Item 8.01. Other Events

OGE Energy Corp. (the Company) is the parent company of Oklahoma Gas and Electric Company (OG&E), a regulated electric utility with approximately 759,000 customers in Oklahoma and western Arkansas, and Enogex Inc. and its subsidiaries (Enogex), a natural gas pipeline business with principal operations in Oklahoma and Texas.

On September 10, 2007, the Oklahoma Corporation Commission (OCC) voted 2-1 to deny OG&E and Public Service Co. of Oklahoma s (PSO) request for pre-approval of their proposed 950 megawatt Red Rock power plant project. The plant, which was to be built at OG&E s Sooner plant site, was to be 42% owned by OG&E, 50% owned by PSO and 8% owned by the Oklahoma Municipal Power Authority (OMPA). The OCC s Administrative Law Judge had previously reviewed the proposal and supported the project. However, final approval rested with the three OCC commissioners. OG&E has begun conferences with PSO and the OMPA to determine the most effective next step. However, pending a review of the OCC s written order, which is expected in mid to late September, OG&E believes it is unlikely the Red Rock proposal could move forward.

Also, on September 14, 2007, OG&E announced that it plans to construct the Oklahoma portion of a new 345kV transmission line from north-central Oklahoma to a substation near Wichita, Kansas, as part of the expanded Regional Planning Process under the direction of the Southwest Power Pool (SPP). The approximately 40-mile segment to be built by OG&E, along with another 40-mile segment of line to be built by Westar Energy of Topeka, Kansas, will provide additional capability to move more power on the regional transmission grid, particularly that part of the grid serving Kansas and Oklahoma. The OG&E-Westar project has been authorized by the SPP and OG&E expects to begin the construction process promptly. The SPP Board of Directors concluded that the project will qualify for Base-Plan funding status, which will spread a portion of the cost of the project to all users in the SPP. OG&E expects to complete construction of the line, at a cost estimated at \$40 million, by late 2010. The press release relating to the transmission line project is furnished as Exhibit 99.01 and incorporated herein by reference.

Exhibit 99.01

OG&E to build major transmission tie to Kansas

Project is part of Southwest Power Pool regional plan

OKLAHOMA CITY OG&E Electric Services announced today it plans to construct the Oklahoma portion of a new 345kV transmission line from north-central Oklahoma to a substation near Wichita, Kan., as part of the expanded Regional Planning Process under the direction of the Southwest Power Pool (SPP).

The approximately 40-mile segment to be built by OG&E, along with another 40-mile segment of line to be built by Westar Energy of Topeka, Kan., will provide additional capability to move more power on the regional transmission grid, particularly that part of the grid serving Kansas and Oklahoma.

This line marks a continuation of OG&E's 105-year tradition of building electric infrastructure to meet growing energy demand, said Steven E. Moore, chairman and CEO of OGE Energy Corp. (NYSE: OGE), parent of OG&E.

The OG&E-Westar project has been authorized by the SPP and OG&E expects to begin the construction process promptly. The project will qualify for Base-Plan funding status, which will spread a portion of the cost of the project to all users in the SPP.

This new line is truly a win-win for everyone, said Mel Perkins, vice president of Power Delivery for OG&E. It will improve the reliability of the system and allow for cost-effective power transfers, with the cost shared by all users of the system within the SPP.

OG&E plans to work with property owners to find the best route for the new line. The company held Town Hall meetings in August to solicit public input. OG&E expects to complete construction of the line, at a cost estimated at \$40 million, by late 2010.

OG&E serves more than 758,000 customers in a service territory spanning 30,000 square miles in Oklahoma and western Arkansas. OGE Energy also is the parent of Enogex Inc., a natural gas pipeline business with principal operations in Oklahoma.

Some of the matters discussed on this news release may contain forward-looking statements that are subject to certain risks, uncertainties and assumptions. Such forward-looking statements are intended to be identified in this document by the words anticipate, believe, estimate, expect, intend, objective, plan, possible, potential, project and similar expressions. Actual results may vary materially. Factors that could cause actual results to differ materially from the forward-looking statements include, but are not limited to general economic conditions, including the availability of credit, actions of rating agencies and their impact on capital expenditures; OGE Energy Corp.'s (collectively, with its subsidiaries, the Company) ability and the ability of its subsidiaries to obtain financing on favorable terms; prices and availability of electricity, coal, natural gas and natural gas liquids, each on a stand-alone basis and in relation to each other; business conditions in the energy industry; competitive factors including the extent and timing of the entry of additional competition in the markets served by the Company; unusual weather; availability and prices of raw materials for current and future
