all necessary covered services to the managed care members included in the agreement. These contracts pass much of the financial risk of providing outpatient diagnostic imaging services, including the risk of over-use, from the payor to the radiology group and, as a result of our management agreement with the radiology group, to us.

We believe that through our comprehensive utilization management, or UM, program we have become highly skilled at assessing and moderating the risks associated with the capitation agreements, so that these agreements are profitable for us. Our UM program is managed by our UM department, which consists of administrative and nursing staff as well as BRMG medical staff who are actively involved with the referring physicians and payor management in both prospective and retrospective review programs. Our UM program includes the following features, all of which are designed to manage our costs while ensuring that patients receive appropriate care:

·Physician Education

At the inception of a new capitation agreement, we provide the new referring physicians with binders of educational material comprised of proprietary information that we have prepared and third-party information we have compiled, which are designed to address diagnostic strategies for common diseases. We distribute additional material according to the referral practices of the group as determined in the retrospective analysis described below.

·Prospective Review

Referring physicians are required to submit authorization requests for non-emergency high-intensity services: MRI, CT, special procedures and nuclear medicine studies. The UM medical staff, according to accepted practice guidelines, considers the necessity and appropriateness of each request. Notification is then sent to the imaging facility, referring physician and medical group. Appeals for cases not approved are directed to us. The capitated payor has the final authority to uphold or deny our recommendation.

Retrospective Review

We collect and sort encounter activity by payor, place of service, referring physician, exam type and date of service. The data is then presented in quantitative and analytical form to facilitate understanding of utilization activity and to provide a comparison between fee-for-service and Medicare equivalents. Our Medical Director prepares a quarterly report for each payor and referring physician. When we find that a referring physician is over utilizing services, we work with the physician to modify referral patterns.

Medicare/Medicaid

Medicare is the federal health insurance program for people age 65 or older and people under age 65 with certain disabilities. Medicaid, funded by both the federal government and states, is a state-administered health insurance program for qualifying low-income and medically needy persons. For services for which we bill Medicare directly or indirectly, including through contracted radiologists, we are paid under the Medicare Physician Fee Schedule. Medicare patients usually pay a 20% co-payment unless they have secondary insurance. Medicaid rates are set by the individual states for each state program and Medicaid patients may be responsible for a modest co-payment.

Contracts with Physician Groups and Other Non-Insurance Company Payors

For some of our contracts with physician groups and other providers, we do not bill payors, but instead accept agreed upon rates for our radiology services. These rates are typically at or below the rates set forth in the current Medicare Fee Schedule for the particular service. However, we often agree to a specified rate for MRI and CT procedures that is not tied to the Medicare Fee Schedule.

Facilities

Through our wholly owned subsidiaries, we operate 109 fixed-site, freestanding outpatient diagnostic imaging facilities in California, 62 in the Maryland, 25 in the Rochester and Hudson Valley areas of New York, 7 in Manhattan, New York, 15 in Delaware, 5 in Rhode Island, 19 in New Jersey, as well as 4 individual facilities in Florida. We lease the premises at which these facilities are located.

Our facilities are primarily located in geographic networks that we refer to as regions. The majority of our facilities are multi-modality sites, offering various combinations of MRI, CT, PET, nuclear medicine, ultrasound, X-ray, fluoroscopy services and other related procedures. A portion of our facilities are single-modality sites, offering either X-ray or MRI services. Consistent with our regional network strategy, we locate our single-modality facilities near multi-modality facilities, to help accommodate overflow in targeted demographic areas.

The following table sets forth the number of our facilities for each year during the five-year period ended December 31, 2012:

| | Year Ended December 31, | | | | |
|--|----------------------------|------|------|------|------|
| | 2008 | 2009 | 2010 | 2011 | 2012 |
| Total facilities owned or managed (at beginning of the year) | 141 | 164 | 180 | 201 | 233 |
| Facilities added by: | | | | | |
| Acquisition | 24 | 14 | 28 | 33 | 25 |
| Internal development | 4 | 3 | 8 | 2 | — |
| Facilities closed or sold | -5 | -1 | -15 | -3 | -12 |
| Total facilities owned (at year end) | 164 | 180 | 201 | 233 | 246 |

Diagnostic Imaging Equipment

The following table indicates, as of December 31, 2012, the quantity of principal diagnostic equipment available at our facilities, by region:

| | MRI | Open/MRI | CT | PET/CT | Mammo | Ultrasound | X-ray | NucMed | Fluoroscopy | Total |
|-------------------|-----|----------|----|--------|-------|------------|-------|--------|-------------|-------|
| California | 60 | 21 | 36 | 21 | 74 | 152 | 103 | 19 | 75 | 561 |

| | | | | | | | | | | |
|---------------------|------------|-----------|------------|-----------|------------|------------|------------|-----------|------------|--------------|
| Florida | 3 | 1 | 3 | 1 | 3 | 5 | 3 | 3 | 5 | 27 |
| Delaware | 8 | | 7 | | 5 | 18 | 17 | 2 | 4 | 61 |
| New Jersey | 14 | 1 | 8 | 2 | 8 | 16 | 13 | 2 | 11 | 75 |
| New York | 23 | 4 | 20 | 5 | 29 | 58 | 31 | 4 | 10 | 184 |
| Maryland | 58 | 8 | 41 | 14 | 59 | 105 | 74 | 15 | 33 | 407 |
| Rhode Island | 3 | 1 | 3 | - | 3 | 3 | 12 | | | 25 |
| Total | 169 | 36 | 118 | 43 | 181 | 357 | 253 | 45 | 138 | 1,340 |

The average age of our MRI and CT units is less than six years, and the average age of our PET units is less than four years. The useful life of our MRI, CT and PET units is typically ten years.

Facility Acquisitions

Information regarding our facility acquisitions can be found within Item 7 - "Management's Discussion and Analysis of Financial Condition and Results of Operations", as well as Note 4 to our consolidated financial statements included in this annual report on Form 10-K.

Information Technology

Our corporate headquarters and many of our facilities are interconnected through a state-of-the-art information technology system. This system, which is compliant with the Health Insurance Portability and Accountability Act of 1996, is comprised of a number of integrated applications and provides a single operating platform for billing and collections, electronic medical records, practice management and image management.

This technology has created cost reductions for our facilities in areas such as image storage, support personnel and financial management and has further allowed us to optimize the productivity of all aspects of our business by enabling us to:

- capture patient demographic, history and billing information at point-of-service;
- automatically generate bills and electronically file claims with third-party payors;
- record and store diagnostic report images in digital format;
- digitally transmit in real-time diagnostic images from one location to another, thus enabling networked radiologists to cover larger geographic markets by using the specialized training of other networked radiologists;
- perform claims, rejection and collection analysis; and
- perform sophisticated financial analysis, such as analyzing cost and profitability, volume, charges, current activity and patient case mix, with respect to each of our managed care contracts.

Diagnostic reports and images are currently accessible via the Internet by our California referring providers. We have worked with some of the larger medical groups in California with whom we have contracts to provide access to this content through their web portals. We are in the process of making such services available outside of California.

We also utilize a third party software for our front desk patient tracking system, or Radiology Information System. We intend to develop our own RIS through our team of software development engineers. With our acquisition of eRad we believe we will be able to develop and implement programs which improve the systems we utilize in the operation of our business by providing systems which meet our specific needs as opposed to being limited to systems developed for the imaging industry in general.

Personnel

At December 31, 2012, we had a total of 4,253 full-time, 737 part-time and 956 per diem employees, including those employed by BRMG. These numbers include 102 full-time and 9 part-time physicians and 1,209 full-time, 455 part-time and 577 per-diem technologists.

We employ site managers who are responsible for overseeing day-to-day and routine operations at each of our facilities, including staffing, modality and schedule coordination, referring physician and patient relations and purchasing of materials. These site managers report to regional managers and directors, who are responsible for oversight of the operations of all facilities within their region, including sales, marketing and contracting. The regional managers and directors, along with our directors of contracting, marketing, facilities, management/purchasing and human resources report to our chief operating officers. These officers, our chief financial officer, our director of information services and our medical director report to our chief executive officer.

None of our employees is subject to a collective bargaining agreement nor have we experienced any work stoppages. We believe our relationship with our employees is good.

Sales and Marketing

At December 31, 2012, our California sales and marketing team consisted of one director of marketing and 39 customer service representatives. Our eastern marketing team consisted of one director of marketing and 77 customer sales representatives. Our sales and marketing team employs a multi-pronged approach to marketing, including physician, payor and sports marketing programs.

Physician Marketing

Each customer service representative on our physician marketing team is responsible for marketing activity on behalf of one or more facilities. The representatives act as a liaison between the facility and referring physicians, holding meetings periodically and on an as-needed basis with them and their staff to present educational programs on new applications and uses of our systems and to address particular patient service issues that have arisen. In our experience, consistent hands-on contact with a referring physician and his or her staff generates goodwill and increases referrals to our facilities. The representatives also continually seek to establish referral relationships with new physicians and physician groups. In addition to a base salary, each representative receives a bonus based upon success.

Payor Marketing

Our marketing team regularly meets with managed care organizations and insurance companies to solicit contracts and meet with existing contracting payors to solidify those relationships. The comprehensiveness of our services, the geographic location of our facilities and the reputation of the physicians with whom we contract all serve as tools for obtaining new or repeat business from payors.

Sports Marketing Program

We have a sports marketing program designed to increase our public profile. We provide X-ray equipment and a technician for all of the basketball games of the Lakers, Clippers and Sparks held at the Staples Center in Los Angeles, Kings hockey games held at the Honda Center in Anaheim, and University of Southern California football games held in the Los Angeles Coliseum. In exchange for this service, we receive game tickets and an advertisement in each team program throughout the season.

Suppliers

Historically, we have acquired our diagnostic imaging equipment from large suppliers such as GE Medical Systems, Inc., Hologic, Phillips, Hitachi, Carestream and others, and we purchase medical supplies from various national vendors. We believe that we have excellent working relationships with all of our major vendors. There are several comparable vendors for our supplies that would be available to us if one of our current vendors becomes unavailable.

We primarily acquire our equipment with cash or through various financing arrangements with equipment vendors and third party equipment finance companies involving the use of capital leases with purchase options at minimal prices at the end of the lease term. At December 31, 2012, capital lease obligations, excluding interest, totaled approximately \$7.7 million through 2017, including current installments totaling approximately \$3.9 million. If we open or acquire additional imaging facilities, we may have to incur material capital lease obligations.

Timely, effective maintenance is essential for achieving high utilization rates of our imaging equipment. We have an arrangement with GE Medical Systems, Inc. under which it has agreed to be responsible for the maintenance and repair of a majority of our equipment for a fee that is based upon a percentage of our revenue, subject to a minimum payment.

Competition

The market for diagnostic imaging services is highly competitive. We compete locally with groups of radiologists, established hospitals, clinics and other independent organizations that own and operate imaging equipment. Our competitors include Alliance Healthcare Services, Inc., Diagnostic Imaging Group and several smaller regional competitors. Some of our competitors may now or in the future have access to greater financial resources than we do and may have access to newer, more advanced equipment. In addition, some physician practices have established their own diagnostic imaging facilities within their group practices to compete with us. We experience additional

competition as a result of those activities.

We compete principally on the basis of our reputation, our ability to provide multiple modalities at many of our facilities, the location of our facilities, the quality of our diagnostic imaging services and technologists and the ability to establish and maintain relationships with healthcare providers and referring physicians. See “Competitive Strengths” above.

Each of the non-BRMG contracted radiology practices has entered into agreements with its physician shareholders and full-time employed radiologists that generally prohibit those shareholders and radiologists from competing for a period of two years within defined geographic regions after they cease to be owners or employees, as applicable. In certain states, like California, a covenant not to compete is enforced in limited circumstances involving the sale of a business. In other states, a covenant not to compete will be enforced only:

- to the extent it is necessary to protect a legitimate business interest of the party seeking enforcement;
- if it does not unreasonably restrain the party against whom enforcement is sought; and
- if it is not contrary to public interest.

Enforceability of a non-compete covenant is determined by a court based on all of the facts and circumstances of the specific case at the time enforcement is sought. For this reason, it is not possible to predict whether or to what extent a court will enforce the contracted radiology practices’ covenants. The inability of the contracted radiology practices or us to enforce radiologist’s non-compete covenants could result in increased competition from individuals who are knowledgeable about our business strategies and operations.

Liability Insurance

We maintain insurance policies with coverage we believe is appropriate in light of the risks attendant to our business and consistent with industry practice. However, adequate liability insurance may not be available to us in the future at acceptable costs or at all. We maintain general liability insurance and professional liability insurance in commercially reasonable amounts. Additionally, we maintain workers’ compensation insurance on all of our employees. Coverage is placed on a statutory basis and corresponds to individual state’s requirements.

Pursuant to our agreements with physician groups with whom we contract, including BRMG, each group must maintain medical malpractice insurance for each physician in the group, having coverage limits of not less than \$1.0 million per incident and \$3.0 million in the aggregate per year.

California's medical malpractice cap further reduces our exposure. California places a \$250,000 limit on non-economic damages for medical malpractice cases. Non-economic damages are defined as compensation for pain, suffering, inconvenience, physical impairment, disfigurement and other non-pecuniary injury. The cap applies whether the case is for injury or death, and it allows only one \$250,000 recovery in a wrongful death case. No cap applies to economic damages. Other states in which we now operate do not have similar limitations and in those states we believe our insurance coverage to be sufficient.

Regulation

General

The healthcare industry is highly regulated, and we can give no assurance that the regulatory environment in which we operate will not change significantly in the future. Our ability to operate profitably will depend in part upon us, and the contracted radiology practices and their affiliated physicians obtaining and maintaining all necessary licenses and other approvals, and operating in compliance with applicable healthcare regulations. We believe that healthcare regulations will continue to change. Therefore, we monitor developments in healthcare law and modify our operations from time to time as the business and regulatory environment changes.

Licensing and Certification Laws

Ownership, construction, operation, expansion and acquisition of diagnostic imaging facilities are subject to various federal and state laws, regulations and approvals concerning licensing of facilities and personnel. In addition, free-standing diagnostic imaging facilities that provide services not performed as part of a physician office must meet Medicare requirements to be certified as an independent diagnostic testing facility before it can be authorized to bill the Medicare program. We have experienced a slowdown in the credentialing of our physicians over the last several years which has lengthened our billing and collection cycle.

Corporate Practice of Medicine

In the states in which we operate, other than Florida, a lay person or any entity other than a professional corporation or other similar professional organization is not allowed to practice medicine, including by employing professional persons or by having any ownership interest or profit participation in or control over any medical professional practice. The laws of such states also prohibit a lay person or a non-professional entity from exercising control over the medical judgments or decisions of physicians and from engaging in certain financial arrangements, such as splitting professional fees with physicians. We structure our relationships with the radiology practices, including the purchase of diagnostic imaging facilities, in a manner that we believe keeps us from engaging in the practice of medicine, exercising control over the medical judgments or decisions of the radiology practices or their physicians, or violating the prohibitions against fee-splitting.

Medicare and Medicaid Fraud and Abuse – Federal Anti-kickback Statute

During the year ended December 31, 2012, approximately 21% of our revenue generated at our diagnostic imaging centers was derived from federal government sponsored healthcare programs (Medicare) and 3% from state sponsored programs (Medicaid).

Federal law known as the Anti-kickback Statute prohibits the knowing and willful offer, payment, solicitation or receipt of any form of remuneration in return for, or to induce, (i) the referral of a person, (ii) the furnishing or arranging for the furnishing of items or services reimbursable under the Medicare, Medicaid or other governmental programs or (iii) the purchase, lease or order or arranging or recommending purchasing, leasing or ordering of any item or service reimbursable under the Medicare, Medicaid or other governmental programs. Enforcement of this anti-kickback law is a high priority for the federal government, which has substantially increased enforcement resources and is scheduled to continue increasing such resources. Noncompliance with the federal Anti-kickback Statute can result in exclusion from the Medicare, Medicaid or other governmental programs and civil and criminal penalties.

The Anti-kickback Statute is broad, and it prohibits many arrangements and practices that are lawful in businesses outside of the healthcare industry. Recognizing that the Anti-kickback Statute is broad and may technically prohibit many innocuous or beneficial arrangements within the healthcare industry, the Office of the Inspector General of the U.S. Department of Health and Human Services issued regulations in July of 1991, which the Department has referred to as “safe harbors.” These safe harbor regulations set forth certain provisions which, if met in form and substance, will assure healthcare providers and other parties that they will not be prosecuted under the federal Anti-kickback Statute. Additional safe harbor provisions providing similar protections have been published intermittently since 1991. Our arrangements with physicians, physician practice groups, hospitals and other persons or entities who are in a position to refer may not fully meet the stringent criteria specified in the various safe harbors. Although full compliance with these provisions ensures against prosecution under the federal Anti-kickback Statute, the failure of a transaction or arrangement to fit within a specific safe harbor does not necessarily mean that the transaction or arrangement is illegal or that prosecution under the federal Anti-kickback Statute will be pursued.

Although some of our arrangements may not fall within a safe harbor, we believe that such business arrangements do not violate the Anti-kickback Statute because we are careful to structure them to reflect fair value and ensure that the reasons underlying our decision to enter into a business arrangement comport with reasonable interpretations of the Anti-kickback Statute. However, even though we continuously strive to comply with the requirements of the Anti-kickback Statute, liability under the Anti-kickback Statute may still arise because of the intentions or actions of the parties with whom we do business. While we are not aware of any such intentions or actions, we have only limited knowledge regarding the intentions or actions underlying those arrangements. Conduct and business arrangements that do not fully satisfy one of these safe harbor provisions may result in increased scrutiny by government enforcement authorities such as the Office of the Inspector General.

Medicare and Medicaid Fraud and Abuse – Stark Law

Congress has placed significant legal prohibitions against physician referrals including the Ethics in Patient Referral Act of 1989 which is commonly known as the Stark Law. The Stark Law prohibits a physician from referring Medicare patients to an entity providing designated health services, as defined under the Stark Law, including, without limitation, radiology services, in which the physician (or immediate family member) has an ownership or investment interest or with which the physician (or immediate family member) has entered into a compensation arrangement. The Stark Law also prohibits the entity from billing for any such prohibited referral. The penalties for violating the Stark Law include a prohibition on payment by these governmental programs and civil penalties of as much as \$15,000 for each violation referral and \$100,000 for participation in a circumvention scheme. We believe that, although we receive fees under our service agreements for management and administrative services, we are not in a position to make or influence referrals of patients.

Under the Stark Law, radiology and certain other imaging services and radiation therapy services and supplies are services included in the designated health services subject to the self-referral prohibition. Such services include the professional and technical components of any diagnostic test or procedure using X-rays, ultrasound or other imaging services, CT, MRI, radiation therapy and diagnostic mammography services (but not screening mammography services). PET and nuclear medicine procedures are also included as designated health services under the Stark Law. The Stark Law, however, excludes from designated health services: (i) X-ray, fluoroscopy or ultrasound procedures that require the insertion of a needle, catheter, tube or probe through the skin or into a body orifice; (ii) radiology procedures that are integral to the performance of, and performed during, non-radiological medical procedures; and (iii) invasive or interventional radiology, because the radiology services in these procedures are merely incidental or secondary to another procedure that the physician has ordered.

The Stark Law provides that a request by a radiologist for diagnostic radiology services or a request by a radiation oncologist for radiation therapy, if such services are furnished by or under the supervision of such radiologist or radiation oncologist pursuant to a consultation requested by another physician, does not constitute a referral by a referring physician. If such requirements are met, the Stark Law self-referral prohibition would not apply to such services. The effect of the Stark Law on the radiology practices, therefore, will depend on the precise scope of services furnished by each such practice's radiologists and whether such services derive from consultations or are

self-generated.

We believe that, other than self-referred patients, all of the services covered by the Stark Law provided by the contracted radiology practices derive from requests for consultation by non-affiliated physicians. Therefore, we believe that the Stark Law is not implicated by the financial relationships between our operations and the contracted radiology practices. In addition, we believe that we have structured our acquisitions of the assets of existing practices, and we intend to structure any future acquisitions, so as not to violate the Anti-kickback Statute and Stark Law and regulations. Specifically, we believe the consideration paid by us to physicians to acquire the tangible and intangible assets associated with their practices is consistent with fair value in arms' length transactions and is not intended to induce the referral of patients or other business generated by such physicians. Should any such practice be deemed to constitute an arrangement designed to induce the referral of Medicare or Medicaid patients, then our acquisitions could be viewed as possibly violating anti-kickback and anti-referral laws and regulations. A determination of liability under any such laws could have a material adverse effect on our business, financial condition and results of operations.

Medicare and Medicaid Fraud and Abuse – General

The federal government embarked on an initiative to audit all Medicare carriers, which are the companies that adjudicate and pay Medicare claims. These audits are expected to intensify governmental scrutiny of individual providers. An unsatisfactory audit of any of our diagnostic imaging facilities or contracted radiology practices could result in any or all of the following: significant repayment obligations, exclusion from the Medicare, Medicaid or other governmental programs, and civil and criminal penalties.

Federal regulatory and law enforcement authorities have increased enforcement activities with respect to Medicare, Medicaid fraud and abuse regulations and other reimbursement laws and rules, including laws and regulations that govern our activities and the activities of the radiology practices. The federal government also has increased funding to fight healthcare fraud and is coordinating its enforcement efforts among various agencies, such as the U.S. Department of Justice, the U.S. Department of Health and Human Services Office of Inspector General, and state Medicaid fraud control units. The government may investigate our or the radiology practices' activities, claims may be made against us or the radiology practices and these increased enforcement activities may directly or indirectly have an adverse effect on our business, financial condition and results of operations.

State Anti-kickback and Physician Self-referral Laws

Many states have adopted laws similar to the federal Anti-kickback Statute. Some of these state prohibitions apply to referral of patients for healthcare services reimbursed by any source, not only the Medicare and Medicaid programs. Although we believe that we comply with both federal and state Anti-kickback laws, any finding of a violation of these laws could subject us to criminal and civil penalties or possible exclusion from federal or state healthcare programs. Such penalties would adversely affect our financial performance and our ability to operate our business.

Federal False Claims Act

The federal False Claims Act provides, in part, that the federal government may bring a lawsuit against any person who it believes has knowingly presented, or caused to be presented, a false or fraudulent request for payment from the federal government, or who has made a false statement or used a false record to get a claim approved. The federal False Claims Act further provides that a lawsuit thereunder may be initiated in the name of the United States by an individual, a "whistleblower," who is an original source of the allegations. The government has taken the position that claims presented in violation of the federal anti-kickback law or Stark Law may be considered a violation of the federal False Claims Act. Penalties include civil penalties of not less than \$5,500 and not more than \$11,000 for each false claim, plus three times the amount of damages that the federal government sustained because of the act of that person.

Recently, the number of suits brought against healthcare providers by private individuals has increased dramatically. Further, on May 20, 2009, President Obama signed into law the Fraud Enforcement and Recovery Act of 2009 (FERA), which greatly expanded the types of entities and conduct subject to the False Claims Act. Also, various states are considering or have enacted laws modeled after the federal False Claims Act. Under the Deficit Reduction Act of 2005, or DRA, states are being encouraged to adopt false claims acts similar to the federal False Claims Act, which establish liability for submission of fraudulent claims to the State Medicaid program and contain whistleblower provisions. Even in instances when a whistleblower action is dismissed with no judgment or settlement, we may incur substantial legal fees and other costs relating to an investigation. Future actions under the False Claims Act may result in significant fines and legal fees, which would adversely affect our financial performance and our ability to operate

our business.

We believe that we are in compliance with the rules and regulations that apply to the federal False Claims Act as well as its state counterparts.

Healthcare Reform Legislation

Healthcare reform legislation enacted in the first quarter of 2010 by the Patient Protection and Affordable Care Act or PPACA, specifically requires the U.S. Department of Health and Human Services, in computing physician practice expense relative value units, to increase the equipment utilization factor for advanced diagnostic imaging services (such as MRI, CT and PET) from a presumed utilization rate of 50% to 65% for 2010 through 2012, 70% in 2013, and 75% thereafter. Excluded from the adjustment are low-technology imaging modalities such as ultrasound, X-ray and fluoroscopy. The Health Care and Education Reconciliation Act of 2010 (H.R. 4872) or Reconciliation Act, which was passed by the Senate and approved by the President on March 30, 2010, amends the provision for higher presumed utilization of advanced diagnostic imaging services to a presumed rate of 75%. The higher utilization rate was fully implemented in the beginning of 2011 and replaced the phase-in approach provided in the PPACA. This utilization rate was further increased to 90% by the American Taxpayer Relief Act of 2012 (“ATRA”), to be effective as of January 1, 2014.

The aim of increased utilization of diagnostic imaging services is to spread the cost of the equipment and services over a greater number of scans, resulting in a lower cost per scan. These changes will precipitate reductions in federal reimbursement for medical imaging and result in decreased revenue for the scans we perform for Medicare beneficiaries. Other changes in reimbursement for services rendered by Medicare Advantage plans may also reduce the revenues we receive for services rendered to Medicare Advantage enrollees.

Health Insurance Portability and Accountability Act of 1996

Congress enacted the Health Insurance Portability and Accountability Act of 1996, or HIPAA, in part, to combat healthcare fraud and to protect the privacy and security of patients' individually identifiable healthcare information.

HIPAA, among other things, amends existing crimes and criminal penalties for Medicare fraud and enacts new federal healthcare fraud crimes, including actions affecting non-government healthcare benefit programs. Under HIPAA, a healthcare benefit program includes any private plan or contract affecting interstate commerce under which any medical benefit, item or service is provided. A person or entity that knowingly and willfully obtains the money or property of any healthcare benefit program by means of false or fraudulent representations in connection with the delivery of healthcare services is subject to a fine or imprisonment, or potentially both. In addition, HIPAA authorizes the imposition of civil money penalties against entities that employ or enter into contracts with excluded Medicare or Medicaid program participants if such entities provide services to federal health program beneficiaries. A finding of liability under HIPAA could have a material adverse effect on our business, financial condition and results of operations.

Further, HIPAA requires healthcare providers and their business associates to maintain the privacy and security of individually identifiable protected health information ("PHI"). HIPAA imposes federal standards for electronic transactions, for the security of electronic health information and for protecting the privacy of PHI. The Health Information Technology for Economic and Clinical Health Act of 2009 ("HITECH"), signed into law on February 17, 2009, dramatically expanded, among other things, (1) the scope of HIPAA to now apply directly to "business associates," or independent contractors who receive or obtain PHI in connection with providing a service to a covered entity, (2) substantive security and privacy obligations, including new federal security breach notification requirements to affected individuals, DHHS and prominent media outlets, of certain breaches of unsecured PHI, (3) restrictions on marketing communications and a prohibition on covered entities or business associates from receiving remuneration in exchange for PHI, and (4) the civil and criminal penalties that may be imposed for HIPAA violations, increasing the annual cap in penalties from \$25,000 to \$1.5 million per year.

In addition, many states have enacted comparable privacy and security statutes or regulations that, in some cases, are more stringent than HIPAA requirements. In those cases it may be necessary to modify our operations and procedures to comply with the more stringent state laws, which may entail significant and costly changes for us. We believe that we are in compliance with such state laws and regulations. However, if we fail to comply with applicable state laws and regulations, we could be subject to additional sanctions.

We believe that we are in compliance with the current HIPAA requirements, as amended by HITECH, and comparable state laws, but we anticipate that we may encounter certain costs associated with future compliance. Moreover, we cannot guarantee that enforcement agencies or courts will not make interpretations of the HIPAA standards that are inconsistent with ours, or the interpretations of our contracted radiology practices or their affiliated physicians. A finding of liability under the HIPAA standards may result in significant criminal and civil penalties. Noncompliance also may result in exclusion from participation in government programs, including Medicare and Medicaid. These actions could have a material adverse effect on our business, financial condition, and results of

operations.

U.S. Food and Drug Administration or FDA

The FDA has issued the requisite pre-market approval for all of the MRI and CT systems we use. We do not believe that any further FDA approval is required in connection with the majority of equipment currently in operation or proposed to be operated, except under regulations issued by the FDA pursuant to the Mammography Quality Standards Act of 1992, as amended by the Mammography Quality Standards Reauthorization Acts of 1998 and 2004 (collectively, the MQSA). All mammography facilities are required to meet the applicable MQSA requirements, including quality standards, be accredited by an approved accreditation body or state agency and certified by the FDA or an FDA-approved certifying state agency. Pursuant to the accreditation process, each facility providing mammography services must comply with certain standards that include, among other things, annual inspection of the facility's equipment, personnel (interpreting physicians, technologists and medical physicists) and practices.

Compliance with these MQSA requirements and standards is required to obtain Medicare payment for services provided to beneficiaries and to avoid various sanctions, including monetary penalties, or suspension of certification. Although the Mammography Accreditation Program of the American College of Radiology is an approved accreditation body and currently accredits all of our facilities which provide mammography services, and although we anticipate continuing to meet the requirements for accreditation, if we lose such accreditation, the FDA could revoke our certification. Congress has extended Medicare benefits to include coverage of screening mammography but coverage is subject to the facility performing the mammography meeting prescribed quality standards described above. The Medicare requirements to meet the standards apply to diagnostic mammography and image quality examination as well as screening mammography.

Radiologist Licensing

The radiologists providing professional medical services at our facilities are subject to licensing and related regulations by the states in which they provide services. As a result, we require BRMG and the other radiology groups with which we contract to require those radiologists to have and maintain appropriate licensure. We do not believe that such laws and regulations will either prohibit or require licensure approval of our business operations, although no assurances can be made that such laws and regulations will not be interpreted to extend such prohibitions or requirements to our operations.

Insurance Laws and Regulation

States in which we operate have adopted certain laws and regulations affecting risk assumption in the healthcare industry, including those that subject any physician or physician network engaged in risk-based managed care to applicable insurance laws and regulations. These laws and regulations may require physicians and physician networks to meet minimum capital requirements and other safety and soundness requirements. Implementing additional regulations or compliance requirements could result in substantial costs to the contracted radiology practices, limiting their ability to enter into capitated or other risk-sharing managed care arrangements and indirectly affecting our revenue from the contracted practices.

Sequestration

We derive a substantial portion of our revenue from direct billings to governmental healthcare programs, such as Medicare and Medicaid, and private health insurance companies and/or health plans, including but not limited to those participating in the Medicare Advantage program. As a result, any negative changes in governmental capitation or fee-for-service rates or methods of reimbursement for the services we provide could have a significant adverse impact on our revenue and financial results.

Congress has a strong interest in reducing the federal debt, which may lead to new proposals designed to achieve savings by altering payment policies. The Budget Control Act of 2011 (“BCA”) established a Joint Select Committee on Deficit Reduction, which had the goal of achieving a reduction in the federal debt level of at least \$1.2 trillion. As a result of the Joint Select Committee’s failure to draft a proposal by the BCA’s deadline, automatic cuts in various federal programs (excluding cuts to Medicaid but including cuts to Medicare provider reimbursement in an amount not to exceed 2%) were scheduled to commence on January 1, 2013. However, as a result of the enactment of ATRA on January 2, 2013, any such cuts were delayed until March 1, 2013 so as to allow the Congress sworn in on January 3, 2013 to consider whether to allow sequestration to take place or replace it with other cuts in federal spending and/or higher taxes.

On March 1, 2013, Congress failed to act and prevent the automatic cuts from taking effect, and CMS has stated that a 2% cut to Medicare payments will begin starting April 1, 2013, which will have a negative impact on our revenues. In addition, certain Congressional members have stated that the automatic federal spending cuts under the BCA are insufficient to achieve the BCA's goals of reducing federal spending and, in turn, the federal deficit. Such members have said that the way to achieve these additional cuts is to implement changes to federal entitlement programs, such as Medicare. Therefore it is not possible at this time to estimate what further impact, if any, other federal Medicare provider reimbursement cuts will have on our integrated care business or results of operations.

Because governmental healthcare programs generally reimburse on a fee schedule basis rather than on a charge-related basis, we generally cannot increase our revenues from these programs by increasing the amount of charges for services. Moreover, if our costs increase, we may not be able to recover our increased costs from these programs. Government and private payors have taken and may continue to take steps to control the cost, eligibility for, use, and delivery of healthcare services as a result of budgetary constraints, cost containment pressures and other reasons. We believe that these trends in cost containment will continue. These cost containment measures, and other market changes in non-governmental insurance plans have generally restricted our ability to recover, or shift to non-governmental payors, any increased costs that we experience. Our integrated care business and financial operations may be materially affected by these developments.

Environmental Matters

The facilities we operate or manage generate hazardous and medical waste subject to federal and state requirements regarding handling and disposal. We believe that the facilities that we operate and manage are currently in compliance in all material respects with applicable federal, state and local statutes and ordinances regulating the handling and disposal of such materials. We do not believe that we will be required to expend any material additional amounts in order to remain in compliance with these laws and regulations or that compliance will materially affect our capital expenditures, earnings or competitive position.

Compliance Program

We maintain a program to monitor compliance with federal and state laws and regulations applicable to healthcare entities. We have a compliance officer who is charged with implementing and supervising our compliance program, which includes the adoption of (i) Standards of Conduct for our employees and affiliates and (ii) a process that specifies how employees, affiliates and others may report regulatory or ethical concerns to our compliance officer. We believe that our compliance program meets the relevant standards provided by the Office of Inspector General of the Department of Health and Human Services.

An important part of our compliance program consists of conducting periodic audits of various aspects of our operations and that of the contracted radiology practices. We also conduct mandatory educational programs designed to familiarize our employees with the regulatory requirements and specific elements of our compliance program.

Item 1A. Risk Factors

If BRMG or any of our other contracted radiology practices terminate their agreements with us, our business could substantially diminish.

Our relationship with BRMG is an integral part of our business. Through our management agreement, BRMG provides all of the professional medical services at 101 of our 109 California facilities. Professional medical services are provided at our other facilities through management contracts with other radiology groups. BRMG and these other radiology groups contract with various other independent physicians and physician groups to provide all of the professional medical services at most of our facilities, and they must use their best efforts to provide the professional medical services at any new facilities that we open or acquire in their areas of operation. In addition, BRMG and the other radiology groups' strong relationships with referring physicians are largely responsible for the revenue generated at the facilities they service. Although our management agreement with BRMG runs until 2014, and for terms as long, if not longer, with the other groups, BRMG and the other radiology groups have the right to terminate the agreements if we default on our obligations and fail to cure the default. Also, the various radiology groups' ability to continue performing under the management agreements may be curtailed or eliminated due to the groups' financial difficulties, loss of physicians or other circumstances. If the radiology groups cannot perform their obligations to us, we would need to contract with one or more other radiology groups to provide the professional medical services at the facilities serviced by the group. We may not be able to locate radiology groups willing to provide those services on terms acceptable to us, if at all. Even if we were able to do so, any replacement radiology group's relationships with referring physicians may not be as extensive as those of the terminated group. In any such event, our business could be seriously harmed. In addition, the radiology groups are party to substantially all of the managed care contracts from which we derive revenue. If we were unable to readily replace these contracts, our revenue would be negatively affected.

Our ability to generate revenue depends in large part on referrals from physicians.

We derive substantially all of our net revenue, directly or indirectly, from fees charged for the diagnostic imaging services performed at our facilities. We depend on referrals of patients from unaffiliated physicians and other third parties who have no contractual obligations to refer patients to us for a substantial portion of the services we perform. If a sufficiently large number of these physicians and other third parties were to discontinue referring patients to us, our scan volume could decrease, which would reduce our net revenue and operating margins. Further, commercial third-party payors have implemented programs that could limit the ability of physicians to refer patients to us. For example, prepaid healthcare plans, such as health maintenance organizations, sometimes contract directly with providers and require their enrollees to obtain these services exclusively from those providers. Some insurance companies and self-insured employers also limit these services to contracted providers. These “closed panel” systems are now common in the managed care environment. Other systems create an economic disincentive for referrals to providers outside the system’s designated panel of providers. If we are unable to compete successfully for these managed care contracts, our results and prospects for growth could be adversely affected.

If our contracted radiology practices, including BRMG, lose a significant number of their radiologists, our financial results could be adversely affected.

At times, there has been a shortage of qualified radiologists in some of the regional markets we serve. In addition, competition in recruiting radiologists may make it difficult for our contracted radiology practices to maintain adequate levels of radiologists. If a significant number of radiologists terminate their relationships with our contracted radiology practices and those radiology practices cannot recruit sufficient qualified radiologists to fulfill their obligations under our agreements with them, our ability to maximize the use of our diagnostic imaging facilities and our financial results could be adversely affected. Increased expenses to BRMG will impact our financial results because the management fee we receive from BRMG, which is based on a percentage of BRMG’s collections, is adjusted annually to take into account the expenses of BRMG. Neither we, nor our contracted radiology practices, maintain insurance on the lives of any affiliated physicians.

We may become subject to professional malpractice liability, which could be costly and negatively impact our business.

The physicians employed by our contracted radiology practices are from time to time subject to malpractice claims. We structure our relationships with the practices under our management agreements in a manner that we believe does not constitute the practice of medicine by us or subject us to professional malpractice claims for acts or omissions of physicians employed by the contracted radiology practices. Nevertheless, claims, suits or complaints relating to services provided by the contracted radiology practices have been asserted against us in the past and may be asserted against us in the future. In addition, we may be subject to professional liability claims, including, without limitation, for improper use or malfunction of our diagnostic imaging equipment or for accidental contamination or injury from exposure to radiation. We may not be able to maintain adequate liability insurance to protect us against those claims at acceptable costs or at all.

Any claim made against us that is not fully covered by insurance could be costly to defend, result in a substantial damage award against us and divert the attention of our management from our operations, all of which could have an adverse effect on our financial performance. In addition, successful claims against us may adversely affect our business or reputation. Although California places a \$250,000 limit on non-economic damages for medical malpractice cases, no limit applies to economic damages and no such limits exist in the other states in which we provide services.

We may not receive payment from some of our healthcare provider customers because of their financial circumstances.

Some of our healthcare provider customers do not have significant financial resources, liquidity or access to capital. If these customers experience financial difficulties they may be unable to pay us for the equipment and services that we provide. A significant deterioration in general or local economic conditions could have a material adverse effect on the financial health of certain of our healthcare provider customers. As a result, we may have to increase the amounts of accounts receivables that we write-off, which would adversely affect our financial condition and results of operations.

Capitation fee arrangements could reduce our operating margins.

For the year ended December 31, 2012, we derived approximately 13% of our payments from capitation arrangements, and we intend to increase the revenue we derive from capitation arrangements in the future. Under capitation arrangements, the payor pays a pre-determined amount per-patient per-month in exchange for us providing all necessary covered services to the patients covered under the arrangement. These contracts pass much of the financial risk of providing diagnostic imaging services, including the risk of over-use, from the payor to the provider.

Our success depends in part on our ability to negotiate effectively, on behalf of the contracted radiology practices and our diagnostic imaging facilities, contracts with health maintenance organizations, employer groups and other third-party payors for services to be provided on a capitated basis and to efficiently manage the utilization of those services. If we are not successful in managing the utilization of services under these capitation arrangements or if patients or enrollees covered by these contracts require more frequent or extensive care than anticipated, we would incur unanticipated costs not offset by additional revenue, which would reduce operating margins.

Pressure to control healthcare costs could have a negative impact on our results.

One of the principal objectives of health maintenance organizations and preferred provider organizations is to control the cost of healthcare services. Healthcare providers participating in managed care plans may be required to refer diagnostic imaging tests to certain providers depending on the plan in which a covered patient is enrolled. In addition, managed care contracting has become very competitive, and reimbursement schedules are at or below Medicare reimbursement levels. The expansion of health maintenance organizations, preferred provider organizations and other managed care organizations within the geographic areas covered by our network could have a negative impact on the utilization and pricing of our services, because these organizations will exert greater control over patients' access to diagnostic imaging services, the selections of the provider of such services and reimbursement rates for those services.

We experience competition from other diagnostic imaging companies and hospitals, and this competition could adversely affect our revenue and business.

The market for diagnostic imaging services is highly competitive. We compete principally on the basis of our reputation, our ability to provide multiple modalities at many of our facilities, the location of our facilities and the quality of our diagnostic imaging services. We compete locally with groups of radiologists, established hospitals, clinics and other independent organizations that own and operate imaging equipment. Our competitors include Alliance Healthcare Services, Inc., Diagnostic Imaging Group and several smaller regional competitors. Some of our competitors may now or in the future have access to greater financial resources than we do and may have access to newer, more advanced equipment. In addition, some physician practices have established their own diagnostic imaging facilities within their group practices and compete with us. We are experiencing increased competition as a result of such activities, and if we are unable to successfully compete, our business and financial condition would be adversely affected.

Our success depends in part on our key personnel and loss of key executives could adversely affect our operations. In addition, former employees and radiology practices we have previously contracted with could use the experience and relationships developed while employed or under contract with us to compete with us.

Our success depends in part on our ability to attract and retain qualified senior and executive management, managerial and technical personnel. Competition in recruiting these personnel may make it difficult for us to continue our growth and success. The loss of their services or our inability in the future to attract and retain management and other key personnel could hinder the implementation of our business strategy. The loss of the services of Dr. Howard G. Berger, our President and Chief Executive Officer, and Norman R. Hames or Stephen M. Forthuber, our Chief Operating Officers, west and east coast, respectively, could have a significant negative impact on our operations. We believe that they could not easily be replaced with executives of equal experience and capabilities. We do not maintain key person insurance on the life of any of our executive officers with the exception of a \$5.0 million policy on the life of Dr. Berger. Also, if we lose the services of Dr. Berger, our relationship with BRMG could deteriorate, which would materially adversely affect our business.

Many of the states in which we operate do not enforce agreements that prohibit a former employee from competing with a former employer. As a result, many of our employees whose employment is terminated are free to compete with us, subject to prohibitions on the use of trade secret information and, depending on the terms of the employee's employment agreement, on solicitation of existing employees and customers (if enforceable). A former executive, manager or other key employee who joins one of our competitors could use the relationships he or she established with third party payors, radiologists or referring physicians while our employee and the industry knowledge he or she acquired during that tenure to enhance the new employer's ability to compete with us.

The agreements with most of our radiology practices contain non-compete provisions; however the enforceability of these provisions is determined by a court based on all the facts and circumstances of the specific case at the time enforcement is sought. Our inability to enforce radiologists' non-compete provisions could result in increased competition from individuals who are knowledgeable about our business strategies and operations.

Our failure to integrate the businesses we acquire successfully and on a timely basis could reduce our profitability.

We may never realize expected synergies, business opportunities and growth prospects in connection with our acquisitions. We may experience increased competition that limits our ability to expand our business. We may not be able to capitalize on expected business opportunities, assumptions underlying estimates of expected cost savings may be inaccurate, or general industry and business conditions may deteriorate. In addition, integrating operations will require significant efforts and expenses on our part. Personnel may leave or be terminated because of an acquisition. Our management may have its attention diverted while trying to integrate an acquisition. If these factors limit our ability to integrate the operations of an acquisition successfully or on a timely basis, our expectations of future results of operations, including certain cost savings and synergies as a result of the acquisition, may not be met. In addition,

our growth and operating strategies for a target's business may be different from the strategies that the target company pursued prior to our acquisition. If our strategies are not the proper strategies, they could have a material adverse effect on our business, financial condition and results of operations.

We may not be able to successfully grow our business, which would adversely affect our financial condition and results of operations.

Historically, we have experienced substantial growth through acquisitions that have increased our size, scope and geographic distribution. During the past two fiscal years, we have completed 21 acquisitions. These acquisitions have added 58 centers to our fixed-site outpatient diagnostic imaging services. Our ability to successfully expand through acquiring facilities, developing new facilities, adding equipment at existing facilities, and directly or indirectly entering into contractual relationships with high-quality radiology practices depends upon many factors, including our ability to:

- identify attractive and willing candidates for acquisitions;

- identify locations in existing or new markets for development of new facilities;

- comply with legal requirements affecting our arrangements with contracted radiology practices, including state prohibitions on fee-splitting, corporate practice of medicine and self-referrals;

- obtain regulatory approvals where necessary and comply with licensing and certification requirements applicable to our diagnostic imaging facilities, the contracted radiology practices and the physicians associated with the contracted radiology practices;

- recruit a sufficient number of qualified radiology technologists and other non-medical personnel;

- expand our infrastructure and management; and

· compete for opportunities. We may not be able to compete effectively for the acquisition of diagnostic imaging facilities. Our competitors may have more established operating histories and greater resources than we do. Competition may also make any acquisitions more expensive.

Managing our recent acquisitions, as well as any other future acquisitions, will entail numerous operational and financial risks, including:

- inability to obtain adequate financing;

- possible adverse effects on our operating results;

- diversion of management's attention and resources;

- failure to retain key personnel;

- difficulties in integrating new operations into our existing infrastructure; and

- amortization or write-offs of acquired intangible assets, including goodwill.

If we are unable to successfully grow our business through acquisitions it could have an adverse effect on our financial condition and results of operations. Further we cannot ensure we will be able to receive the required regulatory approvals for any future acquisitions, expansions or replacements, and the failure to obtain these approvals could limit the market for our services and have an adverse effect on our financial condition and results of operations.

The acquisitions of eRAD, Inc. and Imaging On Call, LLC have resulted in new lines of business for us that could be difficult to integrate, disrupt our business or harm our results of operations.

The acquisition of eRAD, Inc. has provided us with a new line of business that has a large research and development component that is new to our business. The acquisition of Imaging On Call, LLC has provided us with a new teleradiology division, a line of business in which we have not previously provided services. The process of integrating the acquired business, technology, service and research and development component into our business and operations and entry into a new line of business in which we are inexperienced may result in unforeseen operating

difficulties and expenditures. In developing the new line of business as a result of the eRAD, Inc. and Imaging On Call, LLC acquisitions, we may invest significant time and resources, such as our investment in the team of software developers in Canada, the attention of management's time that would otherwise be available for ongoing development of our business that may affect our results of operations and we may not be able to take full advantage of the business opportunities available to us as we expand these new lines of business. Additionally, there are competitors in the same business as eRAD, Inc. and Imaging On Call, LLC. Failure to successfully manage these risks in the development and implementation of new lines of business could have a material, adverse effect on the Company's business, financial condition, and results of operations.

We have experienced operating losses and we have a substantial accumulated deficit. If we are unable to improve our financial performance, we may be unable to pay our obligations.

Although we had net income of \$ 59.8 million and \$7.2 million for the years ended December 31, 2012 and 2011, respectively, we did incur a net loss of \$12.9 million for the year ended December 31, 2010 and have generated net losses in three of our previous five years of operations. As of December 31, 2012, our stockholders' equity deficit was \$ 6.7 million. If we cannot continue to generate income from operations in sufficient amounts, we will not be able to pay our obligations as they become due, which could adversely impact our business, financial condition and results of operations.

Our substantial debt could adversely affect our financial condition and prevent us from fulfilling our obligations under our outstanding indebtedness.

Our current substantial indebtedness and any future indebtedness we incur could adversely affect our financial condition. We are highly leveraged. As of December 31, 2012, our total indebtedness was \$582.4 million, \$551.2 million of which constituted senior secured indebtedness. Our substantial indebtedness could also:

- make it difficult for us to satisfy our obligations with respect to our outstanding indebtedness;
- require us to dedicate a substantial portion of our cash flow from operations to payments on our debt, reducing the availability of our cash flow to fund working capital, capital expenditures, acquisitions and other general corporate purposes;
- expose us to the risk of interest rate increases on our variable rate borrowings, including borrowings under our new senior secured credit facilities;
- increase our vulnerability to adverse general economic and industry conditions;
- limit our flexibility in planning for, or reacting to, changes in our business and the industry in which we operate;
- place us at a competitive disadvantage compared to our competitors that have less debt; and
- limit our ability to borrow additional funds on terms that are satisfactory to us or at all.

We may not be able to finance future needs or adapt our business plan to changes because of restrictions placed on us by our credit facilities, the indenture governing our senior unsecured notes and instruments governing our other indebtedness.

The indenture governing the senior unsecured notes and our credit facilities contain affirmative and negative covenants which restrict, among other things, our ability to:

- pay dividends or make certain other restricted payments or investments;

- incur additional indebtedness and issue preferred stock;
- create liens (other than permitted liens) securing indebtedness or trade payables unless the notes are secured on an equal and ratable basis with the obligations so secured, and, if such liens secure subordinated indebtedness, the notes are secured by a lien senior to such liens;
- sell certain assets or merge with or into other companies or otherwise dispose of all or substantially all of our assets;
- enter into certain transactions with affiliates;
- create restrictions on dividends or other payments by our restricted subsidiaries; and
- create guarantees of indebtedness by restricted subsidiaries.

All of these restrictions could affect our ability to operate our business and may limit our ability to take advantage of potential business opportunities as they arise. A failure to comply with these covenants and restrictions would permit the relevant creditors to declare all amounts borrowed under the applicable agreement governing such indebtedness, together with accrued interest and fees, to be immediately due and payable. If the indebtedness our credit facilities or the senior unsecured notes is accelerated, we may not have sufficient assets to repay amounts due under the credit facilities, the senior unsecured notes or on other indebtedness then outstanding.

A failure to meet our capital expenditure requirements could adversely affect our business.

We operate in a capital intensive, high fixed-cost industry that requires significant amounts of capital to fund operations, particularly the initial start-up and development expenses of new diagnostic imaging facilities and the acquisition of additional facilities and new diagnostic imaging equipment. We incur capital expenditures to, among other things, upgrade and replace equipment for existing facilities and expand within our existing markets and enter new markets. If we open or acquire additional imaging facilities, we may have to incur material capital lease obligations. To the extent we are unable to generate sufficient cash from our operations, funds are not available from our lenders or we are unable to structure or obtain financing through operating leases, long-term installment notes or capital leases, we may be unable to meet our capital expenditure requirements.

The regulatory framework in which we operate is uncertain and evolving.

Although we believe that we are operating in compliance with applicable federal and state laws, neither our current or anticipated business operations nor the operations of the contracted radiology practices have been the subject of judicial or regulatory interpretation. We cannot assure you that a review of our business by courts or regulatory

authorities will not result in a determination that could adversely affect our operations or that the healthcare regulatory environment will not change in a way that restricts our operations. In addition, healthcare laws and regulations may change significantly in the future. We continuously monitor these developments and modify our operations from time to time as the regulatory environment changes. We cannot assure you however, that we will be able to adapt our operations to address new regulations or that new regulations will not adversely affect our business.

Certain states have enacted statutes or adopted regulations affecting risk assumption in the healthcare industry, including statutes and regulations that subject any physician or physician network engaged in risk-based managed care contracting to applicable insurance laws and regulations. These laws and regulations, if adopted in the states in which we operate, may require physicians and physician networks to meet minimum capital requirements and other safety and soundness requirements. Implementing additional regulations or compliance requirements could result in substantial costs to us and the contracted radiology practices and limit our ability to enter into capitation or other risk-sharing managed care arrangements.

State and federal anti-kickback and anti-self-referral laws may adversely affect income.

Various federal and state laws govern financial arrangements among healthcare providers. The federal Anti-Kickback Law prohibits the knowing and willful offer, payment, solicitation or receipt of any form of remuneration in return for, or to induce, the referral of Medicare, Medicaid, or other federal healthcare program patients, or in return for, or to induce, the purchase, lease or order of items or services that are covered by Medicare, Medicaid, or other federal healthcare programs. Similarly, many state laws prohibit the solicitation, payment or receipt of remuneration in return for, or to induce the referral of patients in private as well as government programs. Violation of these Anti-Kickback Laws may result in substantial civil or criminal penalties for individuals or entities and/or exclusion from federal or state healthcare programs. We believe we are operating in compliance with applicable law and believe that our arrangements with providers would not be found to violate the Anti-Kickback Laws. However, these laws could be interpreted in a manner inconsistent with our operations.

Federal law prohibiting physician self-referrals, known as the Stark Law, prohibits a physician from referring Medicare or Medicaid patients to an entity for certain “designated health services” if the physician has a prohibited financial relationship with that entity, unless an exception applies. Certain radiology services are considered “designated health services” under the Stark Law. Although we believe our operations do not violate the Stark Law, our activities may be challenged. If a challenge to our activities is successful, it could have an adverse effect on our operations. In addition, legislation may be enacted in the future that further addresses Medicare and Medicaid fraud and abuse or that imposes additional requirements or burdens on us.

In addition, under the DRA, states enacting false claims statutes similar to the federal False Claims Act, which establish liability for submission of fraudulent claims to the State Medicaid program and contain qui tam or whistleblower provisions, receive an increased percentage of any recovery from a State Medicaid judgment or settlement. Adoption of new false claims statutes in states where we operate may impose additional requirements or burdens on us.

Changes in the method or rates of third-party reimbursement could have a negative impact on our results.

From time to time, changes designed to contain healthcare costs have been implemented, some of which have resulted in decreased reimbursement rates for diagnostic imaging services that impact our business. For services for which we bill Medicare directly, we are paid under the Medicare Physician Fee Schedule, which is updated on an annual basis. Under the Medicare statutory formula, payments under the Physician Fee Schedule would have decreased for the past several years if Congress failed to intervene.

Medicare program reimbursements for physician services as well as other services to Medicare beneficiaries who are not enrolled in Medicare Advantage plans are based upon the fee-for-service rates set forth in the Medicare Physician Fee Schedule, which relies, in part, on a target-setting formula system called the SGR. Each year, on January 1st, the Medicare program updates the Medicare Physician Fee Schedule reimbursement rates. Many private payors use the Medicare Physician Fee Schedule to determine their own reimbursement rates. Based on the SGR, the annual fee schedule update is adjusted to reflect the comparison of actual expenditures to target expenditures. Because one of the factors for calculating the SGR is linked to the growth in the U.S. gross domestic product (“GDP”), the SGR formula may result in a negative payment update if growth in Medicare beneficiaries’ use of services exceeds GDP growth, a situation which has occurred every year since 2002 and the reoccurrence of which we cannot predict.

CMS determined that, effective January 1, 2013, the SGR formula results in a decrease to the physician Medicare fee schedule reimbursement by 26.5%. Congress, however, enacted ATRA which provides, in part, that Medicare physician fee schedule rates for 2012 are extended through December 31, 2013. Therefore, the Medicare fee schedule rates for 2013 are neither subject to the 26.5% SGR formula-driven reduction nor are they subject to any increase over and above the 2012 fee schedule rates.

While Congress has repeatedly intervened to mitigate the negative reimbursement impact associated with the SGR formula, there is no guarantee that Congress will continue to do so in the future. Moreover, the existing methodology may result in significant yearly fluctuations in the Medicare Physician Fee Schedule amounts, which may be unrelated to changes in the actual costs of providing physician services. Unless Congress enacts a change to the SGR methodology, the uncertainty regarding reimbursement rates and fluctuation will continue to exist. Moreover, if Congress does change the SGR methodology or substitute a new system for physician fee-for-service payments, it may require reductions in other Medicare programs including Medicare Advantage to offset such additional costs.

Another provision that affects physician payments under the Medicare Physician Fee Schedule is an adjustment under the Medicare statute to reflect the geographic variation in the cost of delivering physician services, by comparing those costs to the national average. Medicare payments to physicians under the Medicare Physician Fee Schedule are geographically adjusted to reflect the varying cost of delivering physician services across areas. The adjustments are made by indices, known as the Geographic Practice Cost Indices (“GPCI”) that reflect how each geographic area compares to the national average. In 2003, Congress established that for three years there would be a floor of 1.0 on the work component of the Medicare Physician Fee Schedule formula used to determine physician payments, which meant that physician payments would not be reduced in a geographic area just because the relative cost of physician work in that area fell below the national average. Congress extended the GPCI work floor several times since its enactment in 2003. ATRA provides another extension through December 31, 2013. Although Congress has extended the GPCI work floor several times, there is no guarantee that Congress will block the adjustment in the future, which could result in a decrease in payments for physician services.

The 2013 Medicare Physician Fee Schedule also expanded a reduction in reimbursement for multiple images on contiguous body parts to new services, namely diagnostic cardiovascular services and ophthalmology services. Medicare has a longstanding policy to reduce payment by 50% for the second and subsequent procedures furnished to the same beneficiary by a single physician or physicians in the same group practice on the same day, largely based on the presence of efficiencies in the practice expense and physician work. This policy already applies to the technical and professional component of advanced imaging services. Under the new expansion CMS shall apply a 25% reduction to the technical component of second and subsequent diagnostic cardiovascular services, and a 20% reduction to the technical component of second and subsequent diagnostic ophthalmology services, furnished by the same physician (or physicians in the same group practice) to the same beneficiary, on the same day. This further reduces payments for physician services relating to diagnostic imaging, and our associated revenues. Regulatory updates to payment rates for which we bill the Medicare program directly are published annually by CMS in the Federal Register. Current payment rates for certain diagnostic services using equipment costing more than \$1 million are subject to usage assumptions at a usage rate of 75%. However, as part of ATRA, Congress paid for part of the SGR freeze by increasing the equipment utilization threshold for advanced imaging modalities from the current 75% to 90% beginning January 2014.

Complying with federal and state regulations is an expensive and time-consuming process, and any failure to comply could result in substantial penalties.

We are directly or indirectly through the radiology practices with which we contract subject to extensive regulation by both the federal government and the state governments in which we provide services, including:

- the federal False Claims Act;
- the federal Medicare and Medicaid Anti-Kickback Laws, and state anti-kickback prohibitions;

- federal and state billing and claims submission laws and regulations;

- the federal Health Insurance Portability and Accountability Act of 1996, as amended by the Health Information Technology for Economic and Clinical Health Act of 2009, and comparable state laws;

- the federal physician self-referral prohibition commonly known as the Stark Law and the state equivalent of the Stark Law;

- state laws that prohibit the practice of medicine by non-physicians and prohibit fee-splitting arrangements involving physicians;

- federal and state laws governing the diagnostic imaging and therapeutic equipment we use in our business concerning patient safety, equipment operating specifications and radiation exposure levels; and

- state laws governing reimbursement for diagnostic services related to services compensable under workers compensation rules.

If our operations are found to be in violation of any of the laws and regulations to which we or the radiology practices with which we contract are subject, we may be subject to the applicable penalty associated with the violation, including civil and criminal penalties, damages, fines and the curtailment of our operations. Any penalties, damages, fines or curtailment of our operations, individually or in the aggregate, could adversely affect our ability to operate our business and our financial results. The risks of our being found in violation of these laws and regulations is increased by the fact that many of them have not been fully interpreted by the regulatory authorities or the courts, and their provisions are open to a variety of interpretations. Any action brought against us for violation of these laws or regulations, even if we successfully defend against it, could cause us to incur significant legal expenses and divert our management's attention from the operation of our business.

If we fail to comply with various licensure, certification and accreditation standards, we may be subject to loss of licensure, certification or accreditation, which would adversely affect our operations.

Ownership, construction, operation, expansion and acquisition of our diagnostic imaging facilities are subject to various federal and state laws, regulations and approvals concerning licensing of personnel, other required certificates for certain types of healthcare facilities and certain medical equipment. In addition, freestanding diagnostic imaging facilities that provide services independent of a physician's office must be enrolled by Medicare as an independent diagnostic treatment facility, or IDTF, to bill the Medicare program. Medicare carriers have discretion in applying the IDTF requirements and therefore the application of these requirements may vary from jurisdiction to jurisdiction. In addition, federal legislation requires all suppliers that provide the technical component of diagnostic MRI, PET/CT, CT, and nuclear medicine to be accredited by an accreditation organization designated by CMS (which currently include the American College of Radiology (ACR), the Intersocietal Accreditation Commission (IAC) and the Joint Commission) by January 1, 2012. Our MRI, CT, nuclear medicine, ultrasound and mammography facilities are currently accredited by the American College of Radiology. We may not be able to receive the required regulatory approvals or accreditation for any future acquisitions, expansions or replacements, and the failure to obtain these approvals could limit the opportunity to expand our services.

Our facilities are subject to periodic inspection by governmental and other authorities to assure continued compliance with the various standards necessary for licensure and certification. If any facility loses its certification under the Medicare program, then the facility will be ineligible to receive reimbursement from the Medicare and Medicaid programs. For the year ended December 31, 2012, approximately 24% of our net revenue came from the Medicare and Medicaid programs. A change in the applicable certification status of one of our facilities could adversely affect our other facilities and in turn us as a whole. We have experienced a slowdown in the credentialing of our physicians over the last several years which has lengthened our billing and collection cycle, and could negatively impact our ability to collect revenue from patients covered by Medicare. Credentialing of physicians is required by our payors prior to commencing payment.

Our agreements with the contracted radiology practices must be structured to avoid the corporate practice of medicine and fee-splitting.

State law prohibits us from exercising control over the medical judgments or decisions of physicians and from engaging in certain financial arrangements, such as splitting professional fees with physicians. These laws are enforced by state courts and regulatory authorities, each with broad discretion. A component of our business has been to enter into management agreements with radiology practices. We provide management, administrative, technical and other non-medical services to the radiology practices in exchange for a service fee typically based on a percentage of the practice's revenue. We structure our relationships with the radiology practices, including the purchase of diagnostic imaging facilities, in a manner that we believe keeps us from engaging in the practice of medicine or exercising control over the medical judgments or decisions of the radiology practices or their physicians, or violating the prohibitions against fee-splitting. There can be no assurance that our present arrangements with BRMG or the physicians providing medical services and medical supervision at our imaging facilities will not be challenged, and, if

challenged, that they will not be found to violate the corporate practice of medicine or fee splitting prohibitions, thus subjecting us to potential damages, injunction and/or civil and criminal penalties or require us to restructure our arrangements in a way that would affect the control or quality of our services and/or change the amounts we receive under our management agreements. Any of these results could jeopardize our business.

Newly enacted and future federal legislation could limit the prices we can charge for our services, which would reduce our revenue and adversely affect our operating results.

New legislation has introduced certain changes that may result in decreased revenue for the scans we perform. Among other things, the new legislation will adjust Medicare payment rates for physician imaging services in an attempt to better reflect actual usage, by revising upward the assumed usage rate for diagnostic imaging equipment costing more than \$1 million to 90% starting January, 1, 2014. Other changes in reimbursement for services rendered by Medicare Advantage plans may reduce the revenues we receive for services rendered to Medicare Advantage enrollees.

Some of our imaging modalities use radioactive materials, which generate regulated waste and could subject us to liabilities for injuries or violations of environmental and health and safety laws.

Some of our imaging procedures use radioactive materials, which generate medical and other regulated wastes. For example, patients are injected with a radioactive substance before undergoing a PET scan. Storage, use and disposal of these materials and waste products present the risk of accidental environmental contamination and physical injury. We are subject to federal, state and local regulations governing storage, handling and disposal of these materials. We could incur significant costs and the diversion of our management's attention in order to comply with current or future environmental and health and safety laws and regulations. Also, we cannot completely eliminate the risk of accidental contamination or injury from these hazardous materials. Although we believe that we maintain professional liability insurance coverage consistent with industry practice in the event of an accident, we could be held liable for any resulting damages, and any liability could exceed the limits of or fall outside the coverage of our professional liability insurance.

Technological change in our industry could reduce the demand for our services and require us to incur significant costs to upgrade our equipment.

The development of new technologies or refinements of existing modalities may require us to upgrade and enhance our existing equipment before we may otherwise intend. Many companies currently manufacture diagnostic imaging equipment. Competition among manufacturers for a greater share of the diagnostic imaging equipment market may result in technological advances in the speed and imaging capacity of new equipment. This may accelerate the obsolescence of our equipment, and we may not have the financial ability to acquire the new or improved equipment and may not be able to maintain a competitive equipment base. In addition, advances in technology may enable physicians and others to perform diagnostic imaging procedures without us. If we are unable to deliver our services in the efficient and effective manner that payors, physicians and patients expect our revenue could substantially decrease.

Because we have high fixed costs, lower scan volumes per system could adversely affect our business.

The principal components of our expenses, excluding depreciation, consist of debt service, capital lease payments, compensation paid to technologists, salaries, real estate lease expenses and equipment maintenance costs. Because a majority of these expenses are fixed, a relatively small change in our revenue could have a disproportionate effect on our operating and financial results depending on the source of our revenue. Thus, decreased revenue as a result of lower scan volumes per system could result in lower margins, which could materially adversely affect our business.

We may be unable to effectively maintain our equipment or generate revenue when our equipment is not operational.

Timely, effective service is essential to maintaining our reputation and high use rates on our imaging equipment. Although we have an agreement with GE Medical Systems pursuant to which it maintains and repairs the majority of our imaging equipment, this agreement does not compensate us for loss of revenue when our systems are not fully operational and our business interruption insurance may not provide sufficient coverage for the loss of revenue. Also, GE Medical Systems may not be able to perform repairs or supply needed parts in a timely manner, which could result in a loss of revenue. Therefore, if we experience more equipment malfunctions than anticipated or if we are unable to promptly obtain the service necessary to keep our equipment functioning effectively, our ability to provide services would be adversely affected and our revenue could decline.

Disruption or malfunction in our information systems could adversely affect our business.

Our information technology system is vulnerable to damage or interruption from:

- earthquakes, fires, floods and other natural disasters;

- power losses, computer systems failures, internet and telecommunications or data network failures, operator negligence, improper operation by or supervision of employees, physical and electronic losses of data and similar events; and

- computer viruses, penetration by hackers seeking to disrupt operations or misappropriate information and other breaches of security.

We rely on our information systems to perform functions critical to our ability to operate, including patient scheduling, billing, collections, image storage and image transmission. Accordingly, an extended interruption in the system's function could significantly curtail, directly and indirectly, our ability to conduct our business and generate revenue.

Adverse changes in general domestic and worldwide economic conditions and instability and disruption of credit markets could adversely affect our operating results, financial condition, or liquidity.

We are subject to risk arising from adverse changes in general domestic and global economic conditions, including recession or economic slowdown and disruption of credit markets. Continued concerns about the systemic impact of potential long-term and wide-spread recession, inflation, energy costs, geopolitical issues, the availability and cost of credit have contributed to increased market volatility and diminished expectations for the United States economy. The United States, and other western countries have responded to this economic situation by exercising monetary policy to keep interest rates low. Any significant change in economic conditions or change in fiscal monetary policy could result in material changes in interest rates.

Continued turbulence in the United States and international markets and economies may adversely affect our liquidity and financial condition, and the liquidity and financial condition of our patients. If these market conditions continue, they may increase expenses associated with borrowing, limit our ability, and the ability of our patients, to timely replace maturing liabilities, and access the capital markets to meet liquidity needs, resulting in adverse effects on our financial condition and results of operations.

The California budget crisis, if not successfully resolved could have an impact on our revenue.

California is experiencing a budget crisis which has resulted in significant state government cutbacks. 109 of our 246 facilities are located in California. One to one-and-one-half percent (1% to 1.5%) of our revenues come from the California Medicaid program (\$6.5 million to \$9.7 million). To the extent California is unable to provide these payments on a timely basis, or at all, our revenues will be negatively impacted.

We are vulnerable to earthquakes, harsh weather and other natural disasters.

Our corporate headquarters and 109 of our facilities are located in California, an area prone to earthquakes and other natural disasters. Several of our facilities are located in areas of Florida and the east coast that have suffered from hurricanes. Most recently, our operations in Maryland, Delaware, New York and New Jersey were negatively impacted when Hurricane Sandy made landfall on the east coast in late October 2012, resulting in site closures, loss of power and other related business disruptions. In addition, some of our facilities have been affected by snow and other harsh weather conditions particularly in February 2010, when winter snow storms in the mid-Atlantic region, including Maryland, Delaware and New Jersey, caused us to close many of our facilities for up to five business days. An earthquake, harsh weather conditions or other natural disaster could decrease scan volume during affected periods and seriously impair our operations. Damage to our equipment or interruption of our business would adversely affect our financial condition and results of operations.

Possible volatility in our stock price could negatively affect us and our stockholders.

The trading price of our common stock on the NASDAQ Global Market has fluctuated significantly in the past. During the period from January 1, 2011 through December 31, 2012, the trading price of our common stock fluctuated from a high of \$3.58 per share to a low of \$1.94 per share. In the past, we have experienced a drop in stock price following an announcement of disappointing earnings or earnings guidance. Any such announcement in the future could lead to a similar drop in stock price. The price of our common stock could also be subject to wide fluctuations in the future as a result of a number of other factors, including the following:

- changes in expectations as to future financial performance or buy/sell recommendations of securities analysts;
- our, or a competitor's, announcement of new services, or significant acquisitions, strategic partnerships, joint ventures or capital commitments; and
- the operating and stock price performance of other comparable companies.

In addition, the U.S. securities markets have experienced significant price and volume fluctuations. These fluctuations often have been unrelated to the operating performance of companies in these markets. Broad market and industry factors may lead to volatility in the price of our common stock, regardless of our operating performance. Moreover, our stock has limited trading volume, and this illiquidity may increase the volatility of our stock price.

In the past, following periods of volatility in the market price of an individual company's securities, securities class action litigation often has been instituted against that company. The institution of similar litigation against us could result in substantial costs and a diversion of management's attention and resources, which could negatively affect our business, results of operations or financial condition.

Provisions of the Delaware General Corporation Law and our organizational documents may discourage an acquisition of us.

In the future, we could become the subject of an unsolicited attempted takeover of our company. Although an unsolicited takeover could be in the best interests of our stockholders, our organizational documents and the General Corporation Law of the State of Delaware both contain provisions that will impede the removal of directors and may discourage a third-party from making a proposal to acquire us. For example, the provisions:

- permit the board of directors to increase its own size, within the maximum limitations set forth in the bylaws, and fill the resulting vacancies;
- authorize the issuance of shares of preferred stock in one or more series without a stockholder vote;

establish an advance notice procedure for stockholder proposals to be brought before an annual meeting of our stockholders, including proposed nominations of persons for election to the board of directors; and

prohibit transfers and/or acquisitions of stock (without consent of the Board of Directors) that would result in any stockholder owning greater than 5% of the currently outstanding stock resulting in a limitation on net operating loss carryovers, capital loss carryovers, general business credit carryovers, alternative minimum tax credit carryovers and foreign tax credit carryovers, as well as any loss or deduction attributable to a “net unrealized built-in loss” within the meaning of Section 382 of the internal revenue code of 1986, as amended.

We are subject to Section 203 of the Delaware General Corporation Law, which could have the effect of delaying or preventing a change in control.

We have identified material weaknesses in our internal controls over financial reporting.

Maintaining effective internal controls over financial reporting is necessary for us to produce reliable financial statements. The Board of Directors of the Company concluded on November 8, 2013 that material weaknesses in the internal control over financial reporting exist at the Company, and consequently the Board of Directors determined that management’s report on internal control over financial reporting as of December 31, 2012, included in the Company’s Annual Report on Form 10-K for the year then ended, should no longer be relied upon. These material weaknesses led to the need for the restatement of the Company’s financial statements for the year ended December 31, 2012. These material weaknesses are discussed further within Item 9A “Controls and Procedures” of this Annual Report on Form 10-K/A. The existence of one or more material weaknesses precludes a conclusion by management that a corporation’s internal control over financial reporting is effective.

The Company is currently in the process of remediating this material weakness in internal control over financial reporting by, among other things, designing and implementing additional controls to ensure the quality of information delivered to, and improve the review of completed work received from, our outside tax consultant and improve controls over our identification and assessment of uncertain tax positions. If we fail to remediate this material weakness or fail to otherwise maintain effective controls over financial reporting in the future, it could result in a material misstatement of our financial statements that would not be prevented or detected on a timely basis. Management continues to devote significant time and attention to remediating this material weakness and improving our internal controls, and we expect to continue to incur costs associated with implementing appropriate processes, which could include fees for additional audit and consulting services, which could negatively affect our financial condition and operating results.

Item 1B. Unresolved Staff Comments

None.

Item 2. Properties

Our corporate headquarters is located in adjoining premises at 1508, 1510 and 1516 Cotner Avenue, Los Angeles, California 90025, in approximately 21,500 square feet occupied under leases, which expire (with options to extend) on June 30, 2017. In addition, we lease approximately 60,000 square feet of warehouse and other space under leases nationwide, which expire at various dates through August 2020. We also have a regional office of approximately 39,000 square feet in Baltimore, Maryland under a lease, which expires September 30, 2018.

We operate 109 fixed-site, freestanding outpatient diagnostic imaging facilities in California, 62 in Maryland, 25 in the Rochester and Hudson Valley areas of New York, 7 in Manhattan, New York, 15 in Delaware, 5 in Rhode Island, 19 in New Jersey, as well as 4 individual facilities in Florida. We lease the premises at which these facilities are located. Our facility lease terms vary in length from month to month to 15 years with renewal options upon prior written notice, from 1 year to 15 years depending upon the agreed upon terms with the local landlord. Rents under our facility lease amounts generally increase from 1% to 6% on an annual basis. We do not have options to purchase the facilities we rent.

Item 3. Legal Proceedings

We are engaged from time to time in the defense of lawsuits arising out of the ordinary course and conduct of our business. We believe that the outcome of our current litigation will not have a material adverse impact on our business, financial condition and results of operations. However, we could be subsequently named as a defendant in other lawsuits that could adversely affect us.

Item 4. Mine Safety Disclosures

Not applicable.

PART II**Item 5. Market for the Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities**

Our common stock is quoted on the NASDAQ Global Market under the symbol "RDNT." The following table indicates the high and low prices for our common stock for the periods indicated based upon information supplied by the NASDAQ Global Market.

| | Low | High |
|----------------------|------------|-------------|
| Quarter Ended | | |
| December 31, 2012 | \$2.29 | \$2.75 |
| September 30, 2012 | 2.30 | 2.86 |
| June 30, 2012 | 2.33 | 3.32 |
| March 31, 2012 | 1.94 | 3.58 |
| | | |
| December 31, 2011 | \$1.94 | \$2.79 |
| September 30, 2011 | 2.30 | 4.58 |
| June 30, 2011 | 3.40 | 5.19 |
| March 31, 2011 | 2.87 | 4.00 |

The last low and high prices for our common stock on the NASDAQ Global Market on March 8, 2013 were \$2.68 and \$2.77, respectively.

Holders

As of March 8, 2013, the number of holders of record of our common stock was 835. However, Cede & Co., the nominee for The Depository Trust Company, the clearing agency for most broker-dealers, owned a substantial number of our outstanding shares of common stock of record on that date. Our management believes that the number of beneficial owners of our common stock is approximately 4,000.

Dividends

We have never declared or paid cash dividends on our capital stock and we do not expect to pay any dividends in the foreseeable future. We currently intend to retain future earnings, if any, to finance the growth and development of our business. Our current credit facilities place restrictions on our ability to issue dividends. See discussion under “Liquidity and Capital Resources” regarding our current credit facilities. Payment of future dividends, if any, will be at the discretion of our board of directors and will depend on our financial condition, results of operations, capital requirements and such other factors as the board of directors deems relevant.

Equity Compensation Plans Information

The information required by this item will be contained in our definitive proxy statement, to be filed with the SEC in connection with our 2013 annual meeting of stockholders, which is expected to be filed not later than 120 days after the end of our fiscal year ended December 31, 2012, and is incorporated in this report by reference.

Stock Performance Graph

The following graph compares the yearly percentage change in cumulative total stockholder return of our common stock during the period from 2007 to 2012 with (i) the cumulative total return of the S&P500 index and (ii) the cumulative total return of the S&P500 – Healthcare Sector index. The comparison assumes \$100 was invested in December 31, 2007 in our common stock and in each of the foregoing indices and the reinvestment of dividends through January 1, 2013. The stock price performance on the following graph is not necessarily indicative of future stock price performance.

This graph shall not be deemed incorporated by reference by any general statement incorporating by reference this Form 10-K into any filing under the Securities Act or under the Exchange Act, except to the extent that RadNet specifically incorporates this information by reference, and shall not otherwise be deemed filed under such Acts.

Item 6. Selected Consolidated Financial Data

The following table sets forth our selected historical consolidated financial data. The selected consolidated statements of operations data set forth below for the years ended December 31, 2012, 2011 and 2010, and the consolidated balance sheet data as of December 31, 2012 and 2011, are derived from our audited consolidated financial statements and notes thereto included elsewhere herein. The selected historical consolidated statements of operations data set forth below for the years ended December 31, 2009 and 2008, and the consolidated balance sheet data set forth below as of December 31, 2010, 2009 and 2008, are derived from our audited consolidated financial statements not included herein. This data should be read in conjunction with and is qualified in its entirety by reference to the audited consolidated financial statements and the related notes included elsewhere in this annual report and Item 7 - "Management's Discussion and Analysis of Financial Condition and Results of Operations."

The financial data set forth below and discussed in this annual report are derived from the consolidated financial statements of RadNet, its subsidiaries and certain affiliates. As a result of the contractual and operational relationship among BRMG, Dr. Berger and us, we are considered to have a controlling financial interest in BRMG pursuant to applicable accounting guidance. Due to the deemed controlling financial interest, we are required to include BRMG as a consolidated entity in our consolidated financial statements. This means, for example, that revenue generated by BRMG from the provision of professional medical services to our patients, as well as BRMG's costs of providing those services, are included as net revenue and cost of operations in our consolidated statement of operations, whereas the management fee that BRMG pays to us under our management agreement with BRMG is eliminated as a result of the consolidation of our results with those of BRMG. Also, because BRMG is a consolidated entity in our financial statements, any borrowings or advances we have received from or made to BRMG have been eliminated in our consolidated balance sheet. If BRMG were not treated as a consolidated entity in our consolidated financial statements, the presentation of certain items in our income statement, such as net service fee revenue and costs and expenses, would change but our net income would not, because in operation and historically, the annual revenue of BRMG from all sources closely approximates its expenses, including Dr. Berger's compensation, fees payable to us and amounts payable to third parties.

1. See Note 1A of the Consolidated Financial Statements contained in Item 8 for further detail regarding the restatement of the amounts included in the above table as of and for the year ended December 31, 2012.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

Overview

We are filing this Amendment No. 2 of our annual report on Form 10-K to reflect certain adjustments to our consolidated financial statements as of and for the year ended December 31, 2012 with respect to the impact of an overstatement of a deferred tax asset associated with our interest rate swaps. The impact of the restatement is more fully described in Note 1A to the Consolidated Financial Statements contained in Item 8 of this Amendment No. 2.

We are the leading national provider of freestanding, fixed-site outpatient diagnostic imaging services in the United States based on number of locations and annual imaging revenue. At December 31, 2012, we operated directly or indirectly through joint ventures, 246 centers located in California, Maryland, Florida, Delaware, New Jersey, Rhode Island and New York. Our centers provide physicians with imaging capabilities to facilitate the diagnosis and treatment of diseases and disorders and may reduce unnecessary invasive procedures, often reducing the cost and amount of care for patients. Our services include magnetic resonance imaging (MRI), computed tomography (CT), positron emission tomography (PET), nuclear medicine, mammography, ultrasound, diagnostic radiology (X-ray), fluoroscopy and other related procedures. As of December 31, 2012, we had in operation 205 MRI systems, 118 CT systems, 43 PET or combination PET/CT systems, 45 nuclear medicine systems, 253 X-ray systems, 181 mammography systems, 357 ultrasound systems, and 138 fluoroscopy systems.

We derive substantially all of our revenue from fees charged for the diagnostic imaging services performed at our facilities. For the years ended December 31, 2012, 2011 and 2010, we performed 4,142,267, 3,740,443 and 3,315,019 diagnostic imaging procedures and generated net revenue of \$647.2 million, \$585.1 million and \$518.7 million, respectively. Additional information concerning RadNet, Inc., including our consolidated subsidiaries, for each of the years ended December 31, 2012, December 31, 2011 and December 31, 2010 is included in the consolidated financial statements and notes thereto in this annual report.

Our revenue is derived from a diverse mix of payors, including private payors, managed care capitated payors and government payors. We believe our payor diversity mitigates our exposure to possible unfavorable reimbursement trends within any one-payor class. In addition, our experience with capitation arrangements over the last several years has provided us with the expertise to manage utilization and pricing effectively, resulting in a predictable stream of revenue. As of December 31, 2012, we received approximately 56% of our payments from commercial insurance payors, 13% from managed care capitated payors, 21% from Medicare and 3% from Medicaid. With the exception of Blue Cross/Blue Shield and government payors, no single payor accounted for more than 5% of our net revenue for the twelve months ended December 31, 2012.

We have developed our medical imaging business through a combination of organic growth and acquisitions. For a discussion of acquisitions and dispositions of facilities, see “Recent Developments and Facility Acquisitions and Dispositions” below.

We typically experience some seasonality to our business. During the first quarter of each year we generally experience the lowest volumes of procedures and the lowest level of revenue for any quarter during the year. This is primarily the result of two factors. First, our volumes and revenue are typically impacted by winter weather conditions in our northeastern operations. It is common for snowstorms and other inclement weather to result in patient appointment cancellations and, in some cases, imaging center closures. Second, in recent years, we have observed greater participation in high deductible health plans by patients. As these high deductibles reset in January for most of these patients, we have observed that patients utilize medical services less during the first quarter, when securing medical care will result in significant out-of-pocket expenditures.

The consolidated financial statements in this annual report include the accounts of Radnet Management and BRMG. The consolidated financial statements also include Radnet Management I, Inc., Radnet Management II, Inc., Radiologix, Inc., Radnet Management Imaging Services, Inc., Delaware Imaging Partners, Inc., New Jersey Imaging Partners, Inc. and Diagnostic Imaging Services, Inc. (DIS), all wholly owned subsidiaries of Radnet Management. Accounting Standards Codification Section 810-10-15-14 stipulates that generally any entity with a) insufficient equity to finance its activities without additional subordinated financial support provided by any parties, or b) equity holders that, as a group, lack the characteristics specified in the Codification which evidence a controlling financial interest, is considered a Variable Interest Entity (“VIE”). We consolidate all voting interest entities in which we own a majority voting interest and all VIEs for which we are the primary beneficiary. We determine whether we are the primary beneficiary of a VIE through a qualitative analysis that identifies which variable interest holder has the controlling financial interest in the VIE. The variable interest holder who has both of the following has the controlling financial interest and is the primary beneficiary: (1) the power to direct the activities of the VIE that most significantly impact the VIE’s economic performance and (2) the obligation to absorb losses of, or the right to receive benefits from, the VIE that could potentially be significant to the VIE. In performing our analysis, we consider all relevant facts and circumstances, including: the design and activities of the VIE, the terms of the contracts the VIE has entered into, the nature of the VIE’s variable interests issued and how they were negotiated with or marketed to potential investors, and which parties participated significantly in the design or redesign of the entity.

Recent Developments and Facility Acquisitions

On October 10, 2012 we completed the refinancing of our senior secured credit facilities for an aggregate of \$451.25 million. The refinancing includes a new credit agreement providing for a \$350 million senior secured term loan and a \$101.25 million senior secured revolving credit facility. See Note 8 to our consolidated financial statements included in this annual report on Form 10-K for further details regarding this debt refinancing.

On December 31, 2012, we completed our acquisition of Lenox Hill Radiology, consisting of three multi-modality imaging centers as well as three additional X-Ray facilities all located in Manhattan, New York. We also acquired in this transaction a 31.5% interest in a joint venture multi-modality imaging center in Manhattan, New York and an

option to purchase a 50% interest in a multi-modality imaging center located in Brooklyn, New York for \$1.00. The purchase price consisted of approximately \$29.0 million in cash. We have made a preliminary fair value determination of the acquired assets and assumed liabilities and approximately \$4.5 million of working capital, \$7.2 million of fixed assets, \$648,000 of joint venture interests, \$2.5 million in a \$1.00 joint venture purchase option, \$100,000 of intangible assets \$15.7 million of goodwill and the assumption of approximately \$400,000 of other liabilities and \$1.3 million of capital lease debt was recorded with respect to this transaction. Our preliminary fair value determination will be made final with the help of an outside valuation expert which we expect to have completed by the end of our first quarter of 2013.

On January 30, 2013, we purchased an additional 20.9% interest in a joint venture multi-modality imaging center located in Manhattan, New York of which we initially held a 31.5% interest from our December 31, 2012 acquisition of Lenox Hill Radiology. This additional 20.9% interest gave us a controlling interest in the center and so accordingly, we will be consolidating its financial statements in the first quarter of 2013.

On February 28, 2013, we completed our acquisition of a multi-modality imaging center located in Brooklyn, New York by exercising a \$1.00 purchase option to acquire an initial 50% interest (we acquired this option through our December 31, 2012 acquisition of Lenox Hill Radiology) and then by purchasing the remaining 50% interest from the existing partner for approximately \$2.7 million in cash.

On December 3, 2012, we completed our acquisition of a multi-modality imaging center, Clinical Radiologists Medical Imaging located in Silver Spring, Maryland, for \$2.8 million in cash. We have made a fair value determination of the acquired assets and assumed liabilities and approximately \$65,000 of working capital, \$1.8 million of fixed assets, \$71,000 of other assets, \$1.8 million of goodwill and the assumption of approximately \$938,000 of capital lease debt was recorded with respect to this transaction.

On November 5, 2012, we completed our acquisition of a multi-modality imaging center, Vanowen Radiology located in Van Nuys, California, for cash consideration of \$550,000. We have made a fair value determination of the acquired assets and approximately \$164,000 of fixed assets and \$386,000 of goodwill was recorded with respect to this transaction.

On November 9, 2012, we completed our acquisition of a multi-modality imaging center, Pueblo Radiology located in Ventura, California, for cash consideration of \$750,000. This center is located in an area of Ventura where we operate an existing center and compete directly with Pueblo Radiology. We plan on closing our existing center and serving this location from this acquired center. We have made a fair value determination of the acquired assets and approximately \$1.6 million of fixed assets and no goodwill was recorded with respect to this transaction. In accordance with accounting standards, any excess of fair value of acquired net assets over the acquisition consideration results in a gain on bargain purchase. Prior to recording a gain, the acquiring entity must reassess whether all acquired assets and assumed liabilities have been identified and recognized and perform re-measurements to verify that the consideration paid, assets acquired, and liabilities assumed have been properly valued. We undertook such a reassessment, and as a result, have recorded a gain on bargain purchase of approximately \$810,000, which is included in Other Income within our consolidated statement of income for the year ended December 31, 2012. We believe that the gain on bargain purchase resulted from various factors that impacted the sale. The seller, a group of Radiologists some of whom own the building where the imaging center is based, were planning to close the imaging center, which was facing competition pressure from our existing RadNet center, and were facing possible expenses to renovate the building to make it available for a non-imaging center tenant. They saw the sale of these assets to RadNet and RadNet's assumption of an operating lease for the building as a way to avoid costly renovation expense, get out of a location where they were competing directly with a RadNet center and immediately establish a rental revenue stream. We believe that the seller was willing to accept a bargain purchase price from us in return for our ability to enter into a long-term lease agreement for the facility and establish an immediate rental revenue stream with no investment on their part.

On October 1, 2012 we acquired a 100% controlling interest in one of our non-consolidated joint venture imaging centers in which we previously held a 50% non-consolidated equity investment. As a result of this transaction, we began consolidating this imaging center, recording all of its assets and liabilities at their fair value at October 1, 2012. We have made a fair value determination of the acquired assets and assumed liabilities and \$2.1 million of fixed assets

and \$1.8 million of goodwill was recorded with respect to this transaction. We also assumed approximately \$1.9 million of capital lease debt and \$200,000 of other liabilities.

On August 6, 2012 we formed a limited liability company with Barnabas Health, a New Jersey owner and operator of a large New Jersey hospital system, for the purpose of creating a New Jersey imaging network under our management. Our first endeavor was to establish a multi-modality imaging center located in Cedar Knolls, New Jersey, of which we own 49%. Our initial investment of approximately \$1.8 million was recorded to investment in non-consolidated joint ventures.

On July 23, 2012, we completed our acquisition of a multi-modality imaging center, Orthopedic Imaging Center, LLC. located in Redlands, California, for cash consideration of \$700,000. We have made a fair value determination of the acquired assets and approximately \$373,000 of fixed assets, \$25,000 of other assets and \$302,000 of goodwill was recorded with respect to this transaction.

On July 1, 2012, we completed the sale of a 41% portion of our ownership interest of one of our consolidated joint ventures to our existing partner in that joint venture for \$1.8 million. After the sale, we retained a 49% ownership interest in this joint venture. As a result of this transaction we de-consolidated this joint venture and recorded the fair value of our remaining interest as an investment in non-consolidated joint venture accounted for under the equity method. We recorded a gain on de-consolidation of a joint venture of approximately \$2.8 million with respect to this transaction. Approximately \$1.4 million of this gain is related to the re-measurement to current fair value of our remaining 49% interest, using a market based valuation approach. The main input used in our valuation model was the \$1.8 million sale price of a 41% interest.

On May 1, 2012, we completed our acquisition of Advanced Medical Imaging of Stuart, L.P., which consists of two multi-modality imaging centers located in Stuart, Florida, for cash consideration of \$1.0 million. We have made a fair value determination of the acquired assets and approximately \$39,000 of fixed assets, \$88,000 of other current assets and \$923,000 of goodwill was recorded with respect to this transaction.

On April 1, 2012, we completed our acquisition of West Coast Radiology, which consists of five multi-modality imaging centers in Orange County, California, for cash consideration of \$8.1 million. The centers are located in Anaheim, Santa Ana/Tustin, Irvine and Mission Viejo/Laguna Niguel and operate a combination of MRI, CT, ultrasound, mammography, X-ray and other related modalities. We have made a fair value determination of the acquired assets and assumed liabilities and approximately \$715,000 of working capital, \$3.1 million of fixed assets, \$5.4 million of goodwill, \$200,000 of intangible assets and the assumption of approximately \$1.3 million of capital lease debt was recorded with respect to this transaction.

On February 29, 2012, we completed the acquisition of a multi-modality imaging center from TODIC, L.P. located in Camarillo, California for cash consideration of \$350,000. The facility provides MRI, CT, mammography, ultrasound and X-ray services. We have made a fair value determination of the acquired assets and assumed liabilities and approximately \$425,000 of fixed assets and \$86,000 of goodwill was recorded with respect to this transaction as well as the assumption of approximately \$40,000 of accrued liabilities and approximately \$121,000 of capital lease debt.

On February 29, 2012, we completed the acquisition of a multi-modality imaging center from Progressive MRI, LLC located in Frederick, Maryland for cash consideration of \$230,000. The facility provides MRI, CT, mammography, ultrasound and X-ray services. We have made a fair value determination of the acquired assets and approximately \$230,000 of fixed assets was recorded with respect to this transaction.

Results of Operations

The following table sets forth, for the periods indicated, the percentage that certain items in the statements of operations bears to net revenue before provision for bad debts .

Year Ended December 31, 2012 Compared to the Year Ended December 31, 2011

Service Fee Revenue , net of contractual allowances and discounts

Service fee revenue , net of allowances and discounts for the year ended December 31, 2012 was \$ 618.0 million compared to \$ 555.0 million for the year ended December 31, 2011, an increase of \$ 63.0 million, or 11.4 %.

Service fee revenue , net of allowances and discounts , including only those centers which were in operation throughout the full fiscal years of both 2012 and 2011, decreased \$6. 3 million, or 1. 2%. This 1. 2 % decrease is primarily the result of a similar percentage decrease in procedure volumes. This comparison excludes revenue contributions from centers that were acquired subsequent to January 1, 2011. For the year ended December 31, 2012, service fee revenue , net of contractual allowances and discounts, from centers that were acquired subsequent to January 1, 2011 and excluded from the above comparison was \$ 96.3 million. For the year ended December 31, 2011, net revenue from centers that were acquired subsequent to January 1, 2011 and excluded from the above comparison was \$27.0 million.

Provision for Bad Debts

Provision for bad debts increased \$3.6 million, or 16.0%, to \$25.9 million, or 3.8% of net revenue, for the year ended December 31, 2012 compared to \$22.3 million, or 3.7% of net revenue, for the year ended December 31, 2011. This increase is in line with the increase in service fee revenues.

Revenue Under Capitation Arrangements

Revenue under capitation arrangements for the year ended December 31, 2012 was \$55.1 million compared to \$52.5 million for the year ended December 31, 2011, an increase of \$2.6 million, or 5.0%.

Revenue under capitation arrangements, including only those centers which were in operation throughout the full fiscal years of both 2012 and 2011, increased \$174,000, or 0.3%. This comparison excludes revenue contributions from centers that were acquired subsequent to January 1, 2011. For the year ended December 31, 2012, revenue under capitation arrangements from centers that were acquired subsequent to January 1, 2011 and excluded from the above comparison was \$2.5 million. For the year ended December 31, 2011, net revenue from centers that were acquired subsequent to January 1, 2011 and excluded from the above comparison was \$46,000.

Operating Expenses

Cost of operations for the year ended December 31, 2012 increased approximately \$65.2 million, or 13.6%, from \$477.8 million for the year ended December 31, 2011 to \$543.0 million for the year ended December 31, 2012. The following table sets forth our operating expenses for the years ended December 31, 2012 and 2011 (in thousands):

| | Years Ended December 31, | |
|--|-----------------------------|-----------|
| | 2012 | 2011 |
| Salaries and professional reading fees, excluding stock-based compensation | \$298,409 | \$264,465 |
| Stock-based compensation | 2,736 | 3,110 |
| Building and equipment rental | 60,624 | 53,251 |
| Medical supplies | 38,879 | 34,014 |
| Other operating expenses * | 142,345 | 122,988 |
| Cost of operations | 542,993 | 477,828 |

| | | |
|---|-----------|-----------|
| Depreciation and amortization | 57,740 | 57,481 |
| Loss (gain) on sale and disposal of equipment | 456 | (2,240) |
| Severance costs | 736 | 1,391 |
| Total operating expenses | \$601,925 | \$534,460 |

* Includes billing fees, office supplies, repairs and maintenance, insurance, business tax and license, outside services, utilities, marketing, travel and other expenses.

· ***Salaries and professional reading fees, excluding stock-based compensation and severance***

Salaries and professional reading fees increased \$33.9 million, or 12.8%, to \$298.4 million for the year ended December 31, 2012, compared to \$264.5 million for the year ended December 31, 2011.

Salaries and professional reading fees, including only those centers which were in operation throughout the full fiscal years of both 2012 and 2011, increased \$3.8 million, or 1.5%. This 1.5% increase is primarily due to the fact that there was one additional work day during the year ended December 31, 2012 when compared to the prior year. There were also bonuses paid to certain members of management during the year ended December 31, 2012 that were not paid in the prior year. This comparison excludes contributions from centers that were acquired subsequent to January 1, 2011. For the year ended December 31, 2012, salaries and professional reading fees from centers that were acquired subsequent to January 1, 2011 and excluded from the above comparison was \$40.4 million. For the year ended December 31, 2011, salaries and professional reading fees from centers that were acquired subsequent to January 1, 2011, and excluded from the above comparison was \$10.2 million.

· ***Stock-based compensation***

Stock-based compensation decreased \$374,000, or 12.0%, to \$2.7 million for the year ended December 31, 2012 compared to \$3.1 million for the year ended December 31, 2011. The decrease is due to fewer equity compensation instruments being issued in 2012 compared to the prior year.

· ***Building and equipment rental***

Building and equipment rental expenses increased \$7.4 million, or 13.8%, to \$60.6 million for the year ended December 31, 2012, compared to \$53.2 million for the year ended December 31, 2011.

Building and equipment rental expenses, including only those centers which were in operation throughout the full fiscal years of both 2012 and 2011, increased \$1.2 million, or 2.5%. This 2.5% increase is primarily due to equipment lease buy-outs occurring in the third quarter of 2012. This comparison excludes contributions from centers that were acquired subsequent to January 1, 2011. For the year ended December 31, 2012, building and equipment rental expenses from centers that were acquired subsequent to January 1, 2011, and excluded from the above comparison, was \$8.8 million. For the year ended December 31, 2011, building and equipment rental expenses from centers that were acquired subsequent to January 1, 2011, and excluded from the above comparison, was \$2.6 million.

· *Medical supplies*

Medical supplies expense increased \$4.9 million, or 14.3%, to \$38.9 million for the year ended December 31, 2012, compared to \$34.0 million for the year ended December 31, 2011.

Medical supplies expenses, including only those centers which were in operation throughout the full fiscal years of both 2012 and 2011, decreased \$441,000, or 1.4%. This 1.4% decrease is in line with our decrease in service fee revenue. This comparison excludes contributions from centers that were acquired or divested subsequent to January 1, 2011. For the year ended December 31, 2012, medical supplies expense from centers that were acquired subsequent to January 1, 2011, and excluded from the above comparison was \$7.6 million. For the year ended December 31, 2011, medical supplies expense from centers that were acquired subsequent to January 1, 2011, and excluded from the above comparison was \$2.3 million.

· *Other Operating Expenses*

Other operating expenses increased \$19.3 million, or 15.7%, to \$142.3 million for the year ended December 31, 2012 compared to \$123.0 million for the year ended December 31, 2011.

Other operating expenses, including only those centers which were in operation throughout the full fiscal years of both 2012 and 2011, increased \$2.3 million, or 1.9%. This 1.9% increase is primarily due to an increase in insurance costs as well as increases in certain outside accounting and consulting services. This comparison excludes contributions from centers that were acquired or divested subsequent to January 1, 2011. For the year ended December 31, 2012, other operating expense from centers that were acquired subsequent to January 1, 2011, and excluded from the above comparison was \$22.3 million. For the year ended December 31, 2011, other operating expense from centers that were acquired subsequent to January 1, 2011, and excluded from the above comparison was \$5.3 million.

· *Depreciation and amortization expense*

Depreciation and amortization expense increased \$259,000, or 0.4%, to \$57.7 million for the year ended December 31, 2012 when compared to the same period last year. The increase is due to property and equipment additions for existing centers as well as newly acquired centers. Offsetting this is a catch-up reduction to depreciation of approximately \$1.4 million recorded in September of 2012 related to our finalization of purchase accounting for our acquisition of Raven Holdings U.S., Inc.

· *Loss (gain) on sale and disposal of equipment*

Loss on sale of equipment was approximately \$456,000 for the year ended December 31, 2012 and resulted primarily from the sale of imaging equipment for scrap value upon acquisition of upgraded equipment. Gain on sale of equipment was approximately \$2.2 million for the year ended December 31, 2011 and was primarily related to the difference between the net book value of certain equipment damaged in a fire at one of our imaging facilities and insurance proceeds we received from claims filed on this damaged equipment.

· *Severance costs*

During the year ended December 31, 2012, we recorded severance costs of \$736,000 compared to \$1.4 million recorded during the year ended December 31, 2011. In each period, these costs were primarily associated with the integration of acquired operations.

Interest expense

Interest expense increased approximately \$1.0 million, or 1.9%, to \$53.8 million for the year ended December 31, 2012 compared to \$52.8 million for the year ended December 31, 2011. Interest expense for the year ended December 31, 2012 included \$3.6 million of amortization of deferred financing costs and discount on issuance of debt as well as \$918,000 of amortization of Accumulated Other Comprehensive Loss associated with fair value adjustments to our interest rate swaps accumulated prior to April 6, 2010, the date we established our credit facilities. Interest expense for the year ended December 31, 2011 included \$3.2 million of amortization of deferred financing costs and discount on issuance of debt as well as \$1.2 million of amortization of Accumulated Other Comprehensive Loss associated with fair value adjustments to our interest rate swaps accumulated prior to April 6, 2010. See "Liquidity and Capital Resources" below for more details on our credit facilities. Excluding these adjustments to interest expense for each period, interest expense increased approximately \$900,000 for the year ended December 31, 2012 compared to the year ended December 31, 2011. This increase was primarily due to interest expense on the additional borrowings.

Gain on de-consolidation of joint venture

On July 1, 2012, we completed the sale of a 41% portion of our ownership interest of one of our consolidated joint ventures to our existing partner in that joint venture for \$1.8 million. After the sale, we retained a 49% ownership interest in this joint venture. As a result of this transaction we no longer include the financials of this joint venture in our consolidated financial statements and we recorded the fair value of our remaining interest as an investment in non-consolidated joint venture accounted for under the equity method. We recorded a gain on de-consolidation of a joint venture of approximately \$2.8 million with respect to this transaction. Approximately \$1.4 million of this gain is related to the re-measurement to current fair value of our remaining 49% interest, using a market based valuation approach. The main input used in our valuation model was the \$1.8 million sale price of a 41% interest.

Other income

For the year ended December 31, 2012 we recorded approximately \$3.7 million of other income primarily consisting of approximately \$5.1 million of fair value adjustments on our interest rate swaps and an \$810,000 bargain purchase gain related to our November 9, 2012 acquisition of Pueblo Radiology (see “Recent Developments and Facility Acquisitions” above), offset by the write-off of approximately \$2.2 million of other non-operating receivables. For the year ended December 31, 2011 we recorded approximately \$5.1 million of other income primarily related to fair value adjustments on our interest rate swaps.

Income tax benefit / expense

For the year ended December 31, 2012, we recorded a benefit from income taxes of approximately \$ 55.2 million primarily related to reversing the valuation allowance against our deferred tax assets (see Note 11 to our consolidated financial statements for more details). For the year ended December 31, 2011, we recorded \$820,000 for state income tax expense primarily related to taxable income generated in the states of California, Maryland and Delaware.

Equity in earnings from unconsolidated joint ventures

Equity in earnings from our unconsolidated joint ventures increased \$1.3 million, or 24.0% to \$6.5 million for the year ended December 31, 2012 compared to \$5.2 million for the year ended December 31, 2011. This increase primarily related to an increase in procedure volumes at these joint venture imaging centers.

Year Ended December 31, 2011 Compared to the Year Ended December 31, 2010

Service Fee Revenue , net of contractual allowances and discounts

Service fee revenue , net of allowances and discounts for the year ended December 31, 2011 was \$ 555.0 million compared to \$ 489.3 million for the year ended December 31, 2010, an increase of \$ 65.7 million, or 13 .4%.

Service fee revenue , net of contractual allowances and discounts , including only those centers which were in operation throughout the full fiscal years of both 2011 and 2010, increased \$ 2.6 million, or 0. 6%. This 0. 6 % increase is primarily the result of increases in our procedure volumes. This comparison excludes revenue contributions from centers that were acquired subsequent to January 1, 2010. This comparison excludes revenue contributions from centers that were acquired subsequent to January 1, 2010. For the year ended December 31, 2011, service fee revenue, net of contractual allowances and discounts, from centers that were acquired subsequent to January 1, 2010 and excluded from the above comparison was \$ 95.8 million. For the year ended December 31, 2010, net revenue from centers that were acquired subsequent to January 1, 2010 and excluded from the above comparison was \$32. 7 million.

Provision for Bad Debts

Provision for bad debts increased \$300,000, or 1.4%, to \$22.3 million, or 3.7% of net revenue, for the year ended December 31, 2011 compared to \$22.0 million, or 4.1% of net revenue, for the year ended December 31, 2010.

Revenue Under Capitation Arrangements

Revenue under capitation arrangements for the year ended December 31, 2011 was \$52.5 million compared to \$51.4 million for the year ended December 31, 2010, an increase of \$1.1 million, or 2.1%.

Revenue under capitation arrangements, including only those centers which were in operation throughout the full fiscal years of both 2011 and 2010, increased \$687,000, or 1.3%. This comparison excludes revenue contributions from centers that were acquired subsequent to January 1, 2010. For the year ended December 31, 2011, revenue under capitation arrangements from centers that were acquired subsequent to January 1, 2010 and excluded from the above comparison was \$500,000. For the year ended December 31, 2010, net revenue from centers that were acquired subsequent to January 1, 2010 and excluded from the above comparison was \$36,000.

Operating Expenses

Cost of operations for the year ended December 31, 2011 increased approximately \$56.8 million, or 13.5%, from \$421.0 million for the year ended December 31, 2010 to \$477.8 million for the year ended December 31, 2011. The following table sets forth our operating expenses for the years ended December 31, 2011 and 2010 (in thousands):

| | Years Ended December 31, | |
|--|-----------------------------|-----------|
| | 2011 | 2010 |
| Salaries and professional reading fees, excluding stock-based compensation | \$264,465 | \$231,922 |
| Stock-based compensation | 3,110 | 3,718 |
| Building and equipment rental | 53,251 | 47,938 |
| Medical supplies | 34,014 | 30,413 |
| Other operating expenses * | 122,988 | 106,982 |
| Cost of operations | 477,828 | 420,973 |
| Depreciation and amortization | 57,481 | 53,997 |
| Loss (gain) on sale and disposal of equipment | (2,240) | 1,136 |
| Severance costs | 1,391 | 838 |
| Total operating expenses | \$534,460 | \$476,944 |

* Includes billing fees, office supplies, repairs and maintenance, insurance, business tax and license, outside services, utilities, marketing, travel and other expenses.

· *Salaries and professional reading fees, excluding stock-based compensation and severance*

Salaries and professional reading fees increased \$32.6 million, or 14.0%, to \$264.5 million for the year ended December 31, 2011, compared to \$231.9 million for the year ended December 31, 2010.

Salaries and professional reading fees, including only those centers which were in operation throughout the full fiscal years of both 2011 and 2010, increased \$4.8 million, or 2.2%. This 2.2% increase is primarily due to expansion of our existing breast care centers.

This comparison excludes contributions from centers that were acquired subsequent to January 1, 2010. For the year ended December 31, 2011, salaries and professional reading fees from centers that were acquired subsequent to January 1, 2010 and excluded from the above comparison was \$42.6 million. For the year ended December 31, 2010, salaries and professional reading fees from centers that were acquired subsequent to January 1, 2010, and excluded from the above comparison was \$14.8 million.

· *Stock-based compensation*

Stock-based compensation decreased \$608,000, or 16.4%, to \$3.1 million for the year ended December 31, 2011 compared to \$3.7 million for the year ended December 31, 2010. The decrease is primarily due to a larger number of options granted during the first three quarters of 2010 that vested on the date of grant compared to the same period of 2011.

· *Building and equipment rental*

Building and equipment rental expenses increased \$5.3 million, or 11.1%, to \$53.2 million for the year ended December 31, 2011, compared to \$47.9 million for the year ended December 31, 2010.

Building and equipment rental expenses, including only those centers which were in operation throughout the full fiscal years of both 2011 and 2010, decreased \$246,000, or 0.6%. This 0.6% decrease is primarily due to equipment lease buy-outs occurring in the third quarter of 2011. This comparison excludes contributions from centers that were acquired subsequent to January 1, 2010. For the year ended December 31, 2011, building and equipment rental expenses from centers that were acquired subsequent to January 1, 2010, and excluded from the above comparison, was \$9.1 million. For the year ended December 31, 2010, building and equipment rental expenses from centers that were acquired subsequent to January 1, 2010, and excluded from the above comparison, was \$3.5 million.

· *Medical supplies*

Medical supplies expense increased \$3.6 million, or 11.8%, to \$34.0 million for the year ended December 31, 2011, compared to \$30.4 million for the year ended December 31, 2010.

Medical supplies expenses, including only those centers which were in operation throughout the full fiscal years of both 2011 and 2010, increased \$265,000, or 0.9%. This 0.9% increase is in line with the increase in our procedure volumes. This comparison excludes contributions from centers that were acquired or divested subsequent to January 1, 2010. For the year ended December 31, 2011, medical supplies expense from centers that were acquired subsequent to January 1, 2010, and excluded from the above comparison was \$ 4.7 million. For the year ended December 31, 2010, medical supplies expense from centers that were acquired subsequent to January 1, 2010, and excluded from the above comparison was \$1.4 million.

· *Other Operating Expenses*

Other operating expenses increased \$16.0 million, or 15.0%, to \$123.0 million for the year ended December 31, 2011 compared to \$107.0 million for the year ended December 31, 2010.

Other operating expenses, including only those centers which were in operation throughout the full fiscal years of both 2011 and 2010, increased \$1.8 million, or 1.8%. This 1.8% increase is primarily due to an increase in insurance costs as well as increases in certain outside accounting and consulting services. This comparison excludes contributions from centers that were acquired or divested subsequent to January 1, 2010. For the year ended December 31, 2011, other operating expense from centers that were acquired subsequent to January 1, 2010, and excluded from the above comparison was \$21.8 million. For the year ended December 31, 2010, other operating expense from centers that were acquired subsequent to January 1, 2010, and excluded from the above comparison was \$7.6 million.

· *Depreciation and amortization expense*

Depreciation and amortization expense increased \$3.5 million, or 6.5%, to \$57.5 million for the year ended December 31, 2011 when compared to the same period last year. The increase is primarily due to property and equipment additions for existing centers as well as newly acquired centers.

· *Loss (gain) on sale and disposal of equipment*

Gain on sale of equipment was approximately \$2.2 million for the year ended December 31, 2011 and was primarily from insurance proceeds received on equipment lost in a fire at one of our west coast imaging centers. Loss on sale of equipment was approximately \$1.1 million for the year ended December 31, 2010 and resulted primarily from the sale of imaging equipment for scrap value upon acquisition of upgraded equipment.

· *Severance costs*

During the year ended December 31, 2011, we recorded severance costs of \$1.4 million compared to \$838,000 recorded during the year ended December 31, 2010. In each period, these costs were primarily associated with the integration of acquired operations.

Interest expense

Interest expense increased approximately \$4.4 million, or 9.1%, to \$52.8 million for the year ended December 31, 2011 compared to \$48.4 million for the year ended December 31, 2010. Interest expense for the year ended December 31, 2011 included \$3.2 million of amortization of deferred financing costs as well as \$1.2 million of amortization of Accumulated Other Comprehensive Loss associated with fair value adjustments to our interest rate swaps accumulated prior to April 6, 2010, the date of our debt refinancing. Interest expense for the year ended December 31, 2010 included \$3.0 million of amortization of deferred financing costs as well as \$917,000 of amortization of Accumulated Other Comprehensive Loss associated with fair value adjustments to our interest rate swaps accumulated prior to April 6, 2010, the date of our debt refinancing. See "Liquidity and Capital Resources" below for more details on our debt refinancing. Excluding these adjustments to interest expense for each period, interest expense increased \$3.9 million. This increase was primarily due to interest expense on the additional borrowings under the debt refinancing completed April 6, 2010.

Loss on extinguishment of debt

For the year ended December 31, 2010, we recorded a \$9.9 million loss on extinguishment of debt related to our debt refinancing completed on April 6, 2010. This loss included a \$7.6 million write-off of deferred loan costs associated with our GE debt settled on April 6, 2010, as well as approximately \$2.3 million to settle a call premium associated with our prior credit facilities and for interest rate swap related expenses. There was no similar expense for the year ended December 31, 2011.

Other expenses

For the year ended December 31, 2011 we recorded approximately \$5.1 million of other income primarily related to fair value adjustments on our interest rate swaps. For the year ended December 31, 2010, we recorded approximately \$505,000 of other expenses which consisted of approximately \$132,000 related to fair value adjustments on our interest rate swaps as well as \$373,000 related to litigation.

Income tax expense

For the years ended December 31, 2011 and 2010, we recorded \$820,000 and \$576,000, respectively, for state income tax expense primarily related to taxable income generated in the states of California, Maryland and Delaware.

Equity in earnings from unconsolidated joint ventures

Equity in earnings from our unconsolidated joint ventures increased \$272,000, or 5.5% to \$5.2 million for the year ended December 31, 2011 compared to \$4.9 million for the year ended December 31, 2010. The 5.5% increase is primarily due to an improvement in collection rates during the end 2010.

Adjusted EBITDA

We use both GAAP and non-GAAP metrics to measure our financial results. We believe that, in addition to GAAP metrics, these non-GAAP metrics assist us in measuring our cash generated from operations and ability to service our debt obligations. We believe this information is useful to investors and other interested parties because we are highly leveraged and our non-GAAP metrics removes non-cash and nonrecurring charges that occur in the affected period and provides a basis for measuring the Company's financial condition against other quarters.

One non-GAAP measure we believe assists us is Adjusted EBITDA. We define Adjusted EBITDA as earnings before interest, taxes, depreciation and amortization, each from continuing operations as adjusted to exclude losses or gains on the disposal of equipment, other income or loss, loss on debt extinguishments, bargain purchase gains, loss on de-consolidation of joint ventures and non-cash equity compensation. Adjusted EBITDA includes equity earnings in unconsolidated operations and subtracts allocations of earnings to non-controlling interests in subsidiaries, and is adjusted for non-cash or extraordinary and one-time events taken place during the period.

Adjusted EBITDA is a non-GAAP financial measure used as an analytical indicator by us and the healthcare industry to assess business performance, and is a measure of leverage capacity and ability to service debt. Adjusted EBITDA should not be considered a measure of financial performance under GAAP, and the items excluded from Adjusted EBITDA should not be considered in isolation or as alternatives to net income, cash flows generated by operating, investing or financing activities or other financial statement data presented in the consolidated financial statements as an indicator of financial performance or liquidity. As Adjusted EBITDA is not a measurement determined in accordance with GAAP and is therefore susceptible to varying methods of calculation, this metric, as presented, may not be comparable to other similarly titled measures of other companies.

The following is a reconciliation of the nearest comparable GAAP financial measure, net income (loss), to Adjusted EBITDA for the years ended December 31, 2012, 2011, and 2010, respectively (in thousands):

| | Years Ended | | |
|--|----------------------|----------|-------------|
| | December 31, 2012 | 2011 | 2010 |
| | (Restated) | | |
| Net income (loss) attributable to RadNet, Inc. common stockholders | \$59,834 | \$7,231 | \$(12,852) |
| Plus Benefit from (provision for) income taxes | (55,227) | 820 | 576 |
| Plus Other (income) expenses | (3,679) | (5,075) | 505 |
| Plus Interest expense | 53,783 | 52,798 | 48,398 |
| Plus Severance costs | 736 | 1,391 | 838 |

| | | | |
|--|-----------|-----------|-----------|
| Plus Loss (gain) on sale and disposal of equipment | 456 | (2,240) | 1,136 |
| Gain on de-consolidation of joint venture | (2,777) | – | – |
| Plus Loss on extinguishment of debt | – | – | 9,871 |
| Plus Depreciation and amortization | 57,740 | 57,481 | 53,997 |
| Plus Non-cash employee stock based compensation | 2,736 | 3,110 | 3,718 |
| Adjusted EBITDA | \$113,602 | \$115,516 | \$106,187 |

Liquidity and Capital Resources

We had cash and cash equivalents of \$362,000 and accounts receivable of \$129.2 million at December 31, 2012, compared to cash of \$2.5 million and accounts receivable of \$128.4 million at December 31, 2011. We had a working capital balance of \$36.9 million and \$29.9 million at December 31, 2012 and 2011, respectively. We had net income attributable to RadNet, Inc.'s common stockholders of \$59.8 million and \$7.2 million, and a net loss of \$12.9 million for the years ended December 31, 2012, 2011 and 2010, respectively. We also had a stockholders' equity deficit of \$6.7 million and \$69.8 million at December 31, 2012 and 2011, respectively.

We operate in a capital intensive, high fixed-cost industry that requires significant amounts of capital to fund operations. In addition to operations, we require a significant amount of capital for the initial start-up and development of new diagnostic imaging facilities, the acquisition of additional facilities and new diagnostic imaging equipment. Because our cash flows from operations have been insufficient to fund all of these capital requirements, we have depended on the availability of financing under credit arrangements with third parties.

Based on our current level of operations, we believe that cash flow from operations and available cash, together with available borrowings from our senior secured credit facilities, will be adequate to meet our short-term and long-term liquidity needs. Our future liquidity requirements will be for working capital, capital expenditures, debt service and general corporate purposes. Our ability to meet our working capital and debt service requirements, however, is subject to future economic conditions and to financial, business and other factors, many of which are beyond our control. If we are not able to meet such requirements, we may be required to seek additional financing. There can be no assurance that we will be able to obtain financing from other sources on the terms acceptable to us, if at all.

On a continuing basis, we also consider various transactions to increase shareholder value and enhance our business results, including acquisitions, divestitures and joint ventures. These types of transactions may result in future cash proceeds or payments but the general timing, size or success of any acquisition, divestiture or joint venture effort and the related potential capital commitments cannot be predicted. We expect to fund any future acquisitions primarily with cash flow from operations and borrowings, including borrowing from amounts available under our senior secured credit facilities or through new equity or debt issuances.

We and our subsidiaries or affiliates may from time to time, in our or their sole discretion, continue to purchase, repay, redeem or retire any of our outstanding debt or equity securities in privately negotiated or open market transactions, by tender offer or otherwise. However, we have no formal plan of doing so at this time.

Sources and Uses of Cash

Cash provided by operating activities was \$75.3 million, \$57.6 million and \$66.9 million for the years ended December 31, 2012, 2011 and 2010, respectively.

Cash used in investing activities was \$87.2 million, \$87.7 million and \$101.4 million for the years ended December 31, 2012, 2011 and 2010, respectively. For the year ended December 31, 2012, we purchased property and equipment for approximately \$44.5 million, acquired the assets and businesses of additional imaging facilities for approximately \$45.6 million (see Note 4 to the consolidated financial statements of this annual report), and purchased additional equity interests in non-consolidated joint ventures of \$2.8 million. Offsetting our cash used in investing activities was \$2.3 million in proceeds from the sale of an acquired imaging center that was classified on our consolidated balance sheet at December 31, 2011 as an asset held for sale, \$1.8 million of proceeds from the sale of joint venture interests, and \$1.5 million of proceeds from the sale of imaging equipment.

Cash provided by financing activities was \$9.7 million, \$31.9 million and \$25.0 million for the years ended December 31, 2012, 2011 and 2010, respectively. The cash provided by financing for the year ended December 31, 2012, was primarily due to our refinancing of our Credit Facilities originally entered into on April 6, 2010.

2010 Credit Agreements

On April 6, 2010, we completed a series of transactions which we refer to as our "debt refinancing plan" for an aggregate of \$585.0 million. As part of the debt refinancing plan, our wholly owned subsidiary, Radnet Management, Inc., issued and sold \$200.0 million in 10 3/8% senior unsecured notes due 2018 (the "senior notes"). All payments of

the senior notes, including principal and interest, are guaranteed jointly and severally on a senior unsecured basis by RadNet, Inc. and all of Radnet Management's current and future domestic wholly owned restricted subsidiaries. The senior notes were issued under an indenture agreement dated April 6, 2010 (the "Indenture"), by and among Radnet Management, as issuer, RadNet, Inc., as parent guarantor, the subsidiary guarantors thereof and U.S. Bank National Association, as trustee, in a private placement that was not subject to the registration requirements of the Securities Act. The senior notes initially issued on April 6, 2010 in a private placement were subsequently publicly offered for exchange enabling holders of the outstanding senior notes to exchange the outstanding notes for publicly registered exchange notes with nearly identical terms. The exchange offer was completed on February 14, 2011.

In addition to the issuance of senior notes, Radnet Management entered into a Credit and Guaranty Agreement with a syndicate of lenders (the "Credit Agreement"), whereby Radnet Management obtained \$385.0 million in senior secured first-lien bank financing, consisting of (i) a \$285.0 million, six-year term loan facility and (ii) a \$100.0 million, five-year revolving credit facility, including a swing line subfacility and a letter of credit subfacility (collectively, the "Credit Facilities").

Radnet Management's obligations under the Credit Agreement were unconditionally guaranteed by RadNet, Inc., all of Radnet Management's current and future domestic subsidiaries as well as certain affiliates, including Beverly Radiology Medical Group III and its equity holders (Beverly Radiology Medical Group, Inc., BreastLink Medical Group, Inc. and ProNet Imaging Medical Group, Inc.). The Credit Facilities created by the Credit Agreement were secured by a perfected first-priority security interest in all of Radnet Management's and the guarantors' tangible and intangible assets, including, but not limited to, pledges of equity interests of Radnet Management and all of our current and future domestic subsidiaries.

2012 Refinancing

On October 10, 2012 we completed the refinancing of the Credit Facilities by entering into a new Credit and Guaranty Agreement with a syndicate of banks and other financial institutions (the "Refinance Agreement"). The total amount of refinancing was \$451.25 million, consisting of (i) a \$350 million senior secured term loan and (ii) a \$101.25 million senior secured revolving credit facility. The obligations of Radnet Management, Inc. under the Refinance Agreement are guaranteed by RadNet, Inc. and all of Radnet Management's current and future domestic subsidiaries and certain of our affiliates. The obligations under the Refinance Agreement, including the guarantees, are secured by a perfected first-priority security interest in all of Radnet Management's and the guarantors' tangible and intangible assets, including, but not limited to, pledges of equity interests of Radnet Management and all of our current and future domestic subsidiaries.

The termination date for the \$350 million term loan is the earliest to occur of (i) the sixth anniversary of the closing date (October 10, 2012), (ii) the date on which all of the term loans shall become due and payable in full under the Refinance Agreement whether by acceleration or otherwise and (iii) October 1, 2017 if our senior notes due 2018 have not been refinanced by such date. The termination date for the \$101.25 million revolving credit facility is the earliest to occur of (i) the fifth anniversary of the closing date, (ii) the date the revolving credit facility is permanently reduced to zero pursuant to section 2.13(b) of the Refinance Agreement, (iii) the date of the termination of the revolving credit facility pursuant to section 8.01 of the Refinance Agreement and (iv) October 1, 2017 if our senior notes due 2018 have not been refinanced by such date.

In connection with the refinancing of the Credit Facilities, Radnet Management used the net proceeds to repay in full its existing six year term loan facility for \$277.9 million in principal amount outstanding, which would have matured on April 6, 2016, and its revolving credit facility for \$59.8 million in principal amount outstanding, which would have matured on April 6, 2015.

At December 31, 2012, we had \$200.0 million aggregate principal amount of senior notes outstanding, \$349.13 million aggregate principal amount of senior secured term loan debt outstanding and \$33.0 million aggregate principal amount outstanding under the revolving credit facility.

Refinance Agreement

On October 10, 2012, we used the proceeds under the Refinance Agreement to refinance the indebtedness under the Credit Agreement. Under the Refinance Agreement, we obtained \$451.25 million in senior secured financing, consisting of a \$350 million, six-year term loan facility and a \$101.25 million, five-year revolving credit facility.

Interest. The Refinance Agreement bears interest through maturity at a rate determined by adding the applicable margin to either (a) the Base Rate, which is defined in the Refinance Agreement as the highest of (i) the prime rate quoted in the Wall Street Journal, (ii) the rate which is 0.5% in excess of the federal funds rate, (iii) (with respect to term loans only) 2.25% and (iv) 1.00% in excess of the one-month Adjusted Eurodollar Rate at such time, or (b) the Adjusted Eurodollar Rate, which is defined in the Refinance Agreement as the higher of (i) the London interbank offered rate, adjusted for statutory reserve requirements, for the respective interest period, as determined by the administrative agent and (ii) (with respect to term loans only) 1.25%. As used in the Refinance Agreement, applicable margin means (i) (a) with respect to term loans that are Eurodollar Rate Loans, 4.25% per annum and (b) with respect to term loans that are Base Rate Loans, 3.25% per annum; and (ii) (a) with respect to revolving loans that are Eurodollar Rate Loans, 4.25% per annum and (b) with respect to revolving loans and swing line loans that are Base Rate Loans, 3.25% per annum.

Payments. Commencing on December 31, 2012 we began making quarterly amortization payments on the term loan facility under the Refinance Agreement, each in the amount of \$875,000, with the remaining principal balance paid at maturity. Under the Refinance Agreement, we are also required to make mandatory prepayments, subject to specified exceptions, from consolidated excess cash flow, and upon certain events, including, but not limited to, (i) the receipt of net cash proceeds from the sale or other disposition of any property or assets by us or any of our subsidiaries, (ii) the receipt of net cash proceeds from insurance or condemnation proceeds paid on account of any loss of any property or assets of us or any of our subsidiaries, and (iii) the receipt of net cash proceeds from the incurrence of indebtedness by us or any of our subsidiaries (other than certain indebtedness otherwise permitted under the Refinance Agreement).

Guarantees and Collateral. The obligations under the Refinance Agreement are guaranteed by us, all of our current and future domestic subsidiaries and certain of our affiliates. The obligations under the Refinance Agreement and the guarantees are secured by a perfected first priority security interest in all of Radnet Management's and the guarantors' tangible and intangible assets, including, but not limited to, pledges of equity interests of Radnet Management and all of our current and future domestic subsidiaries.

Restrictive Covenants. In addition to certain customary covenants, the Refinance Agreement places limits on our ability to declare dividends or redeem or repurchase capital stock, prepay, redeem or purchase debt, incur liens and engage in sale-leaseback transactions, make loans and investments, incur additional indebtedness, amend or otherwise alter debt and other material agreements, engage in mergers, acquisitions and asset sales, enter into transactions with affiliates and alter the business we and our subsidiaries currently conduct.

Financial Covenants. The Refinance Agreement contains financial covenants including a maximum total leverage ratio and a limit on annual capital expenditures.

Events of Default. In addition to certain customary events of default, events of default under the Refinance Agreement include failure to pay principal or interest when due, a material breach of any representation or warranty contained in the loan documents, covenant defaults, events of bankruptcy and a change of control. The occurrence of an event of default could permit the lenders under the Refinance Agreement to declare all amounts borrowed, together with accrued interest and fees, to be immediately due and payable and to exercise other default remedies.

Senior Notes

On April 6, 2010, we issued \$200 million in aggregate amount of unsecured senior notes which have a coupon of 10.375% and were issued at a price of 98.680%. The senior notes were issued by Radnet Management, Inc. and guaranteed jointly and severally on a senior unsecured basis by us and all of our current and future wholly-owned domestic restricted subsidiaries. The senior notes were offered and sold in a private placement exempt from registration under the Securities Act to qualified institutional buyers pursuant to Rule 144A and Regulation S under the Securities Act. We pay interest on the senior notes on April 1 and October 1, commencing October 1, 2010, and they will expire on April 1, 2018. The senior notes are governed under the Indenture. Under the terms of the indenture, we agreed to file a registration statement with the SEC relating to an offer to exchange the senior notes for registered publicly tradable notes that have substantially identical terms as the senior notes. On August 30, 2010, we filed a registration statement on Form S-4 with the SEC relating to the offer to exchange the senior notes. On January 13, 2011, our registration statement was declared effective by the SEC. On February 14, 2011, we completed an exchange offer whereby all senior notes were exchanged for registered publicly tradable notes.

Ranking. The senior notes and the guarantees:

- rank equally in right of payment with any existing and future unsecured senior indebtedness of the guarantors;
- rank senior in right of payment to all existing and future subordinated indebtedness of the guarantors;
- are effectively subordinated in right of payment to any secured indebtedness of the guarantors (including indebtedness under the Refinance Agreement) to the extent of the value of the assets securing such indebtedness; and
- are structurally subordinated in right of payment to all existing and future indebtedness and other liabilities of any of the Company's subsidiaries that is not a guarantor of the senior notes.

Optional Redemption. Radnet Management may redeem the senior notes, in whole or in part, at any time on or after April 1, 2014, at the redemption prices specified under the Indenture. Prior to April 1, 2013, we may redeem up to 35% of aggregate principal amount of the senior notes issued under the Indenture from the net proceeds of one or more equity offerings at a redemption price equal to 110.375% of the senior notes redeemed, plus accrued and unpaid

interest, if any. Radnet Management is also permitted to redeem the senior notes prior to April 1, 2014, in whole or in part, at a redemption price equal to 100% of the principal amount redeemed, plus a make-whole premium and accrued and unpaid interest, if any.

Change of Control and Asset Sales. If a change in control of Radnet Management occurs, Radnet Management must give holders of the senior notes the opportunity to sell their senior notes at 101% of their face amount, plus accrued interest. If we or one of our restricted subsidiaries sells assets under certain circumstances, Radnet Management will be required to make an offer to purchase the senior notes at their face amount, plus accrued and unpaid interest to the purchase date.

Restrictive Covenants. The Indenture contains covenants that limit, among other things, the ability of us and our restricted subsidiaries, to:

- pay dividends or make certain other restricted payments or investments;

- incur additional indebtedness and issue preferred stock;

- create liens (other than permitted liens) securing indebtedness or trade payables unless the notes are secured on an equal and ratable basis with the obligations so secured, and, if such liens secure subordinated indebtedness, the notes are secured by a lien senior to such liens;

- sell certain assets or merge with or into other companies or otherwise dispose of all or substantially all of our assets;

- enter into certain transactions with affiliates;
- create restrictions on dividends or other payments by our restricted subsidiaries; and
- create guarantees of indebtedness by restricted subsidiaries.

However, these limitations are subject to a number of important qualifications and exceptions, as described in the Indenture. As of December 31, 2012, we were in compliance with all covenants.

Contractual Commitments

Our future obligations for notes payable, equipment under capital leases, lines of credit, equipment and building operating leases and purchase and other contractual obligations for the next five years and thereafter include (dollars in thousands):

| | 2013 | 2014 | 2015 | 2016 | 2017 | Thereafter | Total |
|----------------------|-----------|----------|----------|----------|----------|------------|-------------|
| Notes payable (1) | \$47,225 | \$44,873 | \$45,596 | \$45,405 | \$77,580 | \$555,783 | \$816,462 |
| Capital leases (2) | 4,232 | 2,553 | 734 | 532 | 185 | – | 8,236 |
| Operating leases (3) | 54,571 | 45,975 | 38,949 | 30,668 | 21,131 | 50,465 | 241,759 |
| Total | \$106,028 | \$93,401 | \$85,279 | \$76,605 | \$98,896 | \$606,248 | \$1,066,457 |

(1) Includes variable rate debt for which the contractual obligation was estimated using the applicable rate at December 31, 2012.

(2) Includes interest component of capital lease obligations.

(3) Includes all operating leases through the end of their lease term.

We have an arrangement with GE Medical Systems under which it has agreed to be responsible for the maintenance and repair of a majority of our equipment for a fee that is based on the type and age of the equipment. Under this agreement, we are committed to minimum payments of approximately \$23.0 million per year through 2016.

Critical Accounting Policies

Use of Estimates

Our discussion and analysis of financial condition and results of operations are based on our consolidated financial statements that were prepared in accordance with U.S. generally accepted accounting principles, or GAAP. Management makes estimates and assumptions when preparing financial statements. These estimates and assumptions affect various matters, including:

- our reported amounts of assets and liabilities in our consolidated balance sheets at the dates of the financial statements;
- our disclosure of contingent assets and liabilities at the dates of the financial statements; and
- our reported amounts of net revenue and expenses in our consolidated statements of operations during the reporting periods.

These estimates involve judgments with respect to numerous factors that are difficult to predict and are beyond management's control. As a result, actual amounts could differ materially from these estimates.

The SEC defines critical accounting estimates as those that are both most important to the portrayal of a company's financial condition and results of operations and require management's most difficult, subjective or complex judgment, often as a result of the need to make estimates about the effect of matters that are inherently uncertain and may change in subsequent periods. In note 2 to our consolidated financial statements, we discuss our significant accounting policies, including those that do not require management to make difficult, subjective or complex judgments or estimates. The most significant areas involving management's judgments and estimates are described below.

Revenues

Service fee revenue, net of contractual allowances and discounts, consists of net patient fees received from various payers and patients themselves based mainly upon established contractual billing rates, less allowances for contractual adjustments and discounts. As it relates to BRMG centers, this service fee revenue includes payments for both the professional medical interpretation revenue recognized by BRMG as well as the payment for all other aspects related to our providing the imaging services, for which we earn management fees from BRMG. As it relates to non-BRMG centers, this service fee revenue is earned through providing the use of our diagnostic imaging equipment and the provision of technical services as well as providing administration services such as clerical and administrative personnel, bookkeeping and accounting services, billing and collection, provision of medical and office supplies, secretarial, reception and transcription services, maintenance of medical records, and advertising, marketing and promotional activities.

Service fee revenues are recorded during the period the services are provided based upon the estimated amounts due from the patients and third-party payers. Third-party payers include federal and state agencies (under the Medicare and Medicaid programs), managed care health plans, commercial insurance companies and employers. Estimates of contractual allowances under managed care health plans are based upon the payment terms specified in the related contractual agreements. Contractual payment terms in managed care agreements are generally based upon predetermined rates per discounted fee-for-service rates. We also record a provision for doubtful accounts (based primarily on historical collection experience) related to patients and copayment and deductible amounts for patients who have health care coverage under one of our third-party payers.

Under capitation arrangements with various health plans, we earn a per-enrollee amount each month for making available diagnostic imaging services to all plan enrollees under the capitation arrangement. Revenue under capitation arrangements is recognized in the period which we are obligated to provide services to plan enrollees under contracts with various health plans.

Our revenue, net of contractual allowances, discounts and provision for bad debts for the years ended December 31, are summarized in the following table (in thousands):

| | Years Ended December 31, | | |
|---------------------------------------|--------------------------|-----------|-----------|
| | 2012 | 2011 | 2010 |
| Commercial Insurance | \$409,114 | \$376,107 | \$337,980 |
| Medicare | 122,971 | 107,613 | 103,055 |
| Medicaid | 20,101 | 17,756 | 16,118 |
| Workers' Compensation/Personal Injury | 26,604 | 23,137 | 21,002 |
| Other | 39,192 | 30,367 | 11,140 |

Edgar Filing: RadNet, Inc. - Form 10-K/A

| | | | |
|--|-----------|-----------|-----------|
| Service fee revenue, net of contractual allowances and discounts | 617,982 | 554,979 | 489,294 |
| Provision for bad debts | (25,904) | (22,339) | (21,995) |
| Net service fee revenue | 592,078 | 532,640 | 467,299 |
| Revenue under capitation arrangements | 55,075 | 52,481 | 51,358 |
| Total net revenue | \$647,153 | \$585,121 | \$518,657 |

The break-out of our service fee revenue, net of contractual allowances and discounts, is calculated based upon global payments received from consolidated imaging centers from dates of service from each respective period illustrated.

Provision for Bad Debts

We provide for an allowance against accounts receivable that could become uncollectible to reduce the carrying value of such receivables to their estimated net realizable value. We estimate this allowance based on the aging of our accounts receivable by each type of payer over an 18-month look-back period and other relevant factors. A significant portion of our provision for bad debt relates to co-payments and deductibles owed to us from patients with insurance. Although we attempt to collect deductibles and co-payments due from patients with insurance at the time of service, this attempt to collect at the time of service is not an assessment of the patient's ability to pay nor are revenues recognized based on an assessment of the patient's ability to pay. There are various factors that can impact collection trends, such as changes in the economy, which in turn have an impact on the increased burden of co-payments and deductibles to be made by patients with insurance. These factors continuously change and can have an impact on collection trends and our estimation process.

Accounts Receivable

Substantially all of our accounts receivable are due under fee-for-service contracts from third party payors, such as insurance companies and government-sponsored healthcare programs, or directly from patients. Services are generally provided pursuant to one-year contracts with healthcare providers. Receivables generally are collected within industry norms for third-party payors. We continuously monitor collections from our payors and maintain an allowance for bad debts based upon specific payor collection issues that we have identified and our historical experience.

Depreciation and Amortization of Long-Lived Assets

We depreciate our long-lived assets over their estimated economic useful lives with the exception of leasehold improvements where we use the shorter of the assets useful lives or the lease term of the facility for which these assets are associated.

Deferred Tax Assets

We evaluate the realizability of the net deferred tax assets and assess the valuation allowance periodically. If future taxable income or other factors are not consistent with our expectations, an adjustment to our allowance for net deferred tax assets may be required. For net deferred tax assets we consider estimates of future taxable income, including tax planning strategies, in determining whether our net deferred tax assets are more likely than not to be realized.

Valuation of Goodwill and Long-Lived Assets

Goodwill at December 31, 2012 totaled \$193.9 million. Goodwill is recorded as a result of business combinations. Management evaluates goodwill, at a minimum, on an annual basis and whenever events and changes in circumstances suggest that the carrying amount may not be recoverable in accordance with ASC 350, *Intangibles – Goodwill and Other*. Impairment of goodwill is tested at the reporting unit level by comparing the reporting unit's carrying amount, including goodwill, to the fair value of the reporting unit. The fair value of a reporting unit is estimated using a combination of the income or discounted cash flows approach and the market approach, which uses comparable market data. If the carrying amount of the reporting unit exceeds its fair value, goodwill is considered impaired and a second step is performed to measure the amount of impairment loss, if any. We tested goodwill for impairment on October 1, 2012. Based on our test, we noted no impairment related to goodwill as of October 1, 2012 as the estimated fair value of each reporting unit exceeded its carrying value by no less than 38%. Our largest reporting unit, which is our California Operations, has goodwill of \$67.5 million and an estimated fair value in excess of carrying value of 43% as of October 1, 2012. However, if estimates or the related assumptions change in the future, we may be required to record impairment charges to reduce the carrying amount of goodwill.

We evaluate our long-lived assets (property and equipment) and intangibles, other than goodwill, for impairment whenever indicators of impairment exist. The accounting standards require that if the sum of the undiscounted expected future cash flows from a long-lived asset or definite-lived intangible is less than the carrying value of that asset, an asset impairment charge must be recognized. The amount of the impairment charge is calculated as the excess of the asset's carrying value over its fair value, which generally represents the discounted future cash flows from that asset or in the case of assets we expect to sell, at fair value less costs to sell. No indicators of impairment

were identified with respect to our long-lived assets as of December 31, 2012.

Recent Accounting Standards

On January 1, 2012, we adopted ASU 2011-05, “*Comprehensive Income (Topic 220): Presentation of Comprehensive Income*,” which updates existing guidance on comprehensive income. This guidance eliminates the option to present the components of other comprehensive income as part of our Condensed Consolidated Statements of Equity and Comprehensive Income, which was our previous presentation. It requires companies to present the total of comprehensive income, the components of net income and the components of other comprehensive income either in a single continuous statement of comprehensive income or in two separate but consecutive statements. In the two statement approach which we have adopted, the first statement presents total net income and its components followed consecutively by a second statement that presents total other comprehensive income, the components of other comprehensive income and the total of comprehensive income. The adoption of this pronouncement did not have any effect on our financial condition or results of operations, though it did change our financial statement presentation.

On January 1, 2012, we adopted ASU 2011-07, “*Health Care Entities (Topic 954): Presentation and Disclosure of Patient Service Revenue, Provision for Bad Debts, and the Allowance for Doubtful Accounts for Certain Health Care Entities*,” which requires health care entities to present the provision for doubtful accounts relating to patient service revenue as a deduction from patient service revenue in the statement of operations rather than as an operating expense. Additional disclosures relating to sources of patient revenue and the allowance for doubtful accounts related to patient accounts receivable are also required. Such additional disclosures are included in Note 2 of our consolidated financial statements. The adoption of this ASU had no impact on our financial condition, results of operations or cash flows, although it did change our financial statement presentation.

On January 1, 2012, we adopted ASU 2011-08, “*Intangibles—Goodwill and Other (Topic 350): Testing Goodwill for Impairment*”, simplifying how a company is required to test goodwill for impairment. Companies will now have the option to first assess qualitative factors to determine whether it is more likely than not that the fair value of a reporting unit is less than its carrying amount. If the company determines that it is not more likely than not that the fair value of a reporting unit is less than its carrying amount, then performing the two-step impairment test is unnecessary. This qualitative assessment was not performed as of December 31, 2012.

In July 2012, the FASB modified existing rules to allow entities to use a qualitative approach to test indefinite-lived intangible asset for impairment. The revised standard allows an entity the option to first assess qualitatively whether it is more likely than not (that is, a likelihood of more than 50 percent) that an indefinite-lived intangible asset is impaired. An entity is not required to calculate the fair value of an indefinite-lived intangible asset and perform the quantitative impairment test unless the entity determines that it is more likely than not that the asset is impaired. This guidance will be effective for the Company in 2013, but early adoption is permitted. Adoption of this standard will not have a material impact on our results of operations, cash flows, or financial position.

In February 2013, the FASB issued new guidance which requires disclosure of information about significant reclassification adjustments from accumulated other comprehensive income in a single note or on the face of the financial statements. This guidance will be effective for the Company in 2013. Adoption of this standard, which is related to disclosure only, will not have an impact on the Company's consolidated financial position, results of operations, or cash flows.

Item 7A. Quantitative and Qualitative Disclosures About Market Risk

Foreign Currency Exchange Risk. We sell our services exclusively in the United States and receive payment for our services exclusively in United States dollars. As a result, our financial results are unlikely to be affected by factors such as changes in foreign currency, exchange rates or weak economic conditions in foreign markets.

After the completion of the acquisition of Image Medical Corporation, the parent of eRAD, Inc. on October 1, 2010, we maintain research and development facilities in Prince Edward Island, Canada and Budapest, Hungary for which expenses are paid in the local currency. Accordingly, we do have currency risk resulting from fluctuations between such local currency and the United States Dollar. At the present time, we do not have any foreign exchange currency contracts to mitigate this risk. Fluctuations in foreign exchange rates could impact future operating results. A hypothetical 1% increase in the rate of exchange of foreign currencies against the dollar for 2012 would have resulted in an increase of approximately \$10,000 in our operating expenses for the year.

Interest Rate Sensitivity. Radnet Inc. pays interest on various types of debt instruments to its suppliers, investors and lending institutions. The agreements entail either fixed or variable interest rates. Instruments which have fixed rates include leases on equipment and interest due on our \$200 million outstanding senior notes. Variable rate interest obligations relate primarily to amounts borrowed under our outstanding credit facilities, which allows elections of either LIBOR or prime rates of interest. Under the Refinance Agreement's LIBOR election facility, borrowed funds bear a 1.25% floor or 6 month LIBOR plus an applicable margin of 4.25%. At December 31, 2012, we had \$348.3 million outstanding subject to a LIBOR election. As the LIBOR floor exceeds the current spot rate of 6 month LIBOR, the spot rate would have to increase more than 74 basis points before an additional interest expense would be accrued. An increase of 174 basis points would be necessary to realize a hypothetical 1% increase in the borrowing rate and a resultant \$3.5 million of additional interest expense. At December 31, 2012, an additional \$33.9 million was tied to the prime rate. A hypothetical 1% increase in the prime rate for 2012 would have resulted in an increase of

approximately \$339,000 in interest expense for the year ended December 31, 2012.

Item 8. Financial Statements and Supplementary Data

The Financial Statements are attached hereto and begin on page 53 .

Report of Independent Registered Public Accounting Firm

The Board of Directors and Stockholders of RadNet, Inc.

We have audited the accompanying consolidated balance sheets of RadNet, Inc. and subsidiaries (the “Company” or “RadNet”) as of December 31, 2012 and 2011, and the related consolidated statements of operations, comprehensive income (loss), equity deficit, and cash flows for each of the three years in the period ended December 31, 2012. Our audits also included the financial statement schedule listed in the Index at Item 15(a)(2). These financial statements and schedule are the responsibility of the Company’s management. Our responsibility is to express an opinion on these financial statements and schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the consolidated financial position of RadNet, Inc. and subsidiaries at December 31, 2012 and 2011, and the consolidated results of their operations and their cash flows for each of the three years in the period ended December 31, 2012, in conformity with U.S. generally accepted accounting principles. Also, in our opinion, the related financial statement schedule when considered in relation to the basic financial statements taken as a whole, presents fairly in all material respects the information set forth therein.

As discussed in Note 1A to the consolidated financial statements, the 2012 financial statements have been restated to correct an error in accounting for income taxes.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), RadNet’s internal control over financial reporting as of December 31, 2012, based on criteria established in Internal Control-Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated March 18, 2013, except for the effects of the material weakness described in the sixth paragraph as to which the date is November 13, 2013, expressed an adverse opinion thereon.

/s/ Ernst & Young LLP

Los Angeles, California

March 18, 2013 , except for Note 1A, as to which the date is November 13, 2013.
