Introduction About Freddie Mac

INTRODUCTION

This Annual Report on Form 10-K includes forward-looking statements that are based on current expectations and are subject to significant risks and uncertainties. These forward-looking statements are made as of the date of this Form 10-K. We undertake no obligation to update any forward-looking statement to reflect events or circumstances after the date of this Form 10-K. Actual results might differ significantly from those described in or implied by such statements due to various factors and uncertainties, including those described in the “Forward-Looking Statements” and “Risk Factors” sections of this Form 10-K.

Throughout this Form 10-K, we use certain acronyms and terms that are defined in the “Glossary.”

ABOUT FREDDIE MAC

Freddie Mac is a GSE chartered by Congress in 1970. Our public mission is to provide liquidity, stability, and affordability to the U.S. housing market. We do this primarily by purchasing residential mortgage loans originated by lenders. In most instances, we package these loans into mortgage-related securities, which are guaranteed by us and sold in the global capital markets. We also invest in mortgage loans and mortgage-related securities. We do not originate loans or lend money directly to borrowers.

We support the U.S. housing market and the overall economy by enabling America’s families to access mortgage loan funding with better terms and by providing consistent liquidity to the multifamily mortgage market, which we do primarily by providing financing for workforce housing. We have helped many distressed borrowers keep their homes or avoid foreclosure. We are working with FHFA, our customers and the industry to build a better housing finance system for the nation.

CONSERVATORSHIP AND GOVERNMENT SUPPORT FOR OUR BUSINESS

Since September 2008, we have been operating in conservatorship, with FHFA acting as our Conservator. The conservatorship and related matters significantly affect our management, business activities, financial condition, and results of operations. Our future is uncertain, and the conservatorship has no specified termination date. We do not know what changes may occur to our business model during or following conservatorship, including whether we will continue to exist.

Our Purchase Agreement with Treasury and the terms of the senior preferred stock we issued to Treasury constrain our business activities. However, the support provided by Treasury pursuant to the Purchase Agreement also enables us to have adequate liquidity to conduct our normal business activities. The Purchase Agreement requires our future profits to be distributed to Treasury, and we cannot retain capital from the earnings generated by our business operations (other than a limited amount that will decrease to zero in 2018) or return capital to stockholders other than Treasury. Consequently, our ability to access funds from Treasury under the Purchase Agreement is critical to keeping us solvent and avoiding the appointment of a receiver by FHFA under statutory mandatory receivership provisions. For more information on the conservatorship and government support for our business, see “MD&A - Conservatorship and Related Matters” and Note 2.

The tables and graphs below show our cumulative draws from Treasury and cumulative dividend payments to Treasury under the Purchase Agreement. The Treasury draw amounts shown are the total draws requested based on our quarterly net deficits for the periods presented. Draw requests are funded

Introduction About Freddie Mac

in the quarter subsequent to any net deficit. Under the Purchase Agreement, the payment of dividends does not reduce the outstanding liquidation preference of the senior preferred stock, which remains \$72.3 billion. The amount of available funding remaining under the Purchase Agreement is \$140.5 billion, and would be reduced by any future draws.

Draws From Treasury

(In billions)	Total
Total Senior Preferred Stock Outstanding	\$72.3
Less: Initial Liquidation Preference	1.0
Treasury Draws	\$71.3

Dividend Payments to Treasury

(In billions)	Total
Dividend Payments as of 12/31/16	\$101.4
Scheduled Q1 2017 Dividend Obligation	4.5
Total Dividend Payments	\$105.9

Introduction About Freddie Mac

CONSOLIDATED FINANCIAL RESULTS

Comprehensive Income

Our comprehensive income for 2016 increased compared to 2015, primarily as a result of the following items:

• Lower derivative fair value losses due to an increase in longer-term interest rates during 2016 compared to 2015 when longer-term interest rates declined slightly;

• Higher other income primarily as a result of improved pricing on K Certificates and SB Certificates, coupled with increased fair value gains on multifamily mortgage loans for which we have elected the fair value option and multifamily mortgage loan purchase commitments for which we newly elected the fair value option beginning in 2016, due to market spread tightening in 2016 compared to widening in 2015; partially offset by the following:

• Lower net interest income due primarily to continued reduction in the balance of our mortgage-related investments portfolio; and

• Increased losses on investment securities primarily as a result of an increase in interest rates during 2016 compared to 2015 when longer-term interest rates declined slightly, coupled with a decrease in realized gains in 2016 as we sold fewer non-agency securities in an unrealized gain position.

Our comprehensive income for 2015 declined compared to 2014, primarily as a result of the following items:

Freddie Mac 2016 Form 10-K 3

Introduction About Freddie Mac

Lower other income, as we did not have any significant litigation settlements in 2015 related to our investments in non-agency mortgage-related securities. By comparison, we had a number of favorable significant litigation settlements in 2014;

We recorded fair value losses in 2015 on certain mortgage loans and mortgage-related securities that are measured at fair value due to market spread widening, while in 2014 we recorded gains due to market spread tightening; partially offset by

Lower derivative fair value losses in 2015 than in 2014. Longer-term interest rates declined less in 2015 than in 2014, when the yield curve also flattened, leading to lower losses.

Variability of Earnings

Our financial results are subject to significant earnings variability from period to period. This variability is primarily driven by:

Interest-Rate Volatility — We hold assets and liabilities that expose us to interest-rate risk. Through our use of derivatives, we manage our exposure to interest-rate risk on an economic basis to a low level as measured by our models. However, the way we account for our financial assets and liabilities (i.e., some are measured at amortized cost, while others are measured at fair value), including derivatives, creates volatility in our GAAP earnings when interest rates fluctuate. Based upon the composition of our financial assets and liabilities, including derivatives, at December 31, 2016, we generally recognize fair value losses in earnings when interest rates decline. This volatility generally is not indicative of the underlying economics of our business. For information about our interest-rate risk management activities and the sensitivity of our financial results to interest-rate volatility, see "MD&A - Consolidated Results of Operations - Derivative Gains (Losses) - Explanation of Key Drivers of Derivative Gains (Losses)", "MD&A - Consolidated Results of Operations - Other Key Drivers - Items Affecting Multiple Lines - Debt Funding Strategies and Interest-Rate Risk Management Activities," and "MD&A - Risk Management - Market Risk."

Spread Volatility — The volatility of market spreads (i.e., credit spreads, liquidity spreads, risk premiums, etc.), or OAS, is the risk associated with changes in the excess of market interest rates over benchmark rates. We hold assets and liabilities that expose us to spread volatility, which may contribute to significant GAAP earnings volatility. For financial assets measured at fair value, we generally recognize fair value losses when market spreads widen. Conversely, for financial liabilities measured at fair value, we generally recognize fair value gains when market spreads widen.

The variability of GAAP earnings and the declining capital reserve required under the terms of the Purchase Agreement (ultimately reaching zero in 2018) increase the risk of our having a negative net worth and thus being required to draw from Treasury. We could face a risk of a draw for a variety of reasons, including if we were to experience a large decrease in interest rates, which would result in GAAP losses due to measurement differences, coupled with a large widening of market spreads.

In an effort to reduce the probability of a draw due to changes in interest rates, we entered into certain transactions, including structured transactions, during 2016 that have resulted in additional financial assets being recognized and measured at fair value, which will help to reduce the measurement differences. In addition, in the first quarter of 2017, we began using hedge accounting for certain single-family mortgage loans, which is intended to partially reduce the interest-rate volatility in our GAAP earnings by eliminating a portion of the measurement differences between our GAAP financial results and the underlying economics of our business.

Introduction Our Business

OUR BUSINESS

PRIMARY BUSINESS STRATEGIES

Our primary business strategies describe how we plan to pursue our Charter Mission over a timeframe of two to four years, or approximately through 2018 to 2020. Our core assumption is that the conservatorship will continue with no material changes during that period. These strategies complement FHFA's annual Conservatorship Scorecards.

Charter Mission

We are a GSE with a specific and limited corporate purpose (i.e., "Charter Mission") to support the liquidity, stability and affordability of U.S. housing mortgage markets as a participant in the secondary mortgage market, while operating as a commercial enterprise earning an appropriate return. Everything we do must be done within the specific constraints of our Charter Mission.

Our Twin Goals

We established overarching twin goals to enable us to reach our Charter Mission:

- ▲ Better Freddie Mac; and
- ▲ Better Housing Finance System

Our Key Strategies

A Better Freddie Mac

We are focused on operating as a very well-run large financial institution by:

- Being a very effective operating organization;
- Being a market leader through customer focus and innovation; and
- Managing risk and economic capital for quality risk-adjusted returns.

A Better Housing Finance System

We are focused on providing leadership, through innovation and constructive forward-looking engagement with FHFA, to improve the liquidity, stability, and affordability of the U.S. housing markets by:

- Modernizing and improving the functioning of the mortgage markets;
- Developing greater responsible access to housing finance; and
- Reducing taxpayer exposure to mortgage risks.

For further information on our goals and detailed strategies for each of our business segments, see "MD&A — Our Business Segments."

Introduction Our Business

OUR CHARTER

Our Charter forms the framework for our business activities. Our Charter Mission is to:

• Provide stability in the secondary market for residential loans;

• Respond appropriately to the private capital market;

• Provide ongoing assistance to the secondary market for residential loans (including activities relating to loans for low- and moderate-income families, involving a reasonable economic return that may be less than the return earned on other activities) by increasing the liquidity of mortgage investments and improving the distribution of investment capital available for residential mortgage financing; and

• Promote access to mortgage loan credit throughout the U.S. (including central cities, rural areas, and other underserved areas) by increasing the liquidity of mortgage investments and improving the distribution of investment capital available for residential mortgage financing.

Our Charter permits us to purchase first-lien single-family loans with LTV ratios at the time of our purchase of less than or equal to 80%. Our Charter also permits us to purchase first-lien single-family loans that do not meet this criterion if we have certain specified credit protections, which include mortgage insurance on the portion of the UPB of the loan that exceeds an 80% LTV ratio, a seller's agreement to repurchase or replace a defaulted loan, or the retention by the seller of at least a 10% participation interest in the loan.

This Charter requirement does not apply to multifamily loans or to loans that have the benefit of any guarantee, insurance or other obligation by the U.S. or any of its agencies or instrumentalities (e.g., the FHA, the VA, or the USDA Rural Development). Additionally, as part of HARP, we purchase single-family loans that refinance loans we currently own or guarantee without obtaining additional credit enhancement in excess of that already in place for any such loan, even when the LTV ratio of the new loan is above 80%.

Our Charter does not permit us to originate loans or lend money directly to borrowers in the primary mortgage market. Our Charter limits our purchase of single-family loans to the conforming loan market, which consists of loans originated with UPBs at or below limits determined annually based on changes in FHFA's housing price index. The base conforming loan limit for a one-family residence has been set at \$424,100 for 2017, and was set at \$417,000 from 2006 to 2016. Higher limits have been established in certain "high-cost" areas (for 2017, up to \$636,150 for a one-family residence). Higher limits also apply to two- to four-family residences and to loans secured by properties in Alaska, Guam, Hawaii, and the U.S. Virgin Islands.

Introduction Our Business

BUSINESS SEGMENTS

We have three reportable segments: Single-family Guarantee, Multifamily, and Investments. Certain activities that are not part of a reportable segment are included in the All Other category. For more information on our segments, see "MD&A - Our Business Segments" and Note 11.

EMPLOYEES

At February 2, 2017, we had 5,959 full-time and 45 part-time employees.

PROPERTIES

Our principal offices consist of four office buildings we own in McLean, Virginia, comprising approximately 1.3 million square feet. We operate our business in the United States and its territories, and accordingly, we generate no revenue from and have no long-lived assets, other than financial instruments, in geographic locations other than the United States and its territories.

AVAILABLE INFORMATION

We file reports and other information with the SEC. In view of the Conservator's succession to all of the voting power of our stockholders, we have not prepared or provided proxy statements for the solicitation of proxies from stockholders since we entered into conservatorship, and do not expect to do so while we remain in conservatorship. Pursuant to SEC rules, our annual reports on Form 10-K contain certain information typically provided in an annual proxy statement.

We make available, free of charge through our website at www.freddiemac.com, our annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, and all other SEC reports and amendments to those reports as soon as reasonably practicable after we electronically file the material with the SEC. In addition, materials that we file with the SEC are available for review and copying at the SEC's Public Reference Room at 100 F Street, N.E., Washington, D.C. 20549. The public may obtain information on the operation of the Public Reference Room by calling the SEC at 1-800-SEC-0330. The SEC also maintains an internet site (www.sec.gov) that contains reports, proxy and information statements, and other information regarding companies that file electronically with the SEC. We are providing our website addresses and the website address of the SEC here and elsewhere in this Form 10-K solely for your information. Information appearing on our website or on the SEC's website is not incorporated into this Form 10-K.

Pursuant to SEC regulations, public companies are required to disclose certain information when they incur a material direct financial obligation or become directly or contingently liable for a material obligation under an off-balance sheet arrangement. The disclosure must be made in a current report on Form 8-K under Item 2.03 or, if the obligation is incurred in connection with certain types of securities offerings, in prospectuses for that offering that are filed with the SEC.

Freddie Mac's securities offerings are exempted from SEC registration requirements. As a result, we do not file registration statements or prospectuses with the SEC with respect to our securities offerings. To comply with the disclosure requirements of Form 8-K relating to the incurrence of material financial

Introduction Our Business

obligations, we report these types of obligations either in offering circulars or supplements thereto that we post on our website or in a current report on Form 8-K, in accordance with a “no-action” letter we received from the SEC staff. In cases where the information is disclosed in an offering circular, the document will be posted on our website within the same time period that a prospectus for a non-exempt securities offering would be required to be filed with the SEC.

The website address for disclosure about our debt securities is www.freddiemac.com/debt. From this address, investors can access the offering circular and related supplements for debt securities offerings under Freddie Mac’s global debt facility, including pricing supplements for individual issuances of debt securities. Similar information about our STACR and SCR debt notes is available at www.freddiemac.com/creditriskofferings and www.freddiemac.com/multifamily/investors/structured-credit-risk, respectively.

Disclosure about the mortgage-related securities we issue, some of which are off-balance sheet obligations (e.g., K Certificates), can be found at www.freddiemac.com/mbs. From this address, investors can access information and documents about our mortgage-related securities, including offering circulars and related offering circular supplements.

Introduction Forward-Looking Statements

FORWARD-LOOKING STATEMENTS

We regularly communicate information concerning our business activities to investors, the news media, securities analysts, and others as part of our normal operations. Some of these communications, including this Form 10-K, contain “forward-looking statements.” Examples of forward-looking statements include, but are not limited to, statements pertaining to the conservatorship, our current expectations and objectives for the Single-family Guarantee, Multifamily, and Investments segments of our business, our efforts to assist the housing market, our liquidity and capital management, economic and market conditions and trends, our market share, the effect of legislative and regulatory developments and new accounting guidance, the credit quality of loans we own or guarantee, the costs and benefits of our credit risk transfer transactions, and our results of operations and financial condition on a GAAP, Segment Earnings and fair value basis. Forward-looking statements involve known and unknown risks and uncertainties, some of which are beyond our control. Forward-looking statements are often accompanied by, and identified with, terms such as “objective,” “expect,” “possible,” “trend,” “forecast,” “anticipate,” “believe,” “intend,” “could,” “may,” “will,” and similar phrases. These statements are not historical facts, but rather represent our expectations based on current information, plans, judgments, assumptions, estimates, and projections. Actual results may differ significantly from those described in or implied by such forward-looking statements due to various factors and uncertainties, including those described in the “Risk Factors” section of this Form 10-K, and:

- The actions the U.S. government (including FHFA, Treasury, and Congress) may take, or require us to take, including to support the housing markets or to implement FHFA’s Conservatorship Scorecards and other objectives for us;
- The effect of the restrictions on our business due to the conservatorship and the Purchase Agreement, including our dividend obligation on the senior preferred stock;
 - Changes in our Charter or in applicable legislative or regulatory requirements (including any legislation affecting the future status of our company);
- Changes in the fiscal and monetary policies of the Federal Reserve, including any changes to its policy of maintaining sizable holdings of mortgage-related securities and any future sales of such securities;
- Changes in economic and market conditions, including changes in employment rates, interest rates, spreads, and home prices;
- Changes in the U.S. residential mortgage market, including changes in the supply and type of loan products (e.g., refinance versus purchase, and fixed-rate versus ARM);
- The success of our efforts to mitigate our losses on our Legacy single-family book and our investments in non-agency mortgage-related securities;
- The success of our strategy to transfer mortgage credit risk through STACR debt note, ACIS, K Certificate and other credit risk transfer transactions;
- Our ability to maintain adequate liquidity to fund our operations;
- Our ability to maintain the security of our operating systems and infrastructure (e.g., against cyberattacks);
- Our ability to effectively execute our business strategies, implement new initiatives, and improve efficiency;
- The adequacy of our risk management framework;
- Our ability to manage mortgage credit risks, including the effect of changes in underwriting and servicing practices;
- Our ability to limit or manage our economic exposure and GAAP earnings exposure to interest-rate

Introduction Forward-Looking Statements

volatility and spread volatility, including the availability of derivative financial instruments needed for interest-rate risk management purposes;

• Changes or errors in the methodologies, models, assumptions, and estimates we use to prepare our financial statements, make business decisions, and manage risks;

• Changes in investor demand for our debt or mortgage-related securities (e.g., single-family PCs and multifamily K Certificates);

• Changes in the practices of loan originators, investors and other participants in the secondary mortgage market; and

• Other factors and assumptions described in this Form 10-K, including in the “MD&A” section.

Forward-looking statements are made only as of the date of this Form 10-K, and we undertake no obligation to update any forward-looking statements we make to reflect events or circumstances occurring after the date of this Form 10-K.

Selected Financial Data

SELECTED FINANCIAL DATA

The selected financial data presented below should be reviewed in conjunction with MD&A and our consolidated financial statements and accompanying notes.

Management's Discussion and Analysis Key Economic Indicators | Single-Family Home Prices

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

KEY ECONOMIC INDICATORS

The following graphs and related discussion present certain macroeconomic indicators that can significantly affect our business and financial results.

SINGLE-FAMILY HOME PRICES

NATIONAL HOME PRICES

(December 2000 = 100)

EFFECT ON FINANCIAL RESULTS

• Changes in home prices affect the amount of equity that borrowers have in their homes. Borrowers with less equity typically have higher delinquency rates.

As home prices decline, the severity of losses we incur on defaulted loans that we hold or guarantee increases because the amount we can recover from the property securing the loan decreases. Increases in home prices lower the losses we incur on defaulted loans.

• Declines in home prices typically result in increases in expected credit losses on the mortgage-related securities we hold.

- Declines in home prices may result in declines in the value of our non-agency mortgage-related securities as lower home values may increase default rates and affect the prepayment activities of the borrowers.

COMMENTARY

Home prices continued to appreciate during 2016, increasing 6.5%, compared to an increase of 6.2% during 2015, based on our own non-seasonally adjusted price index of single-family homes funded by loans owned or guaranteed by us or Fannie Mae.

• National home prices at the end of 2016 surpassed their pre-financial crisis peak reached in June 2006, based on our index.

• We expect near-term home price growth rates to moderate gradually and return to growth rates consistent with long-term historical averages of approximately 2% to 5% per year.

Management's Discussion and Analysis Key Economic Indicators | Interest Rates

INTEREST RATES

KEY MARKET INTEREST RATES

EFFECT ON FINANCIAL RESULTS

The 30-year Primary Mortgage Market Survey ("PMMS") interest rate is indicative of what a consumer could expect to be offered on a first-lien, prime, home purchase mortgage with an LTV of 80%. Increases in the PMMS rate typically result in decreases in refinance activity and originations. Decreases in the PMMS rate typically result in increases in refinancing activity and originations.

Changes in interest rates affect the fair value of certain of our assets and liabilities, including derivatives, measured at fair value on a recurring basis on our consolidated balance sheets.

For additional information on the effect of LIBOR swap rates on our financial results, see "Our Business Segments - Investments - Market Conditions."

Freddie Mac 2016 Form 10-K 13

Management's Discussion and Analysis Key Economic Indicators | Interest Rates

COMMENTARY

Mortgage interest rates for 30-year fixed-rate loans are typically closely related to other long-term interest rates such as the 10-year Treasury rate and the 10-year LIBOR rate. When these rates increase, mortgage interest rates for 30-year fixed-rate loans usually also increase. When these rates decline, mortgage interest rates for 30-year fixed-rate loans usually also decline.

Longer-term interest rates, as indicated by the 10-year LIBOR rate and the 10-year Treasury rate, and mortgage interest rates, as indicated by the 30-year PMMS rate, both increased significantly during the fourth quarter of 2016, which caused rates to be higher at the end of 2016 than the end of 2015. However, average interest rates were lower in 2016 compared to 2015 and lower in 2015 compared to 2014.

The Federal Reserve raised short-term interest rates in December 2015 and again in December 2016.

Management's Discussion and Analysis Key Economic Indicators | Unemployment Rate

UNEMPLOYMENT RATE
UNEMPLOYMENT RATE AND JOB CREATION

Source: U.S. Bureau of Labor Statistics

EFFECT ON FINANCIAL RESULTS

• Changes in the unemployment rate can affect several market factors, including the demand for both single-family and multifamily housing and the level of loan delinquencies.

• Decreases in the unemployment rate typically result in lower levels of delinquencies, which often result in a decrease in expected credit losses on our total mortgage portfolio.

• Increases in the unemployment rate typically result in higher levels of delinquencies, which often result in an increase in expected credit losses on our total mortgage portfolio.

COMMENTARY

• Monthly net new job growth decreased during 2016.

• The unemployment rate declined slightly in 2016.

Freddie Mac 2016 Form 10-K 15

Management's Discussion and Analysis Consolidated Results of Operations

CONSOLIDATED RESULTS OF OPERATIONS

You should read this discussion of our consolidated results of operations in conjunction with our consolidated financial statements and accompanying notes.

The table below compares our consolidated results of operations for the past three years.

(Dollars in millions)	Year Ended December 31,			Change		Change 2015-2014		
	2016	2015	2014	\$	%	\$	%	%
Net interest income	\$14,379	\$14,946	\$14,263	(\$567)	(4)%	\$683	5	%
Benefit (provision) for credit losses	803	2,665	(58)	(1,862)	(70)%	2,723	4,695	%

Management's Discussion and Analysis Consolidated Results of Operations | Net Interest Income

NET INTEREST INCOME

EXPLANATION OF KEY DRIVERS OF NET INTEREST INCOME

Net interest income consists of several primary components:

Contractual net interest income - consists of two primary components:

Guarantee fees on debt securities issued by consolidated trusts. We record interest income on loans held by consolidated trusts and interest expense on the debt securities issued by the trusts. The difference between the interest income on the loans and the interest expense on the debt represents the guarantee fee income we receive as compensation for our guarantee of the principal and interest payments of the issued debt securities. This difference includes the legislated 10 basis point increase in guarantee fees that is remitted to Treasury as part of the Temporary Payroll Tax Cut Continuation Act of 2011; and

The difference between the interest income earned on all other interest-earning assets, excluding loans held by consolidated trusts, and the interest expense incurred on the liabilities used to fund those assets.

Contractual net interest income is primarily driven by the volume of assets in the mortgage-related investments portfolio and the interest rate differential between those interest-earning assets and the related interest-bearing liabilities.

Amortization of cost basis adjustments - consists of cost basis adjustments, such as premiums and discounts on loans, investment securities, and debt that are amortized into interest income or interest expense based on the effective yield over the contractual life of the associated financial instrument.

The largest portion of our total net amortization relates to loans and debt securities of consolidated trusts.

Amortization related to investment securities, other debt, and other assets and liabilities makes up a smaller portion.

Net amortization of loans and debt securities of consolidated trusts generally increases net interest income as it includes amortization of the upfront delivery fees we receive when we acquire a loan.

The net amortization of loans and debt securities of consolidated trusts is primarily driven by actual prepayments on the underlying loans. Increases in actual prepayments result in higher net amortization, while decreases in actual prepayments result in lower net amortization. The timing of amortization of loans may differ from the timing of amortization of the securities backed by the loans, as the proceeds from the loans backing these securities are remitted to the security holders at a date subsequent to the date these proceeds are received by us.

Expense related to derivatives - consists of deferred gains and losses on closed cash flow hedges related to forecasted debt issuances that are reclassified from AOCI to net interest income when the related forecasted transaction affects net interest income.

Management's Discussion and Analysis Consolidated Results of Operations | Net Interest Income

NET INTEREST YIELD ANALYSIS

The table below presents an analysis of interest-earning assets and interest-bearing liabilities. To calculate the average balances, we generally use a daily weighted average of amortized cost. When daily average balance information is not available, such as for mortgage loans, we use monthly averages. Mortgage loans on non-accrual status, where interest income is generally recognized when collected, are included in the average balances.

(Dollars in millions)	Year Ended December 31, 2016			2015			2014

Management's Discussion and Analysis Consolidated Results of Operations | Net Interest Income

COMPONENTS OF NET INTEREST INCOME

The table below presents the components of net interest income.

(Dollars in millions)	Year Ended December 31,			Change		Change	
	2016	2015	2014	2016-2015		2015-2014	
				\$	%	\$	%
Contractual net interest income:							
Guarantee fee income	\$2,997	\$2,722	\$2,399	\$275	10 %	\$323	13 %
Guarantee fee income related to the Temporary Payroll Tax Cut Continuation Act of 2011	1,142	957	759	185	19 %	198	26 %
Other contractual net interest income	6,896	8,106	9,070	(1,210)	(15)%	(964)	(11)%
Total contractual net interest income	11,035	11,785	12,228	(750)	(6)%	(443)	(4)%
Net amortization - loans and debt securities of consolidated trusts	3,333	2,883	1,913	450	16 %	970	51 %
Net amortization - other assets and debt	202	506	423	(304)	(60)%	83	20 %
Expense related to derivatives	(191)	(228)	(301)	37	16 %	73	24 %
Net interest income	\$14,379	\$14,946	\$14,263	(\$567)	(4)%	\$683	5 %

Key Drivers:

Guarantee fee income (contractual)

2016 vs. 2015 and 2015 vs. 2014 - increased during both comparative periods as a result of higher average contractual guarantee fee rates, reflecting continued growth in the size of the Core single-family book, and a larger overall single-family credit guarantee portfolio. Average contractual guarantee fees are generally higher on mortgage loans in our Core single-family book compared to those in our Legacy single-family guarantee book. See "Our Business Segments - Single-Family Guarantee" for additional discussion.

Other contractual net interest income

2016 vs. 2015 and 2015 vs. 2014 - decreased during both comparative periods primarily due to the continued reduction in the balance of our mortgage-related investments portfolio, as we continue to manage the size and composition of this portfolio pursuant to the limits established by the Purchase Agreement and FHFA. We expect this trend to continue in the future as we reduce our mortgage-related investments portfolio. See "Conservatorship and Related Matters - Limits on Our Mortgage-Related Investments Portfolio and Indebtedness" for additional discussion of the limits on the mortgage-related investments portfolio.

Net amortization of loans and debt securities of consolidated trusts

2016 vs. 2015 and 2015 vs. 2014 - increased during both comparative periods primarily due to an increase in the amortization of upfront delivery fees and basis adjustments on debt securities of consolidated trusts. The increase in amortization was primarily driven by higher prepayment rates on single-family loans during 2016 compared to 2015 and 2015 compared to 2014.

Net amortization of other assets and debt

2016 vs. 2015 - decreased primarily due to less accretion of previously recognized other-than-temporary impairments. The decrease in accretion is due to a decline in the population of impaired securities as a result of our active disposition of these securities and a decline in new other-than-temporary impairments recognized.

Management's Discussion and Analysis Consolidated Results of Operations | Provision for Credit Losses

BENEFIT (PROVISION) FOR CREDIT LOSSES

EXPLANATION OF KEY DRIVERS OF PROVISION FOR CREDIT LOSSES

The benefit (provision) for credit losses predominantly relates to single-family loans and includes components for both collectively impaired loans and individually impaired loans.

Collectively impaired loans - The provision for collectively impaired loans is primarily driven by the volume of newly delinquent loans and changes in estimated probabilities of default and estimated loss severities for the loans.

Estimated probabilities of default and estimated loss severities are based on current conditions and historical data and are heavily influenced by changes in home prices, but are also affected by a number of other factors, such as local and regional economic conditions, changes in reperformance and default rates, and the success of our borrower assistance programs.

Individually impaired loans - The provision for individually impaired loans is primarily driven by the volume of our loss mitigation activity (e.g., loan modifications) that results in loans being considered TDRs, the payment performance of our individually impaired mortgage portfolio, and changes in estimated probabilities of default and estimated loss severities, which affect the future cash flows we expect to receive from these loans. Estimated probabilities of default and estimated loss severities for individually impaired loans are based on the same current conditions and historical data and are affected by the same factors noted above for collectively impaired loans.

As we continue to perform loss mitigation activities that result in loans being considered individually impaired, the portion of our allowance for loan losses and provision for credit losses related to collectively impaired loans continues to decline.

Our allowance for loan losses and provision for credit losses are significantly affected by the "interest rate concessions" we make on loans that we have modified (i.e., reductions in the contractual interest rate). When a loan is modified and considered individually impaired, we generally measure impairment based on the present value of the expected future cash flows discounted at the loan's original effective interest rate. Under this methodology, we record a loss at the time a loan is modified equal to the difference in the present value of expected future cash flows resulting from the change in the modified loan's contractual interest rate, which increases the provision for credit losses in that period. An increase in mortgage interest rates lengthens the expected life of individually impaired loans, which increases the impairment on these loans and results in an increase in the provision for credit losses. When a modified loan subsequently performs according to its new contractual terms and we receive the new contractual cash flows (i.e., principal and interest payments), a portion of the discount that was previously applied to those cash flows is amortized into earnings each period and is recognized as a reduction in the provision for credit losses in the period in which the cash flows are received. We refer to this reduction in the provision for credit losses as the "amortization of interest rate concessions."

Our provision for credit losses and the amount of charge-offs that we record in the future will be affected by a number of factors, such as the actual level of loan defaults; the effect of loss mitigation efforts; any government actions or programs that affect the ability of borrowers to refinance loans with an LTV ratio greater than 100% or obtain modifications; changes in property values; regional economic conditions, including unemployment rates; additional delays in the foreclosure process; and third-party mortgage insurance coverage and recoveries. Management adjustments may be necessary to take into consideration external factors and current economic events that have occurred but that are not yet

Management's Discussion and Analysis Consolidated Results of Operations | Provision for Credit Losses

reflected in the factors used to derive the model outputs. Significant judgment is exercised in making these adjustments.

The amount of our benefit (provision) for credit losses may also vary from period to period based on additional factors such as reclassification of loans from held-for-investment to held-for-sale.

BENEFIT (PROVISION) FOR CREDIT LOSSES

The table below presents the components of our benefit (provision) for credit losses.

(Dollars in billions)	Year Ended			Change		Change	
	December 31,			2016-2015		2015-2014	
	2016	2015	2014	\$	%	\$	%
Provision for newly impaired loans	(\$0.8)	(\$0.9)	(\$1.7)	\$0.1	11 %	\$0.8	47 %
Amortization of interest rate concessions	0.9	1.2	1.4	(0.3)	(25)%	(0.2)	(14)%
Reclassifications of held-for-investment loans to held-for-sale loans	0.8	2.3	0.1	(1.5)	(65)%	2.2	2,200 %
Other, including changes in estimated default probability and loss severity	(0.1)	0.1	0.1	(0.2)	(200)%	—	—
Benefit (provision) for credit losses	\$0.8	\$2.7	(\$0.1)	(\$1.9)	(70)%	\$2.8	2,800 %

Key Drivers:

2016 vs. 2015 - benefit for credit losses declined in 2016 compared to 2015 primarily due to a decrease in the number of seasoned single-family loans reclassified from held-for-investment to held-for sale in 2016. During 2016, \$4.7 billion in UPB of single-family loans was reclassified to held-for-sale, compared to \$13.6 billion during 2015. See "Effect of Loan Reclassifications" for the effect of these loan reclassifications on pre-tax net income.

2015 vs. 2014 - changed to a benefit in 2015 from a (provision) in 2014 primarily due to:

An increase in the number of seasoned single-family loans reclassified from held-for-investment to held-for-sale in 2015. During 2014, \$0.7 billion in UPB of seasoned single-family loans were reclassified to held-for-sale.

A decrease in the provision for newly impaired loans in 2015 compared to 2014 due to a decline in the volume of newly delinquent single-family loans.

Management's Discussion and Analysis Consolidated Results of Operations | Derivative Gains (Losses)

DERIVATIVE GAINS (LOSSES)

EXPLANATION OF KEY DRIVERS OF DERIVATIVE GAINS (LOSSES)

Derivative instruments are a key component of our interest-rate risk management strategy. We use derivatives to economically hedge our interest-rate risk exposure. We primarily use interest-rate swaps, option-based derivatives such as swaptions, and futures to manage our exposure to changes in interest-rates. We consider the cost of derivatives used in interest-rate risk management to be an inherent part of the cost of funding our mortgage-related investments portfolio.

In addition, we routinely enter into commitments to purchase and sell loans and mortgage-related securities. The majority of these commitments are accounted for as derivative instruments.

We continue to align our derivative portfolio with the changing duration of our hedged assets and liabilities. Although our use of derivatives creates volatility in our GAAP earnings, we manage our exposure to interest-rate risk on an economic basis to a low level as measured by our models. Therefore, we believe the impact of derivatives on our GAAP financial results should be considered in the context of our overall interest-rate risk profile, including our PMVS and duration gap results. For more information about our interest-rate risk management activities and the sensitivity of reported GAAP earnings to those activities, see "Risk Management - Market Risk."

Derivative gains (losses) consist of both fair value changes and accrual of periodic cash settlements:

Fair value changes - Represent changes in the fair value of our derivatives based on market conditions at the end of the period or at the time the derivative instrument is terminated. These amounts may or may not be realized over time, depending on future changes in market conditions and the terms of our derivative instruments.

Accrual of periodic cash settlements - Consists of the net amount we accrue during a period for interest-rate swap payments that we will make or receive. This accrual represents the ongoing cost of our hedging activities, and is economically equivalent to interest expense.

Gains and losses on derivatives are affected by a number of factors, including:

Changes in interest rates - Our primary derivative instruments are interest-rate swaps, including pay-fixed and receive-fixed interest-rate swaps. With a pay-fixed interest-rate swap, we pay a fixed rate of interest and receive a variable rate of interest based on a specified notional balance (the notional balance is for calculation purposes only). As interest rates decline, we recognize derivative losses, as the amount of interest we pay remains fixed, and the amount of interest we receive declines. As rates rise, we recognize derivative gains, as the amount of interest we pay remains fixed, but the amount of interest we receive increases. With a receive-fixed interest-rate swap, the opposite results occur.

Implied volatility - Many of our assets and liabilities have embedded prepayment options. We use option-based derivatives, including swaptions, to economically hedge the prepayment options embedded in our mortgage assets and callable debt. Fair value gains and losses on swaptions are sensitive to changes in both interest rates and implied volatility, which reflects the market's expectation of future changes in interest rates. Assuming all other factors are unchanged, including

Management's Discussion and Analysis Consolidated Results of Operations | Derivative Gains (Losses)

interest rates, purchased swaptions generally become more valuable as implied volatility increases and less valuable as implied volatility decreases, with the opposite being true for written swaptions.

Changes in the shape of the yield curve - We own assets and have outstanding debt with different cash flows along the yield curve. We use derivatives to hedge the yield exposure of assets and debt, resulting in derivatives with different maturities. As a result, changes in the shape of the yield curve will affect our derivative gains (losses).

Changes in the composition of our derivative portfolio - The mix and balance of our derivative portfolio changes from period to period as we enter into or terminate derivative instruments to respond to changes in interest rates and changes in the balances and modeled characteristics of our assets and liabilities. Changes in the composition of our derivative portfolio will affect the derivative gains and losses we recognize in a given period, thereby affecting the volatility of comprehensive income.

COMPONENTS OF DERIVATIVE GAINS (LOSSES)

The table below presents the components of derivative gains (losses).

(Dollars in millions)	Year Ended December 31,			Change		Change	
	2016	2015	2014	2016-2015		2015-2014	
				\$	%	\$	%
Fair value change in interest-rate swaps	\$178	(\$778)	(\$7,294)	\$956	123 %	\$6,516	89 %
Fair value change in option-based derivatives	421	258	1,437	163	63 %	(1,179)	(82)%
Fair value change in other derivatives	887	22	191	865	3,932%	(169)	(88)%
Accrual of periodic cash settlements	(1,760)	(2,198)	(2,625)	438	20 %	427	16 %
Derivative gains (losses)	(\$274)	(\$2,696)	(\$8,291)	\$2,422	90 %	\$5,595	67 %

Key Drivers:

2016 vs. 2015 - derivative losses declined during 2016 primarily due to an increase in longer-term interest rates during the fourth quarter of 2016 resulting in an improvement in the fair value of our pay-fixed interest-rate swaps and forward commitments to issue PC debt. This improvement in fair value was partially offset by losses in our receive-fixed-interest-rate swaps. The 10-year par swap rate increased 13 basis points during 2016, while the 10-year par swap rate declined 10 basis points during 2015.

2015 vs. 2014 - derivative losses declined during 2015 primarily due to a smaller decline in interest rates in 2015 than in 2014. We recognized larger derivative losses during 2014 primarily as a result of the impact of a flattening yield curve as shorter-term interest rates increased and longer-term interest rates declined. The 10-year par swap rate declined 78 basis points during 2014.

See "Our Business Segments - Investments - Market Conditions" for more information about par swap rates.

Management's Discussion and Analysis Consolidated Results of Operations | Other Comprehensive Income

OTHER COMPREHENSIVE INCOME (LOSS)

EXPLANATION OF KEY DRIVERS OF OTHER COMPREHENSIVE INCOME (LOSS)

Our investments in securities classified as available-for-sale are measured at fair value on our consolidated balance sheets. The fair value of these securities is primarily affected by changes in interest rates, market spreads, and the movement of these securities towards maturity. All unrealized gains and losses on these securities are excluded from earnings and reported in other comprehensive income until realized. We reclassify our unrealized gains and losses from AOCI to earnings upon the sale of the securities or if the securities are determined to be other-than-temporarily impaired.

If, subsequent to the recognition of other-than-temporary impairment, our expectation of the cash flows we will receive on a previously impaired security has significantly increased, we will accrete that increase in cash flows into earnings. The accretion into earnings will generally reduce the amount of unrealized gains that we would have otherwise recognized if not for the accretion.

The following table presents the attribution of the other comprehensive income (loss) reported in our consolidated statements of comprehensive income.

(Dollars in millions)	Year Ended December 31,			Change 2016 - 2015		Change 2015 - 2014	
	2016	2015	2014	\$	%	\$	%
Other comprehensive income, excluding reclassifications	(\$29)	\$374	\$2,563	(\$403)	(108)%	(\$2,189)	(85)%
Reclassifications from AOCI:							
Accretion due to significant increases in expected cash flows on previously-impaired available-for-sale securities	(299)	(449)	(519)	150	33 %	70	13 %
Realized gains (losses) reclassified from AOCI	(369)	(502)	(308)	133	26 %	(194)	(63)%
Total reclassifications from AOCI	(668)	(951)	(827)	283	30 %	(124)	(15)%
Total other comprehensive income (loss)	(\$697)	(\$577)	\$1,736	(\$120)	(21)%	(\$2,313)	(133)%

Key Drivers:

Other comprehensive income, excluding reclassifications

2016 vs. 2015 - was a loss in 2016 compared to income in 2015, primarily due to unrealized losses resulting from an increase in longer-term interest rates, coupled with a decrease in unrealized gains as our non-agency securities portfolio continues to decline consistent with the reduction of our mortgage-related investments portfolio pursuant to the limits established by the Purchase Agreement and FHFA.

2015 vs. 2014 - decreased primarily due to less market spread tightening for our non-agency securities.

Reclassifications from AOCI

▲ Accretion due to significant increases in expected cash flows on previously impaired available-for-sale securities

2016 vs. 2015 and 2015 vs. 2014 - decreased during both comparative periods primarily due to a decline in the population of impaired securities as a result of our active dispositions of these securities, coupled with a decline in new other-than-temporary impairments.

Realized gains (losses) reclassified from AOCI

2016 vs. 2015 - decreased primarily due to a decline in sales of non-agency securities in an unrealized gain position. Our sales of non-agency securities will continue to vary as the portion of our portfolio that we are able to sell, based on a variety of criteria, has decreased.

2015 vs. 2014 - increased primarily due to greater sales of agency and non-agency securities in an unrealized gain position. The increase in sales was a result of improved pricing due to declining longer-term interest rates and stabilized collateral performance.

Management's Discussion and Analysis Consolidated Results of Operations

OTHER KEY DRIVERS

Key drivers for other line items for 2016 vs. 2015 and 2015 vs. 2014 include:

● Gains (losses) on extinguishment of debt

2016 vs. 2015 - losses decreased primarily due to an increase in longer-term interest rates during the fourth quarter of 2016, coupled with a decline in our repurchase of single-family PCs. The increase in longer-term interest rates resulted in net extinguishment gains for PCs repurchased during the fourth quarter, which partially offset the net extinguishment losses recognized for PCs repurchased during the nine months ended September 30, 2016. The amount of extinguishment gains or losses may vary, as the type and amount of PCs selected for repurchase are based on our investment and funding strategies, including our efforts to support the liquidity and price performance of our PCs.

2015 vs. 2014 - losses decreased primarily due to a significant decline in our repurchase of single-family PCs, coupled with a smaller decline in longer-term interest rates in 2015 compared to 2014.

● Net impairments of available-for-sale securities recognized in earnings

2016 vs. 2015 - decreased primarily due to a decline in the population of non-agency securities, including those non-agency securities that we intend to sell. Our intent to sell population declined, as the portion of our non-agency securities that we are able to sell, based on a variety of criteria, has decreased.

2015 vs. 2014 - decreased as the unrealized losses associated with securities we intend to sell were lower due to improvements in forecasted home prices, a smaller decline in market interest rates in 2015 compared to 2014, and continued tightening of market spreads for our non-agency securities. Furthermore, the portion of the net impairment related to additional credit losses declined as a result of improved security pricing, stabilized collateral performance, and our efforts to sell certain of the previously impaired non-agency securities. See "Conservatorship And Related Matters - Limits On Our Mortgage-Related Investments Portfolio And Indebtedness" for additional information concerning our efforts to reduce our less liquid assets.

● Other gains (losses) on investment securities recognized in earnings

2016 vs. 2015 - decreased as we recognized net losses during 2016 compared to net gains during 2015, primarily due to losses on our mortgage-related and non-mortgage-related securities as a result of increasing longer-term interest rates, coupled with less realized gains from our available-for-sale securities, as we sold fewer non-agency securities in an unrealized gain position.

2015 vs. 2014 - decreased primarily due to a decline in sales of our agency mortgage-related securities.

● Other income (loss)

2016 vs. 2015 - other income (loss) improved reflecting:

Decreased lower-of-cost-or-fair-value adjustments as we reclassified fewer seasoned single-family loans from held-for-investment to held-for-sale during 2016; and

Increased gains on multifamily mortgage loans and commitments for which we have elected the fair value option, due to increased market spread-related fair value gains. K Certificate benchmark spreads tightened during 2016 compared to these spreads widening during 2015.

Management's Discussion and Analysis Consolidated Results of Operations

2015 vs. 2014 - other income (loss) declined reflecting:

Decreased income from non-agency mortgage-related securities litigation settlements;

Increased write-downs due to lower-of-cost-or-fair-value adjustments for seasoned single-family loans reclassified from held-for-investment to held-for-sale; and

Decreased fair value of multifamily mortgage loans for which we have elected the fair value option, due to the widening of K Certificate benchmark spreads observed in the market.

REO operations expense

2016 vs. 2015 - decreased resulting from a decline in REO inventory due to a decline in the number of seriously delinquent loans as the housing market and economy continued to improve.

2015 vs. 2014 - increased due to a decrease in gains on the disposition of REO properties and recoveries from mortgage insurance.

Temporary Payroll Tax Cut Continuation Act of 2011 expense

2016 vs. 2015 and 2015 vs. 2014 - continued to increase as a result of the increase in the population of loans subject to this expense. As of December 31, 2016 and 2015, respectively, \$1.3 trillion and \$1.1 trillion of UPB of loans (or 72% and 63% of the single-family credit guarantee portfolio) were subject to these fees. We expect the amount of these fees will continue to increase as we add new business and the population of loans subject to these fees increases.

Other expense

2016 vs. 2015 - decreased primarily driven by property taxes and insurance costs associated with seasoned single-family loans reclassified from held-for-investment to held-for-sale as we reclassified fewer loans in 2016 compared to 2015. These costs are considered part of the loan loss reserves while the loans are classified as held-for-investment. See "Single-Family Loan Reclassifications" for more information.

2015 vs. 2014 - increased primarily driven by property taxes and insurance costs associated with seasoned single-family loans reclassified from held-for-investment to held-for-sale as we reclassified more loans in 2015 compared to 2014. These costs are considered part of the loan loss reserves while the loans are classified as held-for-investment. In addition, beginning January 1, 2015, FHFA directed us to set aside funds that will be distributed to certain housing funds pursuant to the GSE Act. During 2015, we completed \$393.8 billion of new business purchases subject to this requirement and accrued \$165 million of related expense. See "MD&A - Regulation and Supervision - Affordable Housing Fund Allocations" for more information.

Income tax expense

2016 vs. 2015 - increased in 2016 compared to 2015 primarily due to an increase in pre-tax income.

2015 vs. 2014 - decreased in 2015 compared to 2014 primarily due to a decrease in pre-tax income.

Management's Discussion and Analysis Consolidated Results of Operations

ITEMS AFFECTING MULTIPLE LINES

The following items affected multiple lines on our consolidated results of operations.

Single-Family Loan Reclassifications

During 2016, 2015, and 2014, we reclassified \$4.7 billion, \$13.6 billion, and \$0.7 billion, respectively, in UPB of seasoned seriously delinquent as well as reperforming single-family mortgage loans from held-for-investment to held-for-sale. The initial reclassifications of these loans affected several line items on our consolidated results of operations, as shown in the table below.

(Dollars in millions)	Year Ended December		
	2016	2015	2014
Benefit for credit losses	\$812	\$2,314	\$147
Other income (loss) - lower-of-cost-or-fair-value adjustment	(1,005)	(2,193)	(195)
Other (expense) - property taxes and insurance associated with these loans	(195)	(1,178)	(62)
Effect on income before income tax (expense) benefit	(\$388)	(\$1,057)	(\$110)
Debt Funding Strategies and Interest-Rate Risk Management Activities			

We issue debt based on a variety of factors including market conditions and our liquidity requirements.

We use derivatives to economically hedge interest-rate sensitivity mismatches between our assets and liabilities. For example, depending on our strategic objectives and the duration of our mortgage-related assets, we may fund our business using longer-term debt or using a mix of derivatives and shorter- and medium-term debt. Through our use of derivatives, we manage our exposure to interest-rate risk on an economic basis to a low level as measured by our models.

We currently favor a mix of derivatives and shorter- and medium-term debt to fund our business and manage interest-rate risk. This funding mix is a less expensive method than relying more extensively on long-term debt, and it provides greater flexibility and opportunity to match the duration of our assets and liabilities in the future as we reduce the mortgage-related investments portfolio in accordance with the requirements of the Purchase Agreement and FHFA.

While our interest-rate risk management activities reduce our economic exposure to interest-rate risk to a low level, as measured by our models, the accounting treatment for our assets and liabilities, including derivatives, creates volatility in our GAAP earnings when interest rates fluctuate. Some assets and liabilities are measured at amortized cost and some are measured at fair value, while all derivatives are measured at fair value. These measurement differences create volatility in our GAAP earnings that generally is not indicative of the underlying economics of our business. In order to help reduce the measurement differences, we entered into certain transactions, including structured transactions, during 2016 that have resulted in additional financial assets being recognized and measured at fair value. In addition, in the first quarter of 2017, we began using hedge accounting for certain single-family mortgage loans, which is intended to partially reduce the interest-rate volatility in our GAAP earnings by eliminating a portion of the measurement differences between our GAAP financial results and the underlying economics of our business.

Management's Discussion and Analysis Consolidated Results of Operations

The table below presents the effect of derivatives used in our interest-rate risk management activities on our comprehensive income, after considering the accrual of periodic cash settlements (which is the economic equivalent of interest expense), the non-interest rate effect (e.g., market spread effect) on derivative fair values, and any offsetting interest rate effect related to financial instruments measured at fair value. The estimated net interest rate effect on comprehensive income is essentially the derivative gains (losses) attributable to financial instruments that are not measured at fair value on a recurring basis .

(Dollars in billions)	Year Ended		
	December 31,		
	2016	2015	2014
Derivative gains (losses)	(\$0.3)	(\$2.7)	(\$8.3)
Less:			
Accrual of periodic cash settlements	(1.8)	(2.2)	(2.6)
Non-interest rate effect on derivative fair values	(0.1)	—	(0.2)
Interest rate effect on derivative fair values	1.6	(0.5)	(5.5)
Add:			
Estimate of offsetting interest rate effect related to financial instruments measured at fair value ⁽¹⁾	(1.2)	0.2	2.0
Income tax benefit (expense)	(0.1)	0.1	1.2
Estimated Net Interest Rate Effect on Comprehensive income	\$0.3	(\$0.2)	(\$2.3)

Includes the interest-rate effect on our trading securities, available-for-sale securities, mortgage loans held-for-sale, (1) and other assets and debt for which we elected the fair value option, which is reflected in other non-interest income (loss) and total other comprehensive income (loss) on our consolidated statements of comprehensive income.

As this table demonstrates, the estimated net effect of derivatives on our comprehensive income is volatile, and can be significant. For more information about our interest-rate risk management activities and the sensitivity of reported GAAP earnings to these activities, see "Risk Management - Market Risk."

Changes in Market Spreads

Our financial results and net worth can be significantly affected by changes in market spreads, especially results driven by financial instruments that are measured at fair value. We have limited ability to mitigate exposure to such changes. These instruments include trading securities, available-for-sale securities, mortgage loans held-for-sale, and other assets and debt for which we elected the fair value option.

During the fourth quarter of 2016, we began purchasing certain swaptions on credit indices that provide protection against adverse movements in multifamily market spreads. While these swaptions mitigate a portion of our exposure to changes in multifamily market spreads, they do not mitigate our exposure to changes in other market spreads. Comprehensive income (loss) was affected by changes in market spreads in amounts estimated to be \$0.1 billion, \$(0.3) billion, and \$1.9 billion (after-tax) during 2016, 2015, and 2014, respectively. During 2016, market spread tightening on our agency and non-agency mortgage-related securities and multifamily mortgage loans and commitments measured at fair value resulted in an increase in comprehensive income. During 2015, market spread widening on our agency mortgage-related securities and multifamily mortgage loans measured at fair value resulted in a decrease in comprehensive income. During 2014, the impact of market spread tightening on mortgage-related securities and mortgage loans

Management's Discussion and Analysis Consolidated Results of Operations

measured at fair value resulted in an increase in comprehensive income. In the fourth quarter of 2016, we separated the market spread related gains (losses) on held-for-sale multifamily mortgage loans and commitments from the effect of improved pricing on K Certificates and SB Certificates. The effect of this improved pricing is now excluded from the estimated spread change effect.

Freddie Mac 2016 Form 10-K 31

Management's Discussion and Analysis Consolidated Balance Sheets Analysis

CONSOLIDATED BALANCE SHEETS ANALYSIS

The table below compares our summarized consolidated balance sheets.

(Dollars in millions)	December 31,		\$ Change	% Change
	2016	2015		
Assets:				
Cash and cash equivalents	\$12,369	\$5,595	\$6,774	121 %
Restricted cash and cash equivalents	9,851	14,533	(4,682)	(32)%
Securities purchased under agreements to resell	51,548	63,644	(12,096)	(19)%
Subtotal	73,768	83,772	(10,004)	(12)%
Investments in securities, at fair value	111,547	114,215	(2,668)	(2)%
Mortgage loans, net	1,803,003	1,754,193	48,810	3 %
Accrued interest receivable	6,135	6,074	61	1 %
Derivative assets, net	747	395	352	89 %
Deferred tax assets, net	15,818	18,205	(2,387)	(13)%
Other assets	12,358	9,038	3,320	37 %
Total assets	\$2,023,376	\$1,985,892	\$37,484	2 %
Liabilities and Equity:				
Liabilities:				
Accrued interest payable	\$6,015	\$6,183	(\$168)	(3)%
Debt, net	2,002,004	1,970,269	31,735	2 %
Derivative liabilities, net	795	1,254	(459)	(37)%
Other liabilities	9,487	5,246	4,241	81 %
Total liabilities	2,018,301	1,982,952	35,349	2 %
Total equity	5,075	2,940	2,135	73 %
Total liabilities and equity	\$2,023,376	\$1,985,892	\$37,484	2 %

Key Drivers:

As of December 31, 2016 compared to December 31, 2015:

Cash and cash equivalents, restricted cash and cash equivalents, and securities purchased under agreements to resell affect one another, so the changes in the balances should be viewed together. For example, cash and cash equivalents and restricted cash and cash equivalents can be invested in securities purchased under agreements to resell or other investments in securities (i.e., non-mortgage-related securities). The decrease in the combined balance was due to lower near-term cash needs for upcoming maturities and anticipated calls of other debt at the end of 2016 compared to the end of 2015.

Deferred tax assets, net decreased primarily due to an increase in longer-term interest rates during 2016, which caused the difference between the GAAP and tax basis of derivative instruments to decline.

Other assets increased primarily because of higher receivables from servicers and an increase in current income tax receivable. Lower average mortgage interest rates during 2016 caused an increase in prepayments, and thus, an increase in receivables from servicers. The increase in the current income tax receivable is primarily due to an increase in estimated tax payments on account with the IRS.

Management's Discussion and Analysis Consolidated Balance Sheets Analysis

Other liabilities increased primarily due to purchases of non-mortgage-related securities that were traded prior to December 31, 2016 and recognized on the consolidated balance sheets, but settled after December 31, 2016. Total equity increased as a result of higher comprehensive income in the fourth quarter of 2016 compared to the fourth quarter of 2015 and was partially offset by dividends paid related to the \$600 million decline in the Capital Reserve Amount in 2016.

Management's Discussion and Analysis Our Business Segments | Segment Earnings

OUR BUSINESS SEGMENTS

As shown in the table below, we have three reportable segments, which are based on the way we manage our business. Certain activities that are not part of a reportable segment are included in the All Other category.

Segment	Description	Primary Income Drivers	Primary Expense Drivers
Single-family Guarantee	Reflects results from our purchase, securitization, and guarantee of single-family loans and the management of single-family credit risk	<ul style="list-style-type: none"> • Guarantee fee income • Net interest income 	<ul style="list-style-type: none"> • Credit-related expenses • Administrative expenses • Credit risk transfer expenses • Losses on loans
Multifamily	Reflects results from our purchase, securitization, and guarantee of multifamily loans and securities, our investments in those loans and securities, and the management of multifamily mortgage credit risk and mortgage market spread risk	<ul style="list-style-type: none"> • Guarantee fee income • Gains on loans • Investment gains • Derivative gains • Net interest income • Investment gains 	<ul style="list-style-type: none"> • Investment losses • Derivative losses • Administrative expenses • Credit-related expenses • Investment losses • Derivative losses
Investments	Reflects results from managing the company's mortgage-related investments portfolio (excluding Multifamily segment investments, single-family seriously delinquent loans, and the credit risk of single-family performing loans), treasury function, and interest-rate risk	<ul style="list-style-type: none"> • Derivative gains 	<ul style="list-style-type: none"> • Other-than-temporary impairments on non-agency mortgage-related securities • Administrative expenses
All Other		N/A	N/A

Consists of material corporate level activities that are infrequent in nature and based on decisions outside the control of the management of our reportable segments

SEGMENT EARNINGS

We evaluate segment performance and allocate resources based on a Segment Earnings approach:

We make significant reclassifications among certain line items in our GAAP financial statements to reflect measures of guarantee fee income on guarantees, net interest income on investments, and benefit (provision) for credit losses on loans that are in line with how we manage our business.

We allocate certain revenues and expenses, including certain returns on assets and funding costs, and all administrative expenses to our three reportable segments.

The sum of Segment Earnings for each segment and the All Other category equals GAAP net income (loss) and the sum of comprehensive income (loss) for each segment and the All Other category equals GAAP comprehensive income (loss).

Management's Discussion and Analysis Our Business Segments | Segment Earnings

During the first and third quarters of 2016, we changed how we calculate certain components of our Segment Earnings for our Single-family Guarantee, Multifamily, and Investments segments. Prior period results have been revised to conform to the current period presentation. See Note 11 for more information on these changes.

Segment Earnings differs significantly from, and should not be used as a substitute for, net income (loss) as determined in accordance with GAAP. Our definition of Segment Earnings may differ from similar measures used by other companies. We believe that Segment Earnings provides us with meaningful metrics to assess the financial performance of each segment and our company as a whole. See Note 11 for additional details on Segment Earnings, including additional financial information for our segments.

SEGMENT COMPREHENSIVE INCOME

The table below shows our comprehensive income by segment, including the All Other category.

Management's Discussion and Analysis Our Business Segments | Single-Family Guarantee

SINGLE-FAMILY GUARANTEE
BUSINESS OVERVIEW

In our Single-family Guarantee segment, we purchase, securitize, and guarantee single-family loans originated by seller/servicers and we manage our single-family credit risk. The U.S. residential mortgage market consists of a primary mortgage market that links homebuyers and lenders and a secondary mortgage market that links lenders and investors. We participate only in the secondary mortgage market. The size of the U.S. residential mortgage market is affected by many factors, including changes in interest rates, unemployment rates, homeownership rates, housing prices, the supply of housing, lender preferences regarding credit risk, and borrower preferences regarding mortgage debt. The amount of residential mortgage debt available for us to purchase and the mix of available loan products are also affected by several factors, including the volume of loans meeting the requirements of our Charter, our own preference for credit risk reflected in our purchase standards, and the loan purchase and securitization activity of other financial institutions.

Our Single-family Guarantee segment supports our primary business strategies by creating:

A Better Freddie Mac:

• Providing market leadership by delivering quality offerings, programs, and services to an increasingly diversified customer base and an evolving mortgage market;

• Improving the customer experience through continued enhancement of our products, programs, processes, and technology; and

• Establishing effective risk management activities that are appropriate for the expected level of risk.

A Better Housing Finance System:

• Developing innovative technology platforms to provide sellers and Freddie Mac with better methods of assessing and managing single-family mortgage credit risk;

• Developing and implementing initiatives to reduce taxpayer exposure and offer private investors new and innovative ways to share in the credit risk of the Core single-family book;

• Expanding access to mortgage credit in a responsible manner to support our Charter Mission as well as to meet specific mandated goals;

• Working with FHFA, Fannie Mae, and CSS on the development of a new common securitization platform; and

• Implementing the single (common) security initiative for Freddie Mac and Fannie Mae, which is intended to increase the liquidity of the TBA market and to reduce the disparities in trading value between our PCs and Fannie Mae's single-class mortgage-related securities.

Products and Activities

Securitization and Guarantee Products

In a typical loan securitization, we purchase loans that lenders originate and then pool those loans into mortgage-related securities that can be sold in the capital markets. In order to issue the mortgage-related securities, we establish trusts pursuant to our Master Trust Agreements and serve as the trustee of those trusts. We administer the collection of borrowers' payments on their loans and the distribution of payments to the investors in the mortgage-related securities, net of any applicable guarantee fees. We

Management's Discussion and Analysis Our Business Segments | Single-Family Guarantee

typically guarantee the payment of principal and interest on these mortgage-related securities and generally retain the guarantee fee income.

When a borrower prepays a loan that we have securitized, the outstanding balance of the security owned by investors is reduced by the amount of the prepayment. If the borrower becomes delinquent, we continue to make the applicable payments to the investors in the mortgage-related securities pursuant to our guarantee until we purchase the loan out of the trust. We have the option to purchase specified loans, including certain delinquent loans, from the trusts at a purchase price equal to the current UPB of the loan, less any outstanding advances of principal that have been previously distributed. After a loan is purchased, we work with the borrowers to mitigate our losses through our loan workout programs, which are discussed in more detail in "Risk Management." If we are unable to achieve a successful loan workout, we either sell the loan to a third party or pursue foreclosure of the underlying property. The purchase of delinquent loans and the sale of loans are done in conjunction with the Investments segment.

The guarantee fee we charge on new acquisitions generally consists of a combination of upfront delivery fees and a base contractual monthly fee paid as a percentage of the UPB of the underlying loan. We may also make upfront payments to buy up the monthly guarantee fee rate ("buy-up fees"), or receive upfront payments to buy down the monthly guarantee fee rate ("buy-down fees"). These fees are paid in conjunction with the formation of a PC to provide for a uniform coupon rate for the mortgage pool underlying the PC. The payments made to buy up the guarantee fee rate are not considered compensation for the credit risk assumed for purposes of our financial statements.

Consequently, these amounts are allocated to the Investments segment.

We enter into loan purchase agreements with many of our single-family customers that outline the terms under which we agree to purchase loans from them over a period of time. For the majority of the loans we purchase, the guarantee fees are not specified contractually. Instead, we bid for some or all of the lender's loan volume on a monthly basis at a guarantee fee rate that we specify. As a result, our loan purchase volumes from individual customers can fluctuate significantly.

We seek to issue guarantees with fee terms that are commensurate with the risks assumed and that will, over the long-term, provide guarantee fee income that exceeds the credit-related and administrative expenses on the underlying loans and provide a return on the capital that would be needed to support the related credit risk. To compensate us for higher levels of risk in some loan products, we charge upfront delivery fees above our contractual base fees, which are calculated based on credit risk factors such as the loan product type, loan purpose, LTV ratio, and credit score. While we vary our guarantee and, in certain cases, delivery fee pricing for different customers, loan products, and loan or borrower underwriting characteristics based on our assessment of credit risk, the seller may elect to retain loans with better credit characteristics. The sellers' decisions with respect to loan retention, or sale to us, could result in our purchases having a more adverse credit profile.

We must obtain FHFA's approval to implement across-the-board increases in our guarantee fees. In addition, from time to time, FHFA issues directives or guidance to us affecting the levels of guarantee fees that we may charge for various types of loans. In July 2016, FHFA issued a directive that addressed the safety and soundness risk that could arise if our guarantee fees were not sufficient to compensate us adequately for the credit risks we are taking. This directive allows us to continue to charge guarantee fees generally in line with the levels we had been charging at the time it was issued, but for many types of loans it prohibits reductions significantly below those levels.

Management's Discussion and Analysis Our Business Segments | Single-Family Guarantee

In 2012, at FHFA's direction, we increased guarantee fees by 10 basis points. Under the Temporary Payroll Tax Cut Continuation Act of 2011, the proceeds from this increase are being remitted to Treasury on a quarterly basis to fund the payroll tax cut. We refer to this fee increase as the legislated 10 basis point increase in guarantee fees.

We issue the types of guarantee and securitization products described below. In these securitization products, Freddie Mac functions in its capacity as depositor, guarantor, administrator, and trustee. While the Single-family Guarantee segment is responsible for the guarantee of our securities, the Investments segment manages the securitization and resecuritization processes.

PCs - our primary single-family mortgage securitization and guarantee process involves our issuance of single-class PCs, which are pass-through securities that represent undivided beneficial interests in trusts that hold pools of loans. For our fixed-rate PCs, we guarantee the timely payment of principal and interest. For our ARM PCs, we guarantee the timely payment of the weighted average coupon interest rate for the underlying loans. We also guarantee the full and final payment of principal, but not the timely payment of principal, on ARM PCs.

Guarantor Swap PCs - we issue most of our PCs in guarantor swap transactions in which our customers provide us with loans in exchange for PCs, as shown in the diagram below:

Cash PCs - we also issue PCs in transactions in which we purchase performing loans (which we sometimes refer to as a securitization pipeline) for cash and securitize them for retention in our mortgage-related investments portfolio or for sale to third parties, as shown in the diagram below. We also use this process to securitize reperforming loans. The purchase of loans and sale of PCs are managed by the Investments segment.

Management's Discussion and Analysis Our Business Segments | Single-Family Guarantee

Resecuritization Products - our resecuritization products represent beneficial interests in pools of PCs and certain other types of mortgage assets. We create these securities primarily by using PCs or our previously issued resecuritization products as the underlying collateral. We believe our issuance of these securities expands the range of investors in our mortgage-related securities to include those seeking specific security attributes. Similar to our PCs, we guarantee the payment of principal and interest to the investors in our resecuritization products. We do not charge a guarantee fee for these securities if the underlying collateral is already guaranteed by us since no additional credit risk is introduced, although we typically receive a transaction fee as compensation for creating the security and future administrative responsibilities. All of the cash flows from the collateral underlying our resecuritization products are generally passed through to investors in these securities. We do not issue resecuritization products that have concentrations of credit risk beyond those embedded in the underlying assets. In many of our resecuritization transactions, securities dealers or investors deliver mortgage assets in exchange for the resecuritization product. In certain cases, we may also exchange our own mortgage assets for the resecuritization product. The resecuritization activities are managed by the Investments segment. The following diagram provides a general example of how we create resecuritization products:

Freddie Mac 2016 Form 10-K 39

Management's Discussion and Analysis Our Business Segments | Single-Family Guarantee

We issue the following types of resecuritization products:

Giant PCs - Giant PCs are resecuritizations of previously issued PCs or Giant PCs. Giant PCs are single-class securities that involve the straight pass through of all of the cash flows of the underlying collateral to holders of the beneficial interests.

Stripped Giant PCs - Stripped Giant PCs are multiclass securities that are formed by resecuritizing previously issued PCs or Giant PCs and issuing principal-only and interest-only securities backed by the cash flows from the underlying collateral.

REMICs - REMICs are resecuritizations of previously issued PCs, Giant PCs, Stripped Giant PCs, or REMICs. REMICs are multiclass securities that divide all of the cash flows of the underlying collateral into two or more classes with varying maturities, payment priorities and coupons.

- **Other securitization products** - From time to time, we may issue guaranteed mortgage-related securities collateralized by non-Freddie Mac mortgage-related securities. However, we have not entered into these types of transactions as part of our Single-family Guarantee business in several years.

Long-term standby commitments - we provide a guarantee on mortgage assets held by third parties, in exchange for guarantee fees, without securitizing those assets. Long-term standby commitments obligate us to purchase seriously delinquent loans that are covered by those commitments. From time to time, we have consented to the termination of our long-term standby commitments and simultaneously entered into guarantor swap transactions with the same counterparty, issuing PCs backed by many of the same loans.

Management's Discussion and Analysis Our Business Segments | Single-Family Guarantee

Common Securitization Platform and the Single (Common) Security

In accordance with FHFA's 2014 Strategic Plan and the Conservatorship Scorecards, we continue to work with FHFA, Fannie Mae, and CSS on the development of a new common securitization platform and the implementation of the single (common) security initiative for Freddie Mac and Fannie Mae.

In December 2016, we and FHFA announced the implementation of Release 1 of the common securitization platform. Under Release 1, we began using the common securitization platform for data acceptance, issuance support, and bond administration activities related to certain Freddie Mac single-family fixed-rate mortgage-related securities.

FHFA expects to announce a timeframe for implementation of Release 2 of the common securitization platform in the first quarter of 2017. Release 2 involves the issuance by Freddie Mac and Fannie Mae of a single (common) mortgage-related security, to be called the Uniform Mortgage-Backed Security ("UMBS"). Release 2 will add to the functionality of Release 1, including commingling of Freddie Mac and Fannie Mae UMBS and UMBS disclosures.

Credit Risk Transfer Transactions

Most of our credit risk transfer transactions are designed to transfer a portion of the expected credit losses and a significant portion of credit losses in a stressed economic environment on groups of previously acquired loans to third-party investors. These transactions have termination dates that are earlier than the maturities of the related loans, and losses on the loans occurring beyond the terms of the transactions are not covered. The following strategic considerations were incorporated into the design of our credit risk transfer transactions:

• Repeatable and scalable execution with a broad appeal to diversified investors;

• Execution at a cost that is economically sensible;

• Minimal effect on the TBA market;

• Minimize changes required of, and effects on, sellers and servicers by having Freddie Mac serve as the credit manager for investors; and

• Avoid or seek to mitigate the risk that our losses are not reimbursed timely and in full.

The value of these transactions to us is dependent on various economic scenarios, and we will primarily benefit from these transactions if we experience significant loan defaults. Our credit risk transfer transactions include:

STACR debt notes - In this transaction, we create a reference pool of loans from our Core single-family book and an associated securitization structure with notional credit risk positions (e.g., first loss, mezzanine, and senior positions).

In certain of our STACR debt note transactions to date, we transferred risk in both first loss and mezzanine notional credit risk positions while in other transactions we only transferred risk in the mezzanine notional credit risk positions.

The notional amounts of the credit risk positions are reduced when certain specified credit events occur on the loans in the reference pool. Generally, the notional amounts of the credit risk positions will be reduced based on scheduled and unscheduled principal payments that occur on the loans in the reference pool.

In STACR debt note transactions, losses may be allocated to the notional balances based on

Management's Discussion and Analysis Our Business Segments | Single-Family Guarantee

calculated losses using a predefined formula or based on the actual losses on the loans in the reference pool. For loans that are covered by credit risk transfer transactions based on calculated losses, we may write down STACR debt notes or receive reimbursement of losses when the loans experience a credit event, which predominantly includes a loan becoming 180 days delinquent. For loans that are covered by credit risk transfer transactions based on actual losses, we may write down STACR debt notes or receive reimbursement of losses once an actual loss event (e.g., third-party foreclosure sale, short sale or REO disposition) occurs.

We issue STACR debt notes related to certain notional credit risk positions to third-party investors and retain the remaining credit risk. We make payments of principal and interest on the issued notes, but are not required to repay principal to the extent that the notional credit risk position is reduced as a result of a specified credit event. The interest rate on STACR debt notes is generally higher than on our other unsecured debt securities due to the potential for reductions to their principal balance. The amount of risk transferred in each transaction affects the interest rate we pay on the notes. The following diagram illustrates a typical STACR debt note transaction:

ACIS insurance policies - In a typical ACIS transaction, we purchase insurance policies, generally underwritten by a group of insurers and reinsurers, that provide credit protection for certain specified credit events that occur and are allocated to the non-issued notional credit risk positions of a STACR debt note transaction (i.e., the risk positions that Freddie Mac retains). Under each insurance policy, we pay monthly premiums that are determined based on the outstanding balance of the reference pool. We may also enter into ACIS transactions that provide credit protection for certain specified

Management's Discussion and Analysis Our Business Segments | Single-Family Guarantee

credit events on loans not included in a reference pool created for a STACR debt note transaction. When specific credit events occur, we receive compensation from the insurance policy up to an aggregate limit based on a predefined formula or based on actual losses. We require our counterparties to partially collateralize their exposure to reduce the risk that we will not be reimbursed for our claims under the policies.

Deep mortgage insurance credit risk transfer, or Deep MI - In this transaction, we purchase a credit enhancement from affiliates of mortgage insurance companies that takes effect immediately upon the sale of the mortgage loan to Freddie Mac. Deep MI provides additional coverage beyond primary mortgage insurance. We require our counterparties to collateralize their exposure to reduce the risk that we will not be reimbursed for our claims under the policies.

Whole loan securities - In this transaction, we issue guaranteed senior securities and unguaranteed subordinated securities backed by single-family loans. The unguaranteed subordinated securities will absorb first losses on the related loans. In these transactions, the loans are serviced in accordance with our Guide and we control the servicing.

Senior subordinate securitization structures - In this structure, we issue guaranteed senior securities and unguaranteed subordinated securities backed by single-family loans. The collateral for these structures consists of seasoned performing modified and reperforming loans. The unguaranteed subordinated securities will absorb first losses on the related loans. In these transactions, the loans are not serviced in accordance with our Guide and we do not control the servicing.

Seller indemnification agreement - In this transaction, we enter into an agreement upon loan acquisition with a seller under which the seller will absorb a portion of losses on the related single-family loans in exchange for a fee or a reduction in our guarantee fee. The indemnification amount may be fully or partially collateralized.

We also use other types of credit enhancements, such as primary mortgage insurance, to mitigate our credit risk exposure. See "Risk Management" for additional information on our credit risk transfer transactions, as well as the other types of credit enhancements we use.

Customers

Our customers in the Single-family Guarantee segment are predominantly financial institutions that originate, sell and perform the ongoing servicing of loans for new or existing homeowners. These companies include mortgage banking companies, commercial banks, community banks, credit unions, other non-depository financial institutions, HFAs, and savings institutions. Many of these companies are both sellers and servicers for us. In addition, our customers include investors and dealers in our guaranteed mortgage-related securities and investors and counterparties in credit risk transfer transactions.

We acquire a significant portion of our loans from several lenders that are among the largest originators in the U.S. In addition, a significant portion of our single-family loans is serviced by several large servicers. The graphs below present the concentration of our single-family purchase volume for 2016 and our loan servicing as of December 31, 2016 among our top five customers.

Management's Discussion and Analysis Our Business Segments | Single-Family Guarantee

Management's Discussion and Analysis Our Business Segments | Single-Family Guarantee

For additional information about seller/servicer concentration risk and our relationships with our seller/servicer customers, see "Risk Management - Credit Risk - Counterparty Credit Risk - Sellers and Servicers."

Competition

Our principal competitors in the Single-family Guarantee segment are Fannie Mae, FHA/VA (with Ginnie Mae securitization), and other financial institutions that retain or securitize loans, such as commercial and investment banks, dealers, and savings institutions. We compete on the basis of price, products, securities structure, and service. Competition to acquire single-family loans can also be significantly affected by changes in our credit standards. The conservatorship, including direction provided to us by our Conservator, may affect our ability to compete. For more information, see "Risk Factors - Other Risks - Competition from banking and non-banking institutions (including Fannie Mae and FHA/VA with Ginnie Mae securitization) may harm our business. FHFA's actions as Conservator of both companies could affect competition between us and Fannie Mae."

Our Segment Earnings guarantee fee income is influenced by our PC price performance because we adjust our fees based on the price performance of our PCs relative to comparable Fannie Mae securities (we refer to this as market-adjusted pricing).

From time to time, we undertake a variety of actions in an effort to support the liquidity and price performance of our PCs relative to comparable Fannie Mae securities. These actions may include:

Resecuritizing PCs;

Encouraging sellers to pool loans that they deliver to us into PC pools with a larger and more diverse population of loans; and

Influencing the volume and characteristics of loans delivered to us by tailoring our loan eligibility guidelines and by other means.

For additional information about our efforts to support the liquidity and relative price performance of our PCs, see "Investments - Market Conditions" and "Risk Factors - Other Risks - A significant decline in the price performance of or demand for our PCs could have an adverse effect on the volume and/or profitability of our new single-family guarantee business."

Management's Discussion and Analysis Our Business Segments | Single-Family Guarantee

MARKET CONDITIONS

The graphs and related discussion below present certain single-family market indicators, for the most recent five years, that can significantly affect the business and financial results of our Single-family Guarantee segment.

U.S. Single-Family Originations

Source: Inside Mortgage Finance dated January 27, 2017.

U.S. Single-Family Home Sales

Source: National Association of Realtors news release dated January 24, 2017 and U.S. Census Bureau news release dated January 26, 2017.

Commentary

• Single-family loan origination volumes in the U.S. increased in 2016, driven by an increase in refinancing activity as a result of lower average mortgage interest rates.

• If average mortgage interest rates continue to move higher in 2017, we would anticipate lower origination activity compared to 2016 as refinance activity and home sales would likely decline.

Freddie Mac 2016 Form 10-K 46

Management's Discussion and Analysis Our Business Segments | Single-Family Guarantee

Single-Family Mortgage Debt Outstanding as of December 31,

Source: Federal Reserve Financial Accounts of the United States of America dated December 8, 2016. For 2016, the amount is as of September 30, 2016 (latest available information).

Single-Family Serious Delinquency Rates as of December 31,

Source: National Delinquency Survey from the Mortgage Bankers Association. For 2016, the rates (excluding Freddie Mac) are as of September 30, 2016 (latest available information).

Commentary

The U.S. single-family mortgage debt outstanding increased in 2016 compared to 2015, which resulted in an increase in the supply of loans available for us to purchase.

Single-family serious delinquency rates in the U.S. continued to decline due to macroeconomic factors, such as decreased unemployment rates and continued home price appreciation. We expect our single-family serious delinquency rate to decline below 1.00% in 2017.

As reported by the U.S. Census Bureau, the U.S. homeownership rate was 63.7% in the fourth quarter of 2016, compared to a high point of 69.2% in the fourth quarter of 2004, and the average of 66.2% since 1990.

BUSINESS RESULTS

The graphs and related discussion below present the business results of our Single-family Guarantee segment.
New Business Activity

Single-Family Loan Purchases and Guarantees

Number of Families Helped to Own a Home

Commentary

We maintain a consistent market presence by providing lenders with a constant source of liquidity for conforming loan products. We have funded approximately 14.2 million single-family homes since 2009 and purchased approximately 1.4 million HARP loans since the initiative began in 2009, including over 25,000 during 2016. Our overall loan purchase activity increased in 2016 compared to 2015, due to higher refinance loan purchase volume as average mortgage interest rates were lower in 2016 compared to 2015. Our overall loan purchase activity increased significantly in 2015 compared to 2014, due to higher volumes of home sales and home price appreciation. We continued working to improve access to affordable mortgage credit, including through our Home Possible[®] loan initiatives. Our Home Possible[®] loan initiatives offer down payment options as low as

Management's Discussion and Analysis Our Business Segments | Single-Family Guarantee

3% and are designed to help qualified borrowers with limited savings buy a home. We purchased nearly 34,000 loans under these initiatives in 2016. We also continue to explore the feasibility of:

Increasing our purchases of loans securitized by permanently affixed manufactured housing;
Improving the effectiveness of pre-purchase and early delinquency counseling for borrowers;
Utilizing alternative credit score models and credit history standards in loan eligibility decisions; and
Increasing support for first-time home buyers.

While we are responsibly expanding our programs and outreach capabilities to better serve low- and moderate-income borrowers and underserved markets, these loans result in increased credit risk. Expanding access to affordable mortgage credit will continue to be a top priority in 2017. See "Regulation and Supervision - Legislative and Regulatory Developments - Final Rule on Duty to Serve Underserved Market" for more information.

If average mortgage interest rates continue to move higher in 2017, we would anticipate lower purchase volume compared to 2016 as refinance activity and home sales would likely decline.

Management's Discussion and Analysis Our Business Segments | Single-Family Guarantee

Single-family Credit Guarantee Portfolio

Single-Family Credit Guarantee Portfolio as of December 31,

Single-Family Loans as of December 31,

Commentary

• The single-family credit guarantee portfolio grew to \$1,755 billion in 2016 from \$1,702 billion in 2015, an increase of approximately 3%.

Freddie Mac 2016 Form 10-K 50

Management's Discussion and Analysis Our Business Segments | Single-Family Guarantee

The Core single-family book grew to 73% of the single-family credit guarantee portfolio at December 31, 2016. We exclude HARP and other relief refinance loans from the Core single-family book because such loans generally reflect credit risk attributes of the original loans (many of which were originated between 2005 and 2008).

The HARP and other relief refinance book represented an additional 15% of the single-family credit guarantee portfolio at December 31, 2016.

The Legacy single-family book declined to 12% of the single-family credit guarantee portfolio at December 31, 2016.

Management's Discussion and Analysis Our Business Segments | Single-Family Guarantee

Guarantee Fees

The average portfolio Segment Earnings guarantee fee rate recognizes upfront delivery fee income over the contractual life of the related loans (usually 30 years). If the related loans prepay, the remaining upfront delivery fee income is recognized immediately. In addition, the average portfolio Segment Earnings guarantee fee rate reflects an average of our total mortgage portfolio and is not limited to purchases in the applicable year.

The average guarantee fee rate charged on new acquisitions recognizes upfront delivery fee income over the estimated life of the related loans using our expectations of prepayments and other liquidations. Loans acquired prior to 2012 have lower contractual guarantee fee rates than loans we have acquired since that time.

Average Portfolio Segment Earnings Guarantee Fee Rate⁽¹⁾ for the Year Ended December 31,

Average Guarantee Fee Rate⁽¹⁾ Charged on New Acquisitions for the Year Ended December 31,

(1) Excludes the legislated 10 basis point increase in guarantee fees.

Commentary

▲ Average portfolio Segment Earnings guarantee fees

2016 vs. 2015 and 2015 vs. 2014 - increased due to higher amortization of upfront delivery fees, driven by higher loan liquidations resulting from a lower average interest rate environment, as well as the acquisition of new loans with higher guarantee fee rates.

● Guarantee fees charged on new acquisitions

2016 vs. 2015 - increased primarily due to changes in the product mix of our single-family new business purchases as new acquisitions have included a relatively higher proportion of 30-year fixed-rate mortgages, which generally have higher guarantee fee rates than most other mortgage

Management's Discussion and Analysis Our Business Segments | Single-Family Guarantee

products, combined with decreased market-adjusted pricing costs based on the price performance of our PCs relative to Fannie Mae securities.

2015 vs. 2014 - decreased due to a combination of competitive pricing and increased market-adjusted pricing costs based on the price performance of our PCs relative to Fannie Mae securities.

Freddie Mac 2016 Form 10-K 53

Management's Discussion and Analysis Our Business Segments | Single-Family Guarantee

Credit Risk Transfer Activity

Since 2013, STACR debt note and ACIS transactions have been our principal method of transferring a portion of the expected credit losses and a significant portion of credit losses in a stressed economic environment subsequent to loan acquisition in our Core single-family book. The following charts present amounts for the STACR and ACIS transactions that occurred in 2016 and the cumulative amount of such transactions at December 31, 2016.

Commentary

We continued to transfer a portion of the expected credit losses and a significant portion of credit losses in a stressed economic environment to third-party investors, insurers, and selected sellers through credit risk transfer transactions. In 2016, we transferred credit losses associated with \$215.2 billion in UPB of loans in our Core single-family book through STACR debt note, ACIS, seller indemnification, whole loan security, senior subordinate securitization structures, and Deep MI transactions. Significant developments in 2016 include the following:
 We developed a new ACIS transaction using collateral other than 30-year fixed-rate mortgages. Also, unlike prior ACIS transactions, this transaction does not involve loans in a reference pool created for a STACR debt note transaction.

Management's Discussion and Analysis Our Business Segments | Single-Family Guarantee

We executed our first Deep MI transaction. The pilot transaction provided additional coverage beyond primary mortgage insurance on 30-year fixed-rate mortgages with LTV ratios between 80% and 95%.

Since 2013, we have completed 57 credit risk transfer transactions that, upon execution of the transaction, covered \$601.9 billion in principal of loans in our Core single-family book.

The interest and premiums we pay on our issued STACR debt note and ACIS transactions to transfer credit risk effectively reduce the guarantee fee income we earn on the PCs within the respective pools. Our expected guarantee fee income on the loans within the STACR and ACIS reference pools has been effectively reduced by approximately 34%, on average, for transactions executed as of December 31, 2016. The amount of effective reduction to our overall guarantee fee income could change over time as we continue our credit risk transfer activities or if there are changes in the economic or regulatory environment that affect the cost of executing these transactions. We expect that the aggregate cost of our credit risk transfer activity will continue to increase as we enter into additional transactions. As of December 31, 2016 there has not been a significant number of loans in our STACR debt note reference pools that have experienced a credit event. As a result of the credit performance of these loans, we have only recognized small write-downs on our STACR debt notes and have begun to make claims for reimbursement of losses under our ACIS transactions.

The 2017 Conservatorship Scorecard sets a goal for us to transfer a meaningful portion of credit risk on at least 90% of the UPB of certain categories of newly acquired single-family loans, such as non-HARP and non-high LTV refinance fixed-rate loans with terms greater than 20 years and LTV ratios above 60%.

Management's Discussion and Analysis Our Business Segments | Single-Family Guarantee

Loss Mitigation Activities

Number of Families Helped to Avoid Foreclosure

Loan Workout Activity

Commentary

We continue to help struggling families retain their homes or otherwise avoid foreclosure through loan workouts, helping approximately 1.2 million borrowers since 2009. Our loan workout activity has declined over the last several years, along with a decline in the size of our seriously delinquent single-family loan portfolio.

- When a home retention solution is not practicable, we require our servicers to pursue foreclosure alternatives, such as short sales, before initiating foreclosure. When foreclosure is unavoidable and we acquire the property as REO, we have helped to stabilize communities by focusing on REO sales to owner-occupants, who have made up 67% of purchasers since the beginning of 2009.

- As part of our strategy to mitigate losses and reduce our holdings of less liquid assets, we sold seriously delinquent loans totaling \$3.1 billion in UPB during 2016. Of the \$2.1 billion in UPB of single-family loans classified as held-for-sale at December 31, 2016, \$1.6 billion related to loans that were seriously delinquent. We believe selling these loans provides better economic returns than continuing to hold them.

Management's Discussion and Analysis Our Business Segments | Single-Family Guarantee

HAMP ended in December 2016. The relief refinance program (including HARP) will end in September 2017 and is expected to be replaced by a new program. See “Risk Management” for additional information on our loan workout activities.

Freddie Mac 2016 Form 10-K 57

Management's Discussion and Analysis Our Business Segments | Single-Family Guarantee

FINANCIAL RESULTS

The table below presents the components of the Segment Earnings and comprehensive income for our Single-family Guarantee segment.

	Year Ended December			Change		Change	
	31, 2016	2015	2014	\$	%	\$	%
(Dollars in millions)							
Guarantee fee income	\$6,091	\$5,152	\$4,094	\$939	18 %	\$1,058	26 %
Provision for credit losses	(517)	(283)	(1,129)	(234)	(83)%	846	75 %
Other non-interest income	447	136	952	311	229 %	(816)	(86)%
Administrative expense	(1,323)	(1,285)	(1,170)	(38)	(3)%	(115)	(10)%
REO operations expense	(298)	(341)	(213)	43	13 %	(128)	(60)%
Other non-interest expense	(1,169)	(794)	(387)	(375)	(47)%	(407)	(105)%
Segment Earnings before income tax expense	3,231	2,585	2,147	646	25 %	438	20 %
Income tax expense	(1,061)	(807)	(600)	(254)	(31)%	(207)	(35)%
Segment Earnings, net of taxes	2,170	1,778	1,547	392	22 %	231	15 %
Total other comprehensive income (loss), net of tax	(9)	12	(10)	(21)	(175)%	22	220 %
Total comprehensive income	\$2,161	\$1,790	\$1,537	\$371	21 %	\$253	16 %

Key Drivers:

Guarantee fee income

2016 vs. 2015 and 2015 vs. 2014 - increased primarily due to higher amortization of upfront delivery fees resulting from increased loan liquidations. Higher average contractual guarantee fee rates, reflecting the growth in the Core single-family book, also contributed.

Provision for credit losses

2016 vs. 2015 - increased primarily due to higher total interest rate concessions resulting from the longer expected life of certain modified loans driven by rising mortgage interest rates in the fourth quarter of 2016.

2015 vs. 2014 - decreased primarily due to a lower volume of newly impaired loans as the housing market and economy continued to improve.

Other non-interest income

2016 vs. 2015 - increased due to fewer seasoned single-family loans reclassified from held-for-investment to held-for-sale in 2016 compared to 2015 due to a smaller inventory of certain seasoned single-family loans available for reclassification, partially offset by increased fair value losses on STACR debt notes, as market spreads between STACR yields and LIBOR tightened more in 2016 than in 2015.

2015 vs. 2014 - decreased primarily due to more seasoned single-family loans reclassified from held-for-investment to held-for-sale in 2015 compared to 2014; as we accelerated our program to sell certain seasoned single-family loans, fair value losses on STACR debt notes, as market spreads between STACR yields and LIBOR tightened in 2015, compared to fair value gains on STACR debt notes in 2014 when market spreads widened, and higher expenses related to CSS.

Management's Discussion and Analysis Our Business Segments | Single-Family Guarantee

Other non-interest expense

2016 vs. 2015 and 2015 vs. 2014 - increased primarily due to higher credit risk transfer expense (interest expense on STACR debt notes and premiums paid to ACIS counterparties) reflecting higher outstanding cumulative volumes of credit risk transfer transactions in the respective comparable periods.

Freddie Mac 2016 Form 10-K 59

Management's Discussion and Analysis Our Business Segments | Multifamily

MULTIFAMILY
BUSINESS OVERVIEW

The Multifamily segment provides liquidity to the multifamily market and supports a consistent supply of workforce housing by purchasing and securitizing loans secured by properties with five or more units. The Multifamily segment reflects results from our purchase, securitization, and guarantee of multifamily loans and securities, our investments in those loans and securities, and the management of multifamily mortgage credit risk and mortgage market spread risk. The Multifamily segment supports our primary business strategies by creating:

A Better Freddie Mac:

- Continuing to provide financing to the multifamily mortgage market and expanding our market presence for workforce housing in line with our mission;
- Improving our risk-adjusted returns by leveraging private capital in our credit risk transfer transactions; and
- Maintaining strong credit and capital management discipline.

A Better Housing Finance System:

- Operating in a customer focused manner, in an effort to build value and support the creation of a strong, long-lasting rental housing system;
- Identifying new opportunities beyond our existing K Certificate and SB Certificate transactions to transfer credit risk to third parties and reduce taxpayer exposure; and
- Fostering innovation of products that expand the availability of workforce housing in the marketplace.

We use a prior-approval underwriting approach for multifamily loans, in contrast to the delegated underwriting approach used in our Single-family Guarantee segment. Under this approach, we maintain credit discipline by completing our own underwriting and credit review for each new loan prior to issuance of a loan commitment, including review of third-party appraisals and cash flow analysis.

Multifamily loans are typically without recourse to the borrower, making repayment dependent on cash flows generated by the underlying property. Cash flows generated by a property are significantly influenced by vacancy and rental rates, as well as conditions in the local rental market, the physical condition of the property, the quality of property management, and the level of operating expenses.

Multifamily property markets are affected by local and regional economic factors, such as employment rates, construction cycles, preferences for homeownership versus renting, and relative affordability of single-family home prices, all of which influence the supply and demand for multifamily properties and pricing for apartment rentals.

Products and Activities

Securitization, Guarantee, and Credit Risk Transfer Products

In our Multifamily segment, we issue various types of securitization, guarantee, and credit risk transfer products. These products, with the exception of other credit risk transfer products (i.e., SCR debt notes), make up our guarantee portfolio.

Management's Discussion and Analysis Our Business Segments | Multifamily

Primary Securitization and Credit Risk Transfer Products - Our primary business model is to acquire loans for aggregation and then to securitize the loans through the issuance of K Certificates or SB Certificates, as discussed below.

K Certificates - We purchase multifamily loans for aggregation and securitization through the issuance of multifamily K Certificates, which allows us to transfer a large majority of expected and stress credit losses of the loans to third-party investors. As shown in the diagram below, in a K Certificate transaction, we sell multifamily loans to a non-Freddie Mac securitization trust that issues senior and subordinated securities, and simultaneously purchase and place the senior securities into a Freddie Mac securitization trust that issues guaranteed K Certificates. In these transactions, we guarantee the senior securities and do not issue or guarantee the subordinated securities. As a result, a large majority of expected and stress credit risk is sold to the third-party investors in the subordinated securities, thereby reducing our credit risk exposure. We receive a guarantee fee in exchange for guaranteeing the K Certificates. Profitability on our K Certificates is evaluated in terms of guarantee fee income and gains on the sales of loans. We attempt to maximize our returns by optimizing the combination of gains we earn when we sell the loans for securitization and the guarantee fees we will earn over time.

We may purchase or retain a portion of the K Certificates or the unguaranteed subordinated securities, and, from time to time, we may undertake other activities to support the liquidity of K Certificates. For more information, see "Risk Factors - Other Risks - The profitability of our multifamily business could be adversely affected by a significant decrease in demand for our K Certificates and SB Certificates."

SB Certificates - We also purchase small balance multifamily loans for aggregation and securitization through the issuance of multifamily SB Certificates. Occasionally, we also issue SB Certificates backed by small balance multifamily loans which were underwritten by Freddie Mac after (rather than at) origination and were not purchased by Freddie Mac prior to securitization. Small balance loans typically are between \$1.0 million and \$6.0 million in size. SB Certificate transactions are structured in a manner generally similar to our K Certificate transactions, and this

Management's Discussion and Analysis Our Business Segments | Multifamily

allows us to transfer a large majority of expected and stress credit losses of the small balance loans to third-party investors.

Similar to our K Certificates, we may purchase or retain a portion of the SB Certificates or the unguaranteed subordinated securities, and, from time to time, we may undertake other activities to support the liquidity of SB Certificates.

Other securitization products - We also issue other securitization products including:

PCs - We securitize multifamily loans into fixed-rate pass-through securities that are similar in structure to our Single-family Guarantee segment fixed-rate PCs. We guarantee the timely payment of the principal and interest on our multifamily fixed-rate PCs.

K Certificates without subordination - We securitize multifamily loans and issue K Certificates without subordination using a transaction structure that is similar to our K Certificates. However, unlike K Certificates, K Certificates without subordination are fully guaranteed and no subordinate or mezzanine securities are issued.

Q Certificates - We securitize multifamily loans, excluding small balance multifamily loans, and issue Q Certificates using a transaction structure that is similar to our K Certificates. However, unlike K Certificates, the multifamily loans backing the Q Certificate trusts are underwritten by Freddie Mac after (rather than at) origination and are not purchased by Freddie Mac prior to securitization.

M Certificates - We securitize pools of tax-exempt or taxable multifamily housing revenue bonds and loans and issue both guaranteed senior M Certificates and unguaranteed subordinated M Certificates.

- Other mortgage-related guarantees - We guarantee mortgage-related assets held by third parties in exchange for guarantee fee income without securitizing those assets. For example, we provide guarantees on certain tax-exempt multifamily housing revenue bonds secured by low- and moderate-income multifamily loans.

Other credit risk transfer products (i.e., SCR debt notes) - We began issuing our SCR debt notes in 2016 in order to transfer a portion of credit risk on the loans underlying certain of our other mortgage-related guarantees. The interest we pay on our SCR debt notes effectively reduces the guarantee fee income we would otherwise earn on the other mortgage-related guarantees. SCR debt notes are generally similar in structure to STACR debt notes.

Investing and Risk Management Activities

Mortgage loans - Our primary business model is to acquire loans for aggregation and then to securitize the loans through the issuance of K Certificates or SB Certificates. However, we also hold a portfolio of multifamily mortgage loans as part of a buy-and-hold investment strategy. Although we continue to purchase small amounts of new multifamily mortgage loans for this portfolio, the size of the portfolio is declining over time.

Agency mortgage-related securities - We may purchase or retain a portion of the K Certificates or SB Certificates and other types of multifamily securitization products we issue, depending on market conditions, and we may also buy or sell these securities in the secondary market.

Non-agency mortgage-related securities - We may purchase a portion of the unguaranteed subordinated securities related to our securitization transactions, depending on market conditions. To

Management's Discussion and Analysis Our Business Segments | Multifamily

date, we have not purchased any of the unguaranteed securities that are in the first loss position nor do we currently hold any in our portfolio.

CMBS - We are not currently an active purchaser of CMBS. However, we continue to hold a portfolio of CMBS and other multifamily investment securities that we acquired under a prior buy-and-hold investment strategy. This portfolio is declining over time.

Swaptions on credit indices - We purchase swaptions on credit indices in order to obtain protection against adverse movements in market spreads which may affect the profitability of our K Certificate or SB Certificate transactions.

Customers

Our multifamily loan volume is sourced through our approved lenders, who are primarily non-bank real estate finance companies and banks. We generally provide post-construction financing to apartment project operators with established performance records. The following graphs show the concentration of our 2016 multifamily new business volume by our largest sellers and loan servicing by our largest servicers as of December 31, 2016. Any seller or servicer with a 10% or greater share is listed separately.

Management's Discussion and Analysis Our Business Segments | Multifamily

Percentage of Multifamily New Business Volume

Percentage of Multifamily Servicing Volume

Note: Excludes loans underlying securitizations where we are not in first loss position, primarily K Certificates and SB Certificates.

Competition

We compete on the basis of price, service, and products, including our use of certain securitization structures. Our principal competitors in the Multifamily segment are Fannie Mae, FHA, commercial and investment banks, CMBS conduits, dealers, savings institutions, and life insurance companies.

Freddie Mac 2016 Form 10-K 64

Management's Discussion and Analysis Our Business Segments | Multifamily

MARKET CONDITIONS

The graphs and related discussion below present certain multifamily market indicators, for the most recent five years, that can significantly affect the business and financial results of our Multifamily segment.

Change in Effective Rents for Period Ending December 31,

Source: REIS, Inc.

Apartment Vacancy Rates as of December 31,

Source: REIS, Inc.

Commentary

The increase in effective rents (i.e., the average rent paid by the tenant over the term of the lease, adjusted for concessions by the landlord and costs borne by the tenant) declined in 2016 but remains strong relative to long-term averages. In 2017, we expect the increase in effective rents to remain in line with the 2016 increase.

Vacancy rates decreased slightly in 2016, remaining well below long-term averages, but are expected to increase during 2017 at a moderate pace.

Multifamily property prices have been especially strong, with 12% annualized growth through November 2016.

Multifamily property price growth may slow with the expected leveling-off in the rate of effective rent growth, an environment of increasing vacancy rates and interest rates, as well as improving returns for other investment types.

Management's Discussion and Analysis Our Business Segments | Multifamily

Apartment Completions and Net Absorption

Source: REIS, Inc.

K Certificate Benchmark Spreads as of December 31,

Source: Independent Dealers

Commentary

Apartment completions are an indication of the supply of rental housing. Net absorption, which is a measurement of the rate at which available apartments are occupied, is an indication of demand for rental housing.

Completions and net absorption were roughly equal during 2016. We expect them to remain in balance in 2017.

The K Certificate benchmark spread represents the market spread of a typical 10-year senior K Certificate over the U.S. swap curve.

The profitability of our K Certificate transactions (as measured by gains and losses on sales of mortgage loans) is affected by the change in the K Certificate benchmark spreads during the period between loan purchase and execution of the K Certificate transaction. These market spread impacts contribute to our earnings volatility, which we try to manage through the size of our securitization pipeline of held-for-sale mortgage loans and through our purchase of swaptions on credit indices.

During 2016, K Certificate benchmark spreads tightened due to a reduction in macroeconomic market volatility compared to 2015. This tightening had a positive effect on K Certificate profitability.

Management's Discussion and Analysis Our Business Segments | Multifamily

Multifamily Mortgage Debt Outstanding as of December 31,

Source: Federal Reserve Financial Accounts of the United States of America. For 2016, the amount is as of September 30, 2016 (latest available information).

Multifamily Delinquency Rates as of December 31,

Source: Freddie Mac, FDIC Quarterly Banking Profile, Trepp, LLC. (MF CMBS market, excluding REOs), American Council of Life Insurers (ACLI). For 2016, the amounts for FDIC insured institutions and ACLI investment bulletin are as of September 30, 2016 (latest available information).

Commentary

There was significant growth in the multifamily market during 2016, driven by increasing property prices, a continued elevated construction pipeline, and low interest rates. As reported by the Federal Reserve, total multifamily mortgage debt outstanding was approximately \$1.2 trillion at September 30, 2016 (the latest available information), representing an increase of \$63.5 billion (or 6%) since December 31, 2015.

Our share of multifamily mortgage debt outstanding has remained relatively stable over the past several years in the 13-15% range.

Our multifamily delinquency rates during 2016 remained among the lowest in the industry, ending the year at 3 bps, primarily due to our prior-approval underwriting approach discussed earlier.

We expect continued growth in the multifamily mortgage market due to increasing property prices and new completions, along with favorable investment opportunities. We also expect to maintain our share of multifamily mortgage debt outstanding in 2017.

We expect the credit losses and delinquency rates for the multifamily mortgage portfolio to remain low in the near term.

Management's Discussion and Analysis Our Business Segments | Multifamily

BUSINESS RESULTS

The graphs and related discussion below present the business results of our Multifamily segment.
New Business Activity

New Business Activity for the Year Ended December 31,

Acquisition of Units by Area Median Income (AMI) for the Year Ended December 31,

Commentary

- The dollar volume of capped multifamily new business activity transacted during 2016 was \$36.5 billion. The 2016 scorecard production cap was increased to \$36.5 billion by FHFA during 2016 from an original amount of \$31 billion. Business activity associated with certain targeted loan types is excluded and is considered uncapped for purposes of determining the dollar volume of multifamily new business.

Freddie Mac 2016 Form 10-K 68

Management's Discussion and Analysis Our Business Segments | Multifamily

Approximately two-thirds of our multifamily new business activity during 2016 counted towards the 2016 scorecard production cap, and the remaining one-third was uncapped.

Nearly 90% of the eligible units we financed during 2016 were affordable to families earning at or below the median income in their area (eligible units are multifamily units that qualify towards our affordable housing goal). We continued our support of workforce housing in the multifamily mortgage market during 2016 through our purchases of manufactured housing community loans and small balance loans.

Our multifamily new business activity outstanding commitments were \$12.4 billion and \$15.0 billion, as of December 31, 2016 and December 31, 2015, respectively. The December 31, 2016 amount includes loan purchase commitments for which we have elected the fair value option.

The growth in our new business activity during 2016 was driven by the overall increase in multifamily mortgage debt outstanding.

We expect our overall new business volume to increase in 2017; however, we expect our volume in the capped categories to be at or below the 2017 Conservatorship Scorecard cap, which is currently set at \$36.5 billion. We also expect to introduce new initiatives to support liquidity and workforce housing in the multifamily mortgage markets.

We expect the increased competition from other market participants, particularly banking institutions, to continue.

Management's Discussion and Analysis Our Business Segments | Multifamily

Multifamily Portfolio

Multifamily Portfolio as of December 31,

Multifamily Investments Portfolio as of December 31,

Commentary

Our multifamily portfolio grew in 2016 due to an increase in the guarantee portfolio, which was primarily attributable to our securitization of loans in K Certificate and SB Certificate transactions. This growth was driven by the overall increase in multifamily new business activity in 2016.

The decline in less liquid assets in our multifamily investments portfolio during 2016 was primarily due to continued runoff of our held-for-investment mortgage loan and CMBS portfolios.

We expect a continued increase in the size of our guarantee portfolio as a result of ongoing K Certificate and SB Certificate transactions. We also expect a continued reduction in our held-for-investment mortgage loan and CMBS portfolios due to ongoing principal repayments and maturities, which will serve to reduce our less liquid assets.

Freddie Mac 2016 Form 10-K 70

Management's Discussion and Analysis Our Business Segments | Multifamily

Net Interest Yield Earned For the Year Ended December 31,

Commentary

Our portfolio of interest-earning assets continued to decline in 2016 primarily as a result of reductions in our held-for-investment loan and CMBS portfolios, consistent with our plans to reduce our holdings of less liquid assets. The interest earning assets that liquidated had lower net interest yields relative to the average portfolio, resulting in an increase in net interest yields in 2016.

Freddie Mac 2016 Form 10-K 71

Management's Discussion and Analysis Our Business Segments | Multifamily

Guarantee Fees

Average Guarantee Fee Rate Charged on New K Certificates, K Certificates without Subordination, and SB Certificates for the Year Ended December 31,

Average Portfolio Guarantee Fee Rate as of December 31,

Freddie Mac 2016 Form 10-K 72

Management's Discussion and Analysis Our Business Segments | Multifamily

Commentary

The guarantee portfolio increased in 2016 primarily as a result of our ongoing issuance of K Certificates and SB Certificates.

The average guarantee fee rate on both the overall guarantee portfolio and on newly issued K Certificates, K Certificates without subordination, and SB Certificates increased in 2016, primarily as a result of increased securitizations of products for which we charge higher fees, such as those with lower subordination rates.

The average guarantee fee rate charged on K Certificates and SB Certificates is generally lower than the average guarantee fee rate charged on our other multifamily securitization products and other mortgage-related guarantees. The lower guarantee fee rate on K Certificates and SB Certificates is driven by higher levels of subordination that absorb the large majority of the expected and stress credit losses.

Freddie Mac 2016 Form 10-K 73

Management's Discussion and Analysis Our Business Segments | Multifamily

Credit Risk Transfer Activity

New K Certificate and SB Certificate Issuances for the Year Ended December 31,

Cumulative K Certificate and SB Certificate Issuances as of December 31,

Note: The charts above do not include certain SB Certificates where the underlying loans were underwritten by Freddie Mac after (rather than at) origination and were not purchased by Freddie Mac prior to securitization.

Commentary

• The number and dollar volume of our K Certificate and SB Certificate issuances increased during 2016 as a result of our strong new business volume during the year. We expect these issuances to continue at similar levels during 2017.

• Nearly 90% of the loans we purchased in 2016 were designated for securitization.

• While we expect to use K Certificates and SB Certificates as the primary methods to transfer multifamily credit risk in 2017, we also expect to introduce new initiatives to transfer credit risk.

Management's Discussion and Analysis Our Business Segments | Multifamily

FINANCIAL RESULTS

The table below presents the components of the Segment Earnings and comprehensive income for our Multifamily segment.

	Year Ended December 31,			Change 2016 - 2015		Change 2015 - 2014	
	2016	2015	2014	\$	%	\$	%
(Dollars in millions)							
Net interest income	\$1,022	\$1,049	\$948	(\$27)	(3)%	\$101	11 %
Guarantee fee income	511	339	254	172	51 %	85	33 %
Benefit (provision) for credit losses	22	26	55	(4)	(15)%	(29)	(53)%
Gains (losses) on loans and other non-interest income	1,166	(198)	1,104	1,364	689 %	(1,302)	(118)%
Derivative gains (losses)	407	372	335	35	9 %	37	11 %
Administrative expense	(362)	(325)	(274)	(37)	(11)%	(51)	(19)%
Other non-interest expense	(58)	(60)	(14)	2	3 %	(46)	(329)%
Segment Earnings before income tax expense	2,708	1,203	2,408	1,505	125 %	(1,205)	(50)%
Income tax expense	(890)	(376)	(772)	(514)	(137)%	396	51 %
Segment Earnings, net of taxes	1,818	827	1,636	991	120 %	(809)	(49)%
Total other comprehensive income (loss), net of tax	(236)	(261)	(177)	25	10 %	(84)	(47)%
Total comprehensive income (loss)	\$1,582	\$566	\$1,459	\$1,016	180 %	(\$893)	(61)%

Key Drivers:

Net interest income

2016 vs. 2015 - declined primarily due to lower balances of interest earning assets, as we reduce our less liquid assets, and lower net prepayment fee income in 2016.

2015 vs. 2014 - increased primarily due to changes in the composition of our multifamily portfolio, as lower yielding legacy loans and securities were replaced during 2015 with purchases of higher-yielding loans to support future securitizations.

Guarantee fee income

2016 vs. 2015 and 2015 vs. 2014 - increased primarily due to higher average multifamily guarantee portfolio balances as a result of ongoing issuances of K Certificates and SB Certificates.

Gains (losses) on loans and other non-interest income, derivative gains (losses), and total other comprehensive income (loss) are evaluated together as they are collectively driven by a combination of market spread-related and interest rate-related fair value changes. We use derivatives in the Multifamily segment to economically offset interest rate-related fair value changes of certain assets. The fair value changes of these economically hedged assets are included in gains (losses) on loans and other non-interest income and total other comprehensive income (loss). The interest rate-related portion of these changes and the interest rate-related derivative fair value changes that are included in derivative gains (losses) largely offset each other and, as a result, there is minimal net impact on total comprehensive income for the Multifamily segment from interest rate-related derivatives. We also recently began using derivatives in the Multifamily segment to economically offset a portion of the market spread-related fair value changes of certain assets.

2016 vs. 2015 - gains in these items increased, in the aggregate, primarily due to improved pricing on K Certificates and SB Certificates, as well as improved market spread-related fair value

Management's Discussion and Analysis Our Business Segments | Multifamily

changes. K Certificate benchmark spreads tightened during 2016, resulting in gains, compared to spread widening during 2015, which resulted in losses.

2015 vs. 2014 - gains in these items decreased, in the aggregate, due to market spread-related fair value changes. The widening of K Certificate benchmark spreads during 2015 resulted in losses while the spread tightening during 2014 resulted in gains.

Freddie Mac 2016 Form 10-K 76

Management's Discussion and Analysis Our Business Segments | Investments

INVESTMENTS

BUSINESS OVERVIEW

The Investments segment reflects results from three primary activities:

- Managing the company's mortgage-related investments portfolio, excluding Multifamily segment investments, single-family seriously delinquent loans, and the credit risk of single-family performing loans;

- Managing the treasury function for the company, including funding and liquidity; and

- Managing interest-rate risk for the company.

The objectives of our Investments segment are to make appropriate risk and capital management decisions, effectively execute our strategy and be responsive to market conditions. The Investments segment supports our primary business strategies by creating:

A Better Freddie Mac:

- Engaging in economically sensible transactions to reduce our less liquid assets, including non-agency mortgage-related securities, and to reduce the balance of our reperforming loans and our performing modified loans;

- Managing the mortgage-related investments portfolio's risk-versus-return profile based on our internal economic capital framework;

- Enhancing the liquidity of our issued securities in the secondary mortgage market to support our business needs;

- Responding to market opportunities by efficiently funding the company's business activities; and

- Managing the company's economic interest-rate risk through the use of derivatives and other debt.

A Better Housing Finance System:

- Expanding and improving the delivery of mortgage capital markets services through our cash loan purchase program, in conjunction with the Single-family Guarantee segment; and

- Implementing the single (common) security initiative for Freddie Mac and Fannie Mae, which is intended to increase the liquidity of the TBA market and to reduce the disparities in trading value between our PCs and Fannie Mae's single-class mortgage-related securities.

Although we manage our business on an economic basis, we have executed certain transactions in an effort to reduce the probability of a draw due to changes in interest rates. Also, we may forgo certain investment opportunities for a variety of reasons, including the limit on the size of our mortgage-related investments portfolio or the risk that a particular accounting treatment may create earnings volatility as well as result in a future draw from Treasury. For additional information on the limits on the mortgage-related investments portfolio established by the Purchase Agreement and by FHFA, see "Conservatorship and Related Matters - Limits on Our Mortgage-Related Investments Portfolio and Indebtedness."

Products and Activities

Investing and Related Activities

In our Investments segment, we manage the following types of products:

Freddie Mac 2016 Form 10-K 77

Management's Discussion and Analysis Our Business Segments | Investments

Agency mortgage-related securities - We primarily invest in Freddie Mac mortgage-related securities, but may also invest in Fannie Mae and Ginnie Mae mortgage-related securities from time to time. Our activities with respect to this product may include purchases and sales, dollar roll transactions, and structuring activities (e.g., resecuritizing existing agency securities into REMICs and selling some or all of the resulting REMIC tranches).

- Non-agency mortgage-related securities - We generally no longer purchase non-agency mortgage-related securities that have not been guaranteed by a GSE, but continue to have a large portfolio of non-agency mortgage-related securities that we acquired in prior years. We are working, in some cases in conjunction with other investors, to mitigate or recover losses we recognized in prior years. In recent years, we and FHFA reached settlements with a number of institutions. Lawsuits against other institutions are currently pending. Our activities with respect to this product are primarily sales but could include other disposition strategies in the future.

Single-family unsecuritized loans - Single-family unsecuritized loans are classified into three categories:

Loans acquired through our cash loan purchase program that are awaiting securitization;

Reperforming loans and performing modified loans; and

Seriously delinquent loans that we have removed from PC pools (this loan category is managed by both the Investments and Single-family Guarantee segments, but is included in the Single-family Guarantee segment's investment portfolio and financial results).

The strategies employed to manage each category may differ. We securitize a majority of the loans acquired through our cash loan purchase program into Freddie Mac mortgage-related securities, primarily PCs, which may be sold to investors or retained in our mortgage-related investments portfolio. As part of the Retained Portfolio plan, we are reducing the balance of our reperforming loans and performing modified loans through a variety of methods, including the following:

Securitization into Freddie Mac PCs, with all of the resulting mortgage-related securities initially being retained. We may resecuritize a portion of the retained mortgage-related securities, with some of the resulting interests being sold to third parties;

Direct loan sales; and

Sales and securitization using a senior subordinate securitization structure, in which we guarantee the resulting senior securities.

In the future, we may pursue other disposition strategies. Seriously delinquent loans continue to be reduced through loss mitigation and foreclosure activities, as well as through sales of certain non-performing loans.

- Other investments and cash portfolio - This portfolio is principally used for short-term liquidity management and consists of: (i) the Liquidity and Contingency Operating Portfolio, (ii) cash and other investments held by consolidated trusts, (iii) collateral pledged by derivative and other counterparties; (iv) investments in unsecured agency debt, and (v) advances to lenders. In our advances to lenders program, we provide funds to lenders in exchange for Freddie Mac PCs that are created through the securitization of mortgage loans that have been pledged as collateral for the secured lending. In the future, we may execute certain secured financing transactions using various types of collateral.

We evaluate the liquidity of our mortgage-related assets based on three categories (in order of liquidity):

Management's Discussion and Analysis Our Business Segments | Investments

Liquid: single-class and multi-class agency securities, excluding certain structured agency securities collateralized by non-agency mortgage-related securities. Also includes certain non-agency mortgage-related securities guaranteed by a GSE;

Securitization Pipeline: performing single-family loans purchased for cash and primarily held for a short period until securitized, with the resulting Freddie Mac issued securities being sold or retained; and

Less Liquid: assets that are less liquid than both agency securities and loans in the securitization pipeline (e.g., reperforming loans, performing modified loans, and non-agency mortgage-related securities not guaranteed by a GSE).

As a well-established disposition path exists for our single-family loans included in the securitization pipeline, we consider those assets to be more liquid than non-agency securities and reperforming loans and performing modified loans, but less liquid than single-class and multi-class agency securities.

As part of our Retained Portfolio plan, we are focused on reducing the balance of less liquid assets that we hold in the mortgage-related investments portfolio through a combination of repayments, sales and securitizations.

We may undertake various activities in an effort to support our presence in the agency securities market or to support the liquidity of our PCs, including their price performance relative to comparable Fannie Mae securities. These activities may include the purchase and sale of agency securities, the purchase of loans, dollar roll transactions, and structuring activities, such as resecuritization of existing agency securities and the sale of some or all of the resulting securities. Depending upon market conditions, there may be substantial variability in any period in the total amount of securities we purchase or sell. In some cases, the purchase or sale of agency securities could adversely affect the price performance of our PCs relative to comparable Fannie Mae securities.

We incur costs in connection with our efforts to support our presence in the agency securities market and to support the liquidity and price performance of our PCs, including by engaging in transactions that yield less than our target rate of return. For more information, see "Risk Factors - Other Risks - A significant decline in the price performance of or demand for our PCs could have an adverse effect on the volume and/or profitability of our new single-family guarantee business."

Funding and Liquidity Management Activities

Our Treasury function manages the funding needs of the company, including the Investments segment, primarily through the issuance of unsecured other debt. The type and term of debt issued is based on a variety of factors and is designed to efficiently meet our ongoing cash needs and to comply with our Liquidity Management Framework. This Framework provides a mechanism for us to sustain significant periods of market illiquidity, while being able to maintain certain business activities and remain current on our obligations. See "Liquidity and Capital Resources - Liquidity Management Framework" for additional discussion of our Liquidity Management Framework.

We primarily use the following types of products as part of our funding and liquidity management activities:

Securities sold under agreements to repurchase - Collateralized short-term borrowings where we sell securities to a counterparty with an agreement to repurchase those securities at a future date.

Management's Discussion and Analysis Our Business Segments | Investments

Discount Notes and Reference Bills - We issue short-term instruments with maturities of one year or less. These products are generally sold on a discounted basis, paying principal only at maturity. Reference Bills are auctioned to dealers on a regular schedule, while discount notes are issued in response to investor demand and our cash needs.

Medium-term Notes - We issue a variety of fixed-rate and variable-rate medium-term notes, including callable and non-callable securities, and zero-coupon securities, with various maturities.

Reference Notes Securities - Reference Notes securities are non-callable fixed-rate securities, which we currently issue with original maturities greater than or equal to two years.

In addition, proceeds from the issuance of STACR and SCR debt notes are used to meet the funding needs of the company. We consider the issuance of these debt notes when managing the treasury function for the company. For a description of the STACR debt notes, see "Our Business Segments - Single-Family Guarantee - Business Overview - Products and Activities," and for a description of the SCR debt notes, see "Our Business Segments - Multifamily - Business Overview - Products and Activities."

To maintain sufficient short-term liquidity, we may hold a combination of cash, cash-equivalent, and non-mortgage-related investments in our Liquidity and Contingency Operating Portfolio. These instruments are limited to those we expect to be liquid and readily convertible into cash. We also lend available cash on a short-term basis through transactions where we purchase securities under agreements to resell. This portfolio is designed to allow us to meet all of our obligations in the event that we lose access to the unsecured debt markets for a period of time. See "Liquidity and Capital Resources" for a further discussion of our funding and liquidity management activities.

Interest-Rate Risk Management Activities

Our goal is to manage the economic interest-rate risk for the company within management approved levels, as measured by our models. See "Risk Management - Market Risk" for additional information, including the measurement of the interest rate sensitivity of our financial assets and liabilities.

Typically there is an interest rate risk mismatch between our financial assets and the other debt that we use to fund those assets. We typically use interest-rate derivatives to reduce the economic risk exposure due to this mismatch. Using our risk management practices described in the "Risk Management - Market Risk" section, we seek to reduce this impact to low levels.

We also could consider the expected holding periods of our financial assets and liabilities. Our debt terms are generally shorter than our assets' projected life. As a result, we will likely have to reissue debt to continue to hold the assets. Changes in market spreads on future debt issuances may affect the future cash flows of our portfolio. We at times attempt to manage the impact of interest rates on future debt issuance. Additionally, financial assets that are likely to be sold prior to their final maturity may have a different debt and derivative mix than financial assets that we plan to hold for a longer period. As a result, interest rate risk measurements for those assets may include additional assumptions (such as a view on expected changes in market spreads) concerning their price sensitivity rather than just a longer-term view of cash flows.

To manage our interest rate risk, we primarily use interest rate swaps, options, swaptions, and futures. When we use derivatives to mitigate our risk exposures, we consider a number of factors, including cost, exposure to counterparty risk, and our overall risk management strategy.

Management's Discussion and Analysis Our Business Segments | Investments

Securitization Activities

We manage the company's securitization and resecuritization activities related to single-family loans. See "Our Business Segments - Single-Family Guarantee" for a discussion of our single-family securitization and guarantee products.

Customers

Our unsecured other debt securities and structured mortgage-related securities are initially purchased by dealers and redistributed to their customers. The customers for these securities generally include state and local governments, insurance companies, money managers, central banks, depository institutions, and pension funds. Our customers under our loan cash purchase program are a variety of lenders, as discussed in "Our Business Segments - Single-Family Guarantee - Business Overview - Customers."

Competition

Our competitors in the Investments segment are firms that invest in loans and mortgage-related assets, and issue corporate debt, including Fannie Mae, REITs, supranationals (international institutions that provide development financing for member countries), commercial and investment banks, dealers, savings institutions, insurance companies, the Federal Farm Credit Banks, and the FHLBs.

Management's Discussion and Analysis Our Business Segments | Investments

MARKET CONDITIONS

The following graph and related discussion presents the par swap rate curve for the most recent three years. Changes in par swap rates can significantly affect the fair value of our debt, derivatives, and mortgage and non-mortgage-related securities. As a result, changes in par swap rates will affect the business and financial results of our Investments segment.

Par Swap Rates as of December 31,

Sources: Bloomberg, ICAP

Commentary

We primarily, but not exclusively, use LIBOR-based derivatives and fixed-rate debt to hedge our interest rate risk. The mortgage-related investments portfolio's exposure to interest rate risk is calculated by our models that project loan and security cash flows over a variety of scenarios. For additional information on our exposure to interest rate risk, see "Risk Management - Market Risk."

Freddie Mac 2016 Form 10-K 82

Management's Discussion and Analysis Our Business Segments | Investments

2016 vs. 2015

The 2-year and 10-year swap rates increased, resulting in gains for our pay-fixed interest rate swaps and losses for our receive-fixed interest rate swaps, certain of our option contracts, and the vast majority of our investments in securities. 3-month LIBOR increased during the fourth quarter of 2016, resulting in higher yields for our short-term interest-earning assets, higher costs for our short-term interest-bearing liabilities, and interest-rate related losses for certain of our shorter duration trading securities.

2015 vs. 2014

The 10-year and 30-year swap rates declined during both periods, resulting in losses for our pay-fixed interest rate swaps and gains for our receive-fixed interest rate swaps, certain of our option contracts, and the vast majority of our investments in securities.

As the 10-year and 30-year swap rates declined less in 2015 than in 2014 and the yield curve did not flatten as much, the impact of interest rates on our financial instruments and financial results was less significant during 2015 as compared to 2014.

In December 2015, the Federal Reserve raised short-term interest rates. As a result, shorter-term interest rates, including the 3-month LIBOR rate, increased in December 2015. The increase in 3-month LIBOR resulted in higher yields for our short-term interest-earning assets, higher costs for our short-term interest-bearing liabilities, and interest-rate related losses for certain of our shorter duration trading securities.

Management's Discussion and Analysis Our Business Segments | Investments

BUSINESS RESULTS

The graphs and related discussion below present the business results of our Investments segment.

Investing Activity

The following graphs presents the Investments segment's total investments portfolio and the composition of its mortgage investments portfolio by liquidity category.

Investments Portfolio

Mortgage Investments Portfolio

Commentary

We continue to reduce the size of our mortgage investments portfolio in order to comply with the mortgage-related investments portfolio's year-end limits. The balance of our mortgage investments portfolio declined 11.5% between December 31, 2015 and December 31, 2016.

The balance of our other investments and cash portfolio decreased 5.4% primarily due to lower near-term cash needs for upcoming maturities and anticipated calls of other debt at the end of 2016 compared to the end of 2015.

The percentage of less liquid assets relative to our total mortgage investments portfolio declined to 34.4% at December 31, 2016 from 38.8% at December 31, 2015, primarily due to repayments, sales and securitizations of our less liquid assets.

The overall liquidity of our mortgage investments portfolio continued to improve as our less liquid assets decreased at a faster pace than the overall decline of our mortgage investments portfolio.

Management's Discussion and Analysis Our Business Segments | Investments

Reduction In Less Liquid Assets

Securitizations of Reperforming Loans and Performing Modified Loans into Freddie Mac PCs

Sales of Less Liquid Assets

Commentary

Since 2013, we have focused on reducing, in an economically sensible manner, our holdings of certain less liquid assets, including single-family reperforming loans and performing modified loans and non-agency mortgage-related securities. Our disposition strategies for our less liquid assets include securitizations and sales.

Our principal strategy related to the securitization of reperforming loans and performing modified loans is to create Freddie Mac PCs and initially retain all of the resulting mortgage-related securities. This strategy also includes the resecuritization of a portion of the retained mortgage-related securities, with some of the resulting interests being sold to third parties.

During 2016, our sales of less liquid assets included \$8.1 billion in UPB of non-agency mortgage-related securities and \$1.1 billion of reperforming loans and performing modified loans. Our sales of reperforming loans and performing modified loans involved securitization of the loans using a senior subordinate securitization structure, in which we guaranteed the resulting senior securities. As part of these transactions, we retained certain of the guaranteed senior securities for our mortgage-related investments portfolio.

Management's Discussion and Analysis Our Business Segments | Investments

Net Interest Yield and Average Balances

Net Interest Yield & Average Investments Portfolio Balance
Commentary

Net Interest Yield

2016 vs. 2015 - declined 37 basis points, primarily due to a reduction in the balance of our higher yielding mortgage-related assets due to repayments, coupled with higher hedging costs from an increase in amortization of upfront cash paid for swaptions. The upfront cash paid for swaptions is amortized on a straight-line basis and reclassified from derivative gains (losses) into net interest income for purposes of segment earnings. The increase in amortization is due to an increase in upfront cash paid for swaptions to hedge our increased exposure to mortgage prepayment risk due to the continued low interest rate environment in 2016.

2015 vs. 2014 - declined 5 basis points, primarily due to a decline in the average yield earned from the mortgage-related assets that we manage. This decline was primarily driven by the repayment of certain higher-yielding agency securities. Although we acquired additional agency securities to replace certain of those securities that were repaid, the new securities had lower yields due to an overall lower interest rate environment.

Average Investments Portfolio Balance

2016 vs. 2015 and 2015 vs. 2014 - declined in each period primarily due to the repayment and sale of non-agency mortgage-related securities and certain reperforming loans and performing

Management's Discussion and Analysis Our Business Segments | Investments

modified loans. This decline was partially offset by an increase in our purchase of single-family loans for our securitization pipeline, and in our purchase of U.S. Treasury securities, which are included in the other investments and cash portfolio. The overall decline in our average investments portfolio balance is consistent with our efforts to comply with the year-end limits on the mortgage-related investments portfolio established by the Purchase Agreement and FHFA.

We expect our average investments portfolio balance to continue to decline in 2017 as we manage the size of our mortgage-related investments portfolio pursuant to the portfolio limit.

The Investments segment manages the interest-rate risk for the company. As a result, substantially all of the net interest rate effect of the company's interest-rate risk management activities is recognized in our Segment Earnings.

The volatility in our Segment Earnings created by our interest-rate risk management activities is generally not indicative of the underlying economics of our business. See "Consolidated Results of Operations - Other Key Drivers - Items Affecting Multiple Lines - Debt Funding Strategies and Interest-Rate Risk Management Activities" for additional information on our interest-rate risk management activities and their impact on consolidated financial results.

Key Drivers:

Net interest income

2016 vs. 2015 - decreased primarily due to a reduction in the balance of our higher yielding mortgage-related assets due to repayments, coupled with higher hedging costs from an increase in amortization of upfront cash paid for swaptions used to hedge our increased exposure to mortgage prepayment risk due to the continued low interest rate environment in 2016.

2015 vs. 2014 - decreased primarily due to the continued reduction in the balance of our mortgage-related assets. The decline in our mortgage-related assets balance during 2015 was due to repayments, sales, and other active dispositions.

Net impairment of available-for-sale securities recognized in earnings

2016 vs. 2015 - was in a net recovery position, as accretion of previously recognized other-than-temporary impairments exceeded new other-than-temporary impairments. The decrease in net recovery position was primarily due to less accretion of previously recognized other-than-temporary impairments, as the population of impaired securities continued to decline. The decrease in the population of impaired securities is due to our active disposition of these securities and a decrease in new other-than-temporary impairments due to improved security pricing and stabilized collateral performance.

Management's Discussion and Analysis Our Business Segments | Investments

2015 vs. 2014 - was in a net recovery position during 2015 compared to a net impairment position in 2014, primarily due to the accretion of previously recognized other-than-temporary impairments exceeding new other-than-temporary impairments. New other-than-temporary impairments significantly declined during 2015 as a result of improved security pricing, stabilized collateral performance, and our efforts to sell certain of the previously impaired non-agency mortgage-related securities in prior periods.

Derivative gains (losses)

2016 vs. 2015 - improved as we recognized derivative gains during 2016 due to an increase in long-term interest rates during the fourth quarter of 2016, compared to recognizing derivative losses during 2015 due to decreasing long-term interest rates. See "Consolidated Results of Operations - Derivative Gains (Losses)" for additional information.

2015 vs. 2014 - improved as we recognized less derivative losses as a result of a smaller decline in longer-term interest rates during 2015 compared to 2014. See "Consolidated Results of Operations - Derivative Gains (Losses)" for additional information.

Gains (losses) on trading securities

2016 vs. 2015 - losses increased primarily due to interest-rate related losses from an increase in longer-term interest rates in the fourth quarter of 2016.

2015 vs. 2014 - losses increased primarily due to interest-rate related losses. While longer-term interest rates decreased, we recognized interest-rate losses due to our purchase of certain securities during the year when rates were lower than rates at December 31, 2015. In addition, we recognized losses due to an increase in short-term interest rates as our trading portfolio contained shorter duration investments, coupled with agency spread widening.

Other non-interest income

2016 vs. 2015 - decreased primarily due to a decline in sales of available-for-sale agency and non-agency mortgage-related securities in an unrealized gain position.

2015 vs. 2014 - decreased primarily due to a decline in proceeds received from the settlement of non-agency mortgage-related securities litigation, as most of this litigation settled during prior periods, including 2014. In 2015, we entered into one small settlement to resolve a claim with respect to certain non-agency mortgage-related securities that we held, while we reached settlements with 10 institutions during 2014. We continue to have ongoing litigation with respect to certain other non-agency mortgage-related securities.

Other comprehensive income

2016 vs. 2015 - was a loss during both periods. The increase in the loss position was primarily due to unrealized losses on agency securities resulting from an increase in longer-term interest rates, coupled with a decrease in unrealized gains as our non-agency securities portfolio continued to decline consistent with the reduction of our mortgage-related investments portfolio. These changes were partially offset by larger unrealized gains due to greater market spread tightening for our agency securities and a decline in sales of available-for-sale non-agency mortgage-related securities in an unrealized gain position, which resulted in less unrealized gains being reclassified from AOCI to other non-interest income.

Management's Discussion and Analysis Our Business Segments | Investments

2015 vs. 2014 - was a loss during 2015 compared to income during 2014, primarily due to less market spread tightening for our non-agency mortgage-related securities and less impairment-related reclassifications from AOCI to earnings. Other comprehensive income in both periods reflects the reversals of unrealized losses due to the accretion of other-than-temporary impairments in earnings and the reclassification of unrealized gains and losses related to available-for-sale securities that were sold during the respective periods.

RISK MANAGEMENT OVERVIEW

Risk is an inherent part of our business activities. We are exposed to four main categories of risk: credit risk, market risk, liquidity risk, and operational risk. We primarily discuss credit risk, market risk, and operational risk in this section. See "Liquidity and Capital Resources" for a discussion of liquidity risk.

Credit risk is the risk associated with the inability or failure of a borrower, issuer or counterparty to meet its financial and/or contractual obligations.

Market risk is the economic risk associated with adverse changes in interest rates, volatility, and spreads.

Liquidity risk is the risk associated with the inability to meet the liquidity needs of the company.

Operational risk is the risk of direct or indirect loss resulting from inadequate or failed internal processes, people, or systems or from external events.

For more discussion of these and other risks facing our business, see "Risk Factors."

RISK MANAGEMENT FRAMEWORK AND GOVERNANCE STRUCTURE

We manage risk using a three-lines-of-defense risk management framework and governance structure that includes enterprise-wide oversight by the Board and its committees, CERO, CCO, and our corporate ERC. These roles and responsibilities continue to evolve.

The discussion and diagram below present the responsibilities associated with our three-lines-of-defense risk management framework and our governance structure.

We have made considerable enhancements to our risk management framework in recent years, including:

- Revising our integrated enterprise risk management framework to enable us to place more focus on high risk business processes and activities; and
- Leveraging our enterprise risk management framework to implement a redesigned and enhanced three-lines-of-defense methodology.

We use our three-lines-of-defense methodology to both strengthen risk ownership in our business units and add clarity to risk management roles and responsibilities. Our framework focuses on balancing ownership of risk by our business units with corporate oversight and independent assurance of the design and effectiveness of our risk management activities. For more information on the role of the Board and its committees, see "Directors, Corporate Governance, and Executive Officers - Board and Committee Information."

Management's Discussion and Analysis

Risk Management |

Freddie Mac 2016 Form 10-K 93

Management's Discussion and Analysis

Risk Management |
Overview

ECONOMIC CAPITAL

We use an internal economic capital framework as a component in our risk management process, which includes a risk-based measurement of capital adjusted for relevant interest rate and other market, credit, and operational risks. We assign economic capital internally to asset classes based on their respective risks. Economic capital is a factor we consider when we make economic decisions, establish risk limits, and measure profitability. We and Fannie Mae are working with FHFA to develop an overall risk measurement framework for evaluating Freddie Mac's and Fannie Mae's risk management and business decisions during conservatorship, known as the Conservator Capital Framework ("CCF"). FHFA is finalizing key inputs to the CCF, and we expect to begin making risk management and business decisions using the CCF in 2017. We currently expect this will result in limited change to our decision making.

Freddie Mac 2016 Form 10-K 94

Management's Discussion and Analysis Risk Management | Credit Risk

CREDIT RISK

OVERVIEW

We are exposed to both mortgage credit risk and counterparty credit risk. Mortgage credit risk is the risk that a borrower will fail to make timely payments on a loan that we own or guarantee. Counterparty credit risk is the risk that a counterparty (other than a mortgage borrower) that has entered into a business contract or arrangement with us will fail to meet its obligations.

We are exposed to three types of mortgage credit risk:

- Single-family mortgage (SF) credit risk, through our ownership or guarantee of loans in the single-family credit guarantee portfolio;
- Multifamily mortgage (MF) credit risk, through our ownership or guarantee of loans in the multifamily mortgage portfolio; and
- Mortgage-related securities (MRS) credit risk, through our ownership of non-Freddie Mac mortgage-related securities in the mortgage-related investments portfolio.

We also hold investments in certain non-mortgage-related securities. As of December 31, 2016, 2015, and 2014, the fair value of our investments in these securities was \$21.1 billion, \$17.2 billion and \$6.7 billion, respectively, and primarily consisted of investments in U.S. Treasury securities. As U.S. Treasury securities are backed by the full faith and credit of the U.S. government, we consider these securities to be free of credit risk. Our investment in other non-mortgage-related securities exposes us to counterparty credit risk. However, we believe such risk exposure is minimal, as the issuers of these securities are primarily major financial institutions, including other GSEs, highly-rated supranational institutions, and government money market funds.

In the sections below, we provide a general discussion of our risk management framework and current risk environment for each of the three types of mortgage credit risk and for counterparty credit risk.

Management's Discussion and Analysis Risk Management | SF Credit Risk

SINGLE-FAMILY MORTGAGE CREDIT RISK

We manage our exposure to single-family mortgage credit risk, which is a type of consumer credit risk, using the following principal strategies:

- Maintaining policies and procedures for new business activity, including prudent underwriting standards;
- Offering private investors new and innovative ways to share in the credit risk of the Core single-family book;
- Monitoring loan performance and characteristics of the single-family credit guarantee portfolio and individual sellers and servicers;
- Engaging in loss mitigation activities; and
- Managing foreclosure and REO activities.

Maintaining Policies and Procedures for New Business Activity, Including Prudent Underwriting Standards

We use a delegated underwriting process in connection with our acquisition of single-family loans whereby we set eligibility and underwriting standards and sellers represent and warrant to us that loans they sell to us meet these standards. Our eligibility and underwriting standards evaluate loans based on a number of characteristics. Limits are established on the purchase of loans with certain higher risk characteristics. These limits are designed to balance our credit risk exposure with the facilitation of affordable housing in a responsible manner. Our purchase guidelines generally provide for a maximum original LTV ratio of 95%, a maximum LTV ratio of 80% for cash-out refinance loans, and no maximum LTV ratio for fixed-rate HARP loans. In March 2015, we began to purchase certain loans with LTV ratios up to 97% under an initiative designed to serve a targeted segment of creditworthy borrowers. We fully discontinued purchases of Alt-A loans in 2009, interest-only loans in 2010, and option ARM loans in 2007. The majority of our purchase volume is evaluated using our own proprietary underwriting software (Loan Product Advisor (“LPA”)), the seller’s software, or Fannie Mae’s comparable software. The performance of non-LPA loans is monitored to ensure compliance with our risk appetite.

We employ a quality control process to review loan underwriting documentation for compliance with our standards using both random and targeted samples. We also perform quality control reviews of many delinquent loans and review all loans that have resulted in credit losses before the representations and warranties are relieved. Sellers may appeal ineligible loan determinations prior to repurchase of the loan. Our reviews of 2015 originations are largely complete, while our reviews of 2016 originations are ongoing. The average aggregate ineligible loan rate across all sellers for loans funded during 2015, 2014, and 2013, excluding HARP and other relief refinance loans, was approximately 0.8%, 1.1%, and 1.4%, respectively. The most common underwriting defect found in our review of loans funded during 2015 related to the delivery of insufficient income documentation.

We made changes in recent periods to standardize our quality control process and facilitate more timely reviews. These changes allow us to identify breaches of representations and warranties early in the life of

Management's Discussion and Analysis Risk Management | SF Credit Risk

the loan. We also implemented new tools, such as our proprietary Quality Control Information Manager, to provide greater transparency into our customer quality control reviews. In January 2015, we launched Loan Coverage Advisor, a new tool that allows our sellers to track significant events for the loans they sell us, including when the seller obtains relief from its obligation to repurchase loans due to breach of certain representations and warranties. In July 2016, we launched our Loan Advisor Suite, which is a set of integrated software applications designed to give lenders a way to originate and deliver high quality mortgage loans to us and to actively monitor representation and warranty relief earlier in the mortgage loan production process. Further enhancements to this suite of tools are expected in 2017. If we discover that the representations or warranties related to a loan were breached (i.e., that contractual standards were not followed), we can exercise certain contractual remedies to mitigate our actual or potential credit losses. These contractual remedies include the ability to require the seller/servicer to repurchase the loan at its current UPB, reimburse us for losses realized with respect to the loan after consideration of any other recoveries, and/or indemnify us. At the direction of FHFA, we implemented a new remedies framework for the categorization of loan origination defects for loans with settlement dates on or after January 1, 2016. Among other items, the framework provides that "significant defects" will result in a repurchase request or a repurchase alternative, such as recourse or indemnification.

At the direction of FHFA, we have made a number of changes to our selling and servicing representation and warranty framework for our mortgage loans. FHFA may require further changes to the framework in the future. Under the revised selling framework, sellers are relieved of repurchase obligations for breaches of certain selling representations and warranties for certain types of loans, including:

- Loans with 36 months (12 months for relief refinance loans) of consecutive, on-time payments after purchase, subject to certain exclusions;
- Loans that have established an acceptable payment history; and
- Loans that have satisfactorily completed a quality control review.

As part of the revised framework, we also made changes that provide additional clarity on life-of-mortgage loan exclusions from repurchase relief for breaches of certain selling representations and warranties. These changes are designed to provide sellers with a higher degree of certainty regarding their repurchase exposure and liability on loans sold to us.

In February 2016, at the direction of FHFA, we published guidelines for a new independent dispute resolution process for alleged breaches of selling or servicing representations and warranties on our loans. Under the new process, a neutral third party renders a decision on demands that remain unresolved after the existing appeal and escalation processes have been exhausted.

We recently announced that we expect to offer representation and warranty relief for certain mortgage loans in early 2017 through our Loan Advisor Suite technology solution. Customer adoption of our technology solution is critical to our ability to expand mortgage access responsibly.

The credit quality of our single-family loan purchases remained strong during the past several years. The tables below show the credit profile of the single-family loans we purchased or guaranteed in the last three years.

Offering Private Investors New and Innovative Ways to Share in the Credit Risk of the Core Single-Family Book

Our Charter requires coverage by specified credit enhancements or participation interests on single-family loans with LTV ratios above 80% at the time of purchase. In addition to obtaining credit enhancements required by our Charter, we also enter into various other types of transactions in which we transfer mortgage credit risk to third parties. We use the following types of credit enhancements to transfer a portion of the credit risk on a loan or group of loans at the time we acquire the loan.

Primary mortgage insurance - Primary mortgage insurance provides loan-level protection against loss up to a specified amount and the premium is typically paid by the borrower. Generally, an insured loan must be in default and the borrower's interest in the underlying property must have been extinguished, such as through a short sale or foreclosure sale, before a claim can be filed under a primary mortgage insurance policy. The mortgage insurer has a prescribed period of time within which to process a claim and make a determination as to its validity and amount. Most of our loans with LTV ratios above 80% are protected by primary mortgage insurance.

Seller indemnification agreement - Requires the seller to absorb a portion of the losses on the related single-family loans in exchange for a fee or a guarantee fee reduction. The indemnification amount may be fully or partially collateralized.

Deep MI - Provides additional coverage beyond primary mortgage insurance. Deep MI is a credit enhancement we purchase from affiliates of mortgage insurance companies. Deep MI covers a pool of loans and takes effect immediately upon sale of the mortgage loans to us over a pre-defined loan aggregation period. We require our counterparties to collateralize their exposure to reduce the risk that we will not be reimbursed for our claims under the policies.

Lender recourse and indemnification agreements - Require a lender to repurchase a loan upon default or to reimburse us for realized credit losses. Lender recourse and lender indemnification agreements are entered into as an alternative to requiring primary mortgage insurance or in exchange for a lower guarantee fee. We have not used lender recourse or lender indemnification agreements on a broad basis in recent years.

Pool insurance - Provides insurance on a group of loans up to a stated aggregate loss limit. We have not purchased pool insurance policies since 2008, and the majority of our pool insurance policies will expire in the next four years.

Management's Discussion and Analysis Risk Management | SF Credit Risk

We also enter into the following types of credit risk transfer transactions subsequent to our purchase or guarantee of loans.

STACR debt notes - Unsecured debt obligations that we issue to third-party investors related to certain notional credit risk positions. We make payments of principal and interest on the issued notes. The amount of principal that we are required to pay the STACR debt note investors is linked to the credit performance of certain loans (referred to as a reference pool) that we have previously guaranteed. As a result, we are not required to repay principal to the extent that the notional credit risk position is reduced as a result of a specified credit event.

ACIS insurance policies - Policies that provide credit protection on a portion of the non-issued notional credit risk positions we retain in a STACR debt note transaction. We also enter into ACIS transactions that provide credit protection for certain specified credit events on loans not included in a reference pool created for a STACR debt note transaction. We receive compensation from the insurance policy up to an aggregate limit when specified credit events occur.

Whole loan securities - Guaranteed senior securities and unguaranteed subordinated securities that we issue which are backed by certain single-family loans that we purchased previously. The unguaranteed subordinated securities will absorb first losses on the related loans. We retain a portion of the subordinated securities. In these transactions, the loans are serviced in accordance with our servicing guide and we control the servicing.

Senior subordinate securitization structures - Guaranteed senior securities and unguaranteed subordinated securities that we issue which are backed by seasoned performing modified and reperforming single-family loans that we purchased previously. The unguaranteed subordinated securities will absorb first losses on the related loans. We retain a portion of the subordinated securities. In these transactions, the loans are not serviced in accordance with our servicing guide and we do not control the servicing.

See "Our Business Segments - Single-Family Guarantee" for additional information on these credit risk transfer transactions.

The table below provides information on the credit-enhanced loans in our single-family credit guarantee portfolio. The credit enhanced categories are not mutually exclusive as a single loan may be covered by both primary mortgage insurance and other credit protection.

	As of December 31,					
	2016		2015		2014

Total	\$1,754,726	\$102,185	\$15,769	\$1,701,887	\$89,770	\$11,927

Collateralized coverage includes cash received by Freddie Mac upon issuance of STACR debt notes and (1) unguaranteed whole loan securities, as well as cash and securities pledged for our benefit primarily related to ACIS transactions.

(2) Credit risk transfer transactions. The substantial majority of single-family loans covered by these transactions were acquired after 2012.

We had coverage remaining of \$102.2 billion and \$89.8 billion on our single-family credit guarantee portfolio as of December 31, 2016 and 2015, respectively. Credit risk transfer transactions provided 19.9% and 16.7% of the coverage remaining at those dates.

The table below provides information on estimated recoveries we could receive from our most significant credit risk transfer transactions (i.e., STACR debt notes and ACIS insurance policies) under various home price scenarios. The timing of our recognition of the recoveries in our statements of comprehensive income will depend on the type of credit risk transfer transaction and whether we are reimbursed based

Management's Discussion and Analysis Risk Management | SF Credit Risk

on calculated losses or actual losses, which may result in timing differences between the recognition of recoveries and the related credit event. We recognize losses on the loans in the reference pool when losses are incurred. Recoveries from credit risk transfer transactions based on actual losses are recognized when the loss confirming event occurs (i.e., foreclosure, deed in lieu of foreclosure, short sale, etc.), which may be several years after the related losses are incurred. Credit risk transfer transactions based on calculated losses are measured at fair value through earnings, so the change in fair value may be recognized prior to the incurrence of the loss.

We estimate the potential recoveries from our STACR debt note and ACIS transactions using a sensitivity analysis that utilizes our historical loss and prepayment experience related to loans originated during periods that experienced above average home price appreciation, moderate home price appreciation, and severe home price depreciation. We match these loans to similar groups within the reference pools (related to our STACR debt note and ACIS transactions) using LTV ratios and FICO scores. Our recoveries were estimated based on loan losses, net of mortgage insurance claim amounts. These are estimated projections. Our actual losses under the chosen scenarios could differ materially from these estimates. In addition, these estimates do not include interest expense and transaction costs we incur to issue our STACR debt notes, and premiums we pay on ACIS transactions.

(Dollars in millions)	As of December 31, 2016

Management's Discussion and Analysis Risk Management | SF Credit Risk

Monitoring Loan Performance and Characteristics of the Single-Family Credit Guarantee Portfolio and Individual Sellers and Servicers

We review loan performance, including delinquency statistics and related loan characteristics in conjunction with housing market and economic conditions, to determine if our pricing and eligibility standards reflect the risk associated with the loans we purchase and guarantee. We review the payment performance of our loans to facilitate early identification of potential problem loans, which could inform our loss mitigation strategies. We also review performance metrics for additional loan characteristics that may expose us to concentrations of credit risk, including:

• Higher risk loan attributes and attribute combinations;

• Higher risk loan product types; and

• Geographic concentrations.

We actively monitor seller and servicer performance, including compliance with our standards, and periodically review their operational processes. We also periodically change seller/servicer guidelines based on the results of our mortgage portfolio monitoring, if warranted.

Single-Family Credit Guarantee Portfolio

Serious delinquency rates continued to decline across our total single-family credit guarantee portfolio in 2016 as economic conditions in many parts of the U.S. continued to improve. Improvement in home prices in many areas of the U.S. during 2016 generally led to improved current LTV ratios of the loans in our single-family credit guarantee portfolio as of December 31, 2016, which contributed to lower credit losses.

The improvement in our serious delinquency rate in 2016 is primarily due to the better performance of newly acquired loans in the Core single-family book, continued loss mitigation and foreclosure activities for loans in the Legacy single-family book as well as sales of certain seriously delinquent loans. The performance of our Core single-family book has benefited from significant home price increases since 2009. As these home price increases moderate and return to long-term historical averages, we expect the performance of our Core single-family book will also moderate. The gradual reduction of our Legacy single-family book also contributed to the improvement in the serious delinquency rate.

Our loss mitigation activities may create fluctuations in our delinquency statistics. For example, loans in modification trial periods, loans subject to forbearance agreements, and loans in repayment plans continue to be reported as seriously delinquent. There may also be temporary lags in the reporting of payment status and modification completion due to differing practices of our servicers that can affect our delinquency statistics.

The charts below show the credit losses and serious delinquency rates for each of our single-family books. Our Core single-family book and our HARP and other relief refinance book continue to perform well and account for a small percentage of our credit losses, as shown below. Our Legacy single-family book continues to decline as a percentage of our overall portfolio, but continues to account for the majority of our credit losses.

(1) The foreclosure and short sale rate presented for the Legacy single-family book represents the rate associated with loans originated in 2000 through 2008.

The table below contains a description of some of the loan characteristics we monitor in our single-family credit guarantee portfolio.

Management's Discussion and Analysis Risk Management | SF Credit Risk

Characteristic	Description	Impact on Credit Quality
LTV Ratio	Ratio of the UPB of the loan to the value of the underlying property collateralizing the loan. Original LTV ratio is measured at loan origination; while current LTV (CLTV) ratio is defined as the ratio of the current loan UPB to the estimated current property value.	<ul style="list-style-type: none"> • Measures ability of the underlying property to cover our exposure on the loan • Higher LTV ratios indicate higher risk, as proceeds from sale of the property may not cover our exposure on the loan • Borrowers with higher credit scores are generally more likely to repay or have the ability to refinance their loans than those with lower scores
Credit Score	Statistically-derived number used by lenders to assess a borrower's likelihood to repay debt. We primarily use FICO scores, which are currently the most commonly used credit scores.	<ul style="list-style-type: none"> • Credit scores presented in this Form 10-K are at the time of origination and may not be indicative of the borrowers' current creditworthiness
Loan Purpose	Indicates how the borrower intends to use the proceeds from a loan (i.e., purchase, cash-out refinance, or other refinance)	<ul style="list-style-type: none"> • Cash-out refinancings generally have had a higher risk of default than loans originated in purchase or other refinance transactions • Detached single-family houses and townhouses are the predominant type of single-family property
Property Type	Indicates whether the property is a detached single-family house, townhouse, condominium, or co-op	<ul style="list-style-type: none"> • Condominiums historically have experienced greater volatility in home prices than detached single-family houses, which may expose us to more risk
Occupancy Type	Indicates whether the borrower intends to use the property as a primary residence, second home, or investment property	<ul style="list-style-type: none"> • Loans on primary residence properties tend to have lower credit risk than loans on second homes or investment properties
Product Type	Indicates the type of loan based on key loan terms, such as the contractual maturity, type of interest rate, and payment characteristics of the loan	<ul style="list-style-type: none"> • Loan products that contain terms which result in scheduled changes in monthly payments may result in higher risk • Shorter loan terms result in faster repayment of principal and may indicate lower risk • Second liens can increase the risk of default
Second Liens	Indicates whether the underlying property is covered by more than one loan	<ul style="list-style-type: none"> • Borrowers are free to obtain second-lien financing after origination, and we are not entitled to receive notification when a borrower does so

Management's Discussion and Analysis Risk Management | SF Credit Risk

The table below contains details on characteristics of the loans in our single-family credit guarantee portfolio as of December 31, 2016, 2015, and 2014.

(Percentage of portfolio based on UPB)	December 31,		
	2016	2015	2014
Original LTV Ratio Range			
60% and below	20 %	20 %	21 %
Above 60% to 80%	53 %	53 %	52 %
Above 80% to 100%	23 %	22 %	21 %
Above 100%	4 %	5 %	6 %
Portfolio weighted average original LTV ratio	75 %	75 %	75 %
Current LTV Ratio Range			
60% and below	45 %	43 %	39 %
Above 60% to 80%	38 %	37 %	37 %
Above 80% to 100%	15 %	16 %	18 %
Above 100%	2 %	4 %	6 %
Portfolio weighted average current LTV ratio	61 %	63 %	66 %
Credit Score			
740 and above	60 %	59 %	58 %
700 to 739	21 %	21 %	20 %
660 to 699	12 %	13 %	13 %
620 to 659	5 %	5 %	6 %
Less than 620	2 %	2 %	3 %
Portfolio weighted average credit score	743	741	740
Loan Purpose			
Purchase	35 %	32 %	30 %
Cash-out refinance	21 %	21 %	21 %
Other refinance	44 %	47 %	49 %

In addition, at December 31, 2016, 2015, and 2014:

• More than 90% of our loans were secured by detached homes or townhomes;

• Approximately 90% of our loans were secured by properties used as the borrower's primary residence at origination; and

• More than 90% of our loans were fixed-rate.

At December 31, 2016, approximately 11% of our loans had second-lien financing by the originator or other third party at origination, and these loans comprised approximately 17% of our seriously delinquent loan population. It is likely that additional borrowers have post-origination second-lien financing.

Higher Risk Loan Attributes and Attribute Combinations

Certain of the loan attributes shown above may indicate a higher risk of default. In particular, loans with original LTV ratios over 90% and/or credit scores below 620 at origination may be higher risk. The table below provides information on loans in our portfolio with these characteristics. The table includes a presentation of each higher risk category in isolation. A single loan may fall within more than one category.

Management's Discussion and Analysis Risk Management | SF Credit Risk

(Dollars in billions)	December 31, 2016				
	UPB	CLTV	% Modified	%	SDQ Rate
Original LTV ratio greater than 90%, HARP loans	\$115.1	83 %	1.8 %		1.07 %
Original LTV ratio greater than 90%, all other loans	\$169.4	82 %	7.2 %		1.92 %
Loans with credit scores below 620 at origination	\$37.5	69 %	21.7 %		5.73 %

(Dollars in billions)	December 31, 2015				
	UPB	CLTV	% Modified	%	SDQ Rate
Original LTV ratio greater than 90%, HARP loans	\$134.2	89 %	1.3 %		1.16 %
Original LTV ratio greater than 90%, all other loans	\$144.8	84 %	8.4 %		2.72 %
Loans with credit scores below 620 at origination	\$41.3	74 %	20.7 %		6.67 %

In addition, certain combinations of loan attributes can indicate an even higher degree of credit risk, such as loans with both higher LTV ratios and lower credit scores. The following tables show the combination of credit score and CLTV ratio attributes of loans in our single-family credit guarantee portfolio.

(1)NM - not meaningful due to the percentage of the portfolio rounding to zero.

Higher Risk Loan Product Types

There are several types of loan products that contain terms which result in scheduled changes in the borrower's monthly payments after specified initial periods, such as interest-only and option ARM loans. These products may result in higher credit risk because the payment changes may increase the borrower's monthly payment, resulting in a higher risk of default. The majority of these loans are in our Legacy single-family book. Only a small percentage of our Core single-family book consists of ARM loans.

The balance of interest-only and option ARM loans declined significantly in recent years as many of these borrowers have repaid or refinanced their loans, received loan modifications, or completed foreclosure alternatives or foreclosure transfers.

While we have not categorized option ARM loans as either subprime or Alt-A for presentation in this Form 10-K and elsewhere in our reporting, they could exhibit similar credit performance to collateral sometimes referred to as subprime or Alt-A by market participants. For reporting purposes, loans within the option ARM category continue to be presented in that category following a modification of the loan, even though the modified loan no longer provides for optional payment provisions.

Management's Discussion and Analysis Risk Management | SF Credit Risk

The table below provides credit characteristic information on higher risk loan product types.

(Dollars in billions)	December 31, 2016

Interest-only	\$22.0	80 %	0.1 %		6.02 %	
Step-rate modified	\$38.3	85 %	100 %		7.34 %	

Includes \$4.1 billion and \$5.0 billion in UPB of option ARM loans as of December 31, 2016 and 2015, respectively. As of December 31, 2016 and 2015, the option ARM loans had: (a) current LTV ratios of 64% and 71%, (b) loan modification percentages of 14.6% and 14.0%; and (c) serious delinquency rates of 5.24% and 8.01%, respectively.

The table below shows the timing of scheduled payment changes for certain types of loans within our single-family credit guarantee portfolio. The amounts in the table below are aggregated by product type and categorized by the year in which the loan will experience a payment change. The timing of the actual payment change may differ from that presented in the table due to a number of factors, including if the borrower refinances the loan. Loans where the year of first payment change is 2016 or prior have already had one or more payment changes as of December 31, 2016; loans where the year of first payment change is 2017 or later have not had a payment change as of December 31, 2016 and will not experience a payment change until a future period. Step-rate modified loans are shown in each year that the borrower will experience a scheduled interest-rate increase; therefore, a single loan may be included in multiple periods. However, the total of step-rate loans in the table reflects the ending UPB of such loans as of December 31, 2016.

(Dollars in millions)	December 31, 2016							
	2016 and prior	2017	2018	2019	2020	2021	Thereafter	Total ⁽¹⁾
ARM/amortizing	\$15,024	\$2,652	\$3,443	\$6,282	\$7,704	\$7,122	\$13,861	\$56,088
ARM/interest-only	9,013	3,888	1,572	89	200	—	—	14,762
Fixed/interest-only	270	1,201	269	4	2	17	72	1,835
Step-rate modified	20,071	21,347	14,855	5,517	4,124	2,937	435	32,035
Total	\$44,378	\$29,088	\$20,139	\$11,892	\$12,030	\$10,076	\$14,368	\$104,720

⁽¹⁾ Excludes loans underlying certain other securitization products, since the payment change information is not available to us for these loans.

We believe that the performance of these types of loans has been more affected by macroeconomic conditions, such as unemployment rates and cumulative home price declines in many geographic areas since 2006, than by the increase in the borrower's monthly payment. However, we continue to monitor the performance of these loans as many have experienced a payment change or are scheduled to have a payment change in 2017 or 2018, which is likely to subject the borrowers to higher monthly payments. Since a substantial portion of these loans were originated in 2005 through 2008 and are located in geographic areas that were most affected by declines in home prices that began in 2006, we believe that the serious delinquency rate for these types of loans will remain high in 2017.

Management's Discussion and Analysis Risk Management | SF Credit Risk

Other Higher Risk Loans - Alt-A and Subprime Loans

While we have referred to certain loans as subprime or Alt-A for purposes of the discussion below and elsewhere in this Form 10-K, there is no universally accepted definition of subprime or Alt-A, and the classification of such loans may differ from company to company. For example, some financial institutions may use credit scores to delineate certain residential loans as subprime. We do not rely on these loan classifications to evaluate the credit risk exposure relating to such loans in our single-family credit guarantee portfolio.

Participants in the mortgage market may characterize single-family loans based upon their overall credit quality at the time of origination, generally considering them to be prime or subprime. While we have not historically characterized the loans in our single-family credit guarantee portfolio as either prime or subprime, we monitor the amount of loans we have guaranteed with characteristics that indicate a higher degree of credit risk. In addition, we estimate that approximately \$1.3 billion and \$1.5 billion of security collateral underlying our other securitization products at December 31, 2016 and 2015, respectively, were identified as subprime based on information provided to us when we entered into these transactions.

Many mortgage market participants classify single-family loans with credit characteristics that range between their prime and subprime categories as Alt-A because these loans have a combination of characteristics of each category, may be underwritten with lower or alternative income or asset documentation requirements compared to a full documentation loan, or both. Although we have discontinued new purchases of loans with lower documentation standards, we continued to purchase certain amounts of such loans in cases where the loan was either purchased pursuant to a previously issued guarantee, part of our relief refinance initiative, or part of another refinance loan initiative and the pre-existing loan was originated under less than full documentation standards. In the event we purchase a refinance loan and the original loan had been previously identified as Alt-A, such refinance loan may no longer be categorized or reported as an Alt-A loan in this Form 10-K and our other financial reports because the new refinance loan replacing the original loan would not be identified by the seller/servicer as an Alt-A loan. As a result, our reported Alt-A balances may be lower than would otherwise be the case had such refinancing not occurred. From the time the relief refinance initiative began in 2009 to December 31, 2016, we have purchased approximately \$34.4 billion of relief refinance loans that were previously categorized as Alt-A loans in our portfolio, including \$1.6 billion in 2016.

The table below contains information on Alt-A loans in our single-family credit guarantee portfolio.

(Dollars in billions)	December 31, 2016				December 31, 2015			
	UPB	CLTV	% Modified	SDQ Rate	UPB	CLTV	% Modified	SDQ Rate
Alt-A	\$32.6	72 %	25.9 %	5.21 %	\$40.2	77 %	23.1 %	6.32 %

The UPB of Alt-A loans in our single-family credit guarantee portfolio declined during 2016 primarily due to borrowers refinancing into other mortgage products, foreclosure transfers, and other liquidation events. Significant portions of the Alt-A loans in our portfolio are concentrated in Arizona, California, Florida, and Nevada.

Management's Discussion and Analysis Risk Management | SF Credit Risk

Geographic Concentrations

We purchase mortgage loans from across the U.S. and maintain a geographically diverse portfolio. However, local economic conditions can affect borrowers' ability to repay and the value of the underlying collateral, leading to concentrations of credit risk in certain geographic areas.

The following table presents certain geographic concentrations in our single-family credit guarantee portfolio. The states presented below had the largest number of seriously delinquent loans as of December 31, 2016. See Note 12 for additional information on the concentration of credit risk in our single-family credit guarantee portfolio.

Credit Losses and Recoveries

Charge-offs were higher in 2015 than in 2016 primarily due to our adoption on January 1, 2015 of an FHFA advisory bulletin that changed when we deem a loan to be uncollectible. We expect the level of charge-offs in 2017 to be lower than in 2016 as we continue our loss mitigation activities and our efforts to sell certain seriously delinquent single-family loans. See "Change in Estimate" in Note 1 for information about our adoption of the FHFA advisory bulletin and its effect on charge-offs and credit losses.

Management's Discussion and Analysis Risk Management | SF Credit Risk

The tables below contain certain credit performance metrics of our single-family credit guarantee portfolio.

(Dollars in millions)	Year Ended December 31,		
	2016	2015	2014
Charge-offs, gross ⁽¹⁾⁽²⁾	\$1,938	\$5,071	\$4,892
Recoveries	(497)	(717)	(1,258)
Charge-offs, net	1,441	4,354	3,634
REO operations expense	287	334	205
Total credit losses	\$1,728	\$4,688	\$3,839
Total credit losses (in bps)	9.9	27.6	22.9
Ratio of total loan loss reserves (excluding reserves for TDR concessions) to net charge-offs for single-family loans ⁽³⁾	3.9	3.0	2.5
Ratio of total loan loss reserves to net charge-offs for single-family loans ⁽³⁾	10.5	9.2	5.2
	As of December 31,		
	2016	2015	2014
Payment Status:			
One month past due	1.37	% 1.37	% 1.52 %
Two months past due	0.40	% 0.42	% 0.49 %
Seriously delinquent	1.00	% 1.32	% 1.88 %

(1) For 2015, includes \$1.9 billion due to the adoption of Advisory Bulletin 2012-02 ("AB 2012-02") Framework for Adversely Classifying Loans, Other Real Estate Owned, and Other Assets and Listing Assets for Special Mention.

Does not include lower-of-cost-or-fair value adjustments and other expenses related to property taxes and

(2) insurance recognized when we transfer loans from held-for-investment to held-for-sale, which totaled \$1.2 billion, \$3.4 billion, and \$0.3 billion during 2016, 2015, and 2014, respectively.

(3) Calculated using annualized net charge-offs from the fourth quarter of each respective year.

Credit loss recoveries during 2016, 2015, and 2014 included \$14 million, \$17 million, and \$349 million, respectively, related to settlement agreements with certain sellers that released specified loans from certain repurchase obligations in exchange for one-time cash payments. We recognized recoveries from primary mortgage insurance (excluding recoveries that represent reimbursements for our expenses, such as REO operations expenses) of \$0.3 billion, \$0.5 billion, and \$0.7 billion that reduced our charge-offs of single-family loans during 2016, 2015, and 2014, respectively. We also recognized recoveries from primary mortgage insurance of \$47 million, \$76 million, and \$180 million during 2016, 2015, and 2014, respectively, as part of REO operations (expense) income.

Our credit losses and seriously delinquent loan population are concentrated in the Legacy single-family book. In addition, our credit losses and seriously delinquent loan population are also concentrated within loans having certain characteristics, as shown in the table below. These categories are not mutually exclusive; for example, an Alt-A loan can be associated with a property located in a judicial foreclosure state and/or have a CLTV ratio of greater than 100%. Additional detail on loans in judicial foreclosure states is presented in the "Managing Foreclosure and REO Activities" section.

Management's Discussion and Analysis Risk Management | SF Credit Risk

	Year Ended December 31, 2016		Year Ended December 31, 2015	
	% of SDQ Portfolio	% of Credit Losses	% of SDQ Portfolio	% of Credit Losses
CLTV > 100%	2 %	7.43 %	4 %	8.08 %
Alt-A loans	2 %	5.21 %	2 %	6.32 %
Judicial foreclosure states	38 %	1.36 %	39 %	1.84 %

Loan Loss Reserves

Our loan loss reserves continued to decline in recent years, consistent with the decline in our serious delinquency rate. Although the housing market continued to improve in many geographic areas in 2016, we expect that our loan loss reserves may remain elevated for an extended period because a significant portion of our reserves is associated with interest rate concessions related to performing TDRs. Additionally, the resolution of certain seriously delinquent loans takes considerable time, often several years in the case of foreclosure.

The table below summarizes our single-family loan loss reserves activity.

(Dollars in millions)	Year Ended December 31,				
	2016	2015	2014	2013	2012
Beginning balance	\$15,348	\$21,793	\$24,578	\$30,508	\$38,916
Provision (benefit) for credit losses	(781)	(2,639)	113	(2,247)	2,013
Charge-offs, gross ⁽¹⁾	(1,938)	(5,071)	(4,892)	(8,995)	(13,520)
Recoveries	497	717	1,258	4,313	2,262
Transfers, net	337	548	736	999	837
Ending balance	\$13,463	\$15,348	\$21,793	\$24,578	\$30,508

As a percentage of our single-family credit guarantee portfolio	0.77	%	0.90	%	1.31	%	1.49	%	1.86	%
---	------	---	------	---	------	---	------	---	------	---

Does not include lower-of-cost-or-fair value adjustments and other expenses related to property taxes and (1) insurance recognized when we transfer loans from held-for-investment to held-for-sale, which totaled \$1.2 billion, \$3.4 billion, \$0.3 billion, \$0 billion, and \$0 billion during 2016, 2015, 2014, 2013, and 2012, respectively.

TDRs and Individually Impaired Loans

Single-family loans that have been individually evaluated for impairment, such as modified loans, generally have a higher associated loan loss reserve than loans that have been collectively evaluated for impairment. Due to the large number of loan modifications completed in recent years, a significant portion of our loan loss reserves is attributable to individually impaired single-family loans. The reserves associated with individually impaired loans, which comprised approximately 63% of the loan loss reserves for single-family loans as of December 31, 2016, largely reflect interest rate concessions for the borrower. Most of our modified single-family loans, including TDRs, were current and performing at December 31, 2016. We expect our loan loss reserve associated with existing single-family TDRs to decline over time as borrowers continue to make monthly payments under the modified terms and interest rate concessions are amortized into earnings.

The table below summarizes the carrying value for individually impaired single-family loans on our consolidated balance sheets for which we have recorded a specific reserve.

Management's Discussion and Analysis Risk Management | SF Credit Risk

(Dollars in millions)	2016		2015	
	Loan Count	Amount	Loan Count	Amount
TDRs, at January 1	512,253	\$85,960	539,590	\$94,401
New additions	43,153	5,956	59,887	8,227
Repayments and reclassifications to held-for-sale	(58,153)	(11,405)	(69,720)	(13,975)
Foreclosure transfers and foreclosure alternatives	(11,544)	(1,642)	(17,871)	(2,789)
TDRs, at December 31,	485,709	78,869	511,886	85,864
Loans impaired upon purchase	7,977	542	9,535	678
Total impaired loans with specific reserve	493,686	79,411	521,421	86,542
Allowance for loan losses		(11,980)		(14,019)
Net investment, at December 31,		\$67,431		\$72,523

The table below presents information about the UPB of single-family TDRs and non-accrual loans on our consolidated balance sheets.

(Dollars in millions)	December 31,				
	2016	2015	2014	2013	2012
TDRs on accrual status	\$77,122	\$82,026	\$82,373	\$78,033	\$65,784
Non-accrual loans	16,164	22,460	32,745	42,829	61,517
Total TDRs and non-accrual loans	\$93,286	\$104,486	\$115,118	\$120,862	\$127,301

Loan loss reserves associated with:

TDRs on accrual status	\$10,295	\$12,105	\$13,728	\$14,239	\$12,430
Non-accrual loans	2,290	2,677	6,935	8,805	14,602
Total	\$12,585	\$14,782	\$20,663	\$23,044	\$27,032

(Dollars in millions)	Year Ended December 31,				
	2016	2015	2014	2013	2012
Foregone interest income on TDRs and non-accrual loans ⁽¹⁾	\$2,109	\$2,690	\$3,235	\$3,552	\$4,126

⁽¹⁾ Represents the amount of interest income that we would have recognized for loans outstanding at the end of each period, had the loans performed according to their original contractual terms.

Management's Discussion and Analysis Risk Management | SF Credit Risk

Engaging in Loss Mitigation Activities

Servicers perform loss mitigation activities as well as foreclosures on loans that they service for us. Our loss mitigation strategy emphasizes early intervention by servicers in delinquent loans and offers alternatives to foreclosure by providing servicers with default management programs designed to manage non-performing loans more effectively and to assist borrowers in maintaining home ownership or to facilitate foreclosure alternatives. We offer a variety of borrower assistance programs, including refinance programs for certain eligible loans and loan workout activities for struggling borrowers. Our loan workouts include both home retention options and foreclosure alternatives. We also engage in transfers of servicing for and sales of certain seriously delinquent loans.

Relief Refinance Program

As part of our loss mitigation activities, servicers contact borrowers that are eligible for the relief refinance initiative. In recent years, our relief refinance program has been one of our more significant borrower assistance programs. Our relief refinance initiative allows eligible homeowners whose loans we already own or guarantee to refinance with more favorable terms (such as reduction in payment, reduction in interest rate, extension of amortization term, or movement to a more stable loan) and without the need to obtain additional mortgage insurance. Our relief refinance program includes HARP, the portion of our relief refinance initiative for loans with LTV ratios above 80%. The relief refinance program (including HARP) will end in September 2017. In August 2016, FHFA announced that we and Fannie Mae, at FHFA's direction, will implement a new high LTV streamlined refinance offering. This offering will not be available to borrowers until October 2017.

The following table includes information about the performance of our relief refinance mortgage portfolio.

(Dollars in millions)	As of December 31,			2015		
	2016	UPB	Loan Count	SDQ Rate	UPB	Loan Count
Above 125% Original LTV	\$25,027	144,719	1.24%	\$28,241	157,035	1.38%
Above 100% to 125% Original LTV	50,618	288,697	1.10%	59,305	323,795	1.20%
Above 80% to 100% Original LTV	82,987	506,932	0.84%	97,375	567,201	0.86%
80% and below Original LTV	106,350	892,471	0.38%	117,677	942,183	0.36%
Total	\$264,982	1,832,819	0.69%	\$302,598	1,990,214	0.72%

These loans have continued to perform well relative to loans with similar characteristics in the Legacy single-family book.

Loan Workout Activities

When refinancing is not practicable, we require our servicers first to evaluate the loan for a forbearance agreement, repayment plan or loan modification, because our level of recovery on a loan that reperfoms is often much higher than for a loan that proceeds to a foreclosure alternative or foreclosure. We offer the following types of home retention options:

- Forbearance agreements - Arrangements that require reduced or no payments during a defined period, generally less than one year, to allow borrowers to return to compliance with the original

Management's Discussion and Analysis Risk Management | SF Credit Risk

mortgage terms or to implement another loan workout. For agreements completed in 2016, the average time period for reduced payments was between two and three months.

Repayment plans - Contractual plans designed to repay past due amounts to allow borrowers to return to compliance with the original mortgage terms. For plans completed in 2016, the average time period to repay past due amounts was approximately three months.

Loan modifications - Contractual plans that may involve changing the terms of the loan, adding outstanding indebtedness, such as delinquent interest, to the UPB of the loan, or a combination of both, including principal forbearance. Our modification programs generally require completion of a trial period of at least three months prior to receiving the modification. If a borrower fails to complete the trial period, the loan is considered for our other workout activities. These modification programs offer eligible borrowers extension of the loan's term up to 480 months and a fixed interest rate. Servicers are paid incentive fees for each completed modification, and there are limits on the number of times a loan may be modified.

The volume of these activities declined during 2016 compared to 2015, primarily due to lower volumes of seriously delinquent loans.

When a seriously delinquent single-family loan cannot be resolved through an economically sensible home retention option, we typically seek to pursue a foreclosure alternative or sale of the seriously delinquent loan. We offer the following types of foreclosure alternatives:

Short sale - The borrower sells the property for less than the total amount owed under the terms of the loan. A short sale is preferable to a borrower because we provide limited relief to the borrower from repaying the entire amount owed on the loan and, in some cases, we also provide cash relocation assistance, while allowing the borrower to exit the home in an orderly manner. A short sale allows Freddie Mac to avoid the costs we would otherwise incur to complete the foreclosure and subsequently sell the property.

Deed in lieu of foreclosure - The borrower voluntarily agrees to transfer title of the property to us without going through formal foreclosure proceedings.

We discuss sales of seriously delinquent loans below in "Servicing Transfers and Sales of Certain Seriously Delinquent Loans."

The volume of foreclosures has moderated in recent periods, primarily due to declining volumes of seriously delinquent loans, the success of our loan workout programs, and our sales of certain seriously delinquent loans. The volume of our short sale transactions declined in 2016 compared to 2015, continuing the trend in recent periods. Similarly, the volume of short sales in the overall market also declined in recent periods as home prices have continued to increase.

The following graphs provide detail about our single-family loan workout activities and foreclosures.

Management's Discussion and Analysis Risk Management | SF Credit Risk

Home Retention Actions

Foreclosure Alternatives and Foreclosures

The table below contains credit characteristic data on our single-family modified loans.

		December 31, 2016

Current or paid off two years after modification:		N/A	N/A	N/A	N/A	65 %	66 %	69 %	71 %

Management's Discussion and Analysis Risk Management | SF Credit Risk

Servicing Transfers and Sales of Certain Seriously Delinquent Loans

From time to time, we facilitate the transfer of servicing for certain groups of loans that are delinquent or are deemed at risk of default to servicers that we believe have capabilities and resources necessary to improve the loss mitigation associated with the loans. See "Sellers and Servicers" in Counterparty Credit Risk below for additional information on these activities.

During 2016 and 2015, we completed sales of \$3.1 billion and \$2.9 billion, respectively, in UPB of seriously delinquent single-family loans. Of the \$2.1 billion in UPB of single-family loans classified as held-for-sale at December 31, 2016, \$1.6 billion related to loans that were seriously delinquent. We believe the sale of these loans provides better economic returns than continuing to hold them. The FHFA requirements guiding these transactions, including bidder qualifications, loan modifications, and performance reporting, are designed to improve borrower outcomes.

Managing Foreclosure and REO Activities

In a foreclosure, we may acquire the underlying property and later sell it, using the proceeds of the sale to reduce our losses.

We typically acquire properties as a result of borrower defaults and subsequent foreclosures on loans that we own or guarantee. We evaluate the condition of, and market for, newly acquired REO properties to determine if repairs are needed, determine occupancy status and whether there are legal or other issues to be addressed, and determine our sale or disposition strategy. When we sell an REO property, we typically provide an initial period where we consider offers by owner occupants and others before offers by investors. We also consider alternative disposition processes, such as REO auctions, bulk sales channels, and partnering with locally-based entities to facilitate dispositions. In recent years, the volume of REO acquisitions has been significantly affected by the length of the foreclosure process, which extends the time it takes for loans to be foreclosed upon and the underlying properties to transition to REO. As of December 31, 2016 and 2015, the percentage of seriously delinquent loans that have been delinquent for more than six months was 57% and 64%, respectively.

Delays in Foreclosure Process and Average Foreclosure Completion Timelines

Our serious delinquency rates and credit losses continue to be adversely affected by delays in the foreclosure process in states where a judicial foreclosure is required. Foreclosures generally take longer to complete in such states, resulting in concentrations of delinquent loans in those states, as shown in the table below. At December 31, 2016, loans in states with a judicial foreclosure process comprised 38% of our single-family credit guarantee portfolio.

Management's Discussion and Analysis Risk Management | SF Credit Risk

The table below presents the length of time our loans have been seriously delinquent, by jurisdiction type.

	As of December 31,					
	2016		2015		2014	
	Loan Count	Percent	Loan Count	Percent	Loan Count	Percent
Aging, by locality:						
Judicial states:						
<= 1 year	35,599	34 %	40,265	29 %	50,138	25 %
> 1 year and <= 2 years	12,257	11	16,199	12	21,919	11
> 2 years	14,318	14	28,265	20	48,984	25
Non-judicial states:						
<= 1 year	32,949	31	38,010	27	49,657	25
> 1 year and <= 2 years	6,075	6	8,660	6	12,989	7
> 2 years	4,736	4	8,322	6	14,379	7
Combined:						
<= 1 year	68,548	65	78,275	56	99,795	50
> 1 year and <= 2 years	18,332	17	24,859	18	34,908	18
> 2 years	19,054	18	36,587	26	63,363	32
Total	105,934	100 %	139,721	100 %	198,066	100 %

The longer a loan remains delinquent, the greater the associated costs we incur. Loans that remain delinquent for more than one year are more challenging to resolve as many of these borrowers may not be in contact with the servicer, may not be eligible for loan modifications, or may determine that it is not economically beneficial for them to enter into a loan modification due to the amount of costs incurred on their behalf while the loan was delinquent. We expect the portion of our credit losses related to loans in states with judicial foreclosure processes will remain high as loans awaiting court proceedings in those states transition to REO or other loss events. The number of our single-family loans delinquent for more than one year declined 39% during 2016.

Our servicing guidelines do not allow initiation of the foreclosure process on a primary residence until a loan is at least 121 days delinquent, regardless of where the property is located. However, we evaluate the timeliness of foreclosure completion by our servicers based on the state where the property is located. Our servicing guide provides for instances of allowable foreclosure delays in excess of the expected timelines for specific situations involving delinquent loans, such as when the borrower files for bankruptcy or appeals a denial of a loan modification.

Management's Discussion and Analysis Risk Management | SF Credit Risk

The table presents average completion times for foreclosures of our single-family loans.

(Average days)	Year Ended		
	December 31,		
	2016	2015	2014
Judicial states:			
Florida	1,205	1,332	1,311
New Jersey	1,767	1,602	1,372
New York	1,599	1,553	1,325
All other judicial states	742	828	796
Judicial states, in aggregate	1,030	1,076	1,031
Non-judicial states, in aggregate	562	637	636
Total	827	892	867

We believe that our average foreclosure timeline is likely to remain elevated in the near term due to the backlog of loans that have been delinquent for more than one year, particularly in the judicial states of Florida, New Jersey, and New York.

Our REO inventory declined in 2016 primarily due to REO dispositions exceeding our acquisitions. REO acquisitions continue to decline due to a declining number of seriously delinquent loans and a large proportion of property sales to third parties at foreclosure. Third-party sales at foreclosure auction allow us to avoid the REO property expenses that we would have otherwise incurred if we held the property in our REO inventory until disposition.

We expect the rate of decline in our REO inventory will slow as a large portion of newly acquired REO properties are older, low value, and rural properties which are more challenging to market and sell. In addition, legal-related delays (i.e., redemption periods and eviction procedures) and a business strategy to repair more homes affect significant portions of our REO inventory, resulting in extended holding periods. As our REO inventory declines, we would expect REO dispositions to decline as well.

The table below shows our single-family REO activity.

(Dollars in millions)	Year Ended December 31,					
	2016		2015		2014	
	Number	Amount	Number	Amount	Number	Amount

Ending balance, valuation allowance		(17)		(53)		(126)
Ending balance - REO		\$1,198		\$1,721		\$2,558

Severity Ratios

Severity ratios are the percentages of our realized losses when loans are resolved by the completion of foreclosures (and subsequent third-party sales or REO dispositions) or foreclosure alternatives (e.g., short sales). Severity ratios are calculated as the amount of our recognized losses divided by the

Management's Discussion and Analysis Risk Management | SF Credit Risk

aggregate UPB of the related loans. The amount of recognized losses is equal to the amount by which the UPB of the loans exceeds the amount of sales proceeds from disposition of the properties, net of capitalized repair and selling expenses, if applicable.

The table below presents single-family severity ratios.

	Year Ended December 31,		
	2016	2015	2014
REO dispositions and third-party foreclosure sales	32.8%	34.3%	34.2%
Short sales	29.0%	30.1%	31.6%

Our severity ratios remained relatively stable during 2016 compared to 2015. These severity ratios are influenced by several factors, including the geographic location of the property and the related selling expenses for REO dispositions and short sales.

REO Property Status

A significant portion of our REO properties are unable to be marketed at any given time because the properties are occupied, under repair, or subject to a redemption period, which is a post-foreclosure period during which borrowers may reclaim a foreclosed property. Redemption periods can increase the average holding period of our inventory, and have done so in recent years. As of December 31, 2016, approximately 51% of our REO properties were unable to be marketed because the properties were occupied, under repair, or located in states with a redemption period, and 14% of the properties were being evaluated for listing and determination of our sales or disposition strategy. As of December 31, 2016, approximately 23% of our REO properties were listed and available for sale, and 12% of our inventory was pending the settlement of sales. Though it varied significantly in different states, the average holding period of our single-family REO properties, excluding any redemption period, was 275 days and 255 days for our REO dispositions during 2016 and 2015, respectively.

MULTIFAMILY MORTGAGE CREDIT RISK

We manage our exposure to multifamily mortgage credit risk, which is a type of commercial real estate credit risk, using the following principal strategies:

- Maintaining policies and procedures for new business activity, including prudent underwriting standards;
 - Transferring a large majority of expected and stress credit losses to third parties through K Certificates, SB Certificates, and other transactions; and
 - Managing our portfolio, including loss mitigation activities.
- Maintaining Policies and Procedures for New Business Activity, Including Prudent Underwriting Standards

We use a prior approval underwriting approach for multifamily loans, in contrast to the delegated underwriting approach used for single-family loans. Under this approach, we maintain credit discipline by completing our own underwriting and credit review for each new loan prior to issuance of a loan commitment, including review of third-party appraisals and cash flow analysis. Our underwriting standards focus on the LTV ratio and DSCR, which estimates ability to repay using the secured property's cash flow, after expenses. A higher DSCR indicates lower credit risk. Our standards require maximum LTV ratios and minimum DSCRs that vary based on the characteristics and features of the loan. Loans are generally underwritten with a maximum original LTV ratio of 80% and a DSCR of greater than 1.25, assuming monthly payments that reflect amortization of principal. However, certain loans may have a higher LTV ratio and/or a lower DSCR, typically where this will serve our mission and contribute to achieving our affordable housing goals. For more detail on LTV ratios of our portfolio, see "Managing Our Portfolio, Including Loss Mitigation Activities" in this section. Consideration is also given to other qualitative factors, such as borrower experience and the strength of the local market. Sellers provide certain representations and warranties to us regarding the loans they sell to us, and are required to repurchase loans for which there has been a breach of representation or warranty. However, repurchases of multifamily loans have been extremely rare due to our underwriting approach prior to purchase.

Multifamily loans may be amortizing or interest-only (for the full term or a portion thereof) and have a fixed or variable rate of interest. Multifamily loans generally have shorter terms than single-family loans and typically have maturities ranging from five to ten years. Most multifamily loans require a balloon payment at maturity, making ability to refinance or pay off the loan at maturity a key attribute. Some borrowers may be unable to refinance during periods of rising interest rates or adverse market conditions.

The table below presents our multifamily loan purchases and other guarantee issuances, by product term.

	December 31,					
	2016		2015		2014	
(Dollars in millions)	Amount	% of Total	Amount	% of Total	Amount	% of Total

7-year loans, fixed or adjustable	19,367	34	16,875	36	11,773	42
Other	13,085	23	9,786	21	5,494	19
Total	\$56,830	100%	\$47,264	100%	\$28,336	100%

Transferring a Large Majority of Expected and Stress Credit Losses to Third Parties Through K Certificates, SB Certificates, and Other Transactions

We seek to transfer multifamily mortgage credit risk primarily through K Certificate and SB Certificate transactions in which we transfer a first loss position associated with the underlying multifamily loans to third-party investors. The amount of subordination to the guaranteed certificates in our K Certificate and SB Certificate transactions is set at a level that we believe is sufficient to cover a large majority of the expected and stress credit losses on the loans. We continue to develop other strategies to reduce our credit exposure to multifamily loans and securities by transferring credit risk to third parties.

We securitized \$178.4 billion in UPB of multifamily loans in K Certificate and SB Certificate transactions between 2009 and 2016. Excluding transactions without subordination, the average level of subordination on all outstanding K Certificates and SB Certificates was 14% and 15% as of December 31, 2016 and 2015, respectively. Since we began issuing K Certificates and SB Certificates, we have experienced no credit losses associated with our guarantees on these securities. See “Our Business Segments - Multifamily” for more information on K Certificates and SB Certificates. The table below shows the delinquency rates for both credit-enhanced and non-credit-enhanced loans in our multifamily mortgage portfolio.

	December 31, 2016		2015		2014	
	% of Portfolio	Delinquency Rate	% of Portfolio	Delinquency Rate	% of Portfolio	Delinquency Rate
Non-credit-enhanced	24 %	0.04 %	32 %	0.03 %	40 %	0.02 %
Credit-enhanced:						
K Certificates and SB Certificates	70	0.02 %	61	0.02 %	53	0.01 %
Other	6	0.02 %	7	—	7	0.35 %
Total	100 %	0.03 %	100 %	0.02 %	100 %	0.04 %

Managing Our Portfolio, Including Loss Mitigation Activities

To help mitigate our potential losses, we generally require sellers to act as the primary servicer for loans they have sold to us, including property monitoring tasks beyond those typically performed by single-family servicers. For securitized loans, we typically transfer the master servicing role to the trustees on behalf of the bondholders in accordance with the securitization and trust documents. Servicers for unsecuritized loans over \$1 million must generally submit an annual assessment of the mortgaged property to us based on the servicer’s analysis of the property as well as the borrower’s financial statements. In situations where a borrower or property is in distress, the frequency of communications with the borrower may be increased. We rate servicing performance on a regular basis, and we may conduct on-site reviews to confirm compliance with our standards.

We primarily use credit enhancements, such as the subordination provided by K Certificates and SB Certificates, to mitigate our credit losses. For unsecuritized loans, we may offer a workout option to give the borrower an opportunity to bring the loan current and retain ownership of the property, such as providing a short-term extension of up to 12 months. These arrangements are entered into with the expectation that we will recover our initial investment or minimize our losses. We do not enter into these arrangements in situations where we believe we would experience a loss in the future that is greater than

or equal to the loss we would experience if we foreclosed on the property at the time of the agreement. Our multifamily loan modification and other workout activities have been minimal in the last three years.

In addition, after the loans have been securitized and the large majority of the expected and stress credit losses has been transferred to third-party investors, we monitor the performance of our K Certificates, SB Certificates, and other similar types of transactions to assess our potential exposure to losses. Due to the subordination protection associated with our K Certificates, SB Certificates, and most of our other securitization products, our primary credit risk exposure in our multifamily mortgage portfolio results from our unsecuritized loans. By their nature, loans awaiting securitization that we hold for sale remain on our balance sheet for a shorter period of time than loans we hold for investment.

We report multifamily delinquency rates based on UPB of loans in our multifamily mortgage portfolio that are two monthly payments or more past due or in the process of foreclosure, as reported by our servicers. Loans that have been modified are not counted as delinquent as long as the borrower is less than two monthly payments past due under the modified terms.

Management's Discussion and Analysis

Non-accrual loans	7	12	31	65	157
Total	\$10	\$21	\$52	\$80	\$205
	Year Ended December 31,				
(In millions)	2016	2015	2014	2013	2012
Foregone interest income on TDRs and non-accrual loans ⁽¹⁾	\$3	\$3	\$4	\$8	\$11

⁽¹⁾ Represents the amount of interest income that we would have recognized for loans outstanding at the end of each period, had the loans performed according to their original contractual terms.

The balance of our multifamily TDR and non-accrual loans has declined for the last four years, which reflects continued strong portfolio performance and positive market fundamentals.

Management's Discussion and Analysis Risk Management | MRS Credit Risk

MORTGAGE-RELATED SECURITIES CREDIT RISK

Our mortgage-related securities portfolio consists of investments in agency and non-agency securities. Agency securities have historically presented minimal credit risk as a result of the guarantee provided by, and the U.S. government's support of, the institutions that issue agency securities. Because non-agency securities generally do not include a guarantee from a GSE or governmental agency, we have credit risk exposure to the underlying collateral of these securities. This credit risk exposure, which principally arises from securities purchased prior to conservatorship, has declined in recent years as we have reduced our positions in non-agency securities and substantially all of our recent mortgage-related securities purchases have consisted of agency securities.

See Note 5 for information concerning our investments in mortgage-related securities, including the amortized cost and fair value balances of these investments by major security type.

Risk Management Activities - Non-Agency Mortgage-Related Securities

As the non-agency mortgage-related securities pay down, our credit risk exposure is reduced. In addition, we further reduce our credit risk exposure by selling or securitizing certain assets and pursuing litigation and other loss recovery efforts. For information on our remaining litigation related to certain of our non-agency mortgage-related securities, see Note 12.

While we continue to have a significant portfolio of non-agency mortgage-related securities, our investments in these securities have declined in recent years, as we continue our efforts to dispose of certain of these securities in an economically sensible manner. See "Reducing Our Mortgage-Related Investments Portfolio Over Time" for information concerning our disposition of these securities.

Freddie Mac 2016 Form 10-K 130

Our Investments in Non-Agency Mortgage-Related Securities

Our investments in non-agency mortgage-related securities are classified according to the nature of the underlying collateral, as either non-agency CMBS or non-agency RMBS.

Non-Agency CMBS

Our non-agency CMBS are backed by multifamily real estate loans. While we have credit risk exposure to the underlying collateral of these securities and therefore exposure to the stresses of the multifamily real estate market, we believe such exposure is mitigated by the presence of structural subordination, as we principally invest in the most senior tranches of the CMBS deals. As of December 31, 2016, approximately 76% of our non-agency CMBS (by UPB) were investment grade or above. As a result, while we monitor these securities for credit losses, we believe our exposure to credit risk is limited.

Non-Agency RMBS

Our non-agency RMBS are backed by single-family real estate loans, including subprime, option ARM, Alt-A and other loans. We categorize our non-agency RMBS as subprime, option ARM, or Alt-A if the securities were identified as such based on information provided to us when we acquired these securities. Since the beginning of 2007, most of the actual principal shortfalls on our non-agency mortgage-related securities resulted from non-agency RMBS backed by subprime, option ARM, and Alt-A loans. Furthermore, as of December 31, 2016, approximately 95% of our non-agency RMBS backed by subprime, option ARM, and Alt-A loans were below investment grade. As a result, compared to our other mortgage-related securities, we believe these securities represent our greatest credit risk exposure. However, we expect this exposure to decline over time as we reduce the less liquid assets, including non-agency RMBS, held in our investments portfolio.

Management's Discussion and Analysis Risk Management | MRS Credit Risk

Higher Risk Components of Our Investments in Non-Agency RMBS

The following table presents certain credit-related statistics concerning our investments in non-agency RMBS backed by subprime, option ARM, and Alt-A loans.

(Dollars in millions)	As of					
	12/31/2016	9/30/2016	6/30/2016	3/31/2016	12/31/2015	
UPB	\$14,343	\$15,330	\$19,248	\$23,760	\$25,300	
Gross unrealized losses, pre-tax	78	157	352	469	425	
Present value of expected future credit losses	2,552	2,330	2,641	3,018	3,576	
Principal repayments	595	658	1,005	731	920	
Principal cash shortfalls ⁽¹⁾	14	17	(82) 20	26	
Collateral delinquency rate	23	% 23	% 24	% 25	% 25	%
Average credit enhancements ⁽²⁾	(1)% 1	% 4	% 3	% 4	%
Cumulative collateral loss	32	% 32	% 31	% 31	% 30	%

Negative value reflects the recovery of previous principal cash shortfalls through the settlement of non-agency (1)RMBS representation and warranty claims. See Note 12 for more information concerning our litigation related to non-agency mortgage-related securities.

Positive value reflects the amount of subordination and other financial support (excluding credit enhancement provided by bond insurance) that will incur losses in the securitization structure before any losses are allocated to securities that we own. Percentage generally calculated based on the total UPB of securities subordinate to the (2)securities we own, divided by the total UPB of all of the securities issued by the trust (excluding notional balances). Negative value is shown when unallocated collateral losses will be allocated to the securities that we own in excess of current remaining credit enhancement, if any. The unallocated collateral losses have been considered in our assessment of other-than-temporary impairment.

While the credit performance of the loans underlying our non-agency RMBS has improved in recent periods, it remains weak and is susceptible to changes in macroeconomic conditions, such as home prices, mortgage interest rates, and unemployment rates. See "Key Economic Indicators" for a discussion of how these conditions influence the performance of our securities and Note 5 for information concerning our evaluation of our non-agency mortgage-related securities portfolio for credit-related impairment.

COUNTERPARTY CREDIT RISK

We are exposed to counterparty credit risk as a result of our contracts with seller/servicers, mortgage insurers, bond insurers, credit insurers, derivative counterparties, including clearing members and clearinghouses, cash and other investments counterparties, mortgage-related security issuers, and document custodians. We manage our exposure to counterparty credit risk using the following principal strategies:

- Maintaining eligibility standards;
- Evaluating counterparty financial strength and performance and monitoring our exposure; and
- Working with underperforming counterparties and limiting our losses from their nonperformance of obligations, when possible.

In the sections below, we discuss our management of counterparty credit risk for each type of counterparty to which we have significant exposure.

Sellers and Servicers

Overview

In our single-family guarantee business, we do not originate loans or have our own loan servicing operation. Instead, our sellers and servicers perform the primary loan origination and loan servicing functions on our behalf. We establish standards for our sellers and servicers to follow and have contractual arrangements with them under which they represent and warrant that the loans they sell to us meet our standards and that they will service loans in accordance with our standards. If we discover that the representations or warranties related to a loan were breached (i.e., that contractual standards were not followed), we can exercise certain contractual remedies to mitigate our actual or potential credit losses. If our sellers or servicers lack appropriate controls, experience a failure in their controls, or experience an operating disruption, including as a result of financial pressure, legal or regulatory actions or ratings downgrades, we could experience a decline in mortgage servicing quality and/or be less likely to recover losses through lender repurchases, recourse agreements, or other credit enhancements, where applicable.

In our multifamily business, we are exposed to the risk that multifamily seller/servicers could come under financial pressure, which could potentially cause degradation in the quality of the servicing they provide us, including their monitoring of each property's financial performance and physical condition. This could also, in certain cases, reduce the likelihood that we could recover losses through lender repurchases, recourse agreements or other credit enhancements, where applicable. This risk primarily relates to multifamily loans that we hold on our consolidated balance sheets where we retain all of the related credit risk.

Maintaining Eligibility Standards

Our eligibility standards for sellers and servicers require the following: a demonstrated operating history in residential mortgage origination and servicing, or an eligible agent acceptable to us; adequate insurance coverage; a quality control program that meets our standards; and sufficient net worth, liquidity, and funding sources.

Management's Discussion and Analysis Risk Management | Counterparty Credit Risk

In 2015, at the direction of FHFA, we and Fannie Mae implemented changes to our single-family seller and servicer eligibility requirements. These changes included revisions to net worth requirements, adoption of new capital and liquidity requirements and enhancements to certain servicer operational requirements.

Evaluating Counterparty Financial Strength and Performance and Monitoring our Exposure

We perform ongoing monitoring and review of our exposure to individual sellers or servicers in accordance with our counterparty risk management framework, including requiring our counterparties to provide regular financial reporting to us. We also monitor and rate our sellers and servicers' compliance with our standards and periodically review their operational processes. We may disqualify or suspend a seller or servicer with or without cause at any time. Once a seller/servicer is disqualified or suspended, we no longer purchase loans originated by that counterparty and no longer allow that counterparty to service loans for us, while seeking to transfer servicing of existing portfolios. As discussed in more detail in "Our Business Segments," we acquire a significant portion of both our single-family and multifamily loan purchase volume from several large lenders, and a large percentage of our loans are also serviced by several large servicers.

We have significant exposure to non-depository and smaller depository financial institutions in our single-family business. These institutions may not have the same financial strength or operational capacity, or be subject to the same level of regulatory oversight, as our largest mortgage seller or servicer counterparties, which are mostly depository institutions.

Although our business with our single-family loan sellers is concentrated, a number of our largest single-family loan seller counterparties reduced or eliminated their purchases of loans from mortgage brokers and correspondent lenders in recent years. As a result, we acquire a greater portion of our single-family business volume directly from non-depository and smaller depository financial institutions.

Also in recent years, there has been a shift in our single-family servicing from depository institutions to non-depository institutions. Some of these non-depository institutions have grown rapidly in recent years and now service a large share of our loans. We estimate that as of December 31, 2016, the percentage of our single-family credit guarantee portfolio that was serviced by non-depository servicers was 33%. Of that amount, approximately 31% was serviced by our three largest non-depository servicers, on a combined basis. Certain of our non-depository servicers have been the subject of scrutiny from regulators.

Working with Underperforming Counterparties and Limiting our Losses from their Nonperformance of Obligations, when Possible

We require certain of our larger single-family sellers to maintain ineligible loan rates below a stated threshold, with financial consequences for non-compliance. In addition, we actively manage the current quality of loan originations of our largest single-family sellers by performing loan quality control sampling reviews and communicating loan defect rates and the causes of those defects to such sellers on a monthly basis. If necessary, we work with these sellers to develop an appropriate plan of corrective action.

We use a variety of tools and techniques to engage our single-family sellers and servicers and limit our losses, including the following:

Management's Discussion and Analysis Risk Management | Counterparty Credit Risk

Repurchases and other remedies - For certain violations of our single-family selling or servicing policies, we can require the counterparty to repurchase loans or provide alternative remedies, such as reimbursement of realized losses or indemnification. We typically first issue a notice of defect and allow a period of time to correct the problem prior to issuing a repurchase request.

In January 2016, at the direction of FHFA, we implemented a new remedies framework for the categorization of loan origination defects. Among other items, the framework provides that "significant defects" will result in a repurchase request or a repurchase alternative, such as recourse or indemnification. We may require the seller to pay us additional fees or provide us with additional data on the loan.

The UPB of loans subject to repurchase obligations from single-family loan sellers was \$0.2 billion at both December 31, 2016 and 2015. See Note 12 for additional information about loans subject to repurchase obligations.

Incentives and compensatory fees - We pay various incentives to single-family servicers for completing workouts of problem loans. We also assess compensatory fees if single-family servicers do not achieve certain benchmarks with respect to servicing delinquent loans.

Servicing transfers - From time to time, we may facilitate the transfer of servicing as a result of poor servicer performance, or for certain groups of single-family loans that are delinquent or are deemed at risk of default to servicers that we believe have the capabilities and resources necessary to improve the loss mitigation associated with the loans. We may also facilitate the transfer of servicing on loans at the request of the servicer.

Mortgage, Bond, and Credit Insurers

Overview

We have exposure to mortgage and bond insurers through credit enhancements we obtain on single-family loans and certain investments in non-agency mortgage-related securities. We also have exposure to insurers and reinsurers through our ACIS and Deep MI transactions (we sometimes refer to these insurers as credit insurers). If any of our mortgage or bond insurers fail to fulfill their obligations, we may not receive reimbursement for credit losses to which we are contractually entitled pursuant to our credit enhancement arrangements.

With respect to primary mortgage insurers, we currently cannot differentiate pricing based on counterparty strength or revoke a primary mortgage insurer's status as an eligible insurer without FHFA approval. Further, we do not select the insurance provider on a specific loan, because the selection is made by the lender at the time the loan is originated.

Accordingly, we are unable to manage our concentration risk with respect to primary mortgage insurers. In recent years, new entrants emerged that have helped diversify our concentrated primary mortgage insurer exposure among more market participants. However, mortgage insurers have recently become attractive candidates for acquisition as legacy risks abate and profitability increases, which could lead to increased concentration among mortgage insurers. As part of our ACIS credit risk transfer transactions, we regularly obtain insurance coverage from global insurers and reinsurers. These transactions incorporate several features designed to increase the likelihood that we will recover on the claims we file with the insurers, including the following:

Freddie Mac 2016 Form 10-K 135

Management's Discussion and Analysis Risk Management | Counterparty Credit Risk

In each ACIS transaction, we require the individual ACIS insurers and reinsurers to post collateral to cover portions of their exposure, which helps to promote certainty of coverage and timely claim payment; and

While private mortgage insurance companies are required to be monoline (i.e., to participate solely in the mortgage insurance business, although the holding company may be a diversified insurer), our ACIS insurers and reinsurers generally participate in multiple types of insurance businesses, which helps to diversify their risk exposure.

We acquired our bond insurance coverage when purchasing non-agency mortgage-related securities in prior years and have not obtained any new bond insurance coverage in many years.

Maintaining Eligibility Standards

We maintain eligibility standards for mortgage insurers. In 2015, at the direction of FHFA, we and Fannie Mae implemented revised eligibility requirements for all Freddie Mac- and Fannie Mae-approved mortgage insurers. These revised eligibility requirements include financial requirements determined using a risk-based framework, and were designed to promote the ability of mortgage insurers to fulfill their intended role of providing consistent liquidity throughout the mortgage cycle. Our mortgage insurers are required to submit audited financial information and certify compliance with these requirements on an annual basis.

In 2014, we issued and implemented revised master policies for mortgage insurers that are designed to provide greater certainty of coverage and facilitate timely claims processing.

Evaluating Counterparty Financial Strength and Performance and Monitoring our Exposure

We monitor our exposure to individual insurers by performing periodic analysis of the financial capacity of each insurer under various adverse economic conditions.

The table below summarizes our exposure to single-family primary mortgage insurers as of December 31, 2016. In the event a mortgage insurer fails to perform, the coverage amounts represent our maximum exposure to credit losses resulting from such a failure.

Management's Discussion and Analysis Risk Management | Counterparty Credit Risk

(In millions)	Credit Rating ⁽¹⁾	Credit Rating Outlook ⁽¹⁾	December 31, 2016			
			UPB		Coverage	
			Primary MI	Pool Insurance	Primary MI	Pool Insurance
Arch Mortgage Insurance Company ⁽²⁾	BBB+	Stable	\$70,618	\$14	\$18,131	\$9
Radian Guaranty Inc. (Radian)	BBB-	Stable	60,634	1,470	15,510	523
Mortgage Guaranty Insurance Corporation (MGIC)	BBB-	Stable	59,339	113	15,227	1
Genworth Mortgage Insurance Corporation	BB+	Watch Dev	43,323	15	11,106	17
Essent Guaranty, Inc.	BBB	Stable	29,225	—	7,459	—
PMI Mortgage Insurance Co. (PMI)	Not Rated	N/A	7,355	65	1,840	44
Republic Mortgage Insurance Company (RMIC)	Not Rated	N/A	5,591	32	1,397	20
Triad Guaranty Insurance Corporation (Triad)	Not Rated	N/A	2,871	10	723	4
Others	N/A	N/A	12,261	—	2,952	—
Total			\$291,217	\$1,719	\$74,345	\$618

Ratings and outlooks are for the corporate entity to which we have the greatest exposure. Coverage amounts may include coverage provided by consolidated affiliates and subsidiaries of the counterparty. Latest rating available as of December 31, 2016. Represents the lower of S&P and Moody's credit ratings and outlooks stated in terms of the S&P equivalent.

⁽²⁾ On January 3, 2017, Arch Capital Group Ltd. announced that it had completed its purchase of United Guaranty Corporation at the end of 2016. The table reflects this transaction.

The majority of our mortgage insurance exposure is concentrated with five mortgage insurers. Although the financial condition of our mortgage insurers has improved in recent years, there is still a risk that some of these counterparties may fail to fully meet their obligations under a stress economic scenario since they are monoline entities primarily exposed to mortgage credit risk.

On October 23, 2016, Genworth Financial, Inc. announced that it had entered into an agreement to be acquired by China Oceanwide Holdings Group Co., Ltd. Because Genworth Mortgage Insurance Corporation, a subsidiary of Genworth Financial, Inc., is an approved mortgage insurer, Freddie Mac will evaluate the financial strength of China Oceanwide Holdings Group Co., Ltd. when considering whether to approve the planned acquisition. The transaction is also subject to other required approvals. For more information about counterparty risk associated with mortgage insurers, see Note 12.

PMI and Triad are both under the control of their state regulators and no longer issue new insurance. Both of these insurers pay a substantial portion of their claims as deferred payment obligations. RMIC is under regulatory supervision and is no longer issuing new insurance; however, it continues to pay its claims in cash.

If, as we currently expect, PMI and Triad do not pay the full amount of their deferred payment obligations in cash, we would lose a portion of the coverage from these insurers shown in the table above. As of December 31, 2016, we had cumulative unpaid deferred payment obligations of \$0.5 billion from these insurers. We have fully reserved for all of these unpaid amounts as collectability is uncertain.

Except for those insurers under regulatory supervision, which no longer issue new coverage, we continue to acquire new loans with mortgage insurance from the mortgage insurers shown in the table above, some of which have credit ratings below investment grade.

Management's Discussion and Analysis Risk Management | Counterparty Credit Risk

The table below summarizes our exposure to bond insurers as of December 31, 2016. In the event a bond insurer fails to perform, the coverage outstanding represents our maximum principal exposure to credit losses related to such a failure.

(Dollars in millions)	Credit Rating ⁽¹⁾	Credit Rating Outlook ⁽¹⁾	December 31, 2016		UPB	
			Gross Unrealized Losses	Coverage Outstanding	% of Total Coverage Outstanding	% of Total Coverage Outstanding
Ambac Assurance Corporation (Ambac)	Not Rated	N/A	\$14	\$2,713	52	%
National Public Finance Guarantee Corp.	A-	Negative	7	1,035	20	%
MBIA Insurance Corp.	CCC	Negative	—	601	12	%
Financial Guaranty Insurance Company (FGIC)	Not Rated	N/A	—	559	10	%
Assured Guaranty Municipal Corp.	A	Stable	—	253	5	%
Syncora Guarantee Inc.	Not Rated	N/A	—	22	—	%
CIFG Assurance North America, Inc.	Not Rated	N/A	—	29	1	%
Total			\$21	\$5,212	100	%

Ratings and outlooks are for the corporate entity to which we have the greatest exposure. Coverage amounts may include coverage provided by consolidated affiliates and subsidiaries of the counterparty. Latest rating available as of December 31, 2016. Represents the lower of S&P and Moody's credit ratings and outlooks stated in terms of the S&P equivalent.

We expect to receive substantially less than full payment of our claims from Ambac and FGIC as these companies are either insolvent or under the control of their state regulators. We believe that we will also likely receive substantially less than full payment of our claims from some of our other bond insurers because we believe they also lack sufficient ability to fully meet all of their expected lifetime claims-paying obligations to us as such claims emerge. Some of our bond insurers are in runoff mode and not writing new business.

Bond insurance is included as a feature at issuance of some of our non-agency mortgage-backed securities. The expected benefits from bond insurers, or the inability of bond insurers to perform on their obligations, is captured in the fair value of these securities.

Derivative Counterparties

Overview

We use cleared derivatives, exchange-traded derivatives, and OTC derivatives, and are exposed to the non-performance of each of our derivative counterparties. The Investments segment manages this risk for the company. Our derivative counterparty credit exposure relates principally to interest-rate derivative contracts. We maintain internal standards for approving new derivative counterparties, clearinghouses, and clearing members. Cleared derivatives - We are required to post initial and variation margin with our clearing members in connection with interest-rate swaps that are subject to the central clearing requirement of the Dodd-Frank Act. Our exposure to the clearinghouses we use to clear such interest-rate derivatives, and to the clearing members that administer our transactions once accepted for clearing, has increased and may become more concentrated over time. This concentration exposes us to the risk of a failure of a clearinghouse. However, the use of cleared derivatives mitigates our counterparty credit risk exposure to individual counterparties because a central counterparty is substituted for

Management's Discussion and Analysis Risk Management | Counterparty Credit Risk

individual counterparties. The amount of initial margin we must post for cleared and exchange-traded derivatives may be based, in part, on S&P or Moody's credit rating of our long-term senior unsecured debt securities. The lowering or withdrawal of our credit rating by S&P or Moody's may increase our obligation to post margin, depending on the amount of the counterparty's exposure to Freddie Mac with respect to the derivative transactions.

Exchange-traded derivatives - We are required to post initial and variation margin with our clearing members in connection with exchange-traded derivatives. The posting of this margin exposes us to counterparty credit risk in the event that our clearing members or the exchanges' clearinghouses fail to meet their obligations. However, the use of exchange-traded derivatives mitigates our counterparty credit risk exposure to individual counterparties because a central counterparty is substituted for individual counterparties, and changes in the value of open exchange-traded contracts are settled daily via payments made through the financial clearinghouse established by each exchange.

OTC derivatives - OTC derivatives expose us to counterparty credit risk to individual counterparties, because these transactions are executed and settled directly between us and each counterparty, exposing us to potential losses if a counterparty fails to meet its contractual obligations. When a counterparty in OTC derivatives that is subject to a master netting agreement has a net obligation to us with a market value above an agreed upon threshold, the counterparty is obligated to deliver collateral in the form of cash, securities, or a combination of both to satisfy its obligation to us under the master netting agreement. Our OTC derivatives also require us to post collateral to counterparties in accordance with agreed upon thresholds when we are in a derivative liability position. The collateral posting thresholds we assign to our OTC counterparties, as well as the ones they assign to us, are generally based on S&P or Moody's credit rating. The lowering or withdrawal of our credit rating by S&P or Moody's may increase our obligation to post collateral, depending on the amount of the counterparty's exposure to Freddie Mac with respect to the derivative transactions. Regulations that take effect March 1, 2017 will require posting of variation margin without the application of any thresholds for OTC derivative transactions executed after that date. As a result, our and the counterparties' credit ratings will no longer be used in determining the amount of collateral to be posted in connection with these transactions.

In the event a counterparty defaults, our economic loss may be higher than the uncollateralized exposure of our derivatives if we are not able to replace the defaulted derivatives in a timely and cost-effective fashion (e.g., due to a significant interest rate movement during the period or other factors). We could also incur economic losses if non-cash collateral posted to us by the defaulting counterparty and held by the custodian cannot be liquidated at prices that are sufficient to recover the amount of such exposure.

Evaluating Counterparty Financial Strength and Performance and Monitoring Our Exposure

Over time, our exposure to derivative counterparties varies depending on changes in fair values, which are affected by changes in interest rates and other factors. Due to risk limits with certain counterparties, we may be forced to execute transactions with lower returns with our counterparties when managing our interest-rate risk. We manage our exposure through master netting and collateral agreements and stress-testing to evaluate potential exposure under possible adverse market scenarios. Collateral is typically transferred within one business day based on the values of the related derivatives. We regularly review the market values of the securities pledged to us as non-cash collateral to manage our exposure to loss. We conduct additional reviews of our exposure when market conditions dictate or certain events affecting an individual counterparty occur. When non-cash collateral is posted to us, we require collateral in excess

Management's Discussion and Analysis Risk Management | Counterparty Credit Risk

of our exposure to satisfy the net obligation to us in accordance with the counterparty agreement.

The table below compares the gross fair value of our derivative asset positions after counterparty netting with our net exposure to these positions after considering cash and non-cash collateral held.

(Dollars in millions)	As of December 31, 2016		
	Number of Counterparty positions	Fair Value - Gain	Fair Value - Gain positions, net of collateral
OTC interest-rate swap and swaption counterparties (by rating):			
AA- or above	5	\$266	\$14
A+, A, or A-	11	1,856	31
BBB+, BBB, or BBB-	3	42	6
Total OTC	19	2,164	51
Cleared and exchange-traded derivatives	2	215	21
Total	21	\$2,379	\$72

Approximately 98% of our exposure at fair value for OTC interest-rate swap and option-based derivatives, excluding amounts related to our posting of cash collateral in excess of our derivative liability determined at the counterparty level, was collateralized at December 31, 2016. The remaining exposure was primarily due to market movements between the measurement of a derivative at fair value and our receipt of the related collateral, as well as exposure amounts below the then applicable counterparty collateral posting threshold. The concentration of our derivative exposure among our primary OTC derivative counterparties remains high and could further increase.

We also execute forward purchase and sale commitments of mortgage-related securities, including dollar roll transactions, that are treated as derivatives for accounting purposes and utilize the Mortgage Backed Securities Division of the Fixed Income Clearing Corporation ("MBSD/FICC") as a clearinghouse. As a clearing member of the clearinghouse, we post margin to the MBSD/FICC and are exposed to the counterparty credit risk of the organization. In the event a clearing member fails and causes losses to the MBSD/FICC clearing system, we could be subject to the loss of the margin that we have posted to the MBSD/FICC. Moreover, our exposure could exceed the amount of margin we have posted to the MBSD/FICC, as clearing members are generally required to cover losses caused by defaulting members on a pro rata basis. It is difficult to estimate our maximum exposure, as this would require an assessment of transactions that we and other members of the MBSD/FICC may execute in the future. We believe that it is unlikely we will have to make any material payments under these arrangements and the risk of loss is expected to be remote because of the MBSD/FICC's financial safeguards and our ability to terminate our membership in the clearinghouse (which would limit our loss). As of December 31, 2016, the gross fair value of such forward purchase and sale commitments that were in derivative asset positions was \$270 million.

Other Counterparties

We have exposure to other types of counterparties to transactions that we enter into in the ordinary course of business, including the following:

Cash and other investments counterparties - We are exposed to the non-performance of counterparties relating to cash and other investments (including non-mortgage-related securities and cash equivalent) transactions, including those entered into on behalf of our securitization trusts. Our policies require that the counterparty be evaluated using our internal counterparty rating model prior

Management's Discussion and Analysis Risk Management | Counterparty Credit Risk

to our entering into such transactions. We monitor the financial strength of our counterparties to these transactions and may use collateral maintenance requirements to manage our exposure to individual counterparties. The permitted term and dollar limits for each of these transactions are also based on the counterparty's financial strength. Our cash and other investments (including non-mortgage-related securities and cash equivalents) counterparties are primarily major financial institutions, Treasury, and the Federal Reserve Bank of New York. Our investments in non-mortgage-related securities at December 31, 2016 and 2015 were primarily in U.S. Treasury securities.

Mortgage related-security issuers and servicers - We are exposed to the non-performance of servicers and issuers of our investments in non-Freddie Mac mortgage-related securities, which can result in credit losses, impairments, and declines in the fair value of these securities. See the "Mortgage-Related Securities Credit Risk" section for more information on how we manage risk associated with non-agency mortgage-related securities. A significant portion of the single-family loans underlying our investments in non-agency mortgage-related securities is serviced by non-depository servicers. These servicers may not have the same financial strength, internal controls, or operational capacity as depository servicers. As of December 31, 2016 and 2015, approximately \$8.4 billion and \$13.0 billion, respectively, of our investments in single-family non-agency mortgage-related securities, based on UPB, were serviced by subsidiaries and/or affiliates of Ocwen Financial Corp.

Document custodians - We use third-party document custodians to provide loan document certification and custody services for the loans that we purchase and securitize. In many cases, our seller/servicers or their affiliates also serve as document custodians for us. Our ownership rights to the loans that we own or that back our securitization products could be challenged if a seller/servicer intentionally or negligently pledges, sells, or fails to obtain a release of prior liens on the loans that we purchased, which could result in financial losses to us. When a seller/servicer or one of its affiliates acts as a document custodian for us, the risk that our ownership interest in the loans may be adversely affected is increased, particularly in the event the seller/servicer were to become insolvent. To manage these risks, we maintain legal and contractual arrangements that identify our ownership interest in the loans and establish qualifying standards for our document custodians. We also monitor the financial strength of our document custodians on an ongoing basis in accordance with our counterparty risk management framework, and we require transfer of documents to our possession or to a different third-party document custodian if we have concerns about the solvency or competency of the document custodian.

The MERS® System - The MERS System is an electronic registry that is widely used by seller/servicers, Freddie Mac, and other participants in the mortgage industry to maintain records of beneficial ownership of loans. The MERS System is owned and operated by MERSCORP Holdings, Inc. In 2016, Intercontinental Exchange, Inc. acquired a majority equity position in MERSCORP Holdings, Inc. Freddie Mac and Fannie Mae also have equity positions in MERSCORP Holdings. A significant portion of the loans we own or guarantee are registered in the MERS System. Our business could be adversely affected if we were prevented from using the MERS System, or if our use of the MERS System adversely affects our ability to enforce our rights with respect to our loans registered in the MERS System.

OPERATIONAL RISK

We define operational risk as the risk of direct or indirect loss resulting from inadequate or failed internal processes, people or systems, or from external events. Operational risk is inherent in all of our activities. Operational risk events include accounting or operational errors, business interruptions, non-compliance with legal or regulatory requirements, fraudulent acts, inappropriate acts by employees, information security incidents, or vendors who do not perform in accordance with their contracts. These events could result in financial loss, legal actions, regulatory fines, and reputational harm.

OPERATIONAL RISK MANAGEMENT AND RISK PROFILE

Our operational risk management framework includes risk identification, assessment, measurement, mitigation and reporting. When operational risk events are identified, our policies require that the events be documented and analyzed to determine whether changes are required in our systems and/or processes to further mitigate the risk of future events. During 2016, we continued to enhance and refine our three-lines-of-defense framework to both strengthen risk ownership in our business units and add clarity to risk management roles and responsibilities. Our framework focuses on balancing ownership of risk by our business units with corporate oversight and independent assurance of the design and effectiveness of our risk management activities.

In order to evaluate and monitor operational risk, each business unit completes an assessment using the Risk and Control Self-Assessment ("RCSA") framework. The framework is designed to identify and assess the business unit's exposure to operational risk and determine if additional action is required to manage the risk to an acceptable level. In addition to the RCSA process, we employ several tools to identify and measure operational risks, including loss event data, key risk indicators, root cause analysis, and testing. While our operational risk framework includes tools to support effective management of operational risk, the primary responsibility for managing both the day-to-day risk and longer-term or emerging risks lies with the business units.

We continue to face heightened operational risk and expect the risk to remain elevated for the near term. This elevated risk profile is due to the layering impact of several factors including: legacy systems requiring upgrade for operational resiliency; reliance on manual processes; volume and complexity of new business initiatives, including those we are pursuing under the Conservatorship Scorecards; and issues requiring remediation. Other factors contributing to our heightened operational risk are discussed in "Risk Factors - Operational Risks."

While our operational risk profile remains elevated, we are continuing to strengthen our operational control environment.

We continued to invest in technology risk management activities, including the enhancement of our out-of-region disaster recovery capabilities. Our out-of-region data center, which became operational in 2014, improved our ability to recover our business systems in the event of a catastrophic regional business event, such as a disaster that affects our Northern Virginia production data centers.

We continue to make various multi-year investments to build the infrastructure for a better housing finance system, including the development of the common securitization platform by CSS (jointly owned

by Freddie Mac and Fannie Mae) and a single (common) security. With regard to the common securitization platform, while we exercise influence over CSS through our representation on the CSS Board of Managers, we do not control its day-to-day operations. CSS' day-to-day operations are managed by CSS management, which is overseen by the CSS Board of Managers. The Board of Managers consists of two Freddie Mac and two Fannie Mae representatives. We may not realize the benefits of our investments if the common securitization platform and single (common) security do not operate successfully, or if the market does not accept the single (common) security. In addition, the transition to the common securitization platform, which began in late 2016, presents significant operational and technological challenges. Freddie Mac began its transition to the common securitization platform in late 2016 through Release 1. We are employing various processes and procedures to mitigate the operational risks related to Release 1, including leveraging redundant operational processes and the ability to execute specific failback procedures. We will continue working with FHFA, CSS and Fannie Mae to develop processes and procedures related to the risks associated with Release 2.

We continue to invest in the information risk and security area to strengthen our capabilities to prevent, detect, respond to and mitigate risk, and protect our critical assets. In 2014, we launched a multi-year information protection initiative designed to mitigate information risk. In 2016, we updated our information security roadmap and launched an end-to-end information risk program.

Model Risk

Model Risk is defined as the potential for adverse consequences from decisions based on incorrect or misused model outputs. Our business activities significantly rely on the use of models. We use a variety of models to inform management decisions related to our businesses. These include models that forecast significant factors such as interest rates, mortgage rates, and house prices, as well as models that project future cash flows related to borrower prepayment and default behavior. Risks emerge when unexpected changes cause future outcomes to be different from the outcomes projected by our models.

Model development, changes to existing models, and model risks are managed in each line of business according to our three-lines-of-defense framework. New model development and changes to existing models undergo a review process. Each business periodically reviews model performance, embedded assumptions and limitations, and modeling techniques, and updates its models as it deems appropriate. The ERM Division, the second line of defense, develops corporate model risk policies and standards and independently validates the work done by the first line of defense (i.e., the business units). The Internal Audit Division, the third line of defense, provides additional periodic independent assessment that model governance, policies, and procedures are followed appropriately.

Given the importance and complexity of models in our business, model development may take several months to complete. Delays in our model development process could affect our ability to make sound business and risk management decisions, and increase our exposure to risk. We have procedures designed to mitigate this risk. In 2016, we improved our model governance processes by strengthening model policies, standards and procedures. We face heightened exposure to risk in our model governance processes as we operationalize these enhancements. We will continue to refine these processes to increase effectiveness and efficiency.

Management's Discussion and Analysis

Risk Management |
Operational Risk

A corporate Model Risk Committee serves as a coordination forum for any issues arising from models that are used across divisions. Issues that remain unresolved at the Model Risk Committee are escalated to the ERC as necessary. We face significant risks associated with our use of models, as discussed in "Risk Factors - Operational Risks - We face risks and uncertainties associated with the models that we use to inform business and risk management decisions and for financial accounting and reporting purposes."

OPERATIONAL RISK UPDATE RELATING TO MASTER TRUST AGREEMENTS

The company identified that some of its operational procedures were not sufficiently detailed to comply with certain obligations under its Master Trust Agreements, as they are amended from time to time. During 2016, we made significant progress to correct the deficiencies in these operational procedures, and we are continuing our efforts to improve our procedures. Past practices led to a build-up in the custodial account of funds that were due to the company. We withdrew \$22.6 billion of company funds from the custodial account during 2016 and established processes to withdraw company funds on a regular basis.

The funds that were withdrawn were reclassified from restricted cash and cash equivalents to cash and cash equivalents on our consolidated balance sheets. However, cash and cash equivalents, restricted cash and cash equivalents, and securities purchased under agreements to resell are managed together. Therefore, the reclassification did not affect how we manage these funds.

EFFECTIVENESS OF OUR DISCLOSURE CONTROLS AND PROCEDURES

Management, including the company's CEO and CFO, conducted an evaluation of the effectiveness of our disclosure controls and procedures as of December 31, 2016. As of December 31, 2016, we had one material weakness related to conservatorship, which remained unremediated, causing us to conclude that our disclosure controls and procedures were not effective at a reasonable level of assurance. For additional information, see "Controls and Procedures."

Freddie Mac 2016 Form 10-K 144

MARKET RISK

Our business segments have embedded exposure to market risk, including interest-rate and spread risks. Interest-rate risk is consolidated and primarily managed by the Investments segment, while spread risk is owned and managed by each individual business segment. Market risk can adversely affect future cash flows, or economic value, as well as earnings and net worth.

The majority of our interest-rate risk comes from our investments in mortgage-related assets (securities and loans) and the debt we issue to fund them. Typically, an existing loan or bond investment is worth less to an investor when interest rates (yields) rise and worth more when they decline. In addition, for a majority of our mortgage-related assets, the borrower has the option to make unscheduled principal payments at any time before maturity without incurring a prepayment penalty. Thus, our mortgage-related asset portfolio is also exposed to the uncertainty as to when borrowers will exercise their option and pay the outstanding principal balance of their loans. We face similar (and in most cases directionally opposite) exposure related to unsecured debt. Unsecured debt is typically worth less to an investor when interest rates (yields) rise and more when they decline. In addition, we issue debt with embedded options, such as an option to call, which provides us flexibility concerning the timing of our debt maturities. We actively manage our economic exposure to interest rate fluctuations.

Our primary goal in managing interest-rate risk is to reduce the amount of change in the value of our future cash flows due to future changes in interest rates. We use models to analyze possible future interest-rate scenarios, along with the cash flows of our assets and liabilities over those scenarios.

Although the mortgage-related investments portfolio is the main contributor of interest-rate risk to the company, other core businesses also contribute to our interest-rate risk and may be managed differently. We have certain assets that have a much shorter holding period. As a result, we may manage the risk of these assets based on their disposition, while our risk measures use long-term cash flows. Hedging these businesses at times requires additional assumptions concerning risk metrics to accommodate changes in pricing that may not be related to the future cash flow of the assets. This could create a perceived risk exposure as the hedged risk may differ from the model risk.

The choice of the benchmark rate used to model and hedge our positions is a significant assumption. The effectiveness of our hedges ultimately depends on how closely the different instruments (assets, liabilities, and derivatives) react to the underlying chosen benchmark. In the simplest example, all instruments would have interest-rate risk based on the same underlying benchmark, in our case, the swap rate. In practice, however, different instruments react differently versus the benchmark rate, which creates a market spread between the benchmark rate and the instrument. As the market spreads of these instruments move differently, our ability to predict the behavior of each instrument relative to the others is reduced, potentially affecting the effectiveness of our hedges.

We employ risk management practices that seek to maintain certain interest rate characteristics of our assets and liabilities within our risk limits through a number of different strategies, including:

- Asset selection and structuring, such as acquiring or structuring mortgage-related securities with certain expected prepayment and other characteristics;
- Issuance of both callable and non-callable unsecured debt; and
- Use of interest rate derivatives, including swaptions and swaps.

To maintain our interest-rate risk exposure within our risk limits across a range of interest-rate scenarios,

we analyze the interest-rate sensitivity of financial assets and liabilities at the instrument level on a daily basis across a variety of interest-rate scenarios. For risk management purposes, the interest-rate risk characteristics are determined daily based on models and market information, which may be updated daily, weekly, or monthly. The fair values of our assets and liabilities, including derivatives, are primarily based on either third-party prices or observable market-based inputs. See "Valuation Risk and Controls Over Fair Value Measurements" in Note 13 for discussion on valuation risk.

The Risk Committee of our Board of Directors establishes Board limits for certain interest-rate and spread risk measures, and if we exceed these limits, we are required to notify the Risk Committee and address the limit breach. These limits encompass a range of interest-rate risks that include duration risk, convexity risk, volatility risk, and yield curve risk associated with our use of various financial instruments, including derivatives. The Board limits also include a spread volatility limit on certain Multifamily assets. The management limits are set at values below those set at the Board level, which is intended to allow us to follow a series of predetermined actions in the event of a breach of the management limits and helps ensure proper oversight to reduce the possibility of exceeding the Board limits. Our ERC is responsible for reviewing performance as compared to the Board and management limits.

We generally do not hedge the interest-rate exposure of our credit guarantees except for the interest-rate exposure related to buy-ups, float, and STACR debt notes. Float, which arises from timing differences between the borrower's principal payments on the loan and the reduction of the PC balance, can lead to significant interest expense if the interest rate paid to a PC investor is higher than the reinvestment rate earned by the securitization trusts on payments received from borrowers and paid to us as trust management income.

Changes in prepayments, defaults, or market spreads can adversely affect our economic cash flows, earnings, and net worth.

We use derivatives as an important part of our strategy to manage interest-rate risk. When deciding to use derivatives to mitigate our exposures, we consider a number of factors, including cost, exposure to counterparty risks, and our overall risk management strategy. See "Credit Risk - Counterparty Credit Risk" and "Risk Factors" for more discussion of our market risk exposures, including those related to derivatives, institutional counterparties, and other market risks.

MEASUREMENT OF MARKET RISK

The principal types of market risks to which we are exposed are described below.

Risk	Description	Risk Exposure
Interest-rate Risk	Interest-rate risk is the risk that changes in the level and shape of the yield curve, such as a level change, or a flattening or steepening, will adversely affect our economic value.	<p>A change in the level of interest rates (represented by a parallel shift of the yield curve, all else constant) exposes our assets and liabilities to risk, potentially affecting expected future cash flows and their present values. This is reflected in our PMVS-L and Duration Gap disclosures.</p> <p>Similarly, changes in the shape or slope of the yield curve (often reflecting changes in the market's expectation of future interest rates) exposes our assets and liabilities to risk, potentially affecting expected future cash flows and their present values. This is reflected in our PMVS-YC disclosure.</p> <p>Volatility risk is the risk that changes in the market's expectation of the magnitude of future variations in interest rates will adversely affect our economic value.</p> <p>We are exposed to volatility risk in both our mortgage-related assets and liabilities, especially in instruments with embedded options.</p> <p>This risk arises principally because interest rates on our mortgage-related investments may not move in tandem with interest rates on our financial liabilities and derivatives, potentially affecting the effectiveness of our hedges.</p>
Spread Risk	Spread risk is the risk that yields in different asset classes may not move together and may adversely affect our economic value.	<p>We are continually exposed to significant market spread risk, also referred to as mortgage-to-debt OAS risk, arising from funding mortgage-related investments with debt securities.</p> <p>We also incur market spread risk when we use LIBOR- or Treasury-based instruments in our risk management activities.</p> <p>We are exposed to market spread risk arising from the difference in time between when we commit to purchase a multifamily mortgage loan and when we securitize the loan. During this time, market spreads can widen, causing losses due to changes in fair value. We also have market spread risk on the K Certificates and SB Certificates we hold in our mortgage-related investments portfolio.</p>

Our primary interest-rate risk measures are duration gap and PMVS.

Duration gap - Measures the difference in price sensitivity to interest rate changes between our financial assets and liabilities, and is expressed in months relative to the market value of assets. For example, assets with a six month duration and liabilities with a five month duration would result in a positive duration gap of one month. A duration gap of zero implies that the duration of our assets equals the duration of our liabilities. As a result, the change in the value of assets from an instantaneous move in interest rates, either up or down, would be expected to be accompanied by an equal and offsetting change in the value of liabilities, thus leaving the economic value unchanged. A positive duration gap indicates that the duration of our assets exceeds the duration of our liabilities

which, from a net perspective, implies that the economic value will increase in value when interest rates fall and decrease in value when interest rates rise. A negative duration gap indicates that the duration of our liabilities exceeds the duration of our assets which, from a net perspective, implies that the economic value will increase in value when interest rates rise and decrease in value when interest rates fall.

We actively measure and manage our duration gap exposure on a daily basis. In addition to duration gap management, we also measure and manage the price sensitivity of our portfolio to a number of different specific interest rate changes along the yield curve. The price sensitivity of an instrument to specific changes in interest rates is known as the instrument's key rate duration risk. By managing our duration exposure both in aggregate through duration gap and to specific changes in interest rates through key rate duration, we expect to limit our fair value exposure to interest rate changes for a wide range of interest rate yield curve scenarios. However, hedging our overall duration gap exposure could result in increased volatility in our financial results, as our derivatives and several types of our financial assets are measured at fair value, while our financial liabilities are generally not measured at fair value.

PMVS - An estimate of the change in the market value of our financial assets and liabilities with spreads held constant from an instantaneous shock to interest rates, assuming no rebalancing actions are undertaken and assuming the mortgage rate-to-LIBOR basis does not change. PMVS is measured in two ways, one measuring the estimated sensitivity of our portfolio market value to a 50 basis point parallel movement in interest rates (PMVS-Level or PMVS-L) and the other to a nonparallel movement (PMVS-Yield Curve or PMVS-YC), resulting from a 25 basis point change in slope of the LIBOR yield curve. The 50 basis point shift and 25 basis point change in slope of the LIBOR yield curve used for our PMVS measures reflect reasonably possible near-term changes that we believe provide a meaningful measure of our interest-rate risk sensitivity.

We calculate our exposure to changes in interest rates using effective duration and effective convexity based on our models. Effective duration measures the percentage change in the price of financial instruments from a 100 basis point change in interest rates. Financial instruments with positive duration increase in value as interest rates decline.

Conversely, financial instruments with negative duration increase in value as interest rates rise. The net effective duration of our portfolio is expressed in months as our duration gap.

Effective convexity measures the change in effective duration for a 100 basis point change in interest rates. Effective duration is not constant over the entire yield curve and effective convexity measures how effective duration changes over large changes in interest rates.

Together, duration and convexity provide a measure of an instrument's overall price sensitivity to changes in interest rates. We utilize the aggregate duration and convexity risk of all interest-rate sensitive instruments on a daily basis to estimate the two PMVS metrics. The duration and convexity measures are used to estimate PMVS using the following formula:

$$\text{PMVS} = -[\text{Duration}] \text{ multiplied by } [\text{rate shock}] \text{ plus } [0.5 \text{ multiplied by Convexity}] \text{ multiplied by } [\text{rate shock}]^2$$

In the equation, [rate shock] represents the interest-rate change expressed in fair value terms. Assuming an adverse 50 basis point change, the result of this formula is the fair value sensitivity to the change in rate, which is expressed as:

$$\text{PMVS} = (0.5 \text{ absolute value of duration}) + (0.125)$$

convexity), assuming convexity is negative.

To estimate PMVS-L, an instantaneous parallel 50 basis point shock is applied to the yield curve, as represented by the swap curve, holding all spreads to the swap curve constant. This shock is applied to the duration and convexity of all interest-rate sensitive financial instruments. The resulting change in market value for the aggregate portfolio is computed for both the up rate and down rate shock and the change in market value in the more adverse scenario of the up and down rate shocks is the PMVS. In cases where both the up rate and down rate shocks result in a positive effect, the PMVS is zero. Because this process uses a parallel, or level, shock to interest rates, we refer to this measure as PMVS-L.

To estimate sensitivity related to the shape of the yield curve, a yield curve steepening and flattening of 25 basis points is applied using the duration of all interest-rate sensitive instruments. The resulting change in market value for the aggregate portfolio is computed for both the steepening and flattening yield curve scenarios. The more adverse yield curve scenario is then used to determine the PMVS. Because this process uses a non-parallel shock to interest rates, we refer to this measure as PMVS-YC.

We estimate the sensitivity to changes in interest rates of the fair value of all financial assets and liabilities, including derivatives, on a pre-tax basis. In making these calculations, we do not consider the sensitivity to interest-rate changes of the following assets and liabilities:

Credit guarantee activities - We do not consider the sensitivity of the fair value of credit guarantee activities to changes in interest rates except for the guarantee-related items mentioned above because we do not actively manage the change in the fair value of our guarantee business that is attributable to changes in interest rates. We do not believe that periodic changes in fair value due to movements in interest rates are the best indication of the long-term value of our guarantee business because these changes do not take into account the potential for future guarantee business activity.

Other assets with minimal interest-rate sensitivity - We do not include other assets, primarily non-financial instruments such as fixed assets and REO, because we estimate their impact on PMVS and duration gap to be minimal.

LIMITATIONS OF MARKET RISK MEASURES

Our PMVS and duration gap estimates are determined using models that involve our judgment of interest-rate and prepayment assumptions. While we believe that PMVS and duration gap are useful risk management tools, they should be understood as estimates rather than as precise measurements. There could be times when we hedge differently than our model estimates during the period, such as when we are making changes or market updates to these models. While PMVS and duration gap estimate our exposure to changes in interest rates, they do not capture the potential effect of certain other market risks, such as changes in volatility and market spread risk. The effect of these other market risks can be significant.

There are inherent limitations in any methodology used to estimate exposure to changes in market interest rates. Our sensitivity analyses for PMVS and duration gap contemplate only certain movements in interest rates and are performed at a particular point in time based on the estimated fair value of our existing portfolio. These sensitivity analyses do not consider other factors that may have a significant effect on our financial instruments, most notably business activities and strategic actions that

Management's Discussion and Analysis

Risk Management |
Market Risk

management may take in the future to manage interest-rate risk. These analyses are not intended to provide precise forecasts of the effect a change in market interest rates would have on the estimated fair value of our net assets. In addition, it has been more difficult in recent years to measure and manage the interest-rate risk related to mortgage assets as risk for prepayment model error remains high due to the low interest rate environment and uncertainty regarding default rates, unemployment, government policy changes and programs, loan modifications, and the volatility and impact of home price movements on mortgage durations. Mis-estimation of prepayments, resulting in over or under hedging of interest-rate risk, could result in significant economic losses and have an adverse impact on earnings. In addition, this mis-estimation could result in realized losses upon the sale of assets.

Our PMVS and duration gap measures do not fully reflect the potential effect of negative index values across all of our floating rate assets and liabilities. See "Risk Factors - Market Risk - Negative values for certain interest rate indices could have an adverse effect on our operational and interest-rate risk management processes." We incorporated the effect of negative interest rate index values for the majority of our floating rate assets and liabilities in 2016. For the small population of these assets and liabilities for which we have not incorporated the effect of negative interest rate index values, we do not believe the impacts to the duration gap and PMVS levels would be material to the company's financial condition or results of operations.

The table below provides duration gap, estimated point-in-time and minimum and maximum PMVS-L and PMVS-YC results, and an average of the daily values and standard deviation for the years ended December 31, 2016 and 2015. The table below also provides PMVS-L estimates assuming an immediate 100 basis point shift in the LIBOR yield curve. The interest-rate sensitivity of a mortgage portfolio varies across a wide range of interest rates. We are providing certain of the disclosures below pursuant to a disclosure commitment with FHFA.

(In millions)	PMVS-YC		PMVS-L			
	25 bps	50 bps	100 bps	50 bps		
Assuming shifts of the LIBOR yield curve:						
December 31, 2016	\$7	\$—	\$—			
December 31, 2015	\$12	\$50	\$186			
	Year Ended December 31,					
	2016		2015			
(Duration gap in months, dollars in millions)	Duration Gap	PMVS-YC 25 bps	PMVS-L 50 bps	Duration Gap	PMVS-YC 25 bps	PMVS-L 50 bps
Average	0.1	\$6	\$20	0.2	\$17	\$90
Minimum	(0.4)	\$—	\$—	(0.4)	\$—	\$23
Maximum	0.7	\$31	\$92	1.0	\$47	\$249
Standard deviation	0.2	\$5	\$21	0.3	\$12	\$40

Derivatives enable us to reduce our interest-rate risk exposure. The table below shows that the PMVS-L risk levels assuming a 50 basis point shift in the LIBOR yield curve for the periods presented would have been higher if we had not used derivatives.

Management's Discussion and Analysis Risk Management |
 Market Risk

(In millions)	PMVS-L (50 bps)		Effect of Derivatives
	Before Derivatives	After Derivatives	
December 31, 2016	\$3,651	\$—	(\$3,651)
December 31, 2015	\$3,373	\$50	(\$3,323)

While we manage our interest-rate risk exposure on an economic basis to a low level as measured by our models, the accounting treatment for our financial assets and liabilities (i.e., some are measured at amortized cost, while others are measured at fair value), including derivatives, creates volatility in our GAAP earnings when interest rates fluctuate. Based upon the composition of our financial assets and liabilities, including derivatives, at December 31, 2016, we generally recognize fair value losses in GAAP earnings when interest rates decline. The table below presents the estimated adverse net effect on pre-tax earnings of certain immediate shifts in interest rates. These estimates represent the derivative gains (losses) attributable to financial instruments that are not measured at fair value on a recurring basis. The methodology used to calculate these figures is consistent with the methodology used to calculate our PMVS-YC and PMVS-L metrics above.

(In millions)	GAAP FV-YC	GAAP FV-L	100 bps
	25 bps	50 bps	
December 31, 2016	\$526	\$1,328	\$2,615
December 31, 2015	\$635	\$1,630	\$3,573

Our adverse exposures under these interest-rate scenarios as of December 31, 2016 declined compared to December 31, 2015 as we entered into certain transactions, including structured transactions, during 2016 that have resulted in additional financial assets being recognized and measured at fair value which helped to offset the fair value changes of our derivatives.

In the first quarter of 2017, we began using hedge accounting for certain single-family mortgage loans, which is intended to partially reduce the interest-rate volatility in our GAAP earnings by eliminating a portion of the measurement differences between our GAAP financial results and the underlying economics of our business. The disclosure in our Monthly Volume Summary reports, which are available on our web site www.freddiemac.com/investors/volsum, reflects the average of the daily PMVS-L, PMVS-YC, and duration gap estimates for a given reporting period (a month, a quarter, or year).

Management's Discussion and Analysis Liquidity and Capital Resources | Overview

LIQUIDITY AND CAPITAL RESOURCES

OVERVIEW

Our business activities require that we maintain adequate liquidity to fund our operations, which primarily include the following:

- Principal payments due to the maturity, redemption or repurchase of our other debt;
- Interest payments on our other debt;
- Dividend obligations on our senior preferred stock;
- Cash purchases of single-family and multifamily loans;
- Purchases of mortgage-related securities and non-mortgage investments;
- Removal of modified or seriously delinquent mortgage loans from PC trusts;
- Any shortfall related to the payments of principal and interest on our debt securities issued by consolidated trusts and any other payments related to our guarantees of mortgage assets;
- Payments to affordable housing funds under the GSE Act;
- Payments to Treasury associated with the legislated 10 basis point increase under the Temporary Payroll Tax Cut Continuation Act;
- Any costs related to the disposition of our REO properties;
- Payments related to derivative contracts;
- Posting or pledging collateral to third parties in connection with secured financing and daily trade activities; and
- Administrative expenses.

We fund our cash needs primarily by issuing other debt. Other sources of cash primarily include:

- Interest and principal payments on and sales of securities or loans that we hold in our mortgage-related investments portfolio or our Liquidity and Contingency Operating Portfolio;
- Repurchase transactions with counterparties;
- Guarantee fees we receive in connection with our guarantee activities, excluding those fees associated with the legislated 10 basis point increase we remit to Treasury; and
- Quarterly draws from Treasury under the Purchase Agreement, which are made if we have a quarterly deficit in our net worth.

In addition to the uses and sources of cash described above, we are involved in various legal proceedings, including those discussed in "Legal Proceedings," which may result in a need to use cash to settle claims or pay certain costs or receipt of cash from settlements.

Our securities and other obligations are not guaranteed by the U.S. government and do not constitute a debt or obligation of the U.S. government or any agency or instrumentality thereof, other than Freddie Mac. We continue to manage our debt issuances to remain in compliance with the aggregate indebtedness limits set forth in the Purchase Agreement. For a description of our debt products, see "Our Business Segments - Investments."

Management's Discussion and Analysis Liquidity and Capital Resources | Liquidity Management Framework

LIQUIDITY MANAGEMENT FRAMEWORK

The support provided by Treasury pursuant to the Purchase Agreement enables us to have adequate liquidity to conduct our normal business activities. However, the costs and availability of our debt funding could vary for a number of reasons, including the uncertainty about the future of the GSEs and any future downgrades in our credit ratings or the credit ratings of the U.S. government.

We make extensive use of the Federal Reserve's payment system in our business activities. The Federal Reserve requires that we fully fund our accounts at the Federal Reserve Bank of New York to the extent necessary to cover cash payments on our debt and mortgage-related securities each day, before the Federal Reserve Bank of New York, acting as our fiscal agent, will initiate such payments. Although we seek to maintain sufficient intraday liquidity to fund our activities through the Federal Reserve's payment system, we have limited access to cash once the debt markets are closed for the day. Insufficient cash may cause our account to be overdrawn, potentially resulting in penalties and reputational harm.

Maintaining sufficient liquidity is of primary importance to, and a cost of, our business. Under our liquidity management practices and policies, we:

- Manage intraday cash needs and provide for the contingency of an unexpected cash demand;
- Maintain cash and non-mortgage investments to enable us to meet ongoing cash obligations for a limited period of time, assuming no access to unsecured debt markets;
- Maintain unencumbered securities with a value greater than or equal to the largest projected daily cash shortfall for an extended period of time, assuming no access to unsecured debt markets; and
- Manage the maturity of our unsecured debt based on our asset profile.

To facilitate cash management, we forecast cash outflows and inflows using assumptions and models. These forecasts help us to manage our liabilities with respect to the timing of our cash flows. Differences between actual and forecasted cash flows have resulted in higher costs from issuing a higher amount of debt than needed or unexpectedly needing to issue debt, and may do so in the future. Differences between actual and forecasted cash flows also could result in our account at the Federal Reserve Bank of New York being overdrawn. We maintain daily cash reserves to manage this risk.

Management's Discussion and Analysis Liquidity and Capital Resources | Liquidity Profile

LIQUIDITY PROFILE

During 2016, the majority of the funds in our Liquidity and Contingency Operating Portfolio were deposited with the Federal Reserve Bank of New York, invested in U.S. Treasury securities, or invested in securities purchased under agreements to resell. In the event of a downgrade of a position or counterparty, as applicable, below minimum rating requirements, we make an assessment whether to exit the existing position or continue to do business with the counterparty.

During 2016, we had sufficient access to the debt markets due largely to support from the U.S. government. We rely significantly on our ability to issue debt on an on-going basis to refinance our effective short-term debt. Our effective short-term debt percentage, which represents the percentage of our total other debt that is expected to mature within one year, increased to 46.1% as of December 31, 2016 compared to 41.3% as of December 31, 2015 as a larger percentage of our callable debt and non-callable debt is expected to mature during 2017 compared to 2016.

Our debt cap under the Purchase Agreement was \$479.0 billion in 2016 and declined to \$407.2 billion on January 1, 2017. As of December 31, 2016, our aggregate indebtedness, calculated as the par value of other debt, was \$356.7 billion. We disclose the amount of our indebtedness on this basis monthly under the caption "Other Debt Activities - Total Debt Outstanding" in our Monthly Volume Summary reports, which are available on our web site at www.freddiemac.com/investors/volsum/.

Our ability to maintain sufficient liquidity, including by pledging mortgage-related and other securities as collateral to other institutions, could cease or change rapidly and the cost of the available funding could increase significantly due to changes in market interest rates, market confidence, operational risks, and other factors.

To fund our business activities, we depend on the continuing willingness of investors to purchase our debt securities. The reduction in our mortgage-related investments portfolio has reduced our funding needs. We expect that this trend will continue over time as the mortgage-related investments portfolio shrinks. Changes or perceived changes in the government's support of us could have a severe negative effect on our access to the debt markets and on our debt funding costs.

In addition, any change in applicable legislative or regulatory exemptions, including those described in "Regulation and Supervision," could adversely affect our access to some debt investors, thereby potentially increasing our debt funding costs. For more information on our short- and long-term liquidity needs, see "Contractual Obligations."

OTHER DEBT ACTIVITIES

Debt securities that we issue are classified either as debt securities of consolidated trusts held by third parties or other debt. We issue other debt to fund our operations. Competition for funding can vary with economic, financial market, and regulatory environments.

The tables below summarize the par value and the average rate of other debt securities we issued or paid off, including regularly scheduled principal payments, payments resulting from calls, and payments for repurchases. We repurchase, call, or exchange our outstanding debt securities from time to time for a variety of reasons, including managing our funding composition and supporting the liquidity of our debt securities.

Freddie Mac 2016 Form 10-K 155

Management's Discussion and Analysis Liquidity and Capital Resources | Liquidity Profile

Our outstanding other debt balance continues to decline as we reduce our indebtedness along with the decline in our mortgage-related investments portfolio. As a result, our total issuances of other debt, excluding securities sold under agreements to repurchase, decreased while total payoffs and maturities increased in 2016 compared to 2015. We continued to utilize overnight discount notes as a more cost effective tool to manage intra-day liquidity needs.

Our short term debt issuances provide us with overall lower funding costs relative to medium and longer term debt. In October 2016, amendments to the SEC's rules that govern money market mutual funds became effective. These amendments make certain structural and operational reforms to address the risks of investor withdrawals from money market funds. These amendments do not apply to mutual funds that invest solely in debt issued or guaranteed by the U.S. government or its agencies and instrumentalities, including GSEs. As a result, the demand for short-term government and agency debt has increased, which contributed to the improvement in our short-term and non-callable debt spreads during 2016.

We replaced a portion of called and matured medium-term and longer-term debt with a combination of new callable and non-callable debt. Issuing a combination of callable and non-callable debt assists in managing our liquidity metrics. Our callable debt provides us with the option to repay the outstanding principal balance of the debt prior to its contractual maturity date. As of December 31, 2016, \$76 billion of the outstanding \$98 billion of callable debt may be called within one year.

The following graphs present our other debt by contractual maturity date and earliest redemption date. For the purposes of this presentation, the earliest redemption date is the earliest call date for callable debt and the contractual maturity date for all other debt.

Contractual Maturity Date as of December 31, 2016

Earliest Redemption Date as of December 31, 2016

Management's Discussion and Analysis Liquidity and Capital Resources | Liquidity Profile

DEBT SECURITIES OF CONSOLIDATED TRUSTS

The table below shows the issuance and extinguishment activity for the debt securities of our consolidated trusts.

(In millions)	Year Ended December	
	31, 2016	2015
Beginning balance	\$1,513,089	\$1,440,325
Issuances:		
New issuances to third parties	309,021	259,890
Additional issuances of securities	162,386	137,676
Total issuances	471,407	397,566
Extinguishments:		
Purchases of debt securities from third parties	(42,716)	(43,341)
Debt securities received in settlement of advances to lenders	(29,292)	(11,225)
Repayments of debt securities	(310,326)	(270,236)
Total extinguishments	(382,334)	(324,802)
Ending balance	1,602,162	1,513,089
Unamortized premiums and discounts	46,521	43,032
Debt securities of consolidated trusts held by third parties	\$1,648,683	\$1,556,121

Debt securities of our consolidated trusts represent our liability to third parties that hold beneficial interests in our consolidated securitization trusts. Our exposure on debt securities of consolidated trusts is limited to the guarantee we provide on the payment of principal and interest on these securities, as the primary source of repayment of these debt securities comes from the cash flows of the mortgage loans held by the trusts which back the securities. At December 31, 2016, our estimated exposure (including the amounts that are due to Freddie Mac for debt securities of consolidated trusts that we purchased) to these debt securities is recognized as the allowance for credit losses on mortgage loans held by consolidated trusts. See Note 4 for details on our allowance for loan losses.

The table below provides information on the debt securities issued by our consolidated trusts.

Debt securities of consolidated trusts held by third parties	\$1,602,162	\$1,513,089
CREDIT RATINGS		

Our ability to access the capital markets and other sources of funding, as well as our cost of funds, is highly dependent upon our credit ratings. The table below indicates our credit ratings as of February 2, 2017.

	Nationally Recognized Statistical Rating Organization		
	S&P	Moody's	Fitch
Senior long-term debt	AA+	Aaa	AAA
Short-term debt	A-1+	P-1	F1+
Subordinated debt	AA-	Aa2	AA-
Preferred stock ⁽¹⁾	D	Ca	C/RR6
Outlook	Stable	Stable	Stable

(1) Does not include senior preferred stock issued to Treasury.

Our credit ratings and outlooks are primarily based on the support we receive from Treasury, and therefore, are affected by changes in the credit ratings and outlooks of the U.S. government.

A security rating is not a recommendation to buy, sell or hold securities. It may be subject to revision or withdrawal at any time by the assigning rating organization. Each rating should be evaluated independently of any other rating.

OTHER INVESTMENTS AND CASH PORTFOLIO

The investments in our other investments and cash portfolio are important to our cash flow, collateral management, asset and liability management, and our ability to provide liquidity and stability to the mortgage market. The table below summarizes the balances in our other investments and cash portfolio,

Management's Discussion and Analysis Liquidity and Capital Resources | Liquidity Profile

which includes the Liquidity and Contingency Operating Portfolio.

(In billions)	December 31, 2016				December 31, 2015			
	Liquidity and Contingency Operating Portfolio	Custodial Account	Other ⁽¹⁾	Total Other Investments and Cash Portfolio	Liquidity and Contingency Operating Portfolio	Custodial Account	Other ⁽¹⁾	Total Other Investments and Cash Portfolio

Total	\$69.5	\$23.1	\$3.6	\$96.2	\$70.0	\$29.3	\$2.5	\$101.8

Consists of amounts related to collateral held by us from OTC derivative counterparties, investments in unsecured (1) agency debt that we may not otherwise invest in, other than to pledge as collateral to our counterparties when our derivatives are in a liability position, and advances to lenders.

(2) Consists of advances to lenders.

Our non-mortgage-related securities in the Liquidity and Contingency Operating Portfolio consist of U.S. Treasury securities and other investments that we could sell to provide us with an additional source of liquidity to fund our business operations. We also maintain non-interest-bearing deposits at the Federal Reserve Bank of New York.

MORTGAGE LOANS AND MORTGAGE-RELATED SECURITIES

We invest principally in mortgage loans and mortgage-related securities, certain categories of which are largely unencumbered and liquid. Our primary source of liquidity among these mortgage assets is our holdings of single-class and multiclass agency securities, excluding certain structured agency securities collateralized by non-agency mortgage-related securities.

In addition, we hold unsecuritized single-family loans and multifamily held-for-sale loans that could be securitized and would then be available for sale or use as collateral for repurchase agreements. Due to the large size of our portfolio of liquid assets, the amount of mortgage-related assets that we may successfully sell or borrow against in the event of a liquidity crisis or significant market disruption may be substantially less than the amount of mortgage-related assets we hold. There would likely be insufficient market demand for large amounts of these assets over a prolonged period of time, which would limit our ability to sell or borrow against these assets.

We hold other mortgage assets, but given their characteristics, they may not be available for immediate sale or for use as collateral for repurchase agreements. These assets consist of certain structured agency securities collateralized by non-agency mortgage-related securities, non-agency CMBS, non-agency RMBS backed by subprime, option ARM, and Alt-A and other loans, and unsecuritized seriously delinquent and modified single-family loans.

We are subject to limits on the amount of mortgage assets we can sell in any calendar month without review and approval by FHFA and, if FHFA so determines, Treasury.

Management's Discussion and Analysis Liquidity and Capital Resources I Cash Flows

CASH FLOWS

We evaluate our cash flow performance by comparing the net cash flows from operating and investing activities to the net cash flows required to finance those activities. The following graphs present the results of these activities for the years ended December 31, 2016, 2015 and 2014.

Operating Cash Flows	Investing Cash Flows	Financing Cash Flows
2014 2015 2016	2014 2015 2016	2014 2015 2016

Commentary

2016 vs. 2015

Cash provided by operating activities increased \$5.8 billion primarily due to the following:

- Increase in net sales of mortgage loans acquired as held-for-sale, primarily due to an increase in the volume of our multifamily securitizations; partially offset by

- Decrease in our net interest income.

Cash provided by investing activities decreased \$9.7 billion primarily due to the following:

- Increase in advances to lenders;

- Increase in net purchases of investment securities, primarily due to more investment securities being retained from our agency resecuritizations; partially offset by

- Decrease in securities purchased under agreements to resell due to lower near-term cash needs for upcoming maturities and anticipated calls of other debt at the end of 2016 compared to the end of 2015; and

- Decrease in restricted cash due to the withdrawal of company funds from the custodial account.

Cash used in financing activities decreased \$16.0 billion primarily due to the following:

- Decrease in net repayments and redemptions of debt securities of consolidated trusts held by third parties due to an increase in the volume of our single-family PC issuances for cash; partially offset by

- Increase in net repayments of other debt, as we reduced our indebtedness along with the decline in our mortgage-related investments portfolio.

Management's Discussion and Analysis Liquidity and Capital Resources I Cash Flows

2015 vs. 2014

Cash used by operating activities increased \$9.8 billion primarily due to the following:

- Increase in net purchases of multifamily held-for-sale mortgage loans, as we increased our support of workforce housing in the multifamily mortgage market; and

- Decrease in cash proceeds received from settlements of our non-agency mortgage-related securities litigation.

Cash provided by investing activities decreased \$26.4 billion primarily due to the following:

- Increase in our securities purchased under agreements to resell as a result of higher near-term cash needs for upcoming maturities and anticipated calls of other debt; and

- Increase in advances to lenders.

Cash used in financing activities decreased \$31.2 billion primarily due to the following:

- Decrease in net repayments of other debt, as we increased our use of medium-term other debt to fund our business operation; and

- Decrease in cash dividend payments on the senior preferred stock, as a result of lower comprehensive income.

Freddie Mac 2016 Form 10-K 161

CAPITAL RESOURCES

Our entry into conservatorship resulted in significant changes to the assessment of our capital adequacy and our management of capital. Since our entry into conservatorship, Treasury and FHFA have taken a number of actions that affect our cash requirements and our ability to fund those requirements. Under the Purchase Agreement, Treasury made a commitment to provide us with funding, under certain conditions, to eliminate deficits in our net worth. Obtaining funding from Treasury pursuant to its commitment under the Purchase Agreement enables us to avoid being placed into receivership by FHFA. The amount of available funding remaining under the Purchase Agreement is \$140.5 billion. This amount will be reduced by any future draws. We may need to make additional draws in future periods due to a variety of factors that could adversely affect our net worth.

At December 31, 2016, our assets exceeded our liabilities under GAAP; therefore, no draw is being requested from Treasury under the Purchase Agreement. Based on our Net Worth Amount at December 31, 2016 and the 2017 Capital Reserve Amount of \$600 million, our scheduled dividend obligation to Treasury in March 2017 will be \$4.5 billion. Under the Purchase Agreement, the payment of dividends does not reduce the outstanding liquidation preference of the senior preferred stock. As a result of the net worth sweep dividend on the senior preferred stock, our future profits will be distributed to Treasury, and we cannot retain capital from the earnings generated by our business operations (other than a limited capital reserve amount that will decrease to zero in 2018) or return capital to stockholders other than Treasury. See “Conservatorship and Related Matters” and “Regulation and Supervision” for more information.

In June 2016, FASB issued a new Accounting Standards Update (ASU 2016-13, Financial Instruments—Credit Losses) related to the measurement of credit losses on financial instruments that will be effective as of January 1, 2020, with early adoption permitted as of January 1, 2019. This Update replaces the incurred loss impairment methodology in current GAAP with a methodology that reflects lifetime expected credit losses. While we are still evaluating the effect that the adoption of this Update will have on our financial results, it will increase (perhaps substantially) our provision for credit losses in the period of adoption. As our capital reserve will decline to zero in 2018, this Update increases the risk that we will need to request a draw from Treasury for the period of adoption.

The table below presents activity related to our net worth.

(In millions)	Year Ended December 31,		
	2016	2015	2014
Beginning balance	\$2,940	\$2,651	\$12,835
Comprehensive income	7,118	5,799	9,426
Capital draw from Treasury	—	—	—
Senior preferred stock dividends declared	(4,983)	(5,510)	(19,610)
Total equity / net worth	\$5,075	\$2,940	\$2,651
Aggregate draws under Purchase Agreement	\$71,336	\$71,336	\$71,336
Aggregate cash dividends paid to Treasury	\$101,448	\$96,465	\$90,955

Management's Discussion and Analysis Conservatorship and Related Matters

CONSERVATORSHIP AND RELATED MATTERS

SUPERVISION OF OUR COMPANY DURING CONSERVATORSHIP

FHFA has broad powers when acting as our Conservator. Upon its appointment, the Conservator immediately succeeded to all rights, titles, powers and privileges of Freddie Mac, and of any stockholder, officer or director of Freddie Mac with respect to Freddie Mac and its assets. The Conservator also succeeded to the title to all books, records and assets of Freddie Mac held by any other legal custodian or third party.

Under the GSE Act, the Conservator may take any actions it determines are necessary to put us in a safe and solvent condition and appropriate to carry on our business and preserve and conserve our assets and property. The Conservator's powers include the ability to transfer or sell any of our assets or liabilities, subject to certain limitations and post-transfer notice provisions, without any approval, assignment of rights or consent of any party. However, the GSE Act provides that loans and mortgage-related assets that have been transferred to a Freddie Mac securitization trust must be held by the Conservator for the beneficial owners of the trust and cannot be used to satisfy our general creditors.

We conduct our business subject to the direction of FHFA as our Conservator. The Conservator has delegated certain authority to the Board of Directors to oversee, and to management to conduct, business operations so we can operate in the ordinary course. The directors serve on behalf of, and exercise authority as directed by, the Conservator. The Conservator retains the authority to withdraw or revise its delegations of authority at any time. The Conservator also retains certain significant authorities for itself, and has not delegated them to the Board. The Conservator continues to provide strategic direction for the company and directs the efforts of the Board and management to implement its strategy. Despite the delegations of authority to management, many management decisions are subject to review and/or approval by FHFA and management frequently receives direction from FHFA on various matters involving day-to-day operations.

Our current business objectives reflect direction we received from the Conservator including the Conservatorship Scorecards. At the direction of the Conservator, we have made changes to certain business practices that are designed to provide support for the mortgage market in a manner that serves our public mission and other non-financial objectives. Given our public mission and the important role the Administration and our Conservator have placed on Freddie Mac in addressing housing and mortgage market conditions, we sometimes take actions that could have a negative impact on our business, operating results or financial condition, and could thus contribute to a need for additional draws under the Purchase Agreement. Certain of these actions are intended to help homeowners and the mortgage market.

PURCHASE AGREEMENT, WARRANT AND SENIOR PREFERRED STOCK

In connection with our entry into conservatorship, we entered into the Purchase Agreement with Treasury. Under the Purchase Agreement, we issued to Treasury both senior preferred stock and a warrant to purchase common stock. The Purchase Agreement, the warrant and the senior preferred stock do not

Management's Discussion and Analysis Conservatorship and Related Matters

contain any provisions causing them to terminate or cease to exist upon the termination of conservatorship. The conservatorship, the Purchase Agreement, the warrant and the senior preferred stock materially limit the rights of our common and preferred stockholders (other than Treasury).

Pursuant to the Purchase Agreement, which we entered into through FHFA, in its capacity as Conservator, on September 7, 2008, we issued to Treasury one million shares of Variable Liquidation Preference Senior Preferred Stock with an initial liquidation preference of \$1 billion and a warrant to purchase, for a nominal price, shares of our common stock equal to 79.9% of the total number of shares outstanding. The senior preferred stock and warrant were issued to Treasury as an initial commitment fee in consideration of Treasury's commitment to provide funding to us under the Purchase Agreement. We did not receive any cash proceeds from Treasury as a result of issuing the senior preferred stock or the warrant. However, deficits in our net worth have made it necessary for us to make substantial draws on Treasury's funding commitment under the Purchase Agreement. Under the Purchase Agreement, our ability to repay the liquidation preference of the senior preferred stock is limited and we will not be able to do so for the foreseeable future, if at all.

The Purchase Agreement provides that, on a quarterly basis, we generally may draw funds up to the amount, if any, by which our total liabilities exceed our total assets, as reflected on our GAAP consolidated balance sheet for the applicable fiscal quarter, provided that the aggregate amount funded under the Purchase Agreement may not exceed Treasury's commitment. As of December 31, 2016, the aggregate liquidation preference of the senior preferred stock was \$72.3 billion, and the amount of available funding remaining under the Purchase Agreement was \$140.5 billion. To the extent we draw additional funds in the future, the aggregate liquidation preference will increase and the amount of available funding remaining will decrease.

Treasury, as the holder of the senior preferred stock, is entitled to receive cumulative quarterly cash dividends, when, as and if declared by our Board of Directors. The dividends we have paid to Treasury on the senior preferred stock have been declared by, and paid at the direction of, the Conservator, acting as successor to the rights, titles, powers and privileges of the Board. Under the August 2012 amendment to the Purchase Agreement, our dividend obligation each quarter is the amount, if any, by which our Net Worth Amount at the end of the immediately preceding fiscal quarter, less the applicable Capital Reserve Amount, exceeds zero. As a result of the net worth sweep dividend, our future profits will be distributed to Treasury, and the holders of our common stock and non-senior preferred stock will not receive benefits that could otherwise flow from any such future profits. If for any reason we were not to pay the amount of our dividend obligation on the senior preferred stock in full, the unpaid amount would be added to the liquidation preference, but this would not affect our ability to draw funds from Treasury under the Purchase Agreement.

The senior preferred stock is senior to our common stock and all other outstanding series of our preferred stock, as well as any capital stock we issue in the future, as to both dividends and rights upon liquidation. We are not permitted to redeem the senior preferred stock prior to the termination of Treasury's funding commitment under the Purchase Agreement.

The Purchase Agreement and warrant contain covenants that significantly restrict our business and capital activities. For example, the Purchase Agreement provides that, until the senior preferred stock is repaid or redeemed in full, we may not, without the prior written consent of Treasury:

• Pay dividends on our equity securities, other than the senior preferred stock or warrant, or repurchase

Management's Discussion and Analysis Conservatorship and Related Matters

our equity securities;

• Issue any additional equity securities, except in limited instances;

• Sell, transfer, lease or otherwise dispose of any assets, other than dispositions for fair market value in the ordinary course of business, consistent with past practices, and in other limited circumstances; and

• Issue any subordinated debt.

LIMITS ON OUR MORTGAGE-RELATED INVESTMENTS PORTFOLIO AND INDEBTEDNESS

Our ability to acquire and sell mortgage assets is significantly constrained by limitations under the Purchase Agreement and other limitations imposed by FHFA:

• Under the Purchase Agreement and FHFA regulation, the UPB of our mortgage-related investments portfolio is subject to a cap that decreases by 15% each year until the cap reaches \$250 billion.

• Under the Purchase Agreement, we may not incur indebtedness that would result in the par value of our aggregate indebtedness exceeding 120% of the amount of mortgage assets we are permitted to own on December 31 of the immediately preceding calendar year.

• Our Retained Portfolio Plan, which we adopted in 2014, provides for us to manage the mortgage-related investments portfolio so that it does not exceed 90% of the annual cap established by the Purchase Agreement, subject to certain exceptions. Under the plan, we may seek permission from FHFA to increase the plan's limit on the mortgage-related investments portfolio to 95% of the Purchase Agreement annual cap.

• FHFA indicated that any portfolio sales should be commercially reasonable transactions that consider impacts to the market, borrowers and neighborhood stability.

• Our decisions with respect to managing the decline of the mortgage-related investments portfolio affect all three business segments. In order to achieve all of our portfolio reduction goals, it is possible that we may forgo economic opportunities in one business segment in order to pursue opportunities in another business segment. The reduction in the mortgage-related investments portfolio will result in a decline in income from this portfolio over time.

• Our results against the limits imposed on our mortgage-related investments portfolio and aggregate indebtedness are shown below.

Management's Discussion and Analysis Conservatorship and Related Matters

Mortgage Assets

Indebtedness

REDUCING OUR MORTGAGE-RELATED INVESTMENTS PORTFOLIO OVER TIME

Our mortgage-related investments portfolio includes assets held by all three business segments and consists of:

- Agency securities, which include both single-family and multifamily Freddie Mac mortgage-related securities and non-Freddie Mac agency mortgage-related securities;
- Non-agency mortgage-related securities, which include single-family non-agency mortgage-related securities, CMBS, housing revenue bonds, and other multifamily securities; and
- Single-family and multifamily unsecuritized loans.

We evaluate the liquidity of the assets in our mortgage-related investments portfolio based on three categories (in order of liquidity):

Liquid: single-class and multi-class agency securities, excluding certain structured agency securities collateralized by non-agency mortgage-related securities. Also includes certain non-agency mortgage-related securities guaranteed by a GSE;

Management's Discussion and Analysis Conservatorship and Related Matters

Securitization Pipeline: performing multifamily and single-family loans purchased for cash and primarily held for a short period until securitized, with the resulting Freddie Mac issued securities being sold or retained; and Less Liquid: assets that are less liquid than both agency securities and loans in the securitization pipeline (e.g., reperforming loans and performing modified loans, single-family seriously delinquent loans, and non-agency mortgage-related securities not guaranteed by a GSE).

The table below presents the UPB of our mortgage-related investments portfolio, for purposes of the limit imposed by the Purchase Agreement and FHFA regulation. The cap for this portfolio will decrease to approximately \$288 billion at December 31, 2017.

(Dollars in millions)	December 31, 2016				December 31, 2015

Single-family unsecuritized seriously delinquent loans									
Multifamily segment - unsecuritized loans and mortgage-related securities	7,447	16,372	31,117	54,936	7,304	19,563	40,809	67,676	
Total mortgage-related investments portfolio	\$144,971	\$29,485	\$123,970	\$298,426	\$156,131	\$29,604	\$161,176	\$346,911	
Percentage of total mortgage-related investments portfolio	49	% 10	% 41	% 100	% 45	% 9	% 46	% 100	%
Mortgage-related investments portfolio cap at December 31, 2016 and 2015, respectively				\$339,304				\$399,181	
90% of mortgage-related investments portfolio cap at December 31, 2016 and 2015, respectively ⁽¹⁾				\$305,374				\$359,263	

(1) Represents the amount that we manage to under our Retained Portfolio Plan, subject to certain exceptions. We are particularly focused on reducing, in an economically sensible manner, the balance of the less liquid assets that we hold in our mortgage-related investments portfolio. Our efforts to reduce our holdings of these assets help satisfy several objectives, including to improve the overall liquidity of our mortgage-related investments portfolio and comply with the mortgage-related investments portfolio limits. The decline in our holdings of less liquid assets, which included repayments and active dispositions, accounted for the majority of the decline in our mortgage-related investments portfolio during 2016. Our active dispositions of less liquid assets included the following:

Management's Discussion and Analysis Conservatorship and Related Matters

Sales of \$12.4 billion of less liquid assets, including \$8.1 billion in UPB of non-agency mortgage-related securities, \$3.1 billion in UPB of seriously delinquent unsecuritized single-family loans, and \$1.1 billion in UPB of single-family reperforming loans and performing modified loans. Our sales of reperforming loans and performing modified loans involved securitization of the loans using a senior subordinate securitization structure, in which we guaranteed the resulting senior securities. As part of these transactions, we retained certain of the guaranteed senior securities for our mortgage-related investments portfolio;

Securitized of \$1.5 billion in UPB of less liquid multifamily loans; and

Securitized of \$5.7 billion in UPB of single-family reperforming loans and performing modified loans into Freddie Mac PCs, thereby enhancing their liquidity. Our strategy related to these securitizations is to initially retain all of the resulting mortgage-related securities and then resecuritize a portion of these securities with some of the resulting interests being sold to third parties.

FHFA'S STRATEGIC PLAN FOR FREDDIE MAC AND FANNIE MAE CONSERVATORSHIPS

In May 2014, FHFA issued its 2014 Strategic Plan. FHFA issued the 2016 and 2017 Conservatorship Scorecards in December 2015 and December 2016, respectively. The 2014 Strategic Plan updated FHFA's vision for implementing its obligations as Conservator of Freddie Mac and Fannie Mae. The Conservatorship Scorecards established annual objectives and performance targets and measures for Freddie Mac and Fannie Mae related to the strategic goals set forth in the 2014 Strategic Plan.

The 2014 Strategic Plan established three reformulated strategic goals for the conservatorships of Freddie Mac and Fannie Mae:

Maintain, in a safe and sound manner, foreclosure prevention activities and credit availability for new and refinanced loans to foster liquid, efficient, competitive, and resilient national housing finance markets.

Reduce taxpayer risk through increasing the role of private capital in the mortgage market.

Build a new single-family securitization infrastructure for use by Freddie Mac and Fannie Mae and adaptable for use by other participants in the secondary market in the future.

We continue to align our resources and internal business plans to meet the goals and objectives provided by FHFA.

For information about the 2016 Conservatorship Scorecard, and our performance with respect to it, see "Executive Compensation - Compensation Discussion and Analysis." For information about the 2017 Conservatorship Scorecard, see our current report on Form 8-K filed on December 15, 2016.

For more information on the conservatorship and related matters, see "Regulation and Supervision," "Risk Factors - Conservatorship and Related Matters," Note 2, Note 9, and "Directors, Corporate Governance, and Executive Officers - Authority of the Board and Board Committees."

Management's Discussion and Analysis Regulation and Supervision

REGULATION AND SUPERVISION

In addition to our oversight by FHFA as our Conservator, we are subject to regulation and oversight by FHFA under our Charter and the GSE Act and to certain regulation by other government agencies. Furthermore, regulatory activities by other government agencies can affect us indirectly, even if we are not directly subject to such agencies' regulation or oversight. For example, regulations that modify requirements applicable to the origination or servicing of mortgages can affect us.

FEDERAL HOUSING FINANCE AGENCY

FHFA is an independent agency of the federal government responsible for oversight of the operations of Freddie Mac, Fannie Mae, and the FHLBs.

Under the GSE Act, FHFA has safety and soundness authority that is comparable to, and in some respects broader than, that of the federal banking agencies. FHFA is responsible for implementing the various provisions of the GSE Act that were added by the Reform Act.

RECEIVERSHIP

Under the GSE Act, FHFA must place us into receivership if FHFA determines in writing that our assets are less than our obligations for a period of 60 days. FHFA notified us that the measurement period for any mandatory receivership determination with respect to our assets and obligations would commence no earlier than the SEC public filing deadline for our quarterly or annual financial statements and would continue for 60 calendar days after that date.

FHFA also advised us that, if, during that 60-day period, we receive funds from Treasury in an amount at least equal to the deficiency amount under the Purchase Agreement, the Director of FHFA will not make a mandatory receivership determination. In addition, we could be put into receivership at the discretion of the Director of FHFA at any time for other reasons set forth in the GSE Act.

Certain aspects of conservatorship and receivership operations of Freddie Mac, Fannie Mae and the FHLBs are addressed in an FHFA rule. Among other provisions, the rule indicates that FHFA generally will not permit payment of securities litigation claims during conservatorship and that claims by current or former shareholders arising as a result of their status as shareholders would receive the lowest priority of claim in receivership. In addition, the rule indicates that administrative expenses of the conservatorship will also be deemed to be administrative expenses of receivership and that capital distributions may not be made during conservatorship, except as specified in the rule.

CAPITAL STANDARDS

FHFA suspended capital classification of us during conservatorship in light of the Purchase Agreement. The existing statutory and FHFA-directed regulatory capital requirements are not binding during the conservatorship. These capital standards are described in Note 15. Under the GSE Act, FHFA has the authority to increase our minimum capital levels temporarily or to establish additional capital and reserve requirements for particular purposes.

Pursuant to an FHFA rule, FHFA-regulated entities are required to conduct annual stress tests to determine whether such companies have sufficient capital to absorb losses as a result of adverse

Management's Discussion and Analysis Regulation and Supervision

economic conditions. Under the rule, Freddie Mac is required to conduct annual stress tests using scenarios specified by FHFA that reflect a minimum of three sets of economic and financial conditions and publicly disclose the results of the stress test under the "severely adverse" scenario. In August 2016, we disclosed the results of our most recent "severely adverse" scenario stress test which projected an improvement in the amount of available funding remaining under the Purchase Agreement compared to the test results disclosed in April 2015.

NEW PRODUCTS

The GSE Act requires Freddie Mac and Fannie Mae to obtain the approval of FHFA before initially offering any product (as defined in the statute), subject to certain exceptions. The GSE Act also requires us to provide FHFA with written notice of any new activity that we consider not to be a product. While FHFA published an interim final rule on prior approval of new products, it stated that permitting us to engage in new products is inconsistent with the goals of conservatorship and instructed us not to submit such requests under the interim final rule.

AFFORDABLE HOUSING GOALS

We are subject to annual affordable housing goals. We view the purchase of loans that are eligible to count toward our affordable housing goals to be a principal part of our mission and business, and we are committed to facilitating the financing of affordable housing for very low-, low-, and moderate-income families. In light of these goals, we may make adjustments to our strategies for purchasing loans, which could potentially increase our credit losses. These strategies could include entering into purchase and securitization transactions with lower expected economic returns than our typical transactions. In February 2010, FHFA stated that it does not intend for us to undertake uneconomic or high risk activities in support of the housing goals nor does it intend for the state of conservatorship to be a justification for withdrawing our support from these market segments.

If the Director of FHFA finds that we failed (or there is a substantial probability that we will fail) to meet a housing goal and that achievement of the housing goal was or is feasible, the Director may require the submission of a housing plan that describes the actions we will take to achieve the unmet goal. FHFA has the authority to take actions against us if we fail to submit a required housing plan, submit an unacceptable plan, fail to comply with a plan approved by FHFA, or fail to submit certain mortgage purchase data, information or reports as required by law. We are currently operating under an FHFA-required housing plan. See "Risk Factors - Legal And Regulatory Risks - We may make certain changes to our business in an attempt to meet our housing goals and subgoals, which may cause us to forgo other more profitable opportunities."

Current FHFA housing goals applicable to our purchases consist of four goals and one subgoal for single-family owner-occupied housing, one multifamily affordable housing goal, and two multifamily affordable housing subgoals. Single-family goals are expressed as a percentage of the total number of eligible loans underlying our total single-family loan purchases, while the multifamily goals are expressed in terms of minimum numbers of units financed.

Three of the single-family housing goals and the subgoal target purchase money loans for low-income families, very low-income families, and/or families that reside in low-income areas. The single-family housing goals also include one goal that targets refinancing loans for low-income families. The multifamily

Management's Discussion and Analysis Regulation and Supervision

affordable housing goal targets multifamily rental housing affordable to low-income families. The multifamily affordable housing subgoals target multifamily rental housing affordable to very low-income families and small (5- to 50-unit) multifamily properties affordable to low-income families.

The single-family goals are measured by comparing our performance with the actual share of the market that meets the criteria for each goal and a benchmark level established by FHFA. If our performance on a single-family goal falls short of the benchmark, we still could achieve the goal if our performance meets or exceeds the actual share of the market that meets the criteria for the goal for that year.

Our goals for 2016 and 2017 are set forth below.

	2016	2017	
Single-family purchase money goals (Benchmark levels):			
Low-income	24	% 24	%
Very low-income	6	% 6	%
Low-income areas	17	% TBD	
Low-income areas subgoal	14	% 14	%
Single-family refinance low-income goal (Benchmark level)	21	% 21	%
Multifamily low-income goal (In units)	300,000	300,000	
Multifamily very low-income subgoal (In units)	60,000	60,000	
Multifamily small property low-income subgoal (In units)	8,000	10,000	

We expect to report our performance with respect to the 2016 affordable housing goals in March 2017. At this time, based on preliminary information, we believe we met three of our single-family goals and our three multifamily goals for 2016, but believe we failed to meet the FHFA benchmark level for the other single-family goals. FHFA will not be able to make a final determination on our performance until market data is released in October 2017.

AFFORDABLE HOUSING FUND ALLOCATIONS

The GSE Act requires us to set aside in each fiscal year an amount equal to 4.2 basis points of each dollar of total new business purchases, and pay such amount to certain housing funds. FHFA suspended this requirement when we were placed into conservatorship. However, in December 2014, FHFA terminated the suspension and directed us to begin setting aside amounts, in accordance with the following terms and conditions:

- The amount we will set aside each fiscal year, commencing with fiscal year 2015, will be based on our total new business purchases during such fiscal year; and

Within 60 days after the end of each fiscal year commencing with fiscal year 2015, we will transfer the amount set aside. However, if we have made a draw under the Purchase Agreement during that fiscal year or if such transfer will cause us to have to make a draw, then we will not make a transfer and the amount set aside for that fiscal year will be reversed.

We are prohibited from passing through the costs of these allocations to the originators of the loans that we purchase. During 2016, we completed \$445.7 billion of new business purchases subject to this requirement and accrued \$187 million of related expense. We expect to pay this amount in February 2017 through the following payments: \$91.2 million to the Housing Trust Fund administered by HUD; \$49.1

Management's Discussion and Analysis Regulation and Supervision

million to the Capital Magnet Fund administered by Treasury; and \$46.8 million to the HOPE Reserve Account administered by Treasury.

PORTFOLIO ACTIVITIES

The GSE Act provides FHFA with the power to regulate the size and content of our mortgage-related investments portfolio. The GSE Act requires FHFA to establish, by regulation, criteria governing portfolio holdings to ensure the holdings are backed by sufficient capital and consistent with our mission and safe and sound operations. FHFA adopted the portfolio holdings criteria established in the Purchase Agreement, as it may be amended from time to time, for so long as we remain subject to the Purchase Agreement. See "Conservatorship And Related Matters - Limits On Our Mortgage-Related Investments Portfolio And Indebtedness" for more information.

SUBORDINATED DEBT

FHFA directed us to continue to make interest and principal payments on our subordinated debt, even if we fail to maintain required capital levels. As a result, the terms of any of our subordinated debt that provide for us to defer payments of interest under certain circumstances, including our failure to maintain specified capital levels, are no longer applicable.

Under the Purchase Agreement, we may not issue subordinated debt without Treasury's consent. During 2016 and 2015, we did not call, repurchase or issue any Freddie SUBS® securities.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

HUD has regulatory authority over Freddie Mac with respect to fair lending. Our loan purchase activities are subject to federal anti-discrimination laws. In addition, the GSE Act prohibits discriminatory practices in our loan purchase activities, requires us to submit data to HUD to assist in its fair lending investigations of primary market lenders with which we do business, and requires us to undertake remedial actions against such lenders found to have engaged in discriminatory lending practices. HUD periodically reviews and comments on our underwriting and appraisal guidelines for consistency with the Fair Housing Act and the anti-discrimination provisions of the GSE Act.

DEPARTMENT OF THE TREASURY

Treasury has significant rights and powers as a result of the Purchase Agreement. In addition, under our Charter, the Secretary of the Treasury has approval authority over our issuances of notes, debentures and substantially identical types of unsecured debt obligations (including the interest rates and maturities of these securities), as well as new types of mortgage-related securities issued subsequent to the enactment of the Financial Institutions Reform, Recovery and Enforcement Act of 1989. The Secretary of the Treasury has performed this debt securities approval function by coordinating GSE debt offerings with Treasury funding activities. Our Charter also authorizes Treasury to purchase Freddie Mac debt obligations not exceeding \$2.25 billion in aggregate principal amount at any time.

CONSUMER FINANCIAL PROTECTION BUREAU

The CFPB regulates consumer financial products and services. The CFPB adopted a number of final

Management's Discussion and Analysis Regulation and Supervision

rules relating to loan origination, finance, and servicing practices that generally went into effect in January 2014. The rules include an ability-to-repay rule, which requires loan originators to make a reasonable and good faith determination that a borrower has a reasonable ability to repay the loan according to its terms. This rule provides certain protection from liability for originators making loans that satisfy the definition of a qualified mortgage. The ability-to-repay rule applies to most loans acquired by Freddie Mac, and for loans covered by the rule, FHFA has directed us to limit our single-family acquisitions to loans that generally would constitute qualified mortgages under applicable CFPB regulations. The directive generally restricts us from acquiring loans that are not fully amortizing, have a term greater than 30 years, or have points and fees in excess of 3% of the total loan amount.

SECURITIES AND EXCHANGE COMMISSION

We are subject to the reporting requirements applicable to registrants under the Exchange Act, including the requirement to file with the SEC annual reports on Form 10-K, quarterly reports on Form 10-Q, and current reports on Form 8-K. Although our common stock is required to be registered under the Exchange Act, we continue to be exempt from certain federal securities law requirements, including the following:

- Securities we issue or guarantee are “exempted securities” and may be sold without registration under the Securities Act of 1933;

- We are excluded from the definitions of “government securities broker” and “government securities dealer” under the Exchange Act;

- The Trust Indenture Act of 1939 does not apply to securities issued by us; and

- We are exempt from the Investment Company Act of 1940 and the Investment Advisers Act of 1940, as we are an “agency, authority or instrumentality” of the U.S. for purposes of such Acts.

LEGISLATIVE AND REGULATORY DEVELOPMENTS

LEGISLATION RELATED TO FREDDIE MAC AND ITS FUTURE STATUS

Our future structure and role will be determined by the Administration and Congress, and it is possible, and perhaps likely, that there will be significant changes beyond the near-term.

Several bills were introduced in the 114th Congress, which adjourned in January 2017, concerning the future status of Freddie Mac, Fannie Mae, and the mortgage finance system, including bills which provided for the wind down of Freddie Mac and Fannie Mae, modification of the terms of the Purchase Agreement or an increase in credit risk transfer transactions. None of these bills was enacted. It is likely that similar or new bills will be introduced and considered in the 115th Congress that began in January 2017. We cannot predict whether any of such bills will be enacted.

2015 AFFORDABLE HOUSING GOALS AND HOUSING PLAN

In December 2016, FHFA determined that we achieved three of our five single-family affordable housing goals and all three of our multifamily goals for 2015. Due to our failure to meet two single-family housing goals for 2014, we have been operating under an FHFA-required housing plan that addresses how we intend to achieve the missed goals in 2016 and 2017. Due to our failure to meet two single-family housing

Management's Discussion and Analysis Regulation and Supervision

goals for 2015, FHFA has extended our housing plan through 2018. Our performance compared to our goals, as determined by FHFA for 2015 and 2014, is set forth below.

	Goals for 2015	Market Level for 2015	Results for 2015	Goals for 2014	Market Level for 2014	Results for 2014
Single-family purchase money goals (Benchmark levels):						
Low-income	24	% 23.6	% 22.3	% 23	% 22.8	% 21.0
Very low-income	6	% 5.8	% 5.4	% 7	% 5.7	% 4.9
Low-income areas	19	% 19.8	% 19.0	% 18	% 22.1	% 20.1
Low-income areas subgoal	14	% 15.2	% 14.5	% 11	% 15.0	% 13.6
Single-family refinance low-income goal (Benchmark level)	21	% 22.5	% 22.8	% 20	% 25.0	% 26.4
Multifamily low-income goal (In units)	300,000	N/A	379,042	200,000	N/A	273,434
Multifamily very low-income subgoal (In units)	60,000	N/A	76,935	40,000	N/A	48,689
Multifamily small property low-income subgoal (In units)	6,000	N/A	12,801	N/A	N/A	N/A

FINAL RULE ON DUTY TO SERVE UNDERSERVED MARKETS

The GSE Act establishes a duty for Freddie Mac and Fannie Mae to serve three underserved markets (manufactured housing, affordable housing preservation and rural areas) by developing loan products and flexible underwriting guidelines to facilitate a secondary market for mortgages for very low-, low- and moderate-income families in those markets.

In December 2016, FHFA published a final rule regarding the duty of Freddie Mac and Fannie Mae to serve these underserved markets. Under the rule, Freddie Mac and Fannie Mae are each required to submit to FHFA an underserved markets plan covering a three-year period that describes the activities and objectives it will undertake to meet its duty to serve. We anticipate that the plans will become effective in January 2018, after FHFA provides notice of non-objection with respect to our plan for each underserved market. The rule provides duty to serve credit for eligible activities that facilitate a secondary market for mortgages on residential properties in the specified underserved markets. It also establishes a method for evaluating and rating Freddie Mac's and Fannie Mae's performance each year, on which FHFA will report annually to Congress.

We cannot predict the impact that the rule will have on our business, operations, profitability or credit risk. It is possible that the rule could have an adverse effect on us.

Management's Discussion and Analysis Contractual Obligations

CONTRACTUAL OBLIGATIONS

Our contractual obligations affect our short- and long-term liquidity and capital resource needs. The table below provides aggregated information about the listed categories of our contractual obligations as of December 31, 2016. The table includes information about undiscounted future cash payments due under these contractual obligations, aggregated by type of contractual obligation, including the contractual maturity profile of our debt securities (other than debt securities of consolidated trusts held by third parties). The timing of actual future payments may differ from those presented due to a number of factors, including discretionary debt repurchases.

The amounts of future interest payments on debt securities outstanding at December 31, 2016 are based on the contractual terms of our debt securities at that date. These amounts were determined using certain assumptions, including that variable-rate debt continues to accrue interest at the contractual rates in effect at December 31, 2016 until maturity and callable debt continues to accrue interest until its contractual maturity. The amounts of future interest payments on debt securities do not reflect certain factors that will change the amounts of interest payments on our debt securities after December 31, 2016, such as changes in interest rates, the call or retirement of any debt securities, and the issuance of new debt securities. Accordingly, the amounts presented in the table do not represent a forecast of our future cash interest payments or interest expense.

Our contractual obligations include purchase obligations that are enforceable and legally binding, and exclude contracts that we may cancel without penalty. We include our purchase obligations through the termination date specified in the respective agreement, even if the contract is renewable.

The table excludes certain obligations that could significantly affect our short- and long-term liquidity and capital resource needs. These items, which are listed below, have generally been excluded because the amount and timing of the related future cash payments are uncertain:

Future payments of principal and interest related to debt securities of consolidated trusts held by third parties because the amount and timing of such payments are generally contingent upon the occurrence of future events and are therefore uncertain. These payments generally include payments of principal and interest we make to the holders of our guaranteed mortgage-related securities in the event a loan underlying a security becomes delinquent. We remove loans from pools underlying our PCs in certain circumstances, including when loans are 120 days or more delinquent, and retire the associated PC debt;

- Future cash payments associated with the liquidation preference of the senior preferred stock, the quarterly commitment fee (which has been suspended), and dividends on the senior preferred stock;

• Future cash settlements on derivative agreements not yet accrued, because the amount and timing of such payments are dependent upon items such as changes in interest rates;

• Future dividends on outstanding preferred stock (other than the senior preferred stock), because dividends on these securities are non-cumulative and because we are currently prohibited from paying dividends on these securities;

• Future cash payments related to the 4.2 basis points of each dollar of total new business purchases that we are required by the GSE Act to set aside and pay to certain housing funds, because the amount of such payments is dependent on the volume of our new business purchases and the timing of such payments is dependent, in part, on whether we have made, or could be required to make, a draw under the Purchase Agreement; and

Management's Discussion and Analysis Contractual Obligations

☐The guarantee payments and commitments to advance funds pertaining to off-balance sheet arrangements.

(In millions)	Total	2017	2018	2019	2020	2021	Thereafter
Other long-term debt ⁽¹⁾	\$285,226	\$92,831	\$71,392	\$46,436	\$13,274	\$20,372	\$40,921
Other short-term debt ⁽¹⁾	71,517	71,517	—	—	—	—	—
Interest payable ⁽²⁾	30,328	11,115	3,274	2,525	1,996	1,864	9,554

Purchase obligations:							
Purchase commitments ⁽⁴⁾	27,727	27,727	—	—	—	—	—
Other purchase obligations ⁽⁵⁾	2,624	299	217	216	209	207	1,476
Lease obligations	39	11	9	9	6	3	1
Total specified contractual obligations	\$424,208	\$209,461	\$74,899	\$49,192	\$15,493	\$22,453	\$52,710

(1) Represents par value. Callable debt is included in this table at its contractual maturity. For additional information about our debt, see Note 6.

(2) Includes estimated future interest payments on our short-term and long-term debt securities as well as the accrual of periodic cash settlements of derivatives, netted by counterparty. Also includes accrued interest payable recorded on our consolidated balance sheet.

(3) Includes (i) obligations related to our qualified and non-qualified defined contribution plans, retiree medical plan and other benefit plans; (ii) future cash payments due under our contractual obligations to make delayed equity contributions to LIHTC partnerships; and (iii) payables to the consolidated trusts established for the administration of cash remittances received related to the underlying assets of Freddie Mac mortgage-related securities.

(4) Purchase commitments represent our obligations to purchase loans and mortgage-related securities from third parties, most of which are accounted for as derivatives in accordance with the accounting guidance for derivatives and hedging.

(5) Primarily includes unconditional purchase obligations that are legally binding and that are subject to a cancellation penalty.

Management's Discussion and Analysis Off-Balance Sheet Arrangements

OFF-BALANCE SHEET ARRANGEMENTS

We enter into certain business arrangements that are not recorded on our consolidated balance sheets or that may be recorded in amounts that differ from the full contract or notional amount of the transaction and that may expose us to potential losses in excess of the amounts recorded on our consolidated balance sheets. See Note 3 for more information on our off-balance sheet securitization activities and other guarantees.

SECURITIZATION ACTIVITIES AND OTHER GUARANTEES

We have certain off-balance sheet arrangements related to our securitization activities involving guaranteed loans and mortgage-related securities, though most of our securitization activities are on-balance sheet. Our off-balance sheet arrangements related to these securitization activities primarily consist of K Certificates and SB Certificates. We also have off-balance sheet arrangements related to certain other securitization products and other mortgage-related guarantees.

Our maximum potential off-balance sheet exposure to credit losses relating to these securitization activities and guarantees is primarily represented by the UPB of the underlying loans and securities, which was \$166.7 billion and \$127.3 billion at December 31, 2016 and 2015, respectively.

As part of the guarantee arrangements pertaining to certain multifamily housing revenue bonds and securities backed by multifamily housing revenue bonds, we provided commitments to advance funds, commonly referred to as "liquidity guarantees," which were \$8.5 billion and \$8.9 billion at December 31, 2016 and 2015, respectively. These guarantees require us to advance funds to third parties that enable them to repurchase tendered bonds or securities that are unable to be remarketed. At both December 31, 2016 and 2015, there were no liquidity guarantee advances outstanding.

Our exposure to losses on the transactions described above would be partially mitigated by the recovery we would receive through exercising our rights to the collateral backing the underlying loans and the available credit enhancements, which may include recourse and primary mortgage insurance with third parties. In addition, we provide for incurred losses each period on these guarantees within our provision for credit losses.

OTHER AGREEMENTS

We own interests in numerous entities that are considered to be VIEs for which we are not the primary beneficiary and which we do not consolidate in accordance with the accounting guidance for the consolidation of VIEs. These VIEs relate primarily to our investment activity in mortgage-related assets. Our consolidated balance sheets reflect only our investment in the VIEs, rather than the full amount of the VIEs' assets and liabilities.

As part of our credit guarantee business, we routinely enter into forward purchase and sale commitments for loans and mortgage-related securities. Some of these commitments are accounted for as derivatives. Their fair values are reported as either derivative assets, net or derivative liabilities, net on our consolidated balance sheets. For more information, see "Risk Management - Credit Risk - Counterparty Credit Risk - Derivative Counterparties" and Note 7. We also enter into purchase commitments primarily related to future guarantor swap transactions for single-family loans, and, to a lesser extent, commitments to purchase or guarantee multifamily loans. These non-derivative commitments totaled \$267.4 billion and

Management's Discussion and Analysis Off-Balance Sheet Arrangements

\$258.4 billion in notional value at December 31, 2016 and 2015, respectively.

In connection with the execution of the Purchase Agreement, we, through FHFA, in its capacity as Conservator, issued a warrant to Treasury to purchase 79.9% of our common stock outstanding on a fully diluted basis on the date of exercise. See Note 9 for further information.

Freddie Mac 2016 Form 10-K 178

Management's Discussion and Analysis Critical Accounting Policies and Estimates

CRITICAL ACCOUNTING POLICIES AND ESTIMATES

The preparation of financial statements in accordance with GAAP requires us to make a number of judgments, estimates, and assumptions that affect the reported amounts within our consolidated financial statements. Certain of our accounting policies, as well as estimates we make, are critical, as they are both important to the presentation of our financial condition and results of operations and require management to make difficult, complex, or subjective judgments and estimates, often regarding matters that are inherently uncertain. Actual results could differ from our estimates, and the use of different judgments and assumptions related to these policies and estimates could have a material impact on our consolidated financial statements.

Our critical accounting policies and estimates relate to the single-family allowance for loan losses and fair value measurements. For additional information about our critical accounting policies and estimates and other significant accounting policies, as well as recently issued accounting guidance, see Note 1.

SINGLE-FAMILY ALLOWANCE FOR LOAN LOSSES

The single-family allowance for loan losses represents an estimate of probable incurred credit losses. The single-family allowance for loan losses pertains to all single-family loans classified as held-for-investment on our consolidated balance sheets.

Determining the appropriateness of the single-family allowance for loan losses is a complex process that is subject to numerous estimates and assumptions requiring significant management judgment about matters that involve a high degree of subjectivity. This process involves the use of models that require us to make judgments about matters that are difficult to predict, the most significant of which are the probability of default, prepayment, and loss severity. We regularly evaluate the underlying estimates and models we use when determining the single-family allowance for loan losses and update our assumptions to reflect our historical experience and current view of economic factors. See "Risk Factors - Operational Risks - We face risks and uncertainties associated with the models that we use to inform business and risk management decisions and for financial accounting and reporting purposes."

We believe the level of our single-family allowance for loan losses is appropriate based on internal reviews of the factors and methodologies used. No single statistic or measurement determines the appropriateness of the allowance for loan losses. Changes in one or more of the estimates or assumptions used to calculate the single-family allowance for loan losses could have a material impact on the loan loss reserves and provision for credit losses.

Most single-family loans are aggregated into pools based on similar risk characteristics and measured collectively using a statistically based model that evaluates a variety of factors affecting collectability, including but not limited to current LTV ratios, trends in home prices, loan product type, delinquency/default status and history, and geographic location. Inputs used by the model are regularly updated for changes in the underlying data, assumptions, and market conditions. We review the output of this model by considering qualitative factors such as macroeconomic and other factors to see whether the model outputs are consistent with our expectations. Management adjustments may be necessary to take into consideration external factors and current economic events that have occurred but that are not yet reflected in the factors used to derive the model outputs. Significant judgment is exercised in making

Management's Discussion and Analysis Critical Accounting Policies and Estimates

these adjustments.

Some examples of the qualitative factors considered include:

- Regional housing trends;
- Applicable home price indices;
- Unemployment and employment dislocation trends;
- The effects of changes in government policies and programs;
- Industry trends;
- Consumer credit statistics; and
- Third-party credit enhancements.

The inability to realize the benefits of our loss mitigation activities, a lower realized rate of seller/servicer repurchases, declines in home prices, deterioration in the financial condition of our mortgage insurers, or increases in delinquency rates would cause our losses to be significantly higher than those currently estimated.

Individually impaired single-family loans include loans that have undergone a TDR and are measured for impairment as the excess of our recorded investment in the loan over the present value of the expected future cash flows. Our expectation of future cash flows incorporates many of the judgments indicated above.

FAIR VALUE MEASUREMENTS

We use fair value measurements for the initial recording of certain assets and liabilities and periodic remeasurement of certain assets and liabilities on a recurring or non-recurring basis. Assets and liabilities within our consolidated financial statements measured at fair value include:

- Mortgage-related and non-mortgage related securities;
- Certain loans held-for-sale;
- Derivative instruments;
- Certain debt securities of consolidated trusts held by third parties and certain other debt; and
- Certain REO assets.

The accounting guidance for fair value measurements establishes a framework for measuring fair value, and also establishes a three-level fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value based on the assumptions a market participant would use at the measurement date. Fair value measurements under this hierarchy are distinguished among quoted market prices, observable inputs, and unobservable inputs. The measurement of fair value requires management to make judgments and assumptions. The process for determining fair value using unobservable inputs is generally more subjective and involves a higher degree of management judgment and assumptions than the measurement of fair value using observable inputs. These judgments and assumptions may have a significant effect on our measurements of fair value, and the use of different judgments and assumptions, as well as changes in market conditions, could have a material effect on our consolidated statements of comprehensive income and consolidated balance sheets. See Note 13 for additional information regarding fair value hierarchy and measurements, valuation risk and controls over fair value measurement.

Risk Factors Conservatorship and Related Matters

RISK FACTORS

The following section discusses material risks and uncertainties that could adversely affect our business, financial condition, results of operations, cash flows, reputation, strategies and/or prospects.

CONSERVATORSHIP AND RELATED MATTERS

Freddie Mac's future is uncertain.

It is possible and perhaps likely that future legislative or regulatory action will materially affect our role, business model, structure, and results of operations. Some or all of our functions could be transferred to other institutions, and we could cease to exist as a stockholder-owned company, or at all. If any of these events occur, our shares could further diminish in value, or cease to have any value. Our stockholders may not receive any compensation for such loss in value.

Several bills were introduced in the 114th Congress, which adjourned in January 2017, concerning the future status of Freddie Mac, Fannie Mae, and the mortgage finance system, including bills which provided for the wind down of Freddie Mac and Fannie Mae, modification of the terms of the Purchase Agreement, or an increase in credit risk transfer transactions. None of these bills was enacted. It is likely that similar or new bills will be introduced and considered in the 115th Congress that began in January 2017.

The conservatorship is indefinite in duration. The timing, likelihood, and circumstances under which we might emerge from conservatorship are uncertain. Under the Purchase Agreement, Treasury would be required to consent to the termination of the conservatorship, other than in connection with receivership, and there can be no assurance it would do so. Even if the conservatorship is terminated, we would remain subject to the Purchase Agreement and the terms of the senior preferred stock. It is possible that the conservatorship could end with our being placed into receivership. Because Treasury holds a warrant to acquire nearly 80% of our common stock for nominal consideration, we could effectively remain under the control of the U.S. government even if the conservatorship is ended and the voting rights of common stockholders are restored. If Treasury exercises the warrant, the ownership interest in the company of our existing common stockholders will be substantially diluted.

In the past several years, a number of lawsuits were filed against the U.S. government, Freddie Mac and Fannie Mae challenging certain government actions related to the conservatorship and the Purchase Agreement. This may add to the uncertainty surrounding our future.

For more information, see "MD&A - Regulation and Supervision - Legislative and Regulatory Developments," "Legal Proceedings," and Note 14.

We cannot retain capital from the earnings generated by our business operations (other than a limited amount that will decrease from \$600 million in 2017 to zero in 2018 and thereafter), which increases the likelihood that we may request additional draws from Treasury under the Purchase Agreement in future periods.

We cannot retain capital from the earnings generated by our business operations, as a result of the net worth sweep dividend. This increases the likelihood that we will require draws in future periods,

Risk Factors Conservatorship and Related Matters

particularly as the required Capital Reserve Amount declines from \$600 million in 2017 to zero in 2018. A variety of factors could influence whether we could require a draw, including the following:

- Deterioration of economic conditions, including increased levels of unemployment and declines in home prices or family incomes;
- Adverse changes in interest rates, yield curves, implied volatility or market spreads, which could affect our financial assets and liabilities, including derivatives, and increase realized and unrealized losses recorded in earnings or AOCI;
- The required reductions in the size of our mortgage-related investments portfolio, reductions of higher yielding assets, or other limitations on our investment activities that reduce our earnings capacity;
- The success of any transactions or other steps we may take intended to help reduce earnings volatility and address some of the measurement differences between our GAAP financial results and the underlying economics of our business, including the adoption of hedge accounting;
- Restrictions on our single-family guarantee activities that could reduce our income from these activities;
- Restrictions on the volume of multifamily business we may conduct or other limits on multifamily business activities that could reduce our income from these activities;
- Adverse changes in our liquidity or funding costs, or limitations on our access to public debt markets;
- A failure of one or more of our major counterparties to meet their obligations to us;
- Changes in accounting policies, practices, or guidance (for example, FASB's new accounting standards update related to the measurement of credit losses on financial instruments will increase (perhaps substantially) our provision for credit losses in the period of adoption);
- The effects of our foreclosure prevention and loss mitigation efforts;
- Changes in housing or economic conditions, legislation, or other factors that affect our assessment of our ability to realize our net deferred tax asset. If a valuation allowance on our net deferred tax asset were established, it could significantly increase our tax provision for that period;
- A reduction in corporate tax rates would require us to measure our net deferred tax asset using the new rate in the period in which the rate change is enacted. This would result in a one-time charge through the tax provision; or
- Changes in business practices resulting from legislative and regulatory developments or direction from our Conservator.

Additional draws, which will increase the already substantial liquidation preference of our senior preferred stock and decrease the amount of Treasury's remaining commitment under the Purchase Agreement, may add to the uncertainty regarding our long-term financial sustainability.

FHFA controls our business activities. The terms of the Purchase Agreement and the senior preferred stock significantly limit our business activities. We may be required to take actions that reduce our profitability, are difficult to implement, or expose us to additional risk.

We are under the control of FHFA, as our Conservator, and are not managed to maximize stockholder returns. FHFA determines our strategic direction. We face a variety of different, and sometimes competing, business objectives and FHFA-mandated activities (e.g., the initiatives we are pursuing under the Conservatorship Scorecards). It may be difficult for us to devote sufficient resources and management attention to these multiple priorities. Some of the activities FHFA has required us to undertake are costly and difficult to implement, such as building the common securitization platform.

FHFA has required us to make changes to our business that have adversely affected our financial results.

Risk Factors Conservatorship and Related Matters

FHFA could require us to make additional changes at any time. For example, FHFA may require us to undertake activities that:

- Reduce our profitability;
- Expose us to additional credit, market, funding, operational, and other risks; or
- Provide additional support for the mortgage market to serve our public mission, but adversely affect our financial results.

From time to time, FHFA and Treasury have prevented us from engaging in business activities or transactions that we believe would be profitable, and they may do so again in the future. For example, FHFA could limit the amount of securities we could sell or further limit the size of our mortgage-related investments portfolio or the amount of new multifamily business we may obtain.

The Purchase Agreement and the terms of the senior preferred stock also place significant restrictions on our ability to manage our business, including limiting:

- The amount of indebtedness we may incur;
- The size of our mortgage-related investments portfolio; and
- Our ability to pay dividends, transfer certain assets, raise capital, and pay down the liquidation preference of the senior preferred stock.

The Purchase Agreement prohibits us from taking a variety of actions without Treasury's consent. Treasury has the right to withhold its consent for any reason. The warrant held by Treasury, the restrictions on our business under the Purchase Agreement, and the senior status and net worth dividend provisions of the senior preferred stock could adversely affect our ability to attract capital from the private sector in the future, should we be in a position to do so.

If FHFA placed us into receivership, our assets would be liquidated. The liquidation proceeds might not be sufficient to pay claims outstanding against Freddie Mac, repay the liquidation preference of our preferred stock, or make any distribution to our common stockholders.

We can be put into receivership at the discretion of the Director of FHFA at any time for a number of reasons set forth in the GSE Act. Several bills considered by Congress in the past several years provided for Freddie Mac to be placed into receivership. In addition, FHFA could be required to place us into receivership if Treasury were unable to provide us with funding requested under the Purchase Agreement to address a deficit in our net worth. Treasury might not be able to provide the requested funding if, for example, the U.S. government were not fully operational because Congress had failed to approve funding or the government had reached its borrowing limit. For more information, see "MD&A - Regulation and Supervision - Federal Housing Finance Agency - Receivership."

Being placed into receivership would terminate the conservatorship. The purpose of receivership is to liquidate our assets and resolve claims against us. The appointment of FHFA as our receiver would terminate all rights and claims that our stockholders and creditors might have against our assets or under our Charter arising as a result of their status as stockholders or creditors, other than the potential ability to be paid upon our liquidation.

If our assets were liquidated, the liquidation proceeds might not be sufficient to pay the secured and unsecured claims against us (including claims on our guarantees), repay the liquidation preference on any series of our preferred stock, or make any distribution to our common stockholders. The GSE Act

Risk Factors Conservatorship and Related Matters

provides that, if we were placed into receivership, the receiver would hold the mortgages underlying our mortgage-related securities (and the payments thereon) for the benefit of the holders of those securities. However, payments on the mortgages underlying our mortgage-related securities might not be sufficient to make full payments of principal and interest on the securities. In that event, if we were unable to fulfill our guarantee, the holders of our mortgage-related securities would experience delays in receiving payments on the securities because the relevant systems are not designed to make partial payments.

Proceeds would be available to repay the liquidation preference of other series of preferred stock only after paying the secured and unsecured claims of the company, the administrative expenses of the receiver and the liquidation preference of the senior preferred stock. Only after the liquidation preference of all series of preferred stock is repaid would any proceeds be available for distribution to the holders of our common stock.

Risk Factors Credit Risks

CREDIT RISKS

We are subject to mortgage credit risks, including mortgage credit risk relating to off-balance sheet arrangements; credit costs related to these risks could adversely affect our financial results.

Mortgage credit risk is the risk that a borrower will fail to make timely payments on a loan we own or guarantee. This exposes us to the risk of credit losses and credit-related expenses, which could adversely affect our financial results.

We are primarily exposed to mortgage credit risk with respect to the single-family and multifamily loans and securities reflected as assets on our consolidated balance sheets that we own or guarantee. We are also exposed to mortgage credit risk with respect to guaranteed securities and guarantee arrangements that are not reflected as assets on our consolidated balance sheets. This exposure primarily relates to K Certificates and SB Certificates. We also have off-balance sheet arrangements related to certain other securitization products and other mortgage-related guarantees.

We continue to have a number of loans in our single-family credit guarantee portfolio with certain characteristics, such as Alt-A loans, interest-only loans, option ARM loans, loans with original LTV ratios greater than 90%, and loans to borrowers with credit scores less than 620 at the time of origination, that expose us to greater credit risk than other types of loans. See "MD&A - Risk Management - Credit Risk - Single-Family Mortgage Credit Risk - Monitoring Loan Performance and Characteristics of the Single-family Credit Guarantee Portfolio and Individual Sellers and Servicers."

Our efforts to increase access to single-family mortgage credit, including our expanded affordable housing program and our duty to serve underserved markets, expose us to increased mortgage credit risk.

Our credit risk transfer transactions may not be available to us in adverse economic conditions. These transactions also lower our profitability.

We are increasingly using credit risk transfer transactions to mitigate some of our potential credit losses. Our ability to transfer credit risk (and the cost to us of doing so) could change rapidly, depending on market conditions. In particular, it is possible that there will not be sufficient investor demand for credit risk transfer transactions during a housing downturn. Some of our credit risk transfer transactions are new, and it is uncertain if there will be adequate demand for them over the long term. Some of these transactions use novel structures that have not yet been tested in adverse market conditions; it is possible that, under such conditions, they will provide less protection than we expect. These transactions may not prevent us from incurring substantial losses in adverse market conditions. These transactions have termination dates that are earlier than the maturities of the related loans, and losses on the loans occurring beyond the terms of the transactions are not covered. The costs associated with these transactions are significant and are expected to increase. There could be a significant difference in time between when we recognize a credit loss in earnings and when we recognize the related recovery in earnings, and this lag could adversely affect our financial results in the earlier period. For more information regarding these transactions, see Note 4. Some of these transactions are complex, which may increase our exposure to operational risk.

Risk Factors Credit Risks

We face significant risks related to our delegated underwriting process for single-family loans, including risks related to data accuracy and mortgage fraud. Recent changes to the process could increase our risks.

We delegate to our sellers the underwriting for the single-family loans we purchase or securitize. Our contracts with sellers describe mortgage eligibility and underwriting standards, and the sellers represent and warrant to us that the loans they deliver to us meet these standards. We do not independently verify most of the information provided to us before we purchase or securitize a loan. This exposes us to the risk that one or more of the parties involved in a transaction (such as the borrower, seller, broker, appraiser, title agent, loan officer, or lender) misrepresented the facts about the underlying property, borrower, or loan, or engaged in fraud.

We review a sample of these loans after we purchase them to determine if they are in compliance with our contractual standards. However, our review may not detect any misrepresentations by the parties involved in the transaction, deter loan fraud, or reduce our exposure to these risks.

We can exercise certain contractual remedies, including requiring repurchase of the loan, for loans that do not meet our standards. However, in recent years, at the direction of FHFA, we have significantly revised our representation and warranty framework (including changes to remedies for certain defects) to relieve sellers of certain repurchase obligations in specific cases with respect to single-family loans. As a result, we may face greater exposure to credit and other losses because our ability to seek recovery or repurchase from sellers under this revised framework is more limited. Under the revised framework, it is critical that we identify breaches of representations and warranties early in the life of the loan. We recently announced that we expect to offer representation and warranty relief for certain mortgage loans in early 2017 through our Loan Advisor Suite technology solution. We are enhancing our tools and processes designed to do this. This change in practice may present operational and systems challenges. Once fully implemented, there is a risk that the enhanced tools and processes will not enable us to identify all breaches in a timely manner. For more information, see "MD&A - Risk Management - Credit Risk - Single-Family Mortgage Credit Risk - Maintaining Policies and Procedures for New Business Activity, Including Prudent Underwriting Standards."

We are exposed to significant credit risk related to loans with lower credit quality that back the non-agency mortgage-related securities we hold in our mortgage-related investments portfolio.

Our investments in non-agency mortgage-related securities include securities that are backed by subprime, Alt-A, option ARM, and manufactured housing loans, and home equity lines of credit. The credit performance of these loans remains weak. Over time, we will likely add additional securities to the population of non-agency mortgage-related securities that we intend to sell. As we do so, we will be required to immediately recognize any unrealized losses on such securities in earnings. Our net worth has at times been adversely affected by declines in the fair value of these securities. We may experience additional fair value declines in the future due to a number of factors, such as increased default rates and loss severities on the loans underlying these securities. The quality of the servicing performed on the underlying loans can significantly affect the timing and amount of losses we recognize on these securities.

For more information regarding these risks, see "MD&A - Risk Management - Credit Risk - Mortgage-Related Securities Credit Risk," "Single-Family Mortgage Credit Risk," and "Counterparty Credit Risk - Other Counterparties - Mortgage related-security issuers and servicers."

Risk Factors Credit Risks

Declines in national or regional home prices or other adverse changes in the housing market could negatively affect our business and financial results.

Our financial results and business volumes can be negatively affected by declines in home prices and other adverse changes in the housing market. This could:

- Reduce our actual return or result in losses on new single-family guarantee business, as actual default rates could be higher than we expected when we issued the guarantee;

- Cause us to hedge prepayment risk incorrectly;

- Result in declines in net worth due to fair value declines on our investments in non-agency mortgage-related securities;

- Negatively affect loan pricing, which could cause us to change our disposition strategies for our single-family unsecuritized loans; or

- Increase our losses on dispositions of REO properties.

For more information regarding these risks, see “MD&A - Risk Management - Credit Risk - Mortgage-Related Securities Credit Risk.”

Our loan purchases and guarantee issuances are closely tied to the rate of growth in total outstanding U.S. residential mortgage loan debt, the size of the U.S. residential mortgage market, and the amount of new mortgage loan originations. Total residential mortgage loan debt increased approximately 1.7% in the first nine months of 2016 (the most recent data available) and approximately 1.0% in 2015.

The proportion of our refinance loan purchases to total loan purchases could decrease if mortgage interest rates increase. This could increase our exposure to mortgage credit risk, as refinance loans (particularly those that do not involve "cash-out") generally present less credit risk than purchase loans. Some of our seller/servicer counterparties are highly dependent on refinance loan volumes. A decrease in refinance loan volumes could adversely affect these counterparties, which could increase our exposure to counterparty credit risk.

While the multifamily market has experienced strong rent growth and occupancy trends in the past several years, these trends are not likely to continue at their current pace. New supply of multifamily housing has been increasing in recent periods and could potentially outpace demand, which could result in excess supply and rising vacancy rates. Any softening of multifamily markets could cause delinquencies and credit losses relating to our multifamily activities to increase beyond our current expectations.

We are exposed to counterparty credit risk with respect to our business counterparties. Our financial results may be adversely affected if one or more of our counterparties fail to meet their obligations to us.

We depend on our institutional counterparties to provide services that are critical to our business. We face the risk that one or more of our counterparties may fail to meet their contractual obligations to us. Our important counterparties include seller/servicers, mortgage, bond, and credit insurers, and counterparties to derivatives and short-term lending and other funding transactions (i.e., cash and other investments transactions).

Many of our major counterparties provide several types of services to us. The concentration of our

Risk Factors Credit Risks

exposure to our counterparties remains high, and we continue to face challenges in reducing our risk concentrations with counterparties. Efforts we take to reduce exposure to financially weak counterparties could concentrate our exposure to other counterparties, and increase our costs and reduce our revenue. In recent years, challenging market conditions have, at times, adversely affected the liquidity and financial condition of our counterparties, and some of our major counterparties have failed. Similar events may occur in future periods. Many of our counterparties are subject to increasingly complex regulatory requirements and oversight, which place additional stress on their resources and may affect their ability or willingness to do business with us.

Credit risk related to seller/servicers

We are exposed to credit risks from the seller/servicers of our single-family loans, as described below.

A decline in servicing performance - A decline in a servicer's performance, such as delayed foreclosures or missed opportunities for loan modifications, could significantly affect our ability to mitigate credit losses and could affect the overall credit performance of our single-family credit guarantee portfolio. A large volume of seriously delinquent loans and the complexity of the servicing function are significant factors contributing to the risk of a decline in performance by servicers. We could be adversely affected if our servicers lack appropriate controls, experience a failure in their controls, or experience a disruption in their ability to service loans, including as a result of legal or regulatory actions or ratings downgrades. We are also exposed to fraud by third parties in the loan servicing function, particularly with respect to short sales and other dispositions of non-performing assets.

We could attempt to mitigate our exposure to a poorly performing servicer by terminating its right to service our loans; however, we may not be able to find successor servicers who have the capacity to service the affected loans and who are also willing to assume the representations and warranties of the terminated servicer. Terminating a large servicer may not be feasible because of the operational and capacity challenges related to transfers of large servicing portfolios. If we replace a servicer, we would likely incur costs and potential increases in servicing fees.

A failure by seller/servicers to fulfill their obligations to repurchase loans or indemnify us as a result of breaches of representations and warranties - While we may have the contractual right to require a seller or servicer to repurchase loans from us, it may be difficult, expensive, and time-consuming to enforce such repurchase obligations. We could enter into settlements to resolve repurchase obligations; however, the amounts we receive under any such settlements may be less than the losses we ultimately incur on the underlying loans.

Under our revised representation and warranty framework, as directed by FHFA, we are required in some cases to utilize an alternative remedy, such as indemnification, in lieu of repurchase. The amount we recover under an alternative remedy may be less than the amount we could have recovered in a repurchase.

Increased exposure to non-depository and smaller financial institutions - Over the last several years, we have acquired a greater portion of our single-family business volume from non-depository and smaller financial institutions. In addition, a large and increasing volume of our single-family loans are serviced by non-depository financial institutions. These non-depository and smaller financial institutions may not have the same financial strength or operational capacity, or be subject to the same level of regulatory oversight, as our large single-family loan seller and servicer counterparties

Risk Factors Credit Risks

(which are mostly depository institutions). As a result, we face increased risk that these counterparties could fail to perform their obligations to us. In particular, non-depository servicers rapidly grew their servicing portfolios in the last several years. This appears to have resulted in operational strains that have subjected these servicers to regulatory scrutiny. This rapid growth could expose us to increased risks if any operational strain adversely affects these servicers' servicing performance or their financial strength. In addition, if these servicers reduce their servicing portfolios, there may be a constraint in overall servicing capacity.

Our seller/servicers also have a significant role in servicing loans in our multifamily mortgage portfolio. We are exposed to the risk that multifamily seller/servicers could come under financial pressure, which could potentially cause a decline in their servicing performance.

For more information, see "MD&A - Risk Management - Credit Risk - Counterparty Credit Risk - Sellers and Servicers."

Credit risk related to counterparties to derivatives, short-term lending and other transactions

We have significant exposure to institutions in the financial services industry relating to derivatives, funding, short-term lending, securities and other transactions (e.g., cash and other investments transactions). These transactions are critical to our business, including our ability to:

- Manage interest rate risk and other risks related to our investments in mortgage-related assets;
- Fund our business operations; and
- Service our customers.

We face the risk of operational failure of the clearing members, exchanges, clearinghouses, or other financial intermediaries we use to facilitate derivatives, short-term lending and other transactions. If a clearing member or clearinghouse were to fail, we could lose some or all of the collateral or margin posted with the clearing member or clearinghouse.

We are a clearing member of the clearinghouse through which we execute mortgage-related securities transactions. As a result, we could be subject to losses because we are required to participate in the coverage of losses incurred by other clearing members if they fail to meet their obligations to the clearinghouse.

If our counterparties to short-term lending transactions fail, we are exposed to losses to the extent the transaction is unsecured or the collateral posted to us is insufficient.

For more information, see "MD&A - Risk Management - Credit Risk - Counterparty Credit Risk - Other Counterparties - Cash and Other Investments Counterparties" and "- Derivative Counterparties."

Credit risk related to mortgage, bond, and credit insurers

It is unlikely that we will receive full payment of our claims from several of the mortgage insurers of our single-family loans and bond insurers of certain of our non-agency mortgage-related securities that we purchased prior to 2009, as these insurers are insolvent or are paying only a portion of our claims under our mortgage and bond insurance policies. For more information, see Note 12.

If a mortgage insurer fails to meet its obligations to reimburse us for claims, our credit losses could increase. In addition, if a regulator determines that a mortgage insurer lacks sufficient capital to pay all

Risk Factors Credit Risks

claims when due, the regulator could take action that might affect the timing and amount of claim payments made to us. We face similar risks with respect to our counterparties in our ACIS and Deep MI credit risk transfer transactions. We cannot differentiate pricing based on the strength of a mortgage insurer or revoke a mortgage insurer's status as an eligible insurer without FHFA approval. Further, we do not select the mortgage insurance provider on a specific loan, because the selection is made by the lender at the time the loan is originated. We continue to acquire new loans with mortgage insurance from mortgage insurers that have credit ratings below investment grade.

If a bond insurer were to become insolvent, it is likely that we would not fully collect our claims from the insurer and that any such claims payments could be delayed significantly. This would affect our ability to recover certain unrealized losses on our investments in non-agency mortgage-related securities. We evaluate the expected recovery from bond insurance policies as part of our impairment analysis for our investments in securities. If a bond insurer is not expected to meet its obligations, we could recognize additional impairment of those securities.

For more information, see "MD&A - Risk Management - Credit Risk - Counterparty Credit Risk - Mortgage, Bond, and Credit Insurers."

Our loss mitigation activities may be costly and may adversely affect our financial results.

Our loss mitigation strategies may not be successful. The costs we incur related to loan modifications and other loss mitigation activities have been, and could continue to be, significant. For example, we bear the full cost of the monthly payment reductions related to modifications of loans we own or guarantee, as well as all applicable servicer incentive fees for our mortgage modifications.

We could be required or elect to make changes to our loss mitigation activities that could make these activities more costly to us. For example, we could be required to use principal forgiveness on a broad basis to reduce payments for borrowers and to bear some or all of the costs of such reductions.

Loan modification initiatives, particularly any future focus on principal forgiveness on a broad basis, could have the potential to change borrower behavior and loan underwriting. Principal reductions may create an incentive for borrowers who are current on their loans to become delinquent in order to receive a principal reduction.

We have loans on trial period plans as required under certain loan modification programs. Some of these loans will fail to complete the trial period or fail to qualify for our other borrower assistance programs. For these loans, the trial period will have effectively delayed the foreclosure process and could increase our losses.

Many of our HAMP loans, which initially were set at a below-market interest rate, have provisions for the interest rates to increase gradually until they reach the market rate that was in effect at the time of the modification. The resulting increase in the borrowers' payments may increase the risk that these borrowers will default.

The type of loss mitigation activities we pursue could affect prepayments on our PCs and REMICs, which could affect the value of these securities or the earnings from mortgage-related assets in our Investments segment mortgage investments portfolio. In addition, loss mitigation activities may adversely affect our ability to securitize, resecuritize and sell the loans subject to those activities (e.g., investors may become

Risk Factors Credit Risks

unwilling to purchase securities backed by modified single-family loans).

The effect of HARP and other refinance initiatives of the GSEs on prepayment expectations is difficult to estimate, and we could experience declines in the fair values of certain agency security investments and lower net interest yields over time on other mortgage-related investments. The difficulty in estimating the effect of prepayments could also adversely affect our ability to hedge our mortgage-related investments.

We devote significant resources to our borrower assistance initiatives. The size and scope of these efforts may also limit our ability to pursue other business opportunities or corporate initiatives.

For more information on our loss mitigation activities, see “MD&A - Our Business Segments - Single-Family Guarantee - Loss Mitigation Activities” and “MD&A - Risk Management - Credit Risk - Single-Family Mortgage Credit Risk - Engaging in Loss Mitigation Activities.”

We have been, and will continue to be, adversely affected by delays and deficiencies in the single-family foreclosure process.

The average length of time for foreclosure of a Freddie Mac loan has significantly increased since 2008, particularly in states that require a judicial foreclosure process, and may further increase. Delays in the foreclosure process could:

- Cause our expenses to increase. For example, properties awaiting foreclosure could deteriorate until we acquire them, resulting in increased expenses to repair and maintain the properties;

- Adversely affect the values of, and our losses on, the non-agency mortgage-related securities we hold; and

- Adversely affect trends in home prices regionally or nationally, which could adversely affect our financial results.

We may experience further losses relating to our assets that could materially adversely affect our financial results, liquidity and net worth.

We may experience additional losses relating to our assets, including those that are currently AAA-rated, and the fair values of our assets may decline in the future. This could adversely affect our financial results, liquidity, and net worth. We may decide to pursue certain mortgage-related investments portfolio strategies that could result in the immediate recognition of losses, such as paying a premium to repurchase debt, increasing the amount of non-agency mortgage-related securities we intend to sell, or engaging in certain asset structuring activities that result in the write-off of premiums.

Risk Factors Market Risk

MARKET RISK

Changes in interest rates could negatively affect the fair value of financial assets and liabilities, our results of operations and our net worth.

Our investment and credit guarantee activities in single-family and multifamily mortgage assets expose us to market risk, including prepayment risk.

Interest rates can fluctuate for a number of reasons, including changes in the fiscal and monetary policies of the federal government and its agencies. Federal Reserve policies directly and indirectly influence the yield on our interest-earning assets and the cost of our interest-bearing liabilities. Interest rates can also fluctuate as a result of geopolitical events or changes in general economic conditions, including events or conditions that alter investor demand for Treasury or other fixed-income securities.

Changes in interest rates could adversely affect the cash flows and prepayment rates on assets that we own and related debt and derivatives. We incur costs in connection with our efforts to manage these risks. In addition, changes in interest-rates could adversely affect the prepayment rate on the loans that we guarantee. For example,

When interest rates decrease, borrowers are more likely to prepay their loans by refinancing them at a lower rate. An increased likelihood of prepayment on the loans underlying our mortgage-related securities may adversely affect the value of these securities.

When interest rates increase:

Borrowers with higher risk adjustable-rate loans may have fewer opportunities to refinance into fixed-rate loans;

- A borrower's payment on additional debt obligations (such as home equity lines of credit and second liens) that have adjustable payment terms may increase, which in turn increases the risk that the borrower may default on a loan we own or guarantee;

Our credit losses from loans with adjustable payment terms may increase as borrower payments increase at their reset dates, which increases the borrower's risk of default; and

Other-than-temporary impairments on our investments in non-agency mortgage-related securities could increase due to a reduction in the benefit expected from structural credit enhancements on these securities.

Our financial results can be significantly affected by changes in interest rates and changes in yield curves, as certain of our assets and liabilities are recorded at fair value. Our interest rate risk management activities are designed to reduce our economic exposure to changes in interest rates to a low level as measured by our models. However, the accounting treatment for those assets and liabilities, including derivatives, creates volatility in our earnings when interest rates fluctuate as some assets and liabilities are measured at amortized cost and some are measured at fair value, while all derivatives are measured at fair value. This volatility generally is not indicative of the underlying economics of our business.

In the first quarter of 2017, we began using hedge accounting for certain single-family mortgage loans, which is intended to partially reduce the interest-rate volatility in our GAAP earnings by eliminating a portion of the measurement differences between our GAAP financial results and the underlying economics of our business. Our hedge accounting program is complex and unique in the industry. We

Risk Factors Market Risk

may fail to properly implement this program and related changes to systems and processes. Our hedges may fail in any given future period, which could leave us exposed to significant earnings volatility in that period and increase the risk that we will need a draw from Treasury.

Changes in market spreads could materially affect our results of operations and net worth.

Changes in market conditions, including changes in interest rates, liquidity, prepayment and/or default expectations, and the level of uncertainty in the market for a particular asset class, may cause fluctuations in market spreads (also referred to as OAS). Our financial results and net worth can be significantly affected by changes in market spreads, especially results driven by financial instruments that are measured at fair value. These instruments include trading securities, available-for-sale securities, loans held-for-sale, and loans and debt with the fair value option elected.

A widening of the market spreads on a given asset is typically associated with a decline in the fair value of that asset, which may adversely affect our near-term financial results and net worth. While wider market spreads may create favorable investment opportunities, our ability to take advantage of any such opportunities is limited due to various restrictions on our mortgage-related investments portfolio activities. See “MD&A - Conservatorship and Related Matters - Limits on Our Mortgage-Related Investments Portfolio and Indebtedness.”

A narrowing or tightening of the market spreads on a given asset is typically associated with an increase in the fair value of that asset. Narrowing market spreads may reduce the number of attractive investment opportunities in loans and mortgage-related securities, and could increase the cost of our activities to support the liquidity and price performance of our PCs. Consequently, a tightening of the market spreads on our assets may adversely affect our future financial results and net worth.

Changes in market spreads also affect the fair value of our debt with the fair value option elected. A narrowing or tightening of the market spreads on a given liability is typically associated with an increase in the fair value of that liability, which is recognized as a loss by us.

Negative values for certain interest rate indices could have an adverse effect on our operational and interest-rate risk management processes.

Freddie Mac purchases and securitizes various types of ARMs, and issues, invests in, and hedges with various types of adjustable rate financial instruments. Interest rates have been at historically low levels for a considerable period of time, and in certain countries have been negative. If the interest rate indices used to adjust our ARMs and other financial instruments (primarily LIBOR and Constant Maturity Treasury indices of various durations) were to become negative, our operational and interest-rate risk management processes could be adversely affected. We are evaluating the capability of our existing systems, and those of our customers and counterparties, to process negative interest rates. If these systems cannot process such rates appropriately, we may experience disruptions of our business operations, which could result in adverse effects on our relationships with customers, counterparties, and investors, damage to our reputation, and legal or regulatory actions. In addition, in the event the relevant index has a negative value, the terms of the adjustable-rate loans (originated prior to our October 2016 implementation of a new uniform ARM note) underlying certain of our outstanding ARM securities products may result in our having to pay a greater amount of interest to securities investors than we are entitled to receive on the underlying mortgages. See “MD&A - Risk Management - Market Risk” for a discussion of the implications of this issue for our measurement and management of interest-rate risk.

Risk Factors Operational Risks

OPERATIONAL RISKS

A failure in our operational systems or infrastructure, or those of third parties, could impair our liquidity, disrupt our business, damage our reputation, and cause losses.

We face significant levels of operational risk due to a variety of factors, including the complexity of our business operations and the amount of change to our core systems required to keep pace with regulatory and other requirements and business initiatives.

Shortcomings or failures in our internal processes, people or systems, or those of third parties with which we interact, could lead to impairment of our liquidity, financial and economic loss, errors in our financial statements, disruption of our business (e.g., issuing mortgage and/or debt securities), liability to customers, further legislative or regulatory intervention, or reputational damage. We have certain systems that require manual support and intervention, which may lead to heightened risk of system failures. Our business is highly dependent on our ability to process a large number of transactions on a daily basis and manage and analyze significant amounts of information, much of which is provided by third parties. The transactions we process are complex and are subject to various legal, accounting, and regulatory standards. The types of transactions we process and the standards relating to those transactions can change rapidly in response to external events, such as the implementation of government-mandated programs and changes in market conditions. Our financial, accounting, data processing, or other operating systems and facilities may fail to operate properly or become disabled, adversely affecting our ability to process these transactions. Our systems may contain design flaws. The information provided by third parties may be incorrect, or we may fail to properly manage or analyze it. The inability of our systems to accommodate an increasing volume of transactions or new types of transactions or products could constrain our ability to pursue new business initiatives or improve existing business activities. Our connectivity with our customers and counterparties continues to increase, which increases our risk exposure with respect to an operational failure of our customers' or counterparties' systems.

We have developed, and expect to continue to develop, software tools for use by our customers in the customers' loan production and other processes. These tools may fail to operate properly, which could disrupt our or our customers' business and adversely affect our relationships with our customers.

We also face increased operational risk due to the magnitude and complexity of the new initiatives we are undertaking, including our efforts to help build a better housing finance system. Some of these initiatives require significant changes to our operational systems. In some cases, the changes must be implemented within a short period of time. Our legacy systems may also create increased operational risk for these new initiatives. Internal corporate reorganizations may also increase our operational risk, particularly during the period of implementation.

We also face significant risks related to the FHFA-directed development of the single (common) security with Fannie Mae and CSS and the development and operation of the common securitization platform. The transition to the common securitization platform, which began in November 2016, presents significant operational and technological challenges. In addition, we will increasingly rely on CSS and the common securitization platform (which is owned and operated by CSS) for the operation of our single-family securitization activities, particularly after Release 2 is implemented, as described below. We currently use the common securitization platform to perform certain data acceptance, issuance support and bond administration activities for us (i.e., Release 1). In the first quarter of 2017, FHFA is expected to announce a timeframe for when we will begin to use the common securitization platform to issue and administer our

Risk Factors Operational Risks

single (common) securities (i.e., Release 2). Our business activities could be adversely affected and the market for Freddie Mac securities could be disrupted if the common securitization platform were to fail or otherwise become unavailable to us, or if CSS were unable to perform its obligations to us. Any measures we could take to mitigate these risks might not be sufficient to prevent our business from being harmed.

Our employees could act improperly for their own or third-party gain and cause unexpected losses or reputational damage. While we have processes and systems in place designed to prevent and detect fraud, there can be no assurance that such processes and systems will be successful.

Most of our key business activities are conducted in our offices in Virginia and represent a concentrated risk of people, technology, and facilities. As a result, an infrastructure disruption in the area near our offices or affecting the power grid could significantly adversely affect our ability to conduct normal business operations. A terrorist event or natural disaster in the area near our offices or affecting the power grid could have a similar impact. Any measures we take to mitigate this risk may not be sufficient to respond to the full range of events that may occur.

For information on an operational risk issue relating to our Master Trust Agreements, see "MD&A - Risk Management - Operational Risk."

Potential cyber security threats are changing rapidly and growing in sophistication. We may not be able to protect our systems or the confidentiality of our information from cyberattack and other unauthorized access, disclosure, and disruption.

Our operations rely on the secure, accurate and timely receipt, processing, storage, and transmission of confidential and other information in our computer systems and networks and with customers, counterparties, service providers, and financial institutions.

Information security risks for companies like ours have significantly increased in recent years, in part because of the proliferation of new technologies, the use of the internet and telecommunications technologies to conduct financial transactions, and the increased sophistication and activities of organized crime, hackers, terrorists and other external parties, including foreign state-sponsored actors. Like many companies and government entities, from time to time we have been, and likely will continue to be, the target of attempted cyberattacks, including malware and denial-of-service, as part of an effort to disrupt operations, potentially test cybersecurity capabilities, or obtain confidential, proprietary or other information. We could also be adversely affected by cyberattacks that target the infrastructure of the internet, as such attacks could cause widespread unavailability of websites and degrade website performance. Our risk and exposure to these matters remain heightened because of, among other things, the evolving nature of these threats, our role in the financial services industry, the outsourcing of some of our business operations, and the current global economic and political environment.

Although we devote significant resources to protecting our critical assets, there is no assurance that these measures will provide effective security. Our computer systems, software, end point devices, and networks may be vulnerable to cyberattack, unauthorized access, supply chain disruptions, computer viruses or other malicious code, or other attempts to harm them or misuse or steal information. Breaches of our security measures may result from employee error or misconduct. Outside parties may attempt to induce employees, customers, counterparties, service providers or other users of our systems to disclose sensitive information in order to gain access to our systems and the information they contain. We may not be able to anticipate, detect or recognize threats to our systems and assets, or implement effective preventative measures against security breaches, especially because the techniques used change

Risk Factors Operational Risks

frequently or are not recognized until launched.

The occurrence of one or more of such events could result in thefts of important assets (such as cash or source code), or the unauthorized disclosure, misuse or corruption of confidential and other information (including information about our borrowers, our customers or our counterparties), or could otherwise cause interruptions or malfunctions in our operations or the operations of our customers or counterparties. This could result in significant losses or reputational damage, adversely affect our relationships with our customers and counterparties, negatively affect our competitive position, and otherwise harm our business. We could also face regulatory and other legal action. We might be required to expend significant additional resources to modify our protective measures or to investigate and remediate vulnerabilities or other exposures, and we might be subject to litigation and financial losses that are not fully insured. In addition, there can be no assurance that customers, counterparties, financial intermediaries, and governmental organizations are adequately protecting the information that we share with them. As a result, a cyberattack on their systems and networks, or breach of their security measures, may result in harm to our business and business relationships.

We rely on third parties for certain important functions. Any failures by those vendors and service providers could disrupt our business operations or expose us to loss of confidential information or intellectual property.

We are increasing our use of vendors and service providers, which increases our risk exposure to possible failures in their risk and control environments. We outsource certain key functions to external parties, including some that are critical to financial reporting (including our adoption of hedge accounting), valuations, our mortgage-related investment activity, loan underwriting, loan servicing, and PC issuance (i.e., CSS). We may enter into other key outsourcing relationships in the future. If one or more of these key external parties were not able to perform their functions for a period of time, perform them at an acceptable service level, or handle increased volumes, or if one of them experiences a disruption in its own business or technology from any cause, including an internet security breach, our business operations could be constrained, disrupted, or otherwise negatively affected. Our use of vendors also exposes us to the risk of losing intellectual property or confidential information and to other harm, including to our reputation. Our ability to monitor the activities or performance of vendors may be constrained, which may make it difficult for us to assess and manage the risks associated with these relationships.

We face risks and uncertainties associated with the models that we use to inform business and risk management decisions and for financial accounting and reporting purposes.

Models are inherently imperfect predictors of actual results. We use models to project significant factors in our businesses including, but not limited to, interest rates, house prices, and mortgage rates under a variety of scenarios.

We also use models to project borrower prepayment, default behavior, and loss severity over long periods of time.

There is inherent uncertainty associated with model projections of economic variables and the downstream projections of prepayment and default behavior dependent on these variables.

Uncertainty and risks related to models may arise from a number of sources, including the following:

We could fail to implement, operate, adjust, or use our models as intended. We may fail to code a model correctly, we could use incorrect or insufficient data inputs or fail to fully understand the data inputs, or model implementation software could malfunction. The complexity and interconnectivity of

Risk Factors Operational Risks

our models create additional risk regarding the accuracy of model output. We may not be able to deploy or update models in a timely manner.

The data we use as inputs into our models, much of which we receive from third-party data providers, may be inaccurate.

When market conditions change in unforeseen ways, our model projections may not accurately reflect these conditions or we may not fully understand the model outputs. For example, models may not fully reflect the effect of certain government policy changes or new industry trends. In such cases, it is often necessary to make assumptions and judgments to accommodate the effect of scenarios that are not sufficiently well represented in the historical data. While we may adjust our models in response to new events, considerable residual uncertainty remains.

We also use select third-party vendor models. While the use of such models may reduce our risk where no internal model is available, it exposes us to additional risk, as third parties typically do not provide us with proprietary information regarding their models. We have little control over the process by which vendor models are adjusted or changed. As a result, we may be unable to fully evaluate the risks associated with the use of such models.

We risk making poor business decisions in situations where we rely on models to provide key information. Our use of models could affect decisions concerning the purchase, sale and securitization of loans, the purchase and sale of securities, funding, the setting of guarantee fee prices, and the management of interest-rate, market, or credit risk. Our use of models also affects our quality-control sampling strategies for loans in our single-family credit guarantee portfolio and potential settlements with our counterparties. Our adoption of hedge accounting will increase our reliance on models for financial reporting. See “MD&A - Risk Management - Market Risk” and “Critical Accounting Policies and Estimates” for more information on our use of models.

Risk Factors Liquidity Risks

LIQUIDITY RISKS

Our activities may be adversely affected by limited availability of financing and increased funding costs.

The amount, type, and cost of our unsecured funding, including financing from other financial institutions and the capital markets, directly affects our interest expense and results of operations. A number of factors could make such financing more difficult to obtain, more expensive or unavailable on any terms, both domestically and internationally, including:

- Market and other factors;
- Changes in U.S. government support for us;
- Reduced demand for our debt securities; and
- Competition for debt funding from other debt issuers

Market and Other Factors

Our ability to obtain funding in the public unsecured debt markets or by selling or pledging mortgage-related and other securities as collateral to other institutions could cease or change rapidly. The cost of available funding could increase significantly due to changes in market interest rates, market confidence, operational risks, regulatory requirements and other factors. We may incur higher funding costs due to our liquidity management practices and procedures. There can be no assurance that such practices and procedures would provide us with sufficient liquidity to meet our ongoing cash obligations under all circumstances. In particular, we believe that our liquidity contingency plans may be difficult or impossible to execute during a liquidity crisis or period of significant market turmoil. If we cannot access the unsecured debt markets, our ability to repay maturing indebtedness and fund our operations could be eliminated or significantly impaired, as our alternative sources of liquidity (e.g., cash and other investments) may not be sufficient to meet our liquidity needs.

We make extensive use of the Federal Reserve's payment system in our business activities. The Federal Reserve requires that we fully fund accounts at the Federal Reserve Bank of New York to the extent necessary to cover cash payments on our debt and mortgage-related securities each day, before the Federal Reserve Bank of New York, acting as our fiscal agent, will initiate such payments. Although we seek to maintain sufficient intraday liquidity to fund our activities through the Federal Reserve's payment system, we have limited access to cash once the debt markets are closed for the day. Insufficient cash may cause our account to be overdrawn, potentially resulting in penalties and reputational harm.

Prolonged wide market spreads on long-term debt could cause us to reduce our long-term debt issuances and further increase our reliance on short-term and callable debt issuances. This increased reliance could increase the risk that we may be unable to refinance our debt when it becomes due and result in a greater use of derivatives. This greater use of derivatives could increase the volatility of our comprehensive income or increase our credit exposure to our counterparties.

Our mortgage-related investments portfolio has contracted significantly since we entered into conservatorship, but continues to contain assets that are less liquid than agency securities. Our ability to use these less liquid assets as a significant source of liquidity (for example, through sales or use as collateral in secured lending transactions) is limited.

Risk Factors Liquidity Risks

We pay net worth sweep dividends to Treasury on the senior preferred stock on a quarterly basis. The amount of the net worth sweep dividend could vary substantially from quarter to quarter for a number of reasons, including as a result of non-cash changes in net worth. It is possible that, due to non-cash increases in net worth, such as increases in the fair value of our securities or a reduction in our loan loss reserves, the amount of our dividend for a quarter could exceed the amount of available cash, which could have an adverse effect on our financial results.

Changes in U.S. Government Support

Treasury supports us through the Purchase Agreement and Treasury's ability to purchase up to \$2.25 billion of our obligations under its permanent statutory authority. Unlike certain of our competitors, we do not have access to the Federal Reserve's discount window or emergency credit facilities. Changes or perceived changes in the U.S. government's support for us could have a severe negative effect on our access to the unsecured debt markets and our debt funding costs. Our access to the unsecured debt markets and the costs of our debt funding could be adversely affected by a number of factors relating to U.S. government support, including:

• Uncertainty about the future of the GSEs;

• If debt investors become concerned that the risk of us being placed in receivership is increasing; and

• Future draws that significantly reduce the amount of available funding remaining under the Purchase Agreement.

For more information, see "MD&A - Liquidity and Capital Resources - Capital Resources."

Reduced Demand for Debt Securities

If investor demand for our debt securities were to decrease, our liquidity, business, and results of operations could be materially adversely affected. The willingness of domestic and foreign investors to purchase and hold our debt securities can be influenced by many factors, including changes in the world economy, changes in foreign-currency exchange rates, regulatory and political factors, as well as the availability of and investor preferences for other investments. If investors were to divest their holdings or reduce their purchases of our debt securities, our funding costs could increase and our business activities could be curtailed.

The market for our debt securities may become less liquid as the size of our mortgage-related investments portfolio declines, as we will be issuing fewer debt securities. This could lead to a decrease in demand for our debt securities and an increase in our funding costs.

Competition for Debt Funding

We compete for debt funding with Fannie Mae, the FHLBs, and other institutions. Competition for debt funding from these entities can vary with changes in economic, financial market, and regulatory environments. Increased competition for debt funding may result in a higher cost to finance our business, which could negatively affect our financial results. See "MD&A - Our Business Segments - Investments" for a description of our debt issuance programs. Our funding costs and liquidity contingency plans may also be affected by changes in the amount of, and demand for, debt issued by Treasury.

Risk Factors Liquidity Risks

Any downgrade in the credit ratings of the U.S. government would likely be followed by a downgrade in our credit ratings. A downgrade in the credit ratings of our debt could adversely affect our liquidity and other aspects of our business.

Our credit ratings are important to our liquidity. We currently receive ratings for our unsecured debt from three nationally recognized statistical rating organizations (S&P, Moody's, and Fitch). These ratings are primarily based on the support we receive from Treasury, and therefore are affected by changes in the credit ratings of the U.S. government. Any downgrade in the credit ratings of the U.S. government would be expected to be followed or accompanied by a downgrade in our credit ratings. In addition to a downgrade in the credit ratings of or outlook on the U.S. government, a number of other events could adversely affect our debt credit ratings, including actions by governmental entities, changes in government support for us, future GAAP losses, and additional draws under the Purchase Agreement. Any such downgrades could lead to major disruptions in the mortgage and financial markets and to our business due to lower liquidity, higher borrowing costs, lower asset values, and higher credit losses, and could cause us to experience net losses and net worth deficits. A downgrade in our credit ratings could require us to post additional collateral to certain of our derivative and other counterparties.

For more information, see "MD&A - Liquidity and Capital Resources - Liquidity Profile - Credit Ratings."

Risk Factors Legal and Regulatory Risks

LEGAL AND REGULATORY RISKS

Legislative or regulatory actions could adversely affect our business activities and financial results.

We operate in a highly regulated industry and are subject to heightened supervision from FHFA, as our Conservator.

Our compliance systems and programs may not be adequate to ensure that we are in compliance with all legal and other requirements. We could incur fines or other negative consequences for inadvertent violations.

Our business may be directly adversely affected by future legislative and regulatory actions at the federal, state, and local levels, including actions by FHFA as Conservator. Judicial actions at the federal, state, or local level could also adversely affect us. Legislative, regulatory or judicial actions could affect us in a number of ways, including by imposing significant additional legal, compliance and other costs on us, limiting our business activities and diverting management attention or other resources.

For example, our ability to recruit and retain executives and other employees with the necessary skills to conduct our business may be adversely affected by legislative or regulatory actions (e.g., significant restrictions on compensation).

We could also be negatively affected by legislative, regulatory or judicial action that:

• Changes the foreclosure process of any individual state;

• Limits or otherwise adversely affects the rights of a holder of a first lien on a mortgage (such as through granting priority rights in foreclosure proceedings for homeowner associations or through initiatives that provide a lien priority in connection with loans to finance energy efficiency or similar improvements);

• Expands the responsibilities of (and costs to) servicers for maintaining vacant properties prior to foreclosure;

• Permits or requires principal reductions, such as allowing local governments to use eminent domain to seize mortgage loans and forgive principal on the loans; or

• Prevents us from using the MERS System or disrupts foreclosures of loans registered in the MERS System.

Our business could also be adversely affected by any modification, reduction, or repeal of the federal income tax deductibility of mortgage loan interest payments or changes to other mortgage-related tax benefits.

We are subject to complex and evolving laws and regulations governing privacy and the protection of personal information of individuals. Our business could be adversely affected if we fail to protect the confidentiality of such information or if it is mishandled or misused.

The Dodd-Frank Act significantly changed the regulation of loans and the financial services industry and could continue to affect us in substantial ways. For example, the Dodd-Frank Act and related regulatory changes could cause or require us to make further changes to our business practices, such as practices related to mortgage underwriting and servicing.

Legislation or regulatory actions could indirectly adversely affect us to the extent they affect the activities of banks, savings institutions, insurance companies, derivative counterparties, clearinghouses, securities

Risk Factors Legal and Regulatory Risks

dealers, and other regulated entities that constitute a significant portion of our customers or counterparties, or to the extent that they modify industry practices. Legislative or regulatory actions that remove incentives for these entities to purchase our securities or enter into derivatives or other transactions with us could have a material adverse effect on our business and financial results. For example, changes in business practices resulting from the Dodd-Frank Act and related regulatory changes could have a negative effect on the volume of loan originations or could modify or remove incentives for financial institutions to sell loans to us, either of which could adversely affect the number of loans available for us to purchase or guarantee.

The Basel III standards could affect demand for our debt and mortgage-related securities.

U.S. banking regulators have substantially revised the capital and liquidity requirements applicable to banking organizations, based on the Basel III standards developed by the Basel Committee on Banking Supervision. Phase-in of the new bank capital and liquidity requirements will take several years. The new requirements do not directly apply to us, and there is significant uncertainty about the extent to which implementation of the new requirements by banking organizations may affect us. For example, the emerging regulatory framework could decrease demand for our debt and mortgage-related securities and/or affect competition in the market for loan originations and servicing, with possible adverse consequences for our business and financial results. In addition, the phase-in of enhanced capital and liquidity requirements for banking organizations may reduce the level of participation of such organizations in (and thus the liquidity of) trading markets for various types of financial instruments, including asset-backed securities. In turn, this could decrease the liquidity of the markets for our debt and mortgage-related securities, which could increase our funding and other costs and adversely affect our business.

In January 2016, the Basel Committee on Banking Supervision issued revised standards for minimum capital requirements for market risk. These standards are also applicable to banking organizations. In addition, the Basel Committee is considering further revisions to the Basel III standards.

There is significant uncertainty as to when, and the extent to which, U.S. banking regulators will adopt any new standards, and the effect any such standards may have on us.

We may make certain changes to our business in an attempt to meet our housing goals and subgoals, which may cause us to forgo other more profitable opportunities.

We may make adjustments to our loan sourcing and purchase strategies in an effort to meet our housing goals and subgoals, including relaxing some of our underwriting standards and the expanded use of targeted initiatives to reach underserved populations. For example, we may purchase loans that offer lower expected returns on our investment and potentially increase our exposure to credit losses. Doing so could cause us to forgo other purchase opportunities that we would expect to be more profitable.

It is possible that we could also make changes to our business in the future in response to our duty to serve underserved markets that could adversely affect our profitability. If we do not meet our housing goals or duty to serve requirements, and FHFA finds that we could have met the goals or satisfied the requirements, we may become subject to a housing plan that could require us to take additional steps that could potentially adversely affect our profitability. Due to our failure to meet two single-family housing goals for 2014, we are operating under an FHFA-required housing plan that addresses how we intend to achieve the missed goals in 2016 and 2017. Due to our failure to meet two single-family housing goals for 2015, FHFA has extended our housing plan through 2018. If we fail to comply with the plan, FHFA could

Risk Factors Legal and Regulatory Risks

take additional action against us.

We are involved in legal proceedings that could result in the payment of substantial damages or otherwise harm our business.

We are a party to various claims and other legal proceedings. We also have been, and in the future may be, involved in governmental investigations and regulatory proceedings and IRS examinations. In addition, certain of our former officers are involved in legal proceedings for which they may be entitled to reimbursement by us for costs and expenses of the proceedings. We may be required to establish reserves and to make substantial payments in the event of adverse judgments or settlements of any such claims, proceedings, investigations or examinations. Any legal proceeding, governmental investigation, or IRS examination issue, even if resolved in our favor, could result in negative publicity or cause us to incur significant legal and other expenses. Furthermore, the costs (including settlement costs) related to these legal proceedings and governmental investigations and examinations may differ from our expectations and exceed any amounts for which we have reserved or require adjustments to such reserves. These various matters could divert management's attention and other resources from the needs of the business. In addition, a number of lawsuits have been filed against the U.S. government relating to conservatorship and the Purchase Agreement that could adversely affect us. See "Legal Proceedings" and Note 14 for information about these various pending legal proceedings.

Freddie Mac 2016 Form 10-K 203

Risk Factors Other Risks

OTHER RISKS

Our investment activity is significantly limited under the Purchase Agreement and by FHFA, which will reduce our earnings from investment activities over time and result in greater reliance on our guarantee activities to generate revenue.

Declines in the size of our mortgage-related investments portfolio, as required by the Purchase Agreement and FHFA, will reduce our earnings over the long term. We are also subject to other limitations on our investment activity, including significant constraints on our ability to purchase or sell mortgage assets. These limitations will reduce the earnings capacity of our mortgage-related investments portfolio. We can provide no assurance that the cap on our mortgage-related investments portfolio will not, over time, force us to sell mortgage assets at unattractive prices or that our current strategies will not have an adverse impact on our business or financial results. For more information, see “MD&A - Conservatorship and Related Matters - Limits on Our Mortgage-Related Investments Portfolio and Indebtedness.”

Due to the reduced earnings capacity of our mortgage-related investments portfolio, we will have to place greater emphasis on our guarantee activities to generate revenue. However, our ability to generate revenue through guarantee activities may be limited for a number of reasons. We may be required to adopt business practices that help serve our public mission and other non-financial objectives, but that may negatively affect our future financial results. We must obtain FHFA’s approval to implement across-the-board increases in our guarantee fees, and there can be no assurance FHFA will approve any such increase requests in the future. Congress or FHFA may require us to set aside or otherwise pay monies to fund third party initiatives, such as the existing requirement under the GSE Act that we allocate amounts for certain housing funds. The combination of the restrictions on our business activities and our potential inability to generate sufficient revenue through our guarantee activities to offset the effects of those restrictions may have an adverse effect on our results of operations and financial condition.

The loss of business from a key customer or a decrease in the availability of mortgage insurance could result in a decline in our market share and revenues.

Our business depends on our ability to acquire a steady flow of loans. We purchase a significant percentage of our single-family loans from several large loan originators. Similarly, we acquire a significant portion of our multifamily loans from several large lenders. For more information, see Note 12.

We enter into loan purchase commitments with many of our single-family customers that are typically less than one year in duration. Lenders may fail to deliver loans to us in accordance with their commitments. The loss of business from any of our major lenders could adversely affect our market share and our revenues.

Our Charter requires that single-family loans with LTV ratios above 80% at the time of purchase be covered by mortgage insurance or other credit enhancements. If the availability of mortgage insurance for loans with LTV ratios above 80% is reduced, we may be restricted in our ability to purchase or securitize such loans. This could reduce our overall volume of new business.

Risk Factors Other Risks

Competition from banking and non-banking institutions (including Fannie Mae and FHA/VA with Ginnie Mae securitization) may harm our business. FHFA's actions as Conservator of both companies could affect competition between us and Fannie Mae.

Competition in the secondary mortgage market may make it more difficult for us to purchase mortgage loans. Furthermore, competitive pricing pressures may make our products less attractive in the market and negatively affect our financial results. Increased competition from Fannie Mae and FHA/VA (with Ginnie Mae securitization), and new entrants may alter our product mix, lower our volumes, and reduce our revenues on new business.

We also compete with other financial institutions that retain or securitize loans, such as commercial and investment banks, dealers, savings institutions, and insurance companies. In recent years, FHFA took a number of actions designed to encourage these other financial institutions to increase their activities in the mortgage market (e.g., increasing our guarantee fees in 2012), and could take additional actions in the future. There is a risk that financial institutions may retain loans with better credit characteristics rather than sell them to us, or otherwise seek to structure financial transactions that result in our loan purchases having a higher proportion of loans with lower credit scores and higher LTV ratios. While we compensate ourselves for higher levels of credit risk through charging upfront delivery fees, sellers' retention of loans with better credit characteristics could result in us having lower overall purchase volumes, revenues, and returns (as a result of us having loans with a more adverse credit risk profile).

FHFA is also Conservator of Fannie Mae, our primary competitor. FHFA's actions as Conservator of both companies could affect competition between us and Fannie Mae. It is possible that FHFA could require us and Fannie Mae to take a uniform approach that, because of differences in our respective businesses, could place Freddie Mac at a competitive disadvantage to Fannie Mae. FHFA may also prevent us from taking actions that could give us a competitive advantage.

We have faced increased competition in the multifamily market in recent years from life insurers, banks, CMBS conduits, and other market participants as multifamily market fundamentals have improved. FHFA may take actions that could encourage further competition.

A significant decline in the price performance of or demand for our PCs could have an adverse effect on the volume and/or profitability of our new single-family guarantee business.

The price performance of our PCs relative to comparable Fannie Mae securities is one of Freddie Mac's more significant risks and competitive issues, with both short- and long-term implications. Our PCs are an integral part of our loan purchase program. Our competitiveness in purchasing single-family loans from our sellers and the volume and/or profitability of our new single-family guarantee business are directly affected by the price performance of our PCs relative to comparable Fannie Mae securities.

Freddie Mac fixed-rate PCs provide for faster scheduled monthly remittance of loan principal and interest payments to investors than Fannie Mae fixed-rate securities. Despite the faster remittance cycle of our PCs, our PCs have typically traded at a discount relative to comparable Fannie Mae securities. This difference in relative pricing creates an economic incentive for sellers to conduct a disproportionate share of their single-family business with Fannie Mae. There may not be a liquid market for our PCs, which could adversely affect the price performance of PCs and our single-family market share. A significant reduction in our market share, and thus in the volume of loans that we securitize, or a reduction in the trading volume of our PCs, could further reduce the liquidity

Risk Factors Other Risks

of our PCs. While we may employ various strategies to support the liquidity and price performance of our PCs, and may consider additional strategies, those strategies may fail or adversely affect our business. We may cease such activities at any time, or FHFA could require us to do so, which could adversely affect the liquidity and price performance of our PCs.

The liquidity-related price differences between our PCs and comparable Fannie Mae securities could be influenced by factors that are largely outside of our control. For example, the level of the Federal Reserve's purchases of agency mortgage-related securities could affect the demand for and values of our PCs. Therefore, any strategies we employ to reduce the liquidity-related price differences may not reduce or eliminate these price differences over the long-term. In certain circumstances, we compensate sellers for the difference in price between our PCs and comparable Fannie Mae securities by reducing our guarantee fees, which adversely affects the profitability of our single-family guarantee business. We also incur costs in connection with our efforts to support the liquidity and price performance of our PCs, including by engaging in transactions that yield less than our target rate of return. For more information, see "MD&A - Our Business Segments - Single-Family Guarantee - Business Overview - Products and Activities" and "- Investments Segment - Business Overview - Products and Activities."

In accordance with FHFA's 2014 Strategic Plan and the Conservatorship Scorecards, we are developing a single (common) security, which is designed to reduce the price performance disparities between the mortgage-related securities of Freddie Mac and Fannie Mae. This initiative is complex and costly, and may require us to align our business processes more closely with those of Fannie Mae. It is possible that we could experience a disruption in the liquidity of Freddie Mac securities during the period in which we transition to the single (common) security. Further, there can be no assurance that a single (common) security will reduce the pricing disparities discussed above. The single (common) security initiative will also cause us to have counterparty credit exposure to Fannie Mae. Once the initiative is implemented, investors will be able to commingle Freddie Mac and Fannie Mae securities in resecuritizations. When we resecuritize Fannie Mae securities, our guarantee of principal and interest would extend to the underlying Fannie Mae securities. In the event Fannie Mae were to fail to make a payment on a Fannie Mae security that we resecuritized, Freddie Mac would be responsible for making the payment. We will not control or limit the amount of resecuritized Fannie Mae securities that we could be required to guarantee. We will be dependent on FHFA, Fannie Mae and Fannie Mae's and our Purchase Agreements with Treasury to avoid a liquidity event or default. We are not planning to modify our liquidity strategies to address the possibility of non-timely payment by Fannie Mae.

The profitability of our multifamily business could be adversely affected by a significant decrease in demand for our K Certificates and SB Certificates.

Our current Multifamily business model is highly dependent on our ability to finance purchased multifamily loans through securitization into K Certificates and SB Certificates. A significant decrease in demand for K Certificates and SB Certificates could have an adverse impact on the profitability of the Multifamily business to the extent that our holding period for the loans increases and we are exposed to credit, spread and other market risks for a longer period of time. We employ various strategies to support the liquidity of our K Certificates and SB Certificates, and may consider additional strategies. From time to time, we purchase and sell guaranteed K Certificates and SB Certificates and related unguaranteed securities associated with K Certificates and SB Certificates as well as our other securitization products

Risk Factors Other Risks

through our mortgage-related investments portfolio.

There may not be an active, liquid trading market for our equity securities.

Our common stock and the publicly traded classes of our preferred stock trade exclusively on the OTCQB Marketplace. Trading volumes on the OTCQB Marketplace can fluctuate significantly, which could make it difficult for investors to execute transactions in our securities and could cause declines or volatility in the prices of our equity securities.

Freddie Mac 2016 Form 10-K 207

Legal Proceedings

LEGAL PROCEEDINGS

We are involved as a party to a variety of legal proceedings arising from time to time in the ordinary course of business. See Note 14 for more information regarding our involvement as a party to various legal proceedings. We discuss below certain litigation against the U.S. government concerning conservatorship and the Purchase Agreement. Over the last several years, a number of lawsuits have been filed against the U.S. government and, in some cases, the Secretary of the Treasury and the Director of FHFA. These lawsuits challenge certain government actions related to the conservatorship (including actions taken in connection with the imposition of conservatorship) and the Purchase Agreement. Several of the lawsuits seek to invalidate the net worth sweep dividend provisions of the senior preferred stock, which were implemented pursuant to the August 2012 amendment to the Purchase Agreement. A number of cases have been dismissed. Cases are currently pending in the U.S. Court of Federal Claims, the U.S. District Court for the Northern District of Iowa, the U.S. District Court for the Northern District of Illinois, and the U.S. District Court for the Southern District of Texas. In addition, plaintiffs are appealing a September 2014 order by the U.S. District Court for the District of Columbia to dismiss such parties' cases in that Court and a September 2016 order by the U.S. District Court for the Eastern District of Kentucky to dismiss the case in that Court. It is possible that additional similar lawsuits will be filed in the future.

Freddie Mac is not a party to any of these lawsuits. However, a number of other lawsuits have been filed against Freddie Mac concerning the August 2012 amendment to the Purchase Agreement. See Note 14 for information on the lawsuits filed against Freddie Mac. Pershing Square Capital Management, L.P. ("Pershing") is a plaintiff in one of the lawsuits filed against Freddie Mac. Pershing has filed reports with the SEC, most recently in March 2014, indicating that it beneficially owned more than 5% of our common stock. We do not know Pershing's current beneficial ownership of our common stock. For more information, see "Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters."

It is not possible for us to predict the outcome of these lawsuits (including the outcome of any appeal), or the actions the U.S. government (including Treasury and FHFA) might take in response to any ruling or finding in any of these lawsuits or any future lawsuits. However, it is possible that we could be adversely affected by these events, including, for example, by changes to the Purchase Agreement, or any resulting actual or perceived changes in the level of U.S. government support for our business.

MARKET INFORMATION

Our common stock, par value \$0.00 per share, trades on the OTCQB Marketplace, operated by the OTC Markets Group Inc., under the ticker symbol "FMCC." As of February 2, 2017, there were 650,053,863 shares of our common stock outstanding.

The table below sets forth the high and low bid information for our common stock on the OTCQB Marketplace for the indicated periods and reflects inter-dealer prices, without retail mark-up, mark-down, or commission, and may not necessarily represent actual transactions.

	High	Low
2016 Quarter Ended		
December 31	\$4.84	\$1.52
September 30	1.90	1.46
June 30	2.20	1.21
March 31	1.75	0.97
2015 Quarter Ended		
December 31	\$2.67	\$1.57
September 30	2.61	1.90
June 30	2.84	2.18
March 31	3.32	2.04

HOLDERS

As of February 2, 2017, we had 1,740 common stockholders of record.

DIVIDENDS AND DIVIDEND RESTRICTIONS

We did not pay any cash dividends on our common stock during 2016 or 2015. Our payment of dividends is subject to the following restrictions:

Restrictions Relating to the Conservatorship - The Conservator has prohibited us from paying any dividends on our common stock or on any series of our preferred stock (other than the senior preferred stock). FHFA has instructed our Board of Directors that it should consult with and obtain the approval of FHFA before taking actions involving dividends. In addition, FHFA has adopted a regulation prohibiting us from making capital distributions during conservatorship, except as authorized by the Director of FHFA.

Restrictions Under the Purchase Agreement - The Purchase Agreement prohibits us and any of our subsidiaries from declaring or paying any dividends on Freddie Mac equity securities (other than with respect to the senior preferred stock or warrant) without the prior written consent of Treasury.

Market for Registrant's Common Equity, Related Stockholder Matters, and Issuer Purchases of Equity Securities

Restrictions Under the GSE Act - Under the GSE Act, FHFA has authority to prohibit capital distributions, including payment of dividends, if we fail to meet applicable capital requirements. However, our capital requirements have been suspended during conservatorship.

Restrictions Under our Charter - Without regard to our capital classification, we must obtain prior written approval of FHFA to make any capital distribution that would decrease total capital to an amount less than the risk-based capital level or that would decrease core capital to an amount less than the minimum capital level. As noted above, our capital requirements have been suspended during conservatorship.

Restrictions Relating to Subordinated Debt - During any period in which we defer payment of interest on qualifying subordinated debt, we may not declare or pay dividends on, or redeem, purchase or acquire, our common stock or preferred stock. Our qualifying subordinated debt provides for the deferral of the payment of interest for up to five years if either our core capital is below 125% of our critical capital requirement or our core capital is below our statutory minimum capital requirement, and the Secretary of the Treasury, acting on our request, exercises his or her discretionary authority pursuant to Section 306(c) of our Charter to purchase our debt obligations. FHFA has directed us to make interest and principal payments on our subordinated debt, even if we fail to maintain required capital levels. As a result, the terms of any of our subordinated debt that provide for us to defer payments of interest under certain circumstances, including our failure to maintain specified capital levels, are no longer applicable.

Restrictions Relating to Preferred Stock - Payment of dividends on our common stock is also subject to the prior payment of dividends on our 24 series of preferred stock and one series of senior preferred stock, representing an aggregate of 464,170,000 shares and 1,000,000 shares, respectively, outstanding as of December 31, 2016. Payment of dividends on all outstanding preferred stock, other than the senior preferred stock, is subject to the prior payment of dividends on the senior preferred stock. We paid dividends on the senior preferred stock during 2016 at the direction of the Conservator, as discussed in "MD&A - Liquidity and Capital Resources" and Note 9. We did not declare or pay dividends on any other series of preferred stock outstanding in 2016.

RECENT SALES OF UNREGISTERED SECURITIES

The securities we issue are "exempted securities" under the Securities Act of 1933. As a result, we do not file registration statements with the SEC with respect to offerings of our securities.

Following our entry into conservatorship, we suspended the operation of, and ceased making grants under, equity compensation plans. Previously, we had provided equity compensation under these plans to employees and members of our Board of Directors. Under the Purchase Agreement, we cannot issue any new options, rights to purchase, participations, or other equity interests without Treasury's prior approval. However, grants outstanding as of the date of the Purchase Agreement remain in effect in accordance with their terms. No stock options were exercised during the three months ended December 31, 2016. See Note 9 for more information.

ISSUER PURCHASES OF EQUITY SECURITIES

We did not repurchase any of our common or preferred stock during 2016. Additionally, we do not currently have any outstanding authorizations to repurchase common or preferred stock. Under the Purchase Agreement, we cannot repurchase our common or preferred stock without Treasury's prior

Market for Registrant's Common Equity, Related Stockholder Matters, and Issuer Purchases of Equity Securities

consent, and we may only purchase or redeem the senior preferred stock in certain limited circumstances set forth in the certificate of designation of the senior preferred stock.

Freddie Mac 2016 Form 10-K 211

Financial Statements

FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

Freddie Mac 2016 Form 10-K 212

Financial Statements Report of Independent Registered Public Accounting Firm

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Stockholders of Freddie Mac

In our opinion, the accompanying consolidated balance sheets and the related consolidated statements of comprehensive income, of equity, and of cash flows present fairly, in all material respects, the financial position of Freddie Mac, a stockholder-owned government sponsored enterprise, and its subsidiaries (the "Company") at December 31, 2016 and 2015, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2016 in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, the Company did not maintain, in all material respects, effective internal control over financial reporting as of December 31, 2016, based on criteria established in Internal Control - Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) because a material weakness in internal control over financial reporting related to disclosure controls and procedures that do not provide adequate mechanisms for information known to the Federal Housing Finance Agency ("FHFA") that may have financial statement disclosure ramifications to be communicated to management of Freddie Mac existed as of that date. A material weakness is a deficiency, or a combination of deficiencies, in internal control over financial reporting, such that there is a reasonable possibility that a material misstatement of the annual or interim financial statements will not be prevented or detected on a timely basis. The material weakness referred to above is described in Management's Report on Internal Control Over Financial Reporting, appearing under "Controls and Procedures." We considered this material weakness in determining the nature, timing, and extent of audit tests applied in our audit of the 2016 consolidated financial statements, and our opinion regarding the effectiveness of the Company's internal control over financial reporting does not affect our opinion on those consolidated financial statements. The Company's management is responsible for these financial statements, for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting included in management's report referred to above. Our responsibility is to express opinions on these financial statements and on the Company's internal control over financial reporting based on our integrated audits. We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

As discussed in "Note 2: Conservatorship and Related Matters," in September 2008, the Company was placed into conservatorship by FHFA. The U.S. Department of the Treasury ("Treasury") has committed financial support to the Company and management continues to conduct business operations pursuant to

Financial Statements Report of Independent Registered Public Accounting Firm

the delegated authorities from FHFA during conservatorship. The Company is dependent upon the continued support of Treasury and FHFA.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Non-cash investing and financing activities (Notes 4 and 5)			

The accompanying notes are an integral part of these consolidated financial statements.

Freddie Mac 2016 Form 10-K 218

Financial Statements Notes to the Consolidated Financial Statements | Note 1

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

NOTE 1: SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Freddie Mac is a GSE chartered by Congress in 1970. Our public mission is to provide liquidity, stability, and affordability to the U.S. housing market. We are regulated by FHFA, the SEC, HUD, and Treasury, and are currently operating under the conservatorship of FHFA. For more information on the roles of FHFA and Treasury, see Note 2. Throughout our consolidated financial statements and related notes, we use certain acronyms and terms which are defined in the “Glossary.”

BASIS OF PRESENTATION

The accompanying consolidated financial statements have been prepared in accordance with GAAP and include our accounts as well as the accounts of other entities in which we have a controlling financial interest. All intercompany balances and transactions have been eliminated.

We are operating under the basis that we will realize assets and satisfy liabilities in the normal course of business as a going concern and in accordance with the delegation of authority from FHFA to our Board of Directors and management. Certain amounts in prior periods’ consolidated financial statements have been reclassified to conform to the current presentation.

We evaluate the materiality of identified errors in the financial statements using both an income statement, or “rollover,” and a balance sheet, or “iron curtain,” approach, based on relevant quantitative and qualitative factors. Net income includes certain adjustments to correct immaterial errors related to previously reported periods.

USE OF ESTIMATES

The preparation of financial statements requires us to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses and gains and losses during the reporting period. Management has made significant estimates in preparing the financial statements for establishing the allowance for loan losses and reserve for guarantee losses, valuing financial instruments and other assets and liabilities, and assessing impairments on investments. Actual results could be different from these estimates.

CHANGE IN ESTIMATE

Adoption of Regulatory Guidance on Determining when a Loan is Uncollectible

On January 1, 2015, we adopted regulatory guidance issued by FHFA that establishes guidelines for adverse classification and identification of specified single-family and multifamily assets, including

Financial Statements Notes to the Consolidated Financial Statements | Note 1

guidelines for recognizing charge-offs on certain single-family loans. We analyze loans for collectability based on several factors, including, but not limited to:

- Servicing actions that indicate the potential for near-term loss mitigation, such as whether we have achieved quality borrower contact;

- Credit risk factors, such as whether the loan is in a state with foreclosure practices that prevent timely resolution of delinquencies; and

- Loan characteristics that indicate whether repayment is likely to occur, such as the borrower's payment history, loan status, and historical performance of loans with similar characteristics.

Upon adoption, we changed the timing of when we deem certain single-family loans to be uncollectible, and we began to charge-off the amount of recorded investment in excess of the fair value of the underlying collateral for loans that have been deemed uncollectible prior to foreclosure, based on the factors identified above.

This adoption resulted in a reduction to both the recorded investment of loans, held-for-investment, and our allowance for loan losses of \$1.9 billion on January 1, 2015. However, these additional charge-offs did not have a material impact on our comprehensive income for 2015, as we had already reserved for these losses in our allowance for loan losses in prior periods.

CONSOLIDATION AND EQUITY METHOD ACCOUNTING

For each entity with which we are involved, we determine whether the entity should be consolidated in our financial statements. We generally consolidate entities in which we have a controlling financial interest. The method for determining whether a controlling financial interest exists varies depending on whether the entity is a VIE. For entities that are not VIEs, we hold a controlling financial interest in entities where we hold a majority of the voting rights or where we are able to exercise control through substantive participating rights or as a general partner. We do not currently consolidate any entities which are not VIEs. We use the equity method to account for our interests in entities in which we do not have a controlling financial interest, but over which we have significant influence.

CASH AND CASH EQUIVALENTS

Highly liquid investment securities that have an original maturity of three months or less are accounted for as cash equivalents.

RESTRICTED CASH AND CASH EQUIVALENTS

Cash collateral accepted from counterparties that we do not have the right to use for general corporate purposes is recorded as restricted cash in our consolidated balance sheets. Restricted cash includes cash remittances received from servicers of the underlying assets of our consolidated trusts, as well as cash remittances received on mortgage loans we own, which are deposited into a separate custodial account. We invest the cash held in the custodial account in short-term investments and are entitled to the interest income earned on these short-term investments, which is recorded as interest income, other on our consolidated statements of comprehensive income.

Financial Statements Notes to the Consolidated Financial Statements | Note 1

COMPREHENSIVE INCOME

Comprehensive income includes all changes in equity during a period, except those resulting from investments by stockholders. We define comprehensive income as consisting of net income (loss) plus after-tax changes in:

- The unrealized gains and losses on available-for-sale securities;
- The effective portion of derivatives accounted for as cash flow hedge relationships; and
- Defined benefit plans.

OTHER SIGNIFICANT ACCOUNTING POLICIES

The table below identifies our other significant accounting policies and the related note in which information about them can be found.

Financial Statements Notes to the Consolidated Financial Statements | Note 1

RECENTLY ISSUED ACCOUNTING GUIDANCE

Recently Adopted Accounting Guidance

Standard	Description	Date of Adoption	Effect on Consolidated Financial Statements
ASU 2015-02, Amendments to the Consolidation Analysis (Topic 810)	The amendment affects reporting entities that are required to evaluate whether they should consolidate certain legal entities.	January 1, 2016	The adoption of this amendment did not have a material effect on our consolidated financial statements.
ASU 2015-03, Simplifying the Presentation of Debt Issuance Costs (Subtopic 835-30)	The amendment requires that debt issuance costs related to a recognized debt liability be presented in the balance sheet as a direct deduction from the carrying amount of that debt liability, consistent with debt discounts.	January 1, 2016	Previously reported amounts have been conformed to the current presentation (see Notes 6 and 16). The effect of adoption as of January 1, 2016 was a reduction to Other Assets and Debt, net of \$158 million. There were no effects on earnings resulting from this change.

Financial Statements Notes to the Consolidated Financial Statements | Note 1

Recently Issued Accounting Guidance, Not Yet Adopted Within Our Consolidated Financial Statements

Standard	Description	Date of Adoption	Effect on Consolidated Financial Statements
ASU 2016-06, Derivatives and Hedging (Topic 815)	The amendment clarifies the requirements for assessing whether contingent call (put) options that can accelerate the payment of principal on debt instruments are clearly and closely related to their debt hosts. An entity performing the assessment under the amendment is required to assess the embedded call (put) options solely in accordance with the four-step decision sequence.	January 1, 2017	The adoption of this amendment will not have a material effect on our consolidated financial statements.
ASU 2016-17 - Consolidation (Topic 810): Interests Held through Related Parties That Are under Common Control	The Board is issuing this Update to amend the consolidation guidance on how a reporting entity that is the single decision maker of a VIE should treat indirect interests in the entity held through related parties that are under common control with the reporting entity when determining whether it is the primary beneficiary of that VIE.	January 1, 2017	The adoption of this amendment will not have a material effect on our consolidated financial statements.
ASU 2014-09, Revenue from Contracts with Customers (Topic 606) and ASU 2015-14	The amendment requires entities to recognize revenue to depict the transfer of promised goods or services to customers in amounts that reflect the consideration to which the entity expects to be entitled in exchange for those goods or services. ASU 2015-14 defers the effective date of ASU 2014-09 for all entities by one year.	January 1, 2018	We do not expect that the adoption of this amendment will have a material effect on our consolidated financial statements.
ASU 2016-01, Recognition and Measurement of Financial Assets and Financial Liabilities (Subtopic 825-10)	The amendment addresses certain aspects of recognition, measurement, presentation, and disclosure of financial instruments.	January 1, 2018	We do not expect that the adoption of this amendment will have a material effect on our consolidated financial statements.
ASU 2016-08 - Revenue from Contracts with Customers (Topic 606): Principal versus Agent Considerations (Reporting Revenue Gross versus Net)	The amendments in this Update do not change the core principle of the guidance. The amendments clarify the implementation guidance on principal versus agent considerations.	January 1, 2018	We do not expect that the adoption of this amendment will have a material effect on our consolidated financial statements.
ASU 2016-10, Revenue from Contracts with Customers (Topic 606)	The amendments in this Update do not change the core principle of the guidance in Topic 606, but clarify two issues: i) identifying performance obligations; and ii) licensing. These clarifications are intended to reduce diversity in practice and to reduce the cost and complexity of Topic 606 at transition and on an ongoing basis.	January 1, 2018	We do not expect that the adoption of this amendment will have a material effect on our consolidated financial statements.

ASU 2016-12, Revenue
from Contracts with
Customers (Topic 606)

The amendments in this Update do not change the core principle of the guidance in Topic 606, but affect aspects of the guidance and technical corrections.

January 1,
2018

We do not expect that the adoption of this amendment will have a material effect on our consolidated financial statements.

Financial Statements Notes to the Consolidated Financial Statements | Note 1

Standard	Description	Date of Adoption	Effect on Consolidated Financial Statements
ASU 2016-15, Statement of Cash Flows (Topic 230): Classification of Certain Cash Receipts and Cash Payments (a consensus of the Emerging Issues Task Force)	The main objective of this Update is to address the diversity in practice that currently exists in regards to how certain cash receipts and cash payments are presented and classified in the statement of cash flows under Topic 230, Statement of Cash Flows, and other Topics. This Update addresses eight specific cash flow issues with the objective of reducing the existing diversity in practice. The amendments in this Update address the diversity in the classification and presentation of changes in restricted cash on the statement of cash flows under Topic 230, Statement of Cash Flows. Specifically, this amendment dictates that the statement of cash flows should explain the change in the period of the total of cash, cash equivalents, and restricted cash balances.	January 1, 2018	We are evaluating the effect that the adoption of this amendment will have on our consolidated financial statements.
ASU 2016-18, Statement of Cash Flows (Topic 230): Restricted Cash (a consensus of the FASB Emerging Issues Task Force)	The amendments in this Update are of a similar nature to the items typically addressed in the Technical Corrections and Improvements project. However, the Board decided to issue a separate Update for technical corrections and improvements to Topic 606 and other Topics amended by Update 2014-09 to increase stakeholders' awareness of the proposals and to expedite improvements to Update 2014-09.	January 1, 2018	We are evaluating the effect that the adoption of this amendment will have on our consolidated financial statements.
ASU 2016-20, Technical Corrections and Improvements to Topic 606, Revenue from Contracts with Customers	The amendment addresses the accounting for lease arrangements.	January 1, 2018	We do not expect that the adoption of this amendment will have a material effect on our consolidated financial statements.
ASU 2016-02, Leases (Topic 842)	The amendments in this Update replace the incurred loss impairment methodology in current GAAP with a methodology that reflects lifetime expected credit losses and requires consideration of a broader range of reasonable and supportable information to inform credit loss estimates.	January 1, 2019	We do not expect that the adoption of this amendment will have a material effect on our consolidated financial statements.
ASU 2016-13, Financial Instruments—Credit Losses (Topic 326): Measurement of Credit Losses on Financial Instruments		January 1, 2020	While we are evaluating the effect that the adoption of this amendment will have on our consolidated financial statements, it will increase (perhaps substantially) our provision for credit losses in the period of adoption.

Financial Statements Notes to the Consolidated Financial Statements | Note 2

NOTE 2: CONSERVATORSHIP AND RELATED MATTERS
BUSINESS OBJECTIVES

We operate under the conservatorship that commenced on September 6, 2008, conducting our business under the direction of FHFA, as our Conservator. The conservatorship and related matters significantly affect our management, business activities, financial condition and results of operations. Upon its appointment, FHFA, as Conservator, immediately succeeded to all rights, titles, powers and privileges of Freddie Mac, and of any stockholder, officer or director thereof, with respect to the company and its assets. The Conservator also succeeded to the title to all books, records, and assets of Freddie Mac held by any other legal custodian or third party. The Conservator delegated certain authority to the Board of Directors to oversee, and management to conduct, business operations so that the company can continue to operate in the ordinary course. The directors serve on behalf of, and exercise authority as directed by, the Conservator.

We are subject to certain constraints on our business activities under the Purchase Agreement. However, the support provided by Treasury pursuant to the Purchase Agreement also enables us to have adequate liquidity to conduct our normal business activities. Our ability to access funds from Treasury under the Purchase Agreement is critical to keeping us solvent.

Our current business objectives reflect direction we have received from the Conservator (including the Conservatorship Scorecards). At the direction of the Conservator, we have made changes to certain business practices that are designed to provide support for the mortgage market in a manner that serves our public mission and other non-financial objectives but may not contribute to our profitability. Certain of these objectives are intended to help homeowners and the mortgage market and may help to mitigate future credit losses. Some of these initiatives affect our near- and long-term financial results. Given our public mission and the important role the Administration and our Conservator have placed on Freddie Mac in addressing housing and mortgage market conditions, we may be required to take actions that could have a negative impact on our business, operating results or financial condition, and thus contribute to a need for additional draws under the Purchase Agreement.

In May 2014, FHFA issued its 2014 Strategic Plan, which updated FHFA's vision for implementing its obligations as Conservator of Freddie Mac and Fannie Mae and established three reformulated strategic goals. FHFA also issued annual Conservatorship Scorecards for 2014, 2015, 2016, and 2017. The annual Conservatorship Scorecards establish objectives and performance targets and measures for Freddie Mac and Fannie Mae (the "Enterprises") related to the strategic goals set forth in the Strategic Plan.

The 2014 Strategic Plan established three reformulated strategic goals for the conservatorships of Freddie Mac and Fannie Mae:

- Maintain, in a safe and sound manner, foreclosure prevention activities and credit availability for new and refinanced loans to foster liquid, efficient, competitive and resilient national housing finance markets.
- Reduce taxpayer risk through increasing the role of private capital in the mortgage market.
- Build a new single-family securitization infrastructure for use by the Enterprises and adaptable for use by other participants in the secondary market in the future.

As part of the first goal, the 2014 Strategic Plan describes various steps related to increasing access to

Financial Statements Notes to the Consolidated Financial Statements | Note 2

mortgage credit for credit-worthy borrowers. The 2014 Strategic Plan provides for the Enterprises to continue to play an ongoing role in supporting multifamily housing needs, particularly for low-income households. The plan states that FHFA will continue to impose a production cap on Freddie Mac's and Fannie Mae's multifamily businesses. However, in 2015 FHFA allowed loans in certain affordable and underserved market segments to be excluded from the production cap. This allowance was maintained in the 2016 and 2017 Conservatorship Scorecards with slight modification.

The second goal focuses on ways to transfer risk to private market participants and away from the Enterprises in a responsible way that does not reduce liquidity or adversely affect the availability of mortgage credit. The second goal provides for us to increase the use of single-family credit risk transfer transactions, continue using credit risk transfer transactions in the multifamily business and continue shrinking our mortgage-related investments portfolio consistent with the requirements in the Purchase Agreement, with a focus on selling less liquid assets.

The third goal includes the continued development of the common securitization platform. FHFA refined the scope of this project to focus on making the new shared system operational for Freddie Mac's and Fannie Mae's existing single-family securitization activities. The third goal also provides for the Enterprises to work towards the development of a single (common) security.

We continue to align our resources and internal business plans to meet the goals and objectives provided to us by FHFA.

As a result of the net worth sweep dividend provisions of the senior preferred stock, we cannot retain capital from the earnings generated by our business operations (other than a limited amount that will decrease to zero in 2018) or return capital to stockholders other than Treasury, the holder of our senior preferred stock. Our future is uncertain, and the conservatorship has no specified termination date. We do not know what changes may occur to our business model during or following conservatorship, including whether we will continue to exist. We are not aware of any current plans of our Conservator to significantly change our business model or capital structure in the near term. Our future structure and role will be determined by the Administration and Congress, and it is possible and perhaps likely that there will be significant changes beyond the near term. We have no ability to predict the outcome of these deliberations.

PURCHASE AGREEMENT AND WARRANT

Overview

On September 7, 2008, we, through FHFA, in its capacity as Conservator, entered into the Purchase Agreement with Treasury. The Purchase Agreement was subsequently amended and restated on September 26, 2008, and further amended on May 6, 2009, December 24, 2009, and August 17, 2012. The amount of available funding remaining under the Purchase Agreement was \$140.5 billion as of December 31, 2016. This amount will be reduced by any future draws.

The Purchase Agreement requires Treasury, upon the request of the Conservator, to provide funds to us after any quarter in which we have a negative net worth (that is, our total liabilities exceed our total assets, as reflected on our GAAP balance sheet). In addition, the Purchase Agreement requires Treasury, upon the request of the Conservator, to provide funds to us if the Conservator determines, at any time, that it will be mandated by law to appoint a receiver for us unless we receive these funds from Treasury.

Financial Statements Notes to the Consolidated Financial Statements | Note 2

In exchange for Treasury's funding commitment, we issued to Treasury, as an aggregate initial commitment fee, one million shares of Variable Liquidation Preference Senior Preferred Stock (with an initial liquidation preference of \$1 billion), which we refer to as the senior preferred stock, and a warrant to purchase, for a nominal price, shares of our common stock equal to 79.9% of the total number of shares of our common stock outstanding on a fully diluted basis at the time the warrant is exercised, which we refer to as the warrant. We received no other consideration from Treasury for issuing the senior preferred stock or the warrant.

Treasury, as the holder of the senior preferred stock, is entitled to receive quarterly cash dividends, when, as and if declared by our Board of Directors. The dividends we have paid to Treasury on the senior preferred stock have been declared by, and paid at the direction of, the Conservator, acting as successor to the rights, titles, powers and privileges of the Board. Through December 31, 2012, the senior preferred stock accrued quarterly cumulative dividends at a rate of 10% per year. However, under the August 2012 amendment to the Purchase Agreement, the fixed dividend rate was replaced with a net worth sweep dividend beginning in the first quarter of 2013.

For each quarter from January 1, 2013 through and including December 31, 2017, the dividend payment will be the amount, if any, by which our Net Worth Amount at the end of the immediately preceding fiscal quarter, less the applicable Capital Reserve Amount, exceeds zero. The term Net Worth Amount is defined as the total assets of Freddie Mac (excluding Treasury's commitment and any unfunded amounts thereof), less our total liabilities (excluding any obligation in respect of capital stock), in each case as reflected on our consolidated balance sheets prepared in accordance with GAAP. If the calculation of the dividend payment for a quarter does not exceed zero, then no dividend will accrue or be payable for that quarter. The applicable Capital Reserve Amount was \$1.2 billion for 2016, will be \$0.6 billion for 2017, and will decline to zero on January 1, 2018. For each quarter beginning January 1, 2018, the dividend payment will be the amount, if any, by which our Net Worth Amount at the end of the immediately preceding fiscal quarter exceeds zero. The amounts payable for dividends on the senior preferred stock could be substantial and will have an adverse impact on our financial position and net worth. The senior preferred stock is senior in liquidation preference to our common stock and all other series of preferred stock.

In addition to the issuance of the senior preferred stock and warrant, we are required under the Purchase Agreement to pay a quarterly commitment fee to Treasury. Under the Purchase Agreement, the fee is to be determined in an amount mutually agreed to by us and Treasury with reference to the market value of Treasury's funding commitment as then in effect. However, pursuant to the August 2012 amendment to the Purchase Agreement, for each quarter commencing January 1, 2013, and for as long as the net worth sweep dividend provisions remain in form and content substantially the same, no periodic commitment fee under the Purchase Agreement will be set, accrue or be payable.

Under the Purchase Agreement, our ability to repay the liquidation preference of the senior preferred stock is limited, and we will not be able to do so for the foreseeable future, if at all. The aggregate liquidation preference of the senior preferred stock will increase further if we receive additional draws under the Purchase Agreement or if any dividends or quarterly commitment fees payable under the Purchase Agreement are not paid in cash.

The Purchase Agreement includes significant restrictions on our ability to manage our business, including limiting the amount of indebtedness we can incur and capping the size of our mortgage-related investments portfolio.

Financial Statements Notes to the Consolidated Financial Statements | Note 2

The Purchase Agreement has an indefinite term and can terminate only in limited circumstances, which do not include the end of the conservatorship. The Purchase Agreement therefore could continue after the conservatorship ends. However, Treasury's consent is required for a termination of conservatorship other than in connection with receivership. Treasury has the right to exercise the warrant, in whole or in part, at any time on or before September 7, 2028.

Purchase Agreement Covenants

The Purchase Agreement provides that, until the senior preferred stock is repaid or redeemed in full, we may not, without the prior written consent of Treasury:

- Declare or pay any dividend (preferred or otherwise) or make any other distribution with respect to any Freddie Mac equity securities (other than with respect to the senior preferred stock or warrant);
- Redeem, purchase, retire or otherwise acquire any Freddie Mac equity securities (other than the senior preferred stock or warrant);
- Sell or issue any Freddie Mac equity securities (other than the senior preferred stock, the warrant and the common stock issuable upon exercise of the warrant and other than as required by the terms of any binding agreement in effect on the date of the Purchase Agreement);
- Terminate the conservatorship (other than in connection with a receivership);
- Sell, transfer, lease or otherwise dispose of any assets, other than dispositions for fair market value:
 - To a limited life regulated entity (in the context of a receivership);
 - Of assets and properties in the ordinary course of business, consistent with past practice;
 - Of assets and properties having fair market value individually or in aggregate less than \$250 million in one transaction or a series of related transactions;
 - In connection with our liquidation by a receiver;
 - Of cash or cash equivalents for cash or cash equivalents; or
 - To the extent necessary to comply with the covenant described below relating to the reduction of our mortgage-related investments portfolio;
- Issue any subordinated debt;
- Enter into a corporate reorganization, recapitalization, merger, acquisition or similar event; or
- Engage in transactions with affiliates unless the transaction is: (a) pursuant to the Purchase Agreement, the senior preferred stock or the warrant; (b) upon arm's length terms; or (c) a transaction undertaken in the ordinary course or pursuant to a contractual obligation or customary employment arrangement in existence on the date of the Purchase Agreement.

The Purchase Agreement also requires us to reduce the amount of mortgage assets we own. The Purchase Agreement, as revised in the August 2012 amendment, provides that we could not own mortgage assets with UPB in excess of \$650 billion on December 31, 2012, and on December 31 of each year thereafter may not own mortgage assets with UPB in excess of 85% of the aggregate amount of mortgage assets we are permitted to own as of December 31 of the immediately preceding calendar year, provided that we are not required to own less than \$250 billion in mortgage assets. Under the Purchase Agreement, we also may not, without the prior written consent of Treasury, incur indebtedness that would result in the par value of our aggregate indebtedness exceeding 120% of the amount of mortgage assets we are permitted to own on December 31 of the immediately preceding calendar year. The mortgage asset and indebtedness limitations are determined without giving effect to the changes to the accounting

Financial Statements Notes to the Consolidated Financial Statements | Note 2

guidance for transfers of financial assets and consolidation of VIEs, under which we consolidated our single-family PC trusts and certain other VIEs in our financial statements as of January 1, 2010.

In addition, the Purchase Agreement provides that we may not enter into any new compensation arrangements or increase amounts or benefits payable under existing compensation arrangements of any named executive officer or other executive officer (as such terms are defined by SEC rules) without the consent of the Director of FHFA, in consultation with the Secretary of the Treasury.

The Purchase Agreement also provides that, on an annual basis, we are required to deliver a risk management plan to Treasury setting out our strategy for reducing our enterprise-wide risk profile and the actions we will take to reduce the financial and operational risk associated with each of our reportable business segments.

Warrant Covenants

The warrant we issued to Treasury includes, among others, the following covenants:

• Our SEC filings under the Exchange Act will comply in all material respects as to form with the Exchange Act and the rules and regulations thereunder;

• Without the prior written consent of Treasury, we may not permit any of our significant subsidiaries to issue capital stock or equity securities, or securities convertible into or exchangeable for such securities, or any stock appreciation rights or other profit participation rights to any person other than Freddie Mac or its wholly-owned subsidiaries;

• We may not take any action that will result in an increase in the par value of our common stock;

• Unless waived or consented to in writing by Treasury, we may not take any action to avoid the observance or performance of the terms of the warrant and we must take all actions necessary or appropriate to protect Treasury's rights against impairment or dilution; and

• We must provide Treasury with prior notice of specified actions relating to our common stock, such as setting a record date for a dividend payment, granting subscription or purchase rights, authorizing a recapitalization, reclassification, merger or similar transaction, commencing a liquidation of the company or any other action that would trigger an adjustment in the exercise price or number or amount of shares subject to the warrant.

Termination Provisions

The Purchase Agreement provides that the Treasury's funding commitment will terminate under any of the following circumstances:

• The completion of our liquidation and fulfillment of Treasury's obligations under its funding commitment at that time;

• The payment in full of, or reasonable provision for, all of our liabilities (whether or not contingent, including mortgage guarantee obligations); and

• The funding by Treasury of the maximum amount of the commitment under the Purchase Agreement.

Financial Statements Notes to the Consolidated Financial Statements | Note 2

In addition, Treasury may terminate its funding commitment and declare the Purchase Agreement null and void if a court vacates, modifies, amends, conditions, enjoins, stays or otherwise affects the appointment of the Conservator or otherwise curtails the Conservator's powers. Treasury may not terminate its funding commitment under the Purchase Agreement solely by reason of our being in conservatorship, receivership or other insolvency proceeding, or due to our financial condition or any adverse change in our financial condition.

Waivers and Amendments

The Purchase Agreement provides that most provisions of the agreement may be waived or amended by mutual written agreement of the parties; however, no waiver or amendment of the agreement is permitted that would decrease Treasury's aggregate funding commitment or add conditions to Treasury's funding commitment if the waiver or amendment would adversely affect in any material respect the holders of our debt securities or mortgage guarantee obligations.

Third-party Enforcement Rights

In the event of our default on payments with respect to our debt securities or mortgage guarantee obligations, if Treasury fails to perform its obligations under its funding commitment and if we and/or the Conservator are not diligently pursuing remedies in respect of that failure, the holders of these debt securities or mortgage guarantee obligations may file a claim in the United States Court of Federal Claims for relief requiring Treasury to fund to us the lesser of:

• The amount necessary to cure the payment defaults on our debt and mortgage guarantee obligations; and

- The lesser of:

The deficiency amount; and

The maximum amount of the commitment less the aggregate amount of funding previously provided under the commitment.

Any payment that Treasury makes under those circumstances will be treated for all purposes as a draw under the Purchase Agreement that will increase the liquidation preference of the senior preferred stock.

IMPACT OF CONSERVATORSHIP AND RELATED DEVELOPMENTS ON THE MORTGAGE-RELATED INVESTMENTS PORTFOLIO

For purposes of the limit imposed by the Purchase Agreement and FHFA regulation, the UPB of our mortgage-related investments portfolio could not exceed \$339.3 billion at December 31, 2016 and was \$298.4 billion at that date. Our Retained Portfolio Plan, which we adopted in 2014, provides for us to manage the UPB of the mortgage-related investments portfolio so that it does not exceed 90% of the annual cap established by the Purchase Agreement (subject to certain exceptions). Our mortgage-related investments portfolio cap is reduced by 15% annually until it reaches \$250 billion. This amount is calculated based on the maximum allowable size of the mortgage-related investments portfolio, rather than the actual UPB of the mortgage-related investments portfolio, as of December 31 of the preceding year. Our ability to acquire and sell mortgage assets is significantly constrained by limitations of the Purchase Agreement and those imposed by FHFA.

Financial Statements Notes to the Consolidated Financial Statements | Note 2

GOVERNMENT SUPPORT FOR OUR BUSINESS

We receive substantial support from Treasury and are dependent upon its continued support in order to continue operating our business. Our ability to access funds from Treasury under the Purchase Agreement is critical to:

• Keeping us solvent;

• Allowing us to focus on our primary business objectives under conservatorship; and

• Avoiding the appointment of a receiver by FHFA under statutory mandatory receivership provisions.

At September 30, 2016, our assets exceeded our liabilities under GAAP; therefore, FHFA did not request a draw on our behalf and, as a result, we did not receive any funding from Treasury under the Purchase Agreement during the three months ended December 31, 2016. Since conservatorship began through December 31, 2016, we have paid cash dividends of \$101.4 billion to Treasury at the direction of the Conservator.

Additionally, in recent years, the Federal Reserve purchased significant amounts of mortgage-related securities issued by us, Fannie Mae, and Ginnie Mae.

See Note 6 and Note 9 for more information on the conservatorship and the Purchase Agreement.

RELATED PARTIES AS A RESULT OF CONSERVATORSHIP

As a result of our issuance to Treasury of the warrant to purchase shares of our common stock equal to 79.9% of the total number of shares of our common stock outstanding, on a fully diluted basis, we are deemed a related party to the U.S. government. During the years ended December 31, 2016, 2015, and 2014, no transactions outside of normal business activities have occurred between us and the U.S. government (or any of its related parties), except for the following:

• The transactions with Treasury discussed above in “Purchase Agreement and Warrant” and “Government Support for our Business;”

• The transactions entered into whereby we and Fannie Mae, in conjunction with Treasury, provided assistance to state and local HFAs. Treasury will reimburse Freddie Mac for initial guarantee losses on these transactions;

• The transactions discussed in Note 4, Note 6, and Note 9; and

• The allocation or transfer of 4.2 basis points of each dollar of new business purchases to certain housing funds as required under the GSE Act.

In addition, we are deemed related parties with Fannie Mae as both we and Fannie Mae have the same relationships with FHFA and Treasury. All transactions between us and Fannie Mae have occurred in the normal course of business in conservatorship. In October 2013, FHFA announced the formation of CSS. CSS is equally-owned by Freddie Mac and Fannie Mae. In connection with the formation of CSS, we entered into a limited liability company agreement with Fannie Mae. In November 2014, we and Fannie Mae announced that a chief executive officer had been named for CSS. Additionally, we and Fannie Mae each appointed two executives to the CSS Board of Managers and signed governance and operating agreements for CSS. Therefore, CSS is also deemed a related party. During the year ended December 31, 2016, we contributed \$118 million of capital to CSS.

Financial Statements Notes to the Consolidated Financial Statements | Note 3

NOTE 3: SECURITIZATION AND GUARANTEE ACTIVITIES

Our primary business activities in our Single-family Guarantee and Multifamily segments involve the securitization of loans or other mortgage-related assets using trusts that are VIEs. These trusts issue beneficial interests in the loans or other mortgage-related assets that they own. We guarantee the principal and interest payments on some or all of the issued beneficial interests in substantially all of our securitization transactions.

CONSOLIDATION OF VIEs AND ACCOUNTING FOR GUARANTEES

We consolidate VIEs when we have a controlling financial interest in the VIE and are therefore considered the primary beneficiary of the VIE. We are the primary beneficiary of a VIE when we have both the power to direct the activities of the VIE that most significantly impact its economic performance and exposure to losses or benefits of the VIE that could potentially be significant to the VIE. We evaluate whether we are the primary beneficiary of VIEs in which we have interests on an ongoing basis, and our primary beneficiary determination may change over time as our interest in the VIE changes.

When we consolidate a VIE, we recognize the assets and liabilities of the VIE on our consolidated balance sheets and account for those assets and liabilities based on the applicable GAAP for each specific type of asset or liability. Assets and liabilities that we transfer to a VIE at, after, or shortly before the date we become the primary beneficiary of the VIE are initially measured at the same amounts that they would have been measured if they had not been transferred, and no gain or loss is recognized on these transfers. For all other VIEs that we consolidate, we recognize the assets and liabilities of the VIE at fair value, and we recognize a gain or loss for the difference between:

- The sum of the fair value of the consideration paid, the fair value of any noncontrolling interests, and the reported amount of any previously held interests; and

- The net fair value of the assets and liabilities recognized. Guarantees to consolidated VIEs are eliminated in consolidation and are therefore not separately recognized on our consolidated balance sheets.

When we provide, either to an unconsolidated VIE or to another third party, a guarantee that exposes us to incremental credit risk, we recognize both a guarantee obligation at fair value and the consideration we receive for providing the guarantee, which typically consists of a guarantee asset that represents the fair value of future guarantee fees. As a practical expedient, the measurement of the fair value of the guarantee obligation is set equal to the consideration we receive to provide the guarantee, and no gain or loss is recognized upon issuance of the guarantee. Subsequently, we recognize changes in the fair value of the guarantee asset in current period earnings and amortize the guarantee obligation into earnings as we are released from risk under the guarantee. We also recognize a reserve for guarantee losses when it is probable that a loss has been incurred under the guarantee.

The table below presents the carrying value and classification of the assets and liabilities of consolidated VIEs on our consolidated balance sheets.

Financial Statements Notes to the Consolidated Financial Statements | Note 3

(In millions)	December 31, 2016	December 31, 2015
Consolidated Balance Sheet Line Item		
Assets:		
Cash and cash equivalents	\$—	\$—
Restricted cash and cash equivalents	9,431	14,529
Securities purchased under agreements to resell	13,550	14,840
Mortgage loans held-for-sale	—	1,403
Mortgage loans held-for-investment	1,690,218	1,625,184
Accrued interest receivable	5,454	5,305
Other assets	3,827	2,631
Total assets of consolidated VIEs	\$1,722,480	\$1,663,892
Liabilities:		
Accrued interest payable	\$4,846	\$4,763
Debt, net	1,648,683	1,556,121
Other liabilities	—	6
Total liabilities of consolidated VIEs	\$1,653,529	\$1,560,890
SECURITIZATION ACTIVITIES		

PCs

Single-family PCs are pass-through debt securities that represent undivided beneficial interests in a pool of loans held by a securitization trust. We serve as both administrator and guarantor for our single-family PC trusts. As administrator, we have the right to establish servicing terms and direct loss mitigation activities for the loans held by the PC trusts. As guarantor, we guarantee the payment of principal and interest on our single-family PCs in exchange for a guarantee fee, and we have the right to purchase delinquent loans from the PC trust to help improve the economic performance of the trust. We absorb all credit losses of the PC trusts through our guarantee of the principal and interest payments.

The economic performance of our single-family PC trusts is most significantly affected by the performance of the underlying loans. Our rights as administrator and guarantor provide us with the power to direct the activities that most significantly affect the performance of the underlying loans. We also have the obligation to absorb losses of our single-family PC trusts that could potentially be significant through our guarantee of principal and interest payments. Accordingly, we concluded that we are the primary beneficiary of our single-family PC trusts and, therefore, consolidate those trusts.

Loans held by our single-family PC trusts are recognized on our consolidated balance sheets as mortgage loans held-for-investment. The corresponding single-family PCs held by third parties are recognized on our consolidated balance sheets as debt, net. We extinguish the outstanding debt securities of the related consolidated trust and recognize gains or losses on debt extinguishment for the difference between the consideration paid and the debt carrying value when we purchase single-family PCs as investments in our mortgage-related investments portfolio. Sales of single-family PCs previously held as investments in our mortgage-related investments portfolio are accounted for as debt issuances. See Note 4 and Note 6 for additional information on loans and debt securities of consolidated trusts.

Financial Statements Notes to the Consolidated Financial Statements | Note 3

At December 31, 2016 and 2015, we were the primary beneficiary of, and therefore consolidated, single-family PC trusts with assets totaling \$1.7 trillion and \$1.6 trillion, respectively. During the years ended December 31, 2016 and 2015, we issued approximately \$391.0 billion and \$352.6 billion, respectively, of guaranteed single-family PCs. Our exposure for guarantees to consolidated securitization trusts is generally equal to the UPB of the loans recorded on our consolidated balance sheets.

Resecuritization Products

We create resecuritization products primarily by using PCs or our previously issued resecuritization products as the underlying collateral. In a typical resecuritization transaction, previously issued PCs or resecuritization products are transferred to a resecuritization trust that issues beneficial interests in the underlying collateral. We establish parameters that define eligibility standards for assets that may be used as collateral for each of our resecuritization programs. Resecuritization products can then be created based on the parameters that we have established. Similar to our PCs, we guarantee the payment of principal and interest to the investors in our resecuritization products. However, because we have already guaranteed the underlying assets, we do not assume any incremental credit risk by issuing these securities. The main types of resecuritization products we create are Giant PCs, REMICs, and Stripped Giant PCs.

Giant PCs

Giant PCs are direct pass-throughs of the cash flows of the underlying collateral, which may be previously issued PCs or Giant PCs. We do not consolidate Giant PCs as their resecuritization does not result in any new or incremental risk to the holders of the securities issued by the resecuritization trust and because we are not exposed to any incremental rights to receive benefits or obligations to absorb losses that could be significant to the resecuritization trust.

Purchases of Giant PCs as investments in our mortgage-related investments portfolio are accounted for as debt extinguishments of a pro-rata portion of the underlying single-family PCs because Giant PCs are considered substantially the same as the underlying single-family PCs. Similarly, sales of Giant PCs previously held as investments in our mortgage-related investments portfolio are accounted for as debt issuances of a pro-rata portion of the underlying single-family PCs.

REMICs and Stripped Giant PCs

REMICs and Stripped Giant PCs are multiclass resecuritizations of the cash flows of the underlying collateral, which may be previously issued PCs, Giant PCs, or other REMICs and Stripped Giant PCs. The activity that most significantly impacts the economic performance of our resecuritization trusts is typically the initial design and structuring of the trust. Substantially all resecuritization trusts are created as part of customer-driven transactions in which an investor or dealer participates in the decisions made during the design and establishment of the trust. As a result, we do not have the unilateral ability to direct the activities of our resecuritization trusts that most significantly impact the economic performance of those trusts. In addition, we do not have the right to receive benefits or the obligation to absorb losses that could potentially be significant to the trusts because we have already provided a guarantee on the underlying assets. As a result, we have concluded that we are not the primary beneficiary of our resecuritization trusts and, therefore, do not consolidate those trusts.

Financial Statements Notes to the Consolidated Financial Statements | Note 3

Because we have already guaranteed the underlying assets, we do not receive any incremental guarantee fees in exchange for our guarantee, and, accordingly, we do not recognize any additional guarantee assets, guarantee obligations, or reserves for guarantee losses related to resecuritization trusts. Instead, we receive a one-time transaction fee which represents compensation for both the structuring and creation of the securities and for our ongoing administrative responsibilities to service the securities. We recognize the portion of the transaction fee related to creation of the securities immediately in earnings. We defer the portion of the fee related to ongoing administrative responsibilities and amortize it over the life of the associated trust.

When we purchase a REMIC or Stripped Giant PC as an investment in our mortgage-related investments portfolio, we record the security as an investment in debt securities rather than extinguishment of debt since we are investing in the debt securities of a non-consolidated entity. We do not consolidate REMIC or Stripped Giant PC trusts that we hold as we are not deemed to be the primary beneficiary of the trusts, unless we have the unilateral ability to collapse the trust. Similarly, sales of REMICs or Stripped Giant PCs previously held as investments in our mortgage-related investments portfolio are accounted for as sales of investments in debt securities. See Note 6 for additional information on accounting for investments in debt securities.

K Certificates

In a K Certificate transaction, we sell multifamily loans to a non-Freddie Mac securitization trust that issues senior and subordinated securities, and simultaneously purchase and place the senior securities into a Freddie Mac securitization trust that issues guaranteed K Certificates. In these transactions, we guarantee the senior securities issued by the Freddie Mac securitization trust and do not issue or guarantee the subordinated securities issued by the non-Freddie Mac securitization trust. We receive a guarantee fee in exchange for our guarantee. We serve as guarantor of our K Certificate trusts and, from time to time, as master servicer. However, in contrast to single-family PC trusts, the rights to direct loss mitigation activities of the underlying loans and to purchase delinquent loans from the securitization trust are held by the investor in the most subordinate remaining securities issued by the trust, and we do not have any power to direct those activities unless we are the investor in the most subordinate remaining securities. The economic performance of our K Certificate trusts is most significantly affected by the performance of the underlying loans. Because our rights in a K Certificate transaction do not provide us with the power to direct the activities that most significantly affect the performance of the underlying loans, we are not the primary beneficiary of our K Certificate trusts and, therefore, do not consolidate those trusts.

When we sell loans to a K Certificate trust, we derecognize the transferred loans and account for our guarantee to the non-consolidated K Certificate trust. We account for our investments in the beneficial interests issued by non-consolidated K Certificate trusts as investments in debt securities.

During 2016 and 2015, we issued approximately \$40.6 billion and \$29.4 billion, respectively, of K Certificates for which a guarantee asset and guarantee obligation were recognized.

SB Certificates

In SB Certificate transactions, we securitize small balance multifamily loans in transactions which are structured in a manner generally similar to our K Certificate transactions. We are not the primary

Financial Statements Notes to the Consolidated Financial Statements | Note 3

beneficiary and we do not consolidate SB Certificate trusts as our rights do not provide us with the power to direct the activities that most significantly affect the performance of the underlying loans.

In a typical SB Certificate transaction, we sell loans to a SB Certificate trust, derecognize the transferred loans, and account for our guarantee to the non-consolidated SB Certificate trust. We account for our investments in the beneficial interests issued by non-consolidated SB Certificate trusts as investments in debt securities.

During 2016 and 2015, we issued approximately \$3.5 billion and \$1.6 billion, respectively, of SB Certificates for which a guarantee asset and guarantee obligation were recognized.

Whole Loan Securities

We consolidate our whole loan securities because we have the ability to direct the loss mitigation activities of the underlying loans and we have the obligation to absorb credit losses through our guarantee of the issued securities.

Senior Subordinate Securitization Structures

We do not consolidate our senior subordinate securitization structures as we do not have the ability to direct the activities that most significantly affect the performance of the underlying loans. For these products, we account for our guarantee to the unconsolidated VIE.

Other Securitization Products

We consolidate certain of our other securitization trusts because we have the ability to direct the loss mitigation activities of the underlying loans and we have the obligation to absorb credit losses through our guarantee of the issued securities. As a result, we are the primary beneficiary of single-family and multifamily other securitization trusts with underlying assets totaling \$7.5 billion at both December 31, 2016 and 2015. We do not consolidate the other securitization trusts that do not meet these conditions. For those products, we account for our guarantee to the unconsolidated VIE.

OTHER GUARANTEE ACTIVITIES

Other Mortgage-related Guarantees

In certain circumstances, we provide a guarantee of mortgage-related assets held by third parties, in exchange for a guarantee fee, without securitizing those assets. These guarantees consist of the following:

Long-term standby commitments of single-family loans which obligate us to purchase the covered loans when they become seriously delinquent. Periodically, certain of our customers seek to terminate long-term standby commitments and simultaneously enter into guarantor swap transactions to obtain our PCs backed by many of the same loans.

During 2016 and 2015, we guaranteed \$3.6 billion and \$4.0 billion, respectively, of loans under new long-term standby commitments; and

Guarantees of multifamily housing revenue bonds that were issued by HFAs, including guarantees that require us to advance funds to enable others to repurchase any tendered tax-exempt and related

Financial Statements Notes to the Consolidated Financial Statements | Note 3

taxable bonds that are unable to be marketed. No advances under these guarantees were outstanding at December 31, 2016 and 2015.

Under these arrangements, we account for our guarantee to the counterparty to the transaction but do not recognize the underlying assets on our consolidated balance sheets.

Derivative Instruments

Derivative instruments include written options and written swaptions, and other instruments accounted for as credit derivatives.

We also issued certain REMICs with stated final maturities that are shorter than the stated maturity of the underlying loans. If the underlying loans to these securities have not been purchased by a third party or fully matured as of the stated final maturity date of such securities, we will sponsor an auction of the underlying assets. To the extent that purchase or auction proceeds are insufficient to cover unpaid principal amounts due to investors, we are obligated to fund such principal. Our maximum exposure on these derivative guarantees represents the outstanding UPB of the issued securities.

Other Indemnifications

In connection with certain business transactions, we may provide indemnification to counterparties for claims arising out of breaches of certain obligations (e.g., those arising from representations and warranties) in contracts entered into in the normal course of business. Our assessment is that the risk of any material loss from such a claim for indemnification is remote and there are no significant probable and estimable losses associated with these contracts. In addition, we provided indemnification for litigation defense costs to certain former officers who are subject to ongoing litigation. See Note 14 for information on ongoing litigation. The recognized liabilities on our consolidated balance sheets related to indemnifications were not significant at December 31, 2016 and 2015.

VIEs FOR WHICH WE ARE NOT THE PRIMARY BENEFICIARY

Our involvement with VIEs for which we are not the primary beneficiary takes one or both of two forms - purchasing an investment in these entities or providing a guarantee to these entities. Our maximum exposure to loss for those VIEs in which we have purchased an investment is calculated as the maximum potential charge that we would recognize in earnings if that investment were to become worthless. Our maximum exposure to loss for those VIEs for which we have provided a guarantee represents the contractual amounts that could be lost under the guarantees if counterparties or borrowers defaulted, without consideration of possible recoveries under credit enhancement arrangements. We do not believe the maximum exposure to loss disclosed in the table below is representative of the actual loss we are likely to incur, based on our historical loss experience and after consideration of proceeds from related collateral liquidation, including possible recoveries under credit enhancement arrangements.

The following table presents the carrying amounts and classification of the assets and liabilities recorded on our consolidated balance sheets related to our variable interests in unconsolidated VIEs with which we were involved in the design and creation and have a significant continuing involvement, as well as our maximum exposure to loss.

Financial Statements Notes to the Consolidated Financial Statements | Note 3

(In millions)	December 31, December	
	2016	31, 2015
Assets and Liabilities Recorded on our Consolidated Balance Sheets ⁽¹⁾		
Assets:		
Investments in securities	\$58,995	\$49,040
Accrued interest receivable	254	200
Other assets	1,708	1,232
Liabilities:		
Other liabilities	(1,604)	(1,230)
Maximum Exposure to Loss	\$150,227	\$114,193
Total Assets of Non-Consolidated VIEs	\$175,713	\$134,900

(1) Includes our variable interests in REMICs and Stripped Giant PCs, K Certificates, SB Certificates, senior subordinate securitization structures, and other securitization products that we do not consolidate. Our maximum exposure to loss includes the guaranteed UPB of assets held by the non-consolidated VIEs related to K Certificates, SB Certificates, senior subordinate securitization structures, and other securitization products. Our maximum exposure to loss excludes investments in REMICs and Stripped Giant PCs, because we already consolidate the collateral of these trusts on our consolidated balance sheets.

We also obtain interests in various other VIEs created by third parties through the normal course of business, such as through our investments in non-Freddie Mac mortgage-related securities, purchases of multifamily loans, guarantees of multifamily housing revenue bonds, as a derivative counterparty, or through other activities. We were not involved in the design or creation of these entities and our continuing involvement is typically passive in nature and does not provide us with the power to direct the activities that most significantly impact the economic performance of these entities. As a result, we do not consolidate these VIEs and we account for our interests in the VIEs in the same manner that we account for our interests in other third-party transactions. See Note 5 for additional information regarding our investments in non-Freddie Mac mortgage-related securities. See Note 4 for more information regarding multifamily loans.

FINANCIAL GUARANTEES

The table below shows our maximum potential exposure, recognized liability, and maximum remaining term of our recognized financial guarantees to unconsolidated VIEs and other third parties. This table does not include our unrecognized financial guarantees, such as guarantees to consolidated VIEs or to resecuritization trusts that do not expose us to incremental credit risk. The maximum exposure disclosed in the table is not representative of the actual loss we are likely to incur, based on our historical loss experience and after consideration of proceeds from related collateral liquidation.

(Dollars in millions, terms in years)	December 31, 2016			December 31, 2015		
	Maximum Exposure	Recognized Liability ⁽²⁾	Maximum Remaining Term	Maximum Exposure	Recognized Liability ⁽²⁾	Maximum Remaining Term
K Certificates, SB Certificates, senior subordinate securitization structures, and other securitization products	\$150,227	\$1,532	40	\$114,193	\$1,136	40
Other mortgage-related guarantees	16,445	679	34	13,067	596	38
Derivative instruments	6,396	127	29	17,894	151	30

(1)

The maximum exposure represents the contractual amounts that could be lost if counterparties or borrowers defaulted, without consideration of possible recoveries under credit enhancement arrangements, such as recourse provisions, third-party insurance contracts, or from collateral held or pledged. For derivative instruments, this amount represents the notional value.

Financial Statements Notes to the Consolidated Financial Statements | Note 3

For K Certificates, SB Certificates, senior subordinate securitization structures, other securitization products, and other mortgage-related guarantees, this amount represents the guarantee obligation on our consolidated balance (2) sheets. This amount excludes our reserve for guarantee losses, which totaled \$67 million and \$76 million as of December 31, 2016 and 2015, respectively, and is included within other liabilities on our consolidated balance sheets.

CREDIT ENHANCEMENTS

For many of the loans underlying our single-family PCs, other securitization products, and other mortgage related guarantees, we obtained credit enhancements from third parties covering a portion of our credit risk exposure. See Note 4 for information about credit enhancements on loans.

In connection with the securitization activities of the Multifamily segment, we have various forms of credit protection. The most prevalent type is subordination, primarily through our K Certificates and SB Certificates. Through subordination, we mitigate our credit risk exposure by structuring our securities to transfer a large majority of expected and stress credit losses to private investors who purchase the subordinate tranches, as shown in the table below.

(In millions)	UPB at		Maximum Coverage ⁽¹⁾ at	
	December 31, 2016	December 31, 2015	December 31, 2016	December 31, 2015
K Certificates and SB Certificates	\$139,416	\$103,061	\$23,864	\$18,571
Other securitization products	5,545	5,438	1,359	1,359
Total	\$144,961	\$108,499	\$25,223	\$19,930

For K Certificates and SB Certificates, this represents the UPB of the securities that are subordinate to our (1) guarantee. For other securitization products, this represents the remaining amount of loss recovery that is available subject to the terms of the counterparty agreement or the UPB of the securities that are subordinate to our guarantee.

In addition to subordination, the Multifamily segment also has various other credit enhancements, primarily related to our mortgage loans and other mortgage-related guarantees, in the form of collateral posting requirements, loss sharing agreements, and other similar arrangements. These credit enhancements will enable us to recover all or a portion of our losses or the amounts paid under our guarantee. Our historical losses and related recoveries pursuant to these agreements have not been significant.

Financial Statements Notes to the Consolidated Financial Statements | Note 4

NOTE 4: MORTGAGE LOANS AND LOAN LOSS RESERVES

The table below provides details of the loans on our consolidated balance sheets as of December 31, 2016 and 2015.

(In millions)	December 31, 2016			December 31, 2015		
	Held by Freddie Mac	Held by consolidated trusts	Total	Held by Freddie Mac	Held by consolidated trusts	Total
Held-for sale:						
Single-family	\$2,092	\$—	\$2,092	\$6,045	\$1,702	\$7,747
Multifamily	16,544	—	16,544	19,582	—	19,582
Total UPB	18,636	—	18,636	25,627	1,702	27,329
Cost basis and fair value adjustments, net	(548)	—	(548)	(2,038)	(299)	(2,337)
Total held-for-sale loans	18,088	—	18,088	23,589	1,403	24,992
Held-for-investment:						
Single-family	83,040	1,659,591	1,742,631	90,532	1,597,590	1,688,122
Multifamily	25,873	3,048	28,921	29,505	1,711	31,216
Total UPB	108,913	1,662,639	1,771,552	120,037	1,599,301	1,719,338
Cost basis adjustments	(3,755)	30,549	26,794	(3,465)	28,659	25,194
Allowance for loan losses	(10,461)	(2,970)	(13,431)	(12,555)	(2,776)	(15,331)
Total held-for-investment loans	94,697	1,690,218	1,784,915	104,017	1,625,184	1,729,201
Total loans, net	\$112,785	\$1,690,218	\$1,803,003	\$127,606	\$1,626,587	\$1,754,193

We own both single-family loans, which are secured by one to four unit residential properties, and multifamily loans, which are secured by properties with five or more residential rental units. Our single-family loans are predominantly first lien, fixed-rate loans secured by the borrower's primary residence.

Upon acquisition, we classify a loan as either held-for-sale or held-for-investment. Loans that we have the ability and intent to hold for the foreseeable future are classified as held-for-investment. Loans that we intend to securitize using an entity we will consolidate are classified as held-for-investment both prior to and subsequent to their securitization. Otherwise, they will be classified as held-for-sale. Held-for-investment loans are reported in our consolidated balance sheets at their outstanding UPB, net of deferred fees and other cost basis adjustments (including unamortized premiums and discounts, delivery fees and other pricing adjustments).

Loans not classified as held-for-investment are classified as held-for-sale. Held-for-sale loans are reported at lower-of-cost-or-fair-value on our consolidated balance sheets. Any excess of a held-for-sale loan's cost over its fair value is recognized as a valuation allowance in other income on our consolidated statements of comprehensive income, with changes in this valuation allowance also being recorded in other income. Premiums, discounts, and other cost basis adjustments (including lower-of-cost-or-fair value adjustments) on single-family loans classified as held-for-sale are deferred and not amortized. We elected the fair value option for certain multifamily loans that we intend to securitize and sell to investors. Therefore, these multifamily loans are measured at fair value on a recurring basis, with subsequent gains or losses related to changes in fair value reported in other income in our consolidated statements of comprehensive income.

Cash flows related to loans originally classified as held-for-investment are classified as either investing activities (e.g., principal repayments) or operating activities (e.g., interest payments received from borrowers included within net income (loss)). Cash flows related to loans originally classified as held-for-sale are classified as operating activities.

Financial Statements Notes to the Consolidated Financial Statements | Note 4

During 2016 and 2015, we purchased \$388.9 billion and \$346.5 billion, respectively, in UPB of single-family loans, and \$6.1 billion and \$4.4 billion, respectively, in UPB of multifamily loans that were classified as held-for-investment.

Our sales of multifamily loans occur primarily through the issuance of multifamily K Certificates and SB Certificates. During 2016 and 2015, we sold \$49.9 billion and \$36.1 billion, respectively, of held-for-sale multifamily loans. See Note 3 for more information on our issuances of K Certificates and SB Certificates.

As part of our strategy to mitigate losses and reduce our holdings of less liquid assets, we completed sales of \$3.1 billion and \$2.9 billion in UPB of seriously delinquent single-family loans during 2016 and 2015, respectively.

In connection with our efforts to sell certain of our single-family loans, we reclassified \$4.7 billion and \$13.6 billion in UPB of seasoned single-family loans from held-for-investment to held-for-sale in 2016 and 2015, respectively. We also reclassified \$2.1 billion of multifamily loans from held-for-investment to held-for-sale in 2015. We did not have this multifamily loan reclassification activity in 2016. For additional information regarding the fair value of our loans classified as held-for-sale, see Note 13.

INTEREST INCOME

We recognize interest income on an accrual basis except when we believe the collection of principal and interest in full is not reasonably assured, which generally occurs when a loan is three monthly payments past due, unless the loan is well secured and in the process of collection based upon an individual loan assessment. A loan is considered past due if a full payment of principal and interest is not received within one month of its due date.

Cost basis adjustments on held-for-investment loans are amortized into interest income over the contractual lives of the loans using the effective interest method.

A non-accrual loan may be returned to accrual status when the collectability of principal and interest in full is reasonably assured. For single-family loans, we determine that collectability is reasonably assured when we have received payment of principal and interest such that the loan becomes less than three monthly payments past due. For multifamily loans, the collectability of principal and interest is considered reasonably assured based on an analysis of the factors specific to the loan being assessed. Upon a loan's return to accrual status, all previously reversed interest income is recognized and amortization of any basis adjustments into interest income is resumed.

Financial Statements Notes to the Consolidated Financial Statements | Note 4

CREDIT QUALITY

The current LTV ratio is one key factor we consider when estimating our loan loss reserves for single-family loans. As current LTV ratios increase, the borrower's equity in the home decreases, which negatively affects the borrower's ability to refinance (outside of HARP) or to sell the property for an amount at or above the balance of the outstanding loan. A second-lien loan also reduces the borrower's equity in the home, and has a similar negative effect on the borrower's ability to refinance or sell the property for an amount at or above the combined balances of the first and second loans. As of December 31, 2016 and 2015, based on data collected by us at loan delivery, approximately 11% and 13%, respectively, of loans in our single-family credit guarantee portfolio had second-lien financing by third parties at origination of the first loan. However, borrowers are free to obtain second-lien financing after origination, and we are not entitled to receive notification when a borrower does so. For further information about concentrations of risk associated with our single-family and multifamily loans, see Note 12.

We discontinued our purchases of Alt-A, interest-only, and option ARM loans a number of years ago. For reporting purposes:

• Loans within the Alt-A category continue to be presented in that category following modification, even though the borrower may have provided full documentation of assets and income to complete the modification; and

• Loans within the option ARM category continue to be presented in that category following modification, even though the modified loan no longer provides for optional payment provisions.

The table below presents the recorded investment of single-family held-for-investment loans by current LTV ratios. Our current LTV ratios are estimates based on available data through the end of each respective period presented.

(In millions)	As of December 31, 2016				As of December 31, 2015			
	Current LTV Ratio				Current LTV Ratio			
	≤ 80	> 80 to 100	> 100 ⁽¹⁾	Total	≤ 80	> 80 to 100	> 100 ⁽¹⁾	Total
20 and 30-year or more, amortizing fixed-rate ⁽²⁾	\$1,120,722	\$236,111	\$30,063	\$1,386,896	\$1,020,227	\$242,948	\$50,893	\$1,314,068
15-year amortizing fixed-rate ⁽²⁾	274,967	11,016	887	286,870	271,456	12,400	1,754	285,610
Adjustable-rate	52,319	2,955	85	55,359	59,724	5,055	249	65,028
Alt-A, interest-only, and option ARM	26,293	9,392	4,634	40,319	27,014	13,124	8,485	48,623
Total single-family loans	\$1,474,301	\$259,474	\$35,669	\$1,769,444	\$1,378,421	\$273,527	\$61,381	\$1,713,329

(1) The serious delinquency rate for the total of single-family held-for-investment mortgage loans with current LTV ratios in excess of 100% was 6.80% and 6.03% as of December 31, 2016 and 2015, respectively.

The majority of our loan modifications result in new terms that include fixed interest rates after modification. As of December 31, 2016 and 2015, we have categorized UPB of approximately \$32.0 billion and \$38.3 billion, respectively, of modified loans as fixed-rate loans (instead of as adjustable rate loans), even though the modified loans have rate adjustment provisions. In these cases, while the terms of the modified loans provide for the interest rate to adjust in the future, such future rates are determined at the time of modification rather than at a subsequent date.

Financial Statements Notes to the Consolidated Financial Statements | Note 4

The following table presents the recorded investment in our multifamily held-for-investment loans, by credit quality indicator as of December 31, 2016 and 2015. The multifamily credit quality indicator is based on available data through the end of each period presented. These indicators involve significant management judgment.

(In millions)	December 31, December 31,	
	2016	2015
Credit risk profile by internally assigned grade: ⁽¹⁾		
Pass	\$27,830	\$29,660
Special mention	502	1,135
Substandard	570	408
Doubtful	—	—
Total	\$28,902	\$31,203

(1) A loan categorized as: "Pass" is current and adequately protected by the current financial strength and debt service capacity of the borrower; "Special mention" has signs of potential financial weakness; "Substandard" has a well-defined weakness that jeopardizes the timely full repayment; and "Doubtful" has a weakness that makes collection or liquidation in full highly questionable and improbable based on existing conditions.

⁽¹⁾ Includes \$5.3 billion and \$7.0 billion of loans that were in the process of foreclosure as of December 31, 2016 and 2015, respectively.

We have the option under our PC master trust agreement to remove loans that underlie our PCs under certain circumstances to resolve an existing or impending delinquency or default. Our practice generally has been to remove loans from PC trusts when the loans have been delinquent for 120 days or more.

When we remove loans from PC trusts, we record an extinguishment of the corresponding portion of the debt securities of the consolidated trusts and we reclassify the loans from mortgage loans held-for-investment by consolidated trusts to mortgage loans held-for-investment by Freddie Mac. We removed \$6.8 billion and \$8.4 billion in UPB of loans from PC trusts (or purchased delinquent loans associated with other mortgage-related guarantees)

during the years ended December 31, 2016 and 2015, respectively.

Freddie Mac 2016 Form 10-K 244

Financial Statements Notes to the Consolidated Financial Statements | Note 4

The table below summarizes the delinquency rates of loans within our single-family credit guarantee and multifamily mortgage portfolios.

(Dollars in millions)	December 31, 2016	December 31, 2015
Single-family: ⁽¹⁾		
Non-credit-enhanced portfolio		
Serious delinquency rate	1.02 %	1.30 %
Total number of seriously delinquent loans	77,662	105,071
Credit-enhanced portfolio: ⁽²⁾		
Primary mortgage insurance:		
Serious delinquency rate	1.46 %	2.06 %
Total number of seriously delinquent loans	21,460	27,813
Other credit protection: ⁽³⁾		
Serious delinquency rate	0.43 %	0.58 %
Total number of seriously delinquent loans	9,455	9,422
Total single-family:		
Serious delinquency rate	1.00 %	1.32 %
Total number of seriously delinquent loans	107,170	141,255
Multifamily: ⁽⁴⁾		
Non-credit-enhanced portfolio:		
Delinquency rate	0.04 %	0.03 %
UPB of delinquent loans	\$19	\$19
Credit-enhanced portfolio:		
Delinquency rate	0.02 %	0.02 %
UPB of delinquent loans	\$37	\$20
Total Multifamily:		
Delinquency rate	0.03 %	0.02 %
UPB of delinquent loans	\$56	\$39

(1) Serious delinquencies on single-family loans underlying certain REMICs, other securitization products, and other mortgage-related guarantees may be reported on a different schedule due to variances in industry practice.

(2) The credit enhanced categories are not mutually exclusive as a single loan may be covered by both primary mortgage insurance and other credit protection.

(3) Consists of single-family loans covered by financial arrangements (other than primary mortgage insurance) that are designed to reduce our credit risk exposure. See "Credit Protection and Other Forms of Credit Enhancement" for more information.

(4) Multifamily delinquency performance is based on UPB of loans that are two monthly payments or more past due or those in the process of foreclosure.

We continue to implement a number of initiatives to refinance and modify single-family loans. As part of these initiatives, we pay various incentives to servicers and borrowers. HAMP ended in December 2016. The relief refinance program (including HARP) will end in September 2017 and is expected to be replaced by a new program.

Financial Statements Notes to the Consolidated Financial Statements | Note 4

LOAN LOSS RESERVES

The loan loss reserves represent estimates of probable incurred credit losses. We recognize probable incurred losses by recording a charge to the provision for credit losses in our consolidated statements of comprehensive income. The loan loss reserves include:

• Our allowance for loan losses, which pertains to all single-family and multifamily loans classified as held-for-investment on our consolidated balance sheets; and

• Our reserve for guarantee losses, which pertains to single-family and multifamily loans underlying our K Certificates and SB Certificates, other securitization products, and other mortgage-related guarantees.

A significant portion of the unsecuritized single-family loans on our consolidated balance sheets are seriously delinquent and/or TDR loans that we previously removed from our PC pools. These seriously delinquent and TDR loans typically have a higher associated allowance for loan loss than loans that remain in consolidated trusts.

The table below presents our loan loss reserves activity.

(In millions)	Year Ended December 31, 2016				2015

(1) Includes charge-offs of \$1.9 billion associated with our initial adoption of FHFA Advisory Bulletin 2012-02 on January 1, 2015.

(2) Total charge-offs do not include lower-of-cost-or-fair-value adjustments and other expenses related to property taxes and insurance recognized when we transfer loans from held-for-investment to held-for-sale, which totaled \$1.2 billion and \$3.4 billion during 2016 and 2015 respectively.

Financial Statements Notes to the Consolidated Financial Statements | Note 4

For the years ended December 31, 2016 and 2015, consists of approximately \$0.3 billion and \$0.5 billion, respectively, attributable to capitalization of past due interest on modified loans. Also includes amounts associated (3) with reclassified single-family reserves related to our removal of loans previously held by consolidated trusts, net of reclassifications for single-family loans subsequently resecured after such removal.

Loan Loss Reserves Determined on a Collective Basis
Single-Family Loans

We estimate loan loss reserves on homogeneous pools of single-family loans using a model that evaluates a variety of factors affecting collectability. We review the outputs of this model by considering qualitative factors such as macroeconomic and other factors to see whether the model outputs are consistent with our expectations. Management adjustments may be necessary to take into consideration external factors and current economic events that have occurred but that are not yet reflected in the factors used to derive the model outputs. Significant judgment is exercised in making these adjustments. The homogeneous pools of single-family loans are determined based on common underlying characteristics, including current LTV ratios, trends in home prices, loan product type, and geographic region.

We rely upon third-parties to service our loans. At loan delivery, the seller provides us with loan data, which includes characteristics and underwriting information. Each subsequent month, the servicers provide us with monthly loan level servicing data, including delinquency and loss information.

Our single-family loan loss reserve default models produce estimates based on 12 months of loan level performance data, which includes a history of delinquency, foreclosures, foreclosure alternatives and modifications. Our loan loss reserve estimate includes projections of:

- Loss mitigation activities, including loan modifications for troubled borrowers and the incidence of redefault we have experienced on similar loans that have completed a loan modification; and

- Defaults we believe are likely to occur as a result of loss events that have occurred through the respective balance sheet date.

These projections are based on our recent historical experience and current business practices and require significant management judgment. We monitor our projections of recoveries through seller/servicer repurchases to ensure that these projections are reasonable and consistent with our assessment of the credit capacity of our seller/servicer counterparties. We validate and update our models and factors to capture changes in actual loss experience, as well as the effects of changes in underwriting practices and in our loss mitigation strategies. In determining our loan loss reserves, we also consider macroeconomic and other factors that affect the quality of the loans underlying our portfolio, including regional housing trends, applicable home price indices, unemployment and employment dislocation trends, the effects of changes in government policies and programs, consumer credit statistics, and the extent of third-party insurance.

Our single-family loan loss reserve severity is based on the repeat housing sales index and actual REO dispositions, short sales and third-party sales that incorporate the most recent:

- Six months of sales experience realized on our distressed property dispositions; and

- Twelve months of pre-foreclosure expenses on our distressed properties, including REO, short sales, and third-party sales.

Financial Statements Notes to the Consolidated Financial Statements | Note 4

Our single-family loan loss severity estimate also captures expectations about recoveries from primary mortgage insurance or from seller/servicers due to repurchases. We use historical trends in home prices in our single-family loan loss reserve process, primarily through the use of current LTV ratios in our default models and through the use of recent home price sales experience in our severity estimate. However, we do not use a forecast of trends in home prices in our single-family loan loss reserve process.

For loans where foreclosure is probable, we measure impairment based upon an estimate of the fair value of the underlying collateral less estimated disposition costs. Our estimate also considers the effect of historical home price changes on borrower behavior.

We apply proceeds from primary mortgage insurance and from other credit enhancements, including repurchase recoveries, entered into contemporaneously with, and in contemplation of, a guarantee or loan purchase transaction as a recovery of our recorded investment in a charged-off loan, up to the amount of loss recognized as a charge-off. Proceeds received in excess of our recorded investment in charged-off loans are recorded as a decrease to REO operations expense in our consolidated statements of comprehensive income. We record benefits related to most of our credit enhancements (e.g., primary mortgage insurance and certain ACIS insurance policies) when realization of our claims is deemed probable. We record benefits for certain of our other credit enhancements (e.g., certain STACR debt notes and whole loan securities) when the realized loss event occurs. We generally record repurchase recoveries on a cash basis due to the uncertainty of the timing and amount of collections of such recoveries.

Multifamily Loans

Multifamily loans evaluated collectively for impairment are aggregated into book year vintage portfolios. Potential impairment related to these portfolios is measured by benchmarking published historical commercial loan performance data to those vintages based upon available economic data related to multifamily real estate, including apartment vacancy and rental rates.

Loan Loss Reserves Determined on an Individual Basis

We consider a loan to be impaired when, based on current information, it is probable that we will not receive all amounts due (including both principal and interest) in accordance with the contractual terms of the original loan agreement.

Single-family loans individually evaluated for impairment include TDRs, as well as loans acquired under our financial guarantees with deteriorated credit quality prior to 2010. Multifamily loans individually evaluated for impairment include TDRs, loans three monthly payments or more past due, and loans that are impaired based on management judgment.

Troubled Debt Restructurings

A modification to the contractual terms of a loan that results in granting a concession to a borrower experiencing financial difficulties is considered a TDR. A concession is deemed granted when, as a result of the restructuring, we do not expect to collect all amounts due, including interest accrued, at the original contractual interest rate. As appropriate, we also consider other qualitative factors in determining whether a concession is deemed granted, including whether the borrower's modified interest rate is consistent with that of a non-troubled borrower. We do not consider restructurings that result in an insignificant delay in payment to be a concession. We generally consider a delay in monthly amortizing payments of three

Financial Statements Notes to the Consolidated Financial Statements | Note 4

months or less to be insignificant. A concession typically includes one or more of the following being granted to the borrower:

• A trial period where the expected permanent modification will change our expectation of collecting all amounts due at the original contract rate;

• A delay in payment that is more than insignificant;

• A reduction in the contractual interest rate;

• Interest forbearance for a period of time that is more than insignificant or forgiveness of accrued but uncollected interest amounts;

• Principal forbearance that is more than insignificant; and

• Discharge of the borrower's obligation in Chapter 7 bankruptcy.

The table below presents the volume of single-family and multifamily loans that were newly classified as TDRs during the years ended December 31, 2016 and 2015, based on the original category of the loan before the loan was classified as a TDR. Loans classified as a TDR in one period may be subject to further action (such as a modification or remodification) in a subsequent period. In such cases, the subsequent action would not be reflected in the table below since the loan would already have been classified as a TDR.

(Dollars in millions)	Year Ended December 31,			
	2016		2015	
	Number of Records	Post-TDR Investment	Number of Records	Post-TDR Investment
Single-family: ⁽¹⁾				
20 and 30-year or more, amortizing fixed-rate	35,503	\$5,092	46,641	\$6,627
15-year amortizing fixed-rate	4,623	338	5,806	419

Multifamily	2	8	1	30
Total	44,212	\$6,126	60,926	\$8,417

⁽¹⁾ The pre-TDR recorded investment for single-family loans initially classified as TDR during the years ended December 31, 2016 and 2015 was \$6.2 billion and \$8.4 billion, respectively.

The table below presents the volume of our TDR modifications that experienced payment defaults (i.e., loans that became two months delinquent or completed a loss event) during the applicable periods and had completed a modification during the year preceding the payment default. The table presents loans based on their original product category before modification.

Financial Statements Notes to the Consolidated Financial Statements | Note 4

(Dollars in millions)	Year Ended December 31,			
	2016		2015	
	Number of Loans	Post-TDR Recorded Investment ⁽¹⁾	Number of Loans	Post-TDR Recorded Investment ⁽¹⁾
Single-family:				
20 and 30-year or more, amortizing fixed-rate	16,139	\$2,520	18,478	\$3,036
15-year amortizing fixed-rate	813	66	900	72
Adjustable-rate	277	41	335	55

Total single-family	18,764	\$2,932	21,668	\$3,598
Multifamily	—	\$—	—	\$—

(1) Represents the recorded investment at the end of the period in which the loan was modified and does not represent the recorded investment as of December 31.

In addition to modifications, loans may be initially classified as TDRs as a result of other loss mitigation activities (i.e., repayment plans, forbearance agreements, or trial period modifications). During the years ended December 31, 2016 and 2015, 8,083 and 9,492, respectively, of such loans (with a post-TDR recorded investment of \$1.0 billion and \$1.2 billion, respectively) experienced a payment default within a year after the loss mitigation activity occurred. Loans may also be initially classified as TDRs because the borrowers' debts were discharged in Chapter 7 bankruptcy (and the loan was not already classified as a TDR for other reasons). During the years ended December 31, 2016 and 2015, 1,154 and 2,196, respectively, of such loans (with a post-TDR recorded investment of \$0.1 billion and \$0.3 billion, respectively) experienced a payment default within a year after the borrowers' Chapter 7 bankruptcy.

Single-Family Loans

Impairment of a single-family loan having undergone a TDR is generally measured as the excess of our recorded investment in the loan over the present value of the expected future cash flows, discounted at the loan's original effective interest rate for fixed-rate loans, or at the loan's effective interest rate prior to the restructuring for ARM loans. Our expectation of future cash flows incorporates, among other items, an estimated probability of default which is based on a number of market factors as well as the characteristics of the loan, such as past due status. Subsequent to the restructuring date, interest income is recognized at the modified interest rate, subject to our non-accrual policy as discussed in "Interest Income" above, with all other changes in the present value of expected future cash flows being recognized as a component of the provision for credit losses in our consolidated statements of comprehensive income. If we determine that foreclosure on the underlying collateral is probable, we measure impairment based upon the fair value of the collateral, as reduced by estimated disposition costs and adjusted for estimated proceeds from insurance and similar sources.

During 2016, approximately 43% of completed single-family loan modifications that were classified as TDRs involved interest rate reductions and, in certain cases, term extensions and approximately 16% involved principal forbearance in addition to interest rate reductions and, in certain cases, term extensions. During 2016, the average term extension was 177 months, and the average interest rate reduction was 0.8% on completed single-family loan modifications classified as TDRs.

Substantially all of our completed single-family loan modifications classified as a TDR during 2016 resulted in a modified loan with a fixed interest rate. However, many of these fixed-rate loans include

Financial Statements Notes to the Consolidated Financial Statements | Note 4

provisions for the reduced interest rates to remain fixed for the first five years of the modification and then increase at a rate of up to one percent per year until the interest rate has been adjusted to the market rate that was in effect at the time of the modification.

Multifamily Loans

Multifamily impaired loans include TDRs, loans three monthly payments or more past due, and loans that are deemed impaired based on management judgment. Factors considered by management in determining whether a loan is impaired include the underlying property's operating performance as represented by its current DSCR, available credit enhancements, current LTV ratio, management of the underlying property, and the property's geographic location. Multifamily loans are generally measured individually for impairment based on the fair value of the underlying collateral, as reduced by estimated disposition costs, as the repayment of these loans is generally provided from the cash flows of the underlying collateral and any associated credit enhancement. Except for cases of fraud and certain other types of borrower defaults, most multifamily loans are non-recourse to the borrower. As a result, the cash flows of the underlying property (including any associated credit enhancements) serve as the source of funds for repayment of the loan. Interest income recognition on multifamily impaired loans is subject to our non-accrual policy as discussed in "Interest Income" above.

The assessment as to whether a multifamily loan restructuring is considered a TDR contemplates the unique facts and circumstances of each loan. This assessment considers qualitative factors such as whether the borrower's modified interest rate is consistent with that of a borrower having a similar credit profile at the time of modification. In certain cases, for maturing loans we may provide short-term loan extensions of up to one year with no changes to the effective borrowing rate. In other cases, we may make more significant modifications of terms for borrowers experiencing financial difficulty, such as reducing the interest rate, extending the maturity for longer than one year, providing principal forbearance, or some combination of these terms.

Financial Statements Notes to the Consolidated Financial Statements | Note 4

Impaired Loans

The tables below present our recorded investment in individually impaired loans and the related allowance for loan losses.

Total single-family and multifamily	\$95,844	\$92,003	(\$14,040)	\$95,426	\$3,561	\$405

(1) Consists of income recognized during the period related to loans on non-accrual status.

(2) Individually impaired loans with no specific related valuation allowance primarily represent those loans for which the collateral value is sufficiently in excess of the loan balance to result in recovery of the entire recorded investment if the property were foreclosed upon or otherwise subject to disposition.

(3) Consists primarily of loans classified as TDRs.

Financial Statements Notes to the Consolidated Financial Statements | Note 4

The table below presents our allowance for loan losses and our recorded investment in loans, held-for-investment, by impairment evaluation methodology.

(In millions)	December 31, 2016			December 31, 2015		
	Single-family	Multifamily	Total	Single-family	Multifamily	Total
Recorded investment:						
Collectively evaluated	\$1,684,411	\$28,552	\$1,712,963	\$1,621,801	\$30,728	\$1,652,529
Individually evaluated	85,033	350	85,383	91,528	475	92,003
Total recorded investment	1,769,444	28,902	1,798,346	1,713,329	31,203	1,744,532
Ending balance of the allowance for loan losses:						
Collectively evaluated	(1,431)	(11)	(1,442)	(1,273)	(18)	(1,291)
Individually evaluated	(11,980)	(9)	(11,989)	(14,019)	(21)	(14,040)
Total ending balance of the allowance	(13,411)	(20)	(13,431)	(15,292)	(39)	(15,331)
Net investment in loans	\$1,756,033	\$28,882	\$1,784,915	\$1,698,037	\$31,164	\$1,729,201

A significant number of unsecuritized single-family loans on our consolidated balance sheets are individually evaluated for impairment while substantially all single-family loans held by our consolidated trusts are collectively evaluated for impairment. The ending balance of the allowance for loan losses associated with our held-for-investment unsecuritized loans represented approximately 9.9% and 10.8% of the recorded investment in such loans at December 31, 2016 and 2015, respectively, and a substantial portion of the allowance associated with these loans represented interest rate concessions provided to borrowers as part of loan modifications. The ending balance of the allowance for loan losses associated with loans held by our consolidated trusts represented approximately 0.2% of the recorded investment in such loans as of both December 31, 2016 and 2015.

CREDIT PROTECTION AND OTHER FORMS OF CREDIT ENHANCEMENT

In connection with many of our single-family loans and other mortgage-related guarantees, we have various forms of credit protection.

The table below presents the UPB of single-family loans on our consolidated balance sheets or underlying certain of our financial guarantees with credit protection and the maximum amounts of potential loss recovery by type of credit protection.

Financial Statements Notes to the Consolidated Financial Statements | Note 4

(In millions)	UPB ⁽¹⁾ at		Maximum Coverage ⁽¹⁾⁽²⁾ at	
	December 31, 2016	December 31, 2015	December 31, 2016	December 31, 2015
Credit enhancements at the time we acquire the loan:				
Primary mortgage insurance	\$291,217	\$257,063	\$74,345	\$65,760
Seller indemnification	1,030	1,095	10	11
Deep MI ⁽³⁾	3,067	—	81	—
Lender recourse and indemnification agreements ⁽⁴⁾	5,247	5,902	4,911	5,385
Pool insurance ⁽⁴⁾	1,719	2,140	618	753
Other:				
HFA indemnification	1,747	2,599	1,747	2,599
Subordination	1,874	2,127	230	278
Other credit enhancements ⁽⁴⁾	17	22	6	10
Credit enhancements subsequent to our purchase or guarantee of the loan:				
STACR debt note ⁽⁵⁾	427,978	328,872	14,507	11,551
ACIS transactions ⁽⁶⁾	453,670	328,872	5,355	3,365
Whole loan securities and senior subordinate securitization structures	2,494	894	375	58
Less: UPB with more than one type of credit enhancement	(559,400)	(417,393)	—	—
Total	\$630,660	\$512,193	\$102,185	\$89,770

Except for the majority of our single-family credit risk transfer transactions, our credit enhancements generally provide protection for the first, or initial, credit losses associated with the related loans. Excludes: (a) FHA/VA and other governmental loans; (b) credit protection associated with \$6.7 billion and \$8.3 billion in UPB of single-family loans underlying other structured transactions where data was not available as of December 31, 2016 (1) and 2015, respectively; and (c) repurchase rights (subject to certain conditions and limitations) we have under representations and warranties provided by our agreements with seller/servicers to underwrite loans and service them in accordance with our standards. The UPB of single-family loans covered by insurance or partial guarantees issued by federal agencies (such as FHA, VA and USDA) was \$2.8 billion and \$3.2 billion as of December 31, 2016, and 2015, respectively.

Except for subordination and whole loan security, this represents the remaining amount of loss recovery that is available subject to terms of counterparty agreements. For subordination and whole loan security, this represents (2) the UPB of the securities that are subordinate to our guarantee, which could provide protection by absorbing first losses.

Includes approximately \$3.1 billion in UPB at December 31, 2016, where the related loans are also covered by (3) primary mortgage insurance. Deep MI credit risk transfer, or Deep MI, began in the third quarter of 2016.

In aggregate, includes approximately \$1.0 billion and \$1.1 billion in UPB at December 31, 2016 and 2015, (4) respectively, where the related loans are also covered by primary mortgage insurance.

Includes approximately \$123.5 billion and \$87.4 billion in UPB at December 31, 2016 and 2015, respectively, (5) where the related loans are also covered by primary mortgage insurance. Maximum coverage amounts presented represent the outstanding balance of STACR debt notes held by third parties.

Includes \$127.4 billion and \$87.4 billion in UPB at December 31, 2016 and 2015, respectively, where the related (6) loans are also covered by primary mortgage insurance. Maximum coverage amounts presented represent the remaining aggregate limit of insurance purchased from third parties in ACIS transactions.

Primary mortgage insurance and credit risk transfer transactions are the most prevalent types of credit enhancement protecting our single-family credit guarantee portfolio. Pool insurance contracts provide insurance on a group of mortgage loans up to a stated aggregate loss limit. We have not purchased pool insurance on single-family mortgage loans since March 2008. For information about counterparty risk associated with mortgage insurers, see Note 12. Our credit risk transfer transactions provide credit enhancement by transferring a portion of credit losses on single-family mortgage loans to third-party investors and insurers. The value of these transactions to us is dependent on various economic scenarios, and we will primarily benefit from these transactions if we experience significant mortgage loan defaults.

Financial Statements Notes to the Consolidated Financial Statements | Note 4

NON-CASH INVESTING AND FINANCING ACTIVITIES

During the years ended December 31, 2016, 2015, and 2014, we acquired \$234.6 billion, \$237.5 billion, and \$187.1 billion, respectively, of loans held-for-investment in exchange for the issuance of debt securities of consolidated trusts in guarantor swap transactions. These guarantor swap transactions during the years ended December 31, 2016 and 2015 included approximately \$30.3 billion and \$11.6 billion, respectively, of loans received from sellers to satisfy advances that were recorded in other assets on our consolidated balance sheets.

We acquire REO properties as a result of the derecognition of loans held on our consolidated balance sheets upon foreclosure of the underlying collateral or deed in lieu of foreclosure. These acquisitions represent non-cash transfers. During the years ended December 31, 2016, 2015, and 2014, we had transfers of \$1.5 billion, \$2.0 billion, and \$3.8 billion, respectively, from loans to REO.

Freddie Mac 2016 Form 10-K 256

Financial Statements Notes to the Consolidated Financial Statements | Note 5

NOTE 5: INVESTMENTS IN SECURITIES

The table below summarizes the fair values of our investments in securities by classification as of December 31, 2016 and 2015.

(In millions)	December	December
	31, 2016	31, 2015
Trading securities	\$44,790	\$39,278
Available-for-sale securities	66,757	74,937
Total	\$111,547	\$114,215

We currently classify and account for our securities as either available-for-sale or trading. As of December 31, 2016 and 2015, we did not classify any securities as held-to-maturity, although we may elect to do so in the future.

Securities classified as available-for-sale and trading are reported at fair value with changes in fair value included in AOCI, net of income taxes and other gains (losses) on investment securities recognized in earnings, respectively. See Note 13 for more information on how we determine the fair value of securities.

We record purchases and sales of securities on the trade date when the related forward commitments are exempt from the accounting guidance for derivatives and hedge accounting. Alternatively, we record purchases and sales of securities on the expected settlement date, with a corresponding derivative recorded on the trade date, when the related forward commitments are not exempt from the accounting guidance for derivatives and hedge accounting.

We include interest on securities in our consolidated statements of comprehensive income. For most of our securities, interest income is recognized using the effective interest method, which considers the contractual terms of the security. Deferred items, including premiums, discounts, and other basis adjustments, are amortized into interest income over the contractual lives of the securities.

For certain securities, interest income is recognized using the prospective effective interest method. We apply this method to securities that:

- Can contractually be prepaid or otherwise settled in such a way that we may not recover substantially all of our recorded investment;

- Are not of high credit quality at acquisition; or

- Have been determined to be other-than-temporarily impaired.

Under this method, we recognize as interest income, over the life of the securities, the excess of the cash flows expected to be collected over the securities' carrying value. We update our estimates of expected cash flows periodically and recognize changes in the calculated effective interest rate on a prospective basis.

For securities classified as trading or available-for-sale, we classify the cash flows as investing activities because we hold these securities for investment purposes. In cases where the transfer of a security represents a secured borrowing, we classify the related cash flows as financing activities.

Financial Statements Notes to the Consolidated Financial Statements | Note 5

TRADING SECURITIES

The table below presents the estimated fair values of our trading securities by major security type. Our non-mortgage-related securities primarily consist of investments in U.S. Treasury securities.

(In millions)	December 31, 2016	December 31, 2015
Mortgage-related securities:		
Freddie Mac	\$15,343	\$15,513
Other agency	8,161	6,468
All other	149	146
Total mortgage-related securities	23,653	22,127
Non-mortgage-related securities	21,137	17,151
Total fair value of trading securities	\$44,790	\$39,278

For the years ended December 31, 2016, 2015, and 2014, we recorded net unrealized gains (losses) on trading securities held at those dates of (\$791) million, (\$856) million, and (\$88) million, respectively.

Financial Statements Notes to the Consolidated Financial Statements | Note 5

AVAILABLE-FOR-SALE SECURITIES

At December 31, 2016 and 2015, all available-for-sale securities were mortgage-related securities.

The table below presents the amortized cost, gross unrealized gains and losses, and fair value by major security type for our securities classified as available-for-sale.

(In millions)	December 31, 2016				Fair Value
	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses		
			Other-Than-Temporary Impairment ⁽¹⁾	Impairment ⁽²⁾	
Available-for-sale securities:

(1) Represents the gross unrealized losses for securities for which we have previously recognized other-than-temporary impairment in earnings.

(2) Represents the gross unrealized losses for securities for which we have not previously recognized other-than-temporary impairment in earnings.

Financial Statements Notes to the Consolidated Financial Statements | Note 5

Available-For-Sale Securities in a Gross Unrealized Loss Position

The table below presents available-for-sale securities in a gross unrealized loss position, and whether such securities have been in an unrealized loss position for less than 12 months, or 12 months or greater.

(In millions)	December 31, 2016			
	Less than 12 Months		12 Months or Greater	
	Fair Value	Gross Unrealized Losses	Fair Value	Gross Unrealized Losses
Available-for-sale securities:				
Freddie Mac	\$19,786	(\$559)	\$1,732	(\$23)
Other agency	542	(6)	2,040	(19)
Non-agency RMBS	309	(1)	2,188	(79)
Non-agency CMBS	383	(2)	204	(24)
Obligations of states and political subdivisions	83	—	—	—
Total available-for-sale securities in a gross unrealized loss position	\$21,103	(\$568)	\$6,164	(\$145)

(In millions)	December 31, 2015			
	Less than 12 Months		12 Months or Greater	
	Fair Value	Gross Unrealized Losses	Fair Value	Gross Unrealized Losses
Available-for-sale securities:				
Freddie Mac	\$8,171	(\$64)	\$1,224	(\$35)
Other agency	2,402	(24)	1,392	(12)
Non-agency RMBS	1,176	(30)	4,781	(398)
Non-agency CMBS	396	(9)	160	(2)
Obligations of states and political subdivisions	18	—	8	(1)
Total available-for-sale securities in a gross unrealized loss position	\$12,163	(\$127)	\$7,565	(\$448)

At December 31, 2016, total gross unrealized losses on available-for-sale securities were \$0.7 billion. The gross unrealized losses relate to 436 separate securities. We purchase multiple lots of individual securities at different times and at different costs. We determine gross unrealized gains and gross unrealized losses by specifically evaluating investment positions at the lot level; therefore, some of the lots we hold for an individual security may be in an unrealized gain position, while other lots for that security may be in an unrealized loss position.

Impairment Recognition on Investments in Securities

We evaluate available-for-sale securities in an unrealized loss position as of the end of each quarter to determine whether the decline in value is other-than-temporary. An unrealized loss exists when the fair value of an individual lot is less than its amortized cost basis. As discussed further below, certain other-than-temporary impairment losses are recognized in earnings.

Other-than-temporary impairment is considered to have occurred if the fair value of the security lot is less than its amortized cost basis and we either intend to sell the security or more likely than not will be required to sell the

security lot prior to recovery of its amortized cost basis. Under these circumstances, the security's entire decline in fair value is deemed to be other-than-temporary and is recorded within our consolidated statements of comprehensive income as net impairment of available-for-sale securities

Financial Statements Notes to the Consolidated Financial Statements | Note 5

recognized in earnings.

If we do not intend to sell the security and we believe it is not more likely than not that we will be required to sell prior to recovery of the security's amortized cost basis, we recognize only the credit component of other-than-temporary impairment in earnings and the amounts attributable to all other factors are recorded in AOCI. The credit component represents the amount by which the present value of cash flows expected to be collected from the security is less than its amortized cost basis. The present value of cash flows expected to be collected represents our estimate of future contractual cash flows that we expect to collect, discounted at the security's original effective interest rate or, if applicable, the effective interest rate determined based on significantly improved cash flows subsequent to a prior other-than-temporary impairment.

The evaluation of whether unrealized losses on available-for-sale securities are other-than-temporary requires significant management judgments, assumptions, and consideration of numerous factors. We perform an evaluation on a security lot basis considering all available information. The relative importance of this information varies based on the facts and circumstances surrounding each security, as well as the economic environment at the time of assessment. Our net impairment on available-for-sale securities during 2016 includes certain securities that we have the intent to sell prior to the recovery of the security's amortized cost basis. For the remaining available-for-sale securities in an unrealized loss position at December 31, 2016, we have asserted that we have no intent to sell and that we believe it is not more likely than not that we will be required to sell the security before recovery of its amortized cost basis.

Freddie Mac and Other Agency Securities

We generally hold these securities that are in an unrealized loss position at least to recovery and typically to maturity. As the principal and interest on these securities are guaranteed, we generally do not intend to sell these securities, and it is not more likely than not that we will be required to sell such securities before a recovery of the securities' amortized cost basis. As a result, unless we intend to sell the security, we consider unrealized losses on these securities to be temporary.

Non-Agency Commercial Mortgage-Backed Securities

Non-agency CMBS are exposed to stresses in the commercial real estate market. We use an external model that utilizes underlying collateral performance, current and expected credit enhancements, and assumptions about the underlying collateral cash flows to identify securities that may have an increased risk of failing to make their contractual payments. While it is possible that, under certain conditions, collateral losses on our non-agency CMBS for which we have not recorded an impairment charge could exceed our credit enhancement levels and a principal or interest loss could occur, we do not believe that those conditions were likely as of December 31, 2016.

Financial Statements Notes to the Consolidated Financial Statements | Note 5

Non-Agency Residential Mortgage-Backed Securities Backed by Subprime, Option ARM, Alt-A and Other Loans
 We believe the unrealized losses on the non-agency RMBS we hold are mainly attributable to poor underlying collateral performance, limited liquidity, and risk premiums. In evaluating securities for impairment, we use an internal model that considers the credit performance of the underlying collateral, including current LTV ratio, delinquency status, servicer performance, loan modification terms and status, borrower credit information, and the collectability of amounts from bond insurers. The model also incorporates assumptions about the economic environment, including future home prices and interest rates to project underlying collateral prepayment speeds, delinquency and default rates, and loss severities. Circumstances in which it is expected that a principal and interest shortfall will occur and there is substantial uncertainty surrounding a bond insurer's ability to pay all future claims can give rise to recognition of other-than-temporary impairment in earnings. For additional information regarding bond insurers, see Note 12.

The table below presents the modeled attributes for the related collateral that are used to determine whether our interests in certain available-for-sale non-agency RMBS backed by subprime, option ARM, and Alt-A loans will experience a cash shortfall.

(Dollars in millions)	December 31, 2016	
UPB	\$14,343	
Weighted average collateral cumulative loss	23	%
Weighted average voluntary prepayment rates	6	%
Average security credit enhancements ⁽¹⁾	(1)%

Positive value reflects the amount of subordination and other financial support (excluding credit enhancement provided by bond insurance) that will incur losses in the securitization structure before any losses are allocated to securities that we own. Percentage generally calculated based on the total UPB of securities subordinate to the (1) securities we own, divided by the total UPB of all of the securities issued by the trust (excluding notional balances). Negative value is shown when unallocated collateral losses will be allocated to the securities that we own in excess of current remaining credit enhancement, if any. The unallocated collateral losses have been considered in our assessment of other-than-temporary impairment.

In evaluating the non-agency mortgage-related securities backed by subprime, option ARM, and Alt-A and other loans for other-than-temporary impairment, we noted that the percentage of securities that were AAA-rated and the percentage that were investment grade declined significantly since acquisition. While these ratings have declined, the ratings themselves are not determinative that a loss is more or less likely. While we may consider credit ratings in our analysis, we believe that our detailed security-by-security analysis provides a more comprehensive view of the ultimate collectability of contractual amounts due to us.

Our analysis is subject to change as new information regarding delinquencies, severities, loss timing, prepayments, and other factors becomes available. While it is possible that, under certain conditions, collateral losses on our remaining available-for-sale securities for which we have not recorded an impairment charge could exceed our credit enhancement levels and a principal or interest loss could occur, we do not believe that those conditions were likely as of December 31, 2016.

Financial Statements Notes to the Consolidated Financial Statements | Note 5

Obligations of States and Political Subdivisions

These investments consist of housing revenue bonds. We believe the unrealized losses on obligations of states and political subdivisions are primarily a result of movements in interest rates and liquidity and risk premiums. We believe that any credit risk related to these securities is minimal because of the issuer guarantees provided on these securities.

Other-Than-Temporary Impairment on Available-For-Sale Securities

The table below summarizes other-than-temporary impairment on available-for-sale securities recognized in earnings.

(In millions)	Year Ended		
	December 31,		
	2016	2015	2014
Impairment of available-for-sale securities:			
Total other-than-temporary impairment of available-for-sale securities	\$72	\$241	\$860
Portion of other-than-temporary impairment recognized in AOCI	119	51	78
Net impairment of available-for-sale securities recognized in earnings ⁽¹⁾	\$191	\$292	\$938

(1) Includes \$70 million, \$240 million, and \$817 million during 2016, 2015, and 2014, respectively, of impairment recognized in earnings due to change in status from intent to hold to intent to sell.

The table below is a rollforward of the amount of credit-related other-than-temporary impairment that has been recognized in earnings for available-for-sale securities that we continue to hold.

(In millions)	Year Ended	
	December 31,	
	2016	2015
Credit-related other-than-temporary impairment on available-for-sale securities recognized in earnings:		
Beginning balance — remaining credit losses on available-for-sale securities where other-than-temporary impairment was recognized in earnings	\$5,306	\$6,798
Additions:		
Amounts related to credit losses on securities for which an other-than-temporary impairment was previously recognized	121	52
Reductions:		
Amounts related to securities which were sold, written off, or matured	(167)	(107)
Amounts related to securities which we intend to sell or it is more likely than not that we will be required to sell before recovery of amortized cost basis	(856)	(1,116)
Amounts related to amortization resulting from significant increases in cash flows expected to be collected and/or due to the passage of time that are recognized over the remaining life of the security	(268)	(321)
Ending balance — remaining credit losses on available-for-sale securities where other-than-temporary impairments were recognized in earnings	\$4,136	\$5,306

Realized Gains and Losses on Sales of Available-For-Sale Securities

Gains and losses on the sale of securities are included in other gains (losses) on investment securities recognized in earnings, including those gains (losses) reclassified into earnings from AOCI. We use the specific identification method for determining the cost basis of a security in computing the gain or loss.

The table below summarizes the gross realized gains and gross realized losses from the sale of available-for-sale securities.

Financial Statements Notes to the Consolidated Financial Statements | Note 5

(In millions)	Year Ended December		
	2016	2015	2014
Gross realized gains	\$1,062	\$1,371	\$1,897
Gross realized losses	(91)	(33)	(185)
Net realized gains (losses)	\$971	\$1,338	\$1,712

Maturities of Available-For-Sale Securities

The table below presents the remaining contractual maturities of available-for-sale securities by security type.
As of December 31, 2016

(Dollars in millions)	Total Amortized Cost	Total Fair Value	One Year or Less		After One Year Through Five Years		After Five Years Through Ten Years		After Ten Years	
			Amortized Cost	Fair Value	Amortized Cost	Fair Value	Amortized Cost	Fair Value	Amortized Cost	Fair Value
Available-for-sale securities:										
Freddie Mac	\$43,671	\$43,652	\$—	\$—	\$68	\$67	\$3,079	\$3,069	\$40,524	\$40,516
Other agency	4,127	4,221	1	1	5	7	76	85	4,045	4,128
Non-agency RMBS	10,606	11,797	—	—	7	7	23	29	10,576	11,761
Non-agency CMBS	6,288	6,422	98	98	—	—	—	—	6,190	6,324
Obligations of states and political subdivisions	657	665	6	6	13	13	63	65	575	581
Total available-for-sale securities	\$65,349	\$66,757	\$105	\$105	\$93	\$94	\$3,241	\$3,248	\$61,910	\$63,310
Weighted Average Yield ⁽¹⁾	2.70	%	5.61	%	2.67	%	1.80	%	2.71	%

The weighted average yield is calculated based on a yield for each individual lot held at December 31, 2016 excluding any fully taxable-equivalent adjustments related to tax exempt sources of interest income. The numerator for the individual lot yield consists of the sum of: (a) the year-end interest rate multiplied by the year-end UPB; and (1)(b) the annualized amortization income or expense calculated for December 2016 (excluding the accretion of non-credit-related other-than-temporary impairments and any adjustments recorded for changes in the effective rate). The denominator for the individual lot yield consists of the year-end amortized cost of the lot excluding effects of other-than-temporary impairments on the UPB of impaired lots.

NON-CASH INVESTING AND FINANCING ACTIVITIES

From time to time, we contribute PCs and Giant PCs held in our mortgage-related investments portfolio to non-consolidated REMIC trusts in exchange for beneficial interests in those same REMIC trusts. We account for this type of transaction as the acquisition of investment securities and the issuance of debt securities of consolidated trusts. During the years ended December 31, 2015 and 2014, we received investment securities as consideration for the issuance of debt securities of consolidated trusts of \$0.3 billion and \$1.8 billion, respectively, as a result of these transactions. We did not have such activity during the year ended December 31, 2016.

In addition, from time to time, we may recombine all of the outstanding beneficial interests in a REMIC trust to

effectively recreate the original Giant PC trust. In certain cases, we may receive only beneficial interests in the Giant PC trust as proceeds for our contribution of the collateral. Because the beneficial interest issued by the Giant PC is substantially the same as the PCs that ultimately collateralized the

Financial Statements Notes to the Consolidated Financial Statements | Note 5

trust, we account for our interest in the Giant PC as an extinguishment of the outstanding debt securities of the underlying PC trusts. As a result, we account for this type of transaction as the transfer of investment securities in exchange for the extinguishment of debt securities of consolidated trusts. During the year ended December 31, 2015, we extinguished debt securities of consolidated trusts as consideration for the transfer of investment securities of \$0.5 billion as a result of these transactions. We did not have such activity during the years ended December 31, 2016 and 2014.

Furthermore, during the fourth quarter of 2016, we purchased \$4.5 billion of non-mortgage-related securities that were traded, but not settled. We settled our purchase obligation during the first quarter of 2017.

Financial Statements Notes to the Consolidated Financial Statements | Note 6

NOTE 6: DEBT SECURITIES AND SUBORDINATED BORROWINGS

On January 1, 2016, we adopted the accounting guidance that requires debt issuance costs related to a recognized debt liability to be presented in the consolidated balance sheets as a direct deduction (or basis adjustment) from the debt liability rather than as a separate asset. Previously reported amounts have been revised to conform to the current presentation.

The table below summarizes the interest expense per our consolidated statements of comprehensive income and the balances of total debt, net per our consolidated balance sheets.

(In millions)	Balance, Net		Interest Expense for the Year Ended December 31,		
	2016	2015	2016	2015	2014
Debt securities of consolidated trusts held by third parties	\$1,648,683	\$1,556,121	\$44,599	\$45,536	\$48,003
Other debt:					
Short-term debt	71,451	113,569	350	173	145
Long-term debt	281,870	300,579	5,646	6,207	6,768
Total other debt	353,321	414,148	5,996	6,380	6,913
Total debt, net	\$2,002,004	\$1,970,269	\$50,595	\$51,916	\$54,916

Debt securities that we issue are classified as either debt securities of consolidated trusts held by third parties or other debt. We issue other debt to fund our operations.

With the exception of certain debt for which we elected the fair value option, our debt is reported at amortized cost. Deferred items, including premiums, discounts, issuance costs, and hedging-related basis adjustments, are reported as a component of total debt, net. These items are amortized and reported through interest expense using the effective interest method over the contractual life of the related indebtedness. Amortization of premiums, discounts, and issuance costs begins at the time of debt issuance. Amortization of hedging-related basis adjustments begins upon the discontinuation of the related hedge relationship.

We elected the fair value option on debt that contains embedded derivatives, including certain STACR debt notes. Changes in the fair value of these debt obligations are recorded in other income, with any upfront costs and fees incurred or received in exchange for the issuance of the debt being recognized in earnings as incurred and not deferred. Related interest expense continues to be reported as interest expense based on the stated terms of the debt securities. For additional information on our election of the fair value option, see Note 13.

When we repurchase or call outstanding debt securities, we recognize the difference between the amount paid to redeem the debt security and the carrying value in earnings as a component of gains (losses) on extinguishment of debt. Contemporaneous transfers of cash between us and a creditor in connection with the issuance of a new debt security and satisfaction of an existing debt security are accounted for as either an extinguishment or a modification of an existing debt security. If the debt securities have substantially different terms, the transaction is accounted for as an extinguishment of the existing debt security. The issuance of a new debt security is recorded at fair value, fees paid to the creditor are

Financial Statements Notes to the Consolidated Financial Statements | Note 6

expensed as incurred and fees paid to third parties are deferred and amortized into interest expense over the life of the new debt security using the effective interest method. If the terms of the existing debt security and the new debt security are not substantially different, the transaction is accounted for as a modification of the existing debt. Fees paid to the creditor are deferred and amortized into interest expense over the life of the modified debt security using the effective interest method and fees paid to third parties are expensed as incurred.

We also engage in dollar roll transactions whereby we enter into an agreement to sell and subsequently repurchase (or purchase and subsequently resell) agency securities. When these transactions involve securities issued by consolidated entities, they are treated as issuances and extinguishments of debt.

Under the Purchase Agreement, without the prior written consent of Treasury, we may not incur indebtedness that would result in the par value of our aggregate indebtedness exceeding 120% of the amount of mortgage assets we are allowed to own on December 31 of the immediately preceding calendar year. Because of this debt limit, we may be restricted in the amount of debt we are allowed to issue to fund our operations. Under the Purchase Agreement, the amount of our “indebtedness” is determined without giving effect to the January 1, 2010 change in the accounting guidance related to transfers of financial assets and consolidation of VIEs. Therefore, “indebtedness” does not include debt securities of consolidated trusts held by third parties. We also cannot become liable for any subordinated indebtedness without the prior consent of Treasury. See Note 2 for information regarding restrictions on the amount of mortgage-related securities that we may own.

Our debt cap under the Purchase Agreement was \$479.0 billion in 2016 and declined to \$407.2 billion on January 1, 2017. As of December 31, 2016, our aggregate indebtedness for purposes of the debt cap was \$356.7 billion. Our aggregate indebtedness is calculated as the par value of other short- and long-term debt.

DEBT SECURITIES OF CONSOLIDATED TRUSTS HELD BY THIRD PARTIES

Debt securities of consolidated trusts held by third parties represents our liability to third parties that hold beneficial interests in our consolidated securitization trusts. Debt securities of consolidated trusts held by third parties are generally prepayable as the loans that collateralize the debt may prepay without penalty at any time.

Financial Statements Notes to the Consolidated Financial Statements | Note 6

The table below summarizes the debt securities of consolidated trusts held by third parties based on underlying loan product type.

(Dollars in millions)	December 31, 2016				December 31, 2015			
	Contractual Maturity	UPB	Carrying Amount	Weighted Average Coupon ⁽¹⁾	Contractual Maturity	UPB	Carrying Amount	Weighted Average Coupon ⁽¹⁾
Single-family:								
30-year or more, fixed-rate ⁽²⁾	2017 - 2055	\$1,193,329	\$1,229,849	3.71 %	2016 - 2053	\$1,090,584	\$1,123,290	3.88 %
20-year fixed-rate	2017 - 2037	74,033	76,331	3.49 %	2016 - 2036	73,018	75,221	3.61 %
15-year fixed-rate	2017 - 2032	267,739	273,978	2.90 %	2016 - 2031	270,036	276,531	3.01 %
Adjustable-rate	2017 - 2047	52,991	54,205	2.69 %	2016 - 2047	62,496	63,899	2.61 %
Interest-only	2026 - 2041	10,007	10,057	3.47 %	2026 - 2041	14,252	14,317	3.16 %
FHA/VA	2017 - 2046	1,015	1,038	4.92 %	2016 - 2044	986	1,005	5.37 %
Total single-family		1,599,114	1,645,458			1,511,372	1,554,263	
Multifamily ⁽²⁾	2019 - 2033	3,048	3,225	4.63 %	2017 - 2028	1,717	1,858	4.90 %
Total debt securities of consolidated trusts held by third parties		\$1,602,162	\$1,648,683			\$1,513,089	\$1,556,121	

(1) The effective rate for debt securities of consolidated trusts held by third parties was 2.63% and 3.06% as of December 31, 2016 and 2015, respectively.

(2) Carrying amount includes securities recorded at fair value.

OTHER SHORT-TERM DEBT

As indicated in the table below, a majority of other short-term debt consisted of discount notes and Reference Bills[®] securities, paying only principal at maturity. Discount notes, Reference Bills[®] securities, and medium-term notes are unsecured general corporate obligations. Securities sold under agreements to repurchase are effectively collateralized borrowings where we sell securities with an agreement to repurchase such securities at a future date. Certain medium-term notes that have original maturities of one year or less are classified as other short-term debt for purposes of this presentation.

The table below summarizes the balances and effective interest rates for other short-term debt.

(Dollars in millions)	December 31, 2016			December 31, 2015		
	Par Value	Carrying Amount	Weighted Average Effective Rate	Par Value	Carrying Amount	Weighted Average Effective Rate
Other short-term debt:

Zero-coupon:								
Medium-term notes — callable	2037	1,000	296	6.17 %	1,000	279	6.17 %	
Medium-term notes — non-callable	2017 - 2039	5,792	2,925	5.01 %	7,343	4,288	3.57 %	
Other	2031 - 2055	533	376	7.72 %	335	198	5.93 %	
Hedging-related basis adjustments		N/A	15		N/A	17		
Total other senior debt		284,773	281,502		303,835	300,136		
Other subordinated debt:								
Fixed-rate	2018	121	120	7.84 %	221	219	6.61 %	
Zero-coupon	2019	332	248	10.51 %	332	224	10.51 %	
Total other subordinated debt		453	368		553	443		
Total other long-term debt		\$285,226	\$281,870	1.81 %	\$304,388	\$300,579	2.02 %	

A portion of our other long-term debt is callable. Callable debt gives us the option to redeem the debt security at par on one or more specified call dates or at any time on or after a specified call date.

The table below summarizes the contractual maturities of other long-term debt securities at December 31, 2016.

(In millions)	Par Value
Annual Maturities	
Other long-term debt:	
2017	\$92,831
2018	71,392
2019	46,436
2020	13,274
2021	20,372
Thereafter	40,921
Debt securities of consolidated trusts held by third parties ⁽¹⁾	1,602,162
Total	1,887,388
Net discounts, premiums, debt issuance costs, hedge-related and other basis adjustments ⁽²⁾	43,165
Total debt securities of consolidated trusts held by third parties and other long-term debt	\$1,930,553

- (1) Contractual maturities of debt securities of consolidated trusts held by third parties are not presented because they are prepayable at any time without penalty.
- (2) Other basis adjustments primarily represent changes in fair value attributable to instrument-specific credit risk.

Financial Statements Notes to the Consolidated Financial Statements | Note 6

SUBORDINATED DEBT INTEREST AND PRINCIPAL PAYMENTS

The terms of certain of our subordinated debt securities provide for us to defer payments of interest in the event we fail to maintain specified capital levels. However, in a September 23, 2008 statement concerning the conservatorship, the Director of FHFA stated that we would continue to make interest and principal payments on our subordinated debt, even if we fail to maintain required capital levels.

Freddie Mac 2016 Form 10-K 270

Financial Statements Notes to the Consolidated Financial Statements | Note 7

NOTE 7: DERIVATIVES

Derivatives are reported at their fair value on our consolidated balance sheets. Derivatives in a net asset position, including net derivative interest receivable or payable, are reported as derivative assets, net. Similarly, derivatives in a net liability position, including net derivative interest receivable or payable, are reported as derivative liabilities, net. We offset fair value amounts recognized for the right to reclaim cash collateral or the obligation to return cash collateral against fair value amounts recognized for derivative instruments executed with the same counterparty under a master netting agreement. Changes in fair value and interest accruals on derivatives are recorded as derivative gains (losses) in our consolidated statements of comprehensive income. Non-cash collateral held is not recognized on our consolidated balance sheets as we do not obtain effective control over the collateral, and non-cash collateral posted is not de-recognized from our consolidated balance sheets as we do not relinquish effective control over the collateral. Therefore, non-cash collateral held or posted is not presented as an offset against derivative assets or derivative liabilities on our consolidated balance sheets.

We evaluate whether financial instruments that we purchase or issue contain embedded derivatives. We generally elect to measure newly acquired or issued financial instruments that contain embedded derivatives at fair value, with changes in fair value recorded in earnings.

At December 31, 2016 and 2015, we did not have any derivatives in hedge accounting relationships; however, there are amounts recorded in AOCI related to discontinued cash flow hedges which are recognized in earnings when the originally forecasted transactions affect earnings. If it becomes probable the originally forecasted transaction will not occur, the associated deferred gain or loss in AOCI would be reclassified to earnings immediately. Amounts reclassified from AOCI linked to interest payments on other debt are recorded in other debt interest expense and amounts not linked to interest payments on other debt are recorded in expense related to derivatives. In the years ended December 31, 2016 and 2015, we reclassified from AOCI into earnings, losses of \$192 million and \$230 million, respectively, related to closed cash flow hedges. See Note 9 for information about future reclassifications of deferred net losses related to closed cash flow hedges to net income.

In addition, in the first quarter of 2017, we began using hedge accounting for certain single-family mortgage loans. In the consolidated statements of cash flows, cash flows related to the acquisition and termination of derivatives, other than forward commitments, are generally classified in investing activities. Cash flows related to forward commitments are classified within the section of the consolidated statements of cash flows in accordance with the cash flows of the financial instruments to which they relate.

USE OF DERIVATIVES

We use derivatives primarily to hedge interest-rate sensitivity mismatches between our financial assets and liabilities. We analyze the interest-rate sensitivity of financial assets and liabilities on a daily basis across a variety of interest-rate scenarios based on market prices, models and economics. When we use derivatives to mitigate our exposures, we consider a number of factors, including cost, exposure to counterparty risk, and our overall risk management strategy.

We classify derivatives into three categories:

Financial Statements Notes to the Consolidated Financial Statements | Note 7

Exchange-traded derivatives;
Cleared derivatives; and
OTC derivatives.

Exchange-traded derivatives include standardized interest-rate futures contracts and options on futures contracts. Cleared derivatives include interest-rate swaps that the U.S. Commodity Futures Trading Commission has determined are subject to the central clearing requirement of the Dodd-Frank Act. OTC derivatives refer to those derivatives that are neither exchange-traded derivatives nor cleared derivatives.

TYPES OF DERIVATIVES

We principally use the following types of derivatives:

LIBOR-based interest-rate swaps;
LIBOR- and Treasury-based options (including swaptions); and
LIBOR- and Treasury-based exchange-traded futures.

We also purchase swaptions on credit indices in order to obtain protection against adverse movements in multifamily spreads which may affect the profitability of our K Certificate or SB Certificate transactions.

In addition to swaps, futures, and purchased options, our derivative positions include written options and swaptions, commitments, and credit derivatives.

Written Options and Swaptions

Written call and put swaptions are sold to counterparties allowing them the option to enter into receive-fixed and pay-fixed interest rate swaps, respectively. Written call and put options on mortgage-related securities give the counterparty the right to execute a contract under specified terms, which generally occurs when we are in a liability position. We may, from time to time, write other derivative contracts such as interest-rate futures.

Commitments

We routinely enter into commitments that include commitments to:

Purchase and sell investments in securities;
Purchase and sell loans; and
Purchase and extinguish or issue debt securities of our consolidated trusts.

Most of these commitments are considered derivatives and therefore are subject to the accounting guidance for derivatives and hedging.

Credit Derivatives

We have purchased loans containing debt cancellation contracts, which provide for mortgage debt or payment cancellation for borrowers who experience unanticipated losses of income dependent on a covered event. The rights and obligations under these agreements have been assigned to the servicers. However, in the event the servicer does not perform as required by contract, we would be obligated under our guarantee to make the required contractual payments.

Financial Statements Notes to the Consolidated Financial Statements | Note 7

DERIVATIVE ASSETS AND LIABILITIES AT FAIR VALUE

The table below presents the notional value and fair value of derivatives reported on our consolidated balance sheets.

(In millions)	December 31, 2016			December 31, 2015		
	Notional or Contractual Amount	Derivatives at Fair Value Assets	Liabilities	Notional or Contractual Amount	Derivatives at Fair Value Assets	Liabilities

Total	(\$274)	(\$2,696)	(\$8,291)

(1) Primarily consists of purchased interest-rate caps and floors and options on Treasury futures.

Financial Statements Notes to the Consolidated Financial Statements | Note 8

NOTE 8: COLLATERALIZED AGREEMENTS AND OFFSETTING ARRANGEMENTS
DERIVATIVE PORTFOLIO

Derivative Counterparties

Our use of cleared derivatives, exchange-traded derivatives, and OTC derivatives exposes us to counterparty credit risk. We are required to post margin in connection with our derivatives transactions. This requirement exposes us to counterparty credit risk in the event that our counterparties fail to meet their obligations. However, the use of cleared and exchange-traded derivatives decreases our credit risk exposure to individual counterparties because a central counterparty is substituted for individual counterparties. OTC derivatives, however, expose us to the credit risk of individual counterparties because transactions are executed and settled between us and each counterparty, exposing us to potential losses if a counterparty fails to meet its obligations.

Our use of interest-rate swaps and option-based derivatives is subject to internal credit and legal reviews. On an ongoing basis, we review the credit fundamentals of all of our derivative counterparties, clearinghouses, and clearing members to confirm that they continue to meet our internal risk management standards.

Over the Counter Derivatives

We use master netting and collateral agreements to reduce our credit risk exposure to our OTC derivative counterparties for interest-rate swap and option-based derivatives. Master netting agreements provide for the netting of amounts receivable and payable from an individual counterparty, as well as posting of collateral in the form of cash, Treasury securities or agency mortgage-related or debt securities, or a combination of both when the counterparty's net obligation to us is above an agreed upon threshold. Conversely, we are also required to post collateral to our counterparties when our obligation to them is above a specified threshold. Although it is our practice not to repledge assets held as collateral, these agreements may allow us or our counterparties to repledge all or a portion of the collateral.

We have master netting agreements in place with all of our OTC derivative counterparties. On a daily basis, the market value of each counterparty's derivatives outstanding is calculated to determine the amount of our net credit exposure, which is equal to the market value of derivatives in a net gain position by counterparty after giving consideration to collateral posted. As a result, our use of master netting and collateral agreements reduces our exposure to our counterparties in the event of default.

In the event a counterparty defaults on its obligations under the derivatives agreement and the default is not remedied in the manner prescribed in the agreement, we have the right under the agreement to direct the custodian bank to transfer the collateral to us or to sell the collateral and transfer the proceeds to us.

In the event that all of our counterparties for OTC interest-rate swaps and option-based derivatives were to have defaulted simultaneously on December 31, 2016, our maximum loss for accounting purposes after applying netting agreements and collateral on an individual counterparty basis would have been approximately \$51 million. A significant majority of our net uncollateralized exposure to OTC derivative counterparties is concentrated among four counterparties, all of which were investment grade as of

Financial Statements Notes to the Consolidated Financial Statements | Note 8

December 31, 2016. We regularly review the market value of securities pledged as collateral and derivative counterparty collateral posting thresholds, where applicable, in an effort to manage our exposure to losses. The amount of collateral we pledge to counterparties related to our derivative instruments is determined after giving consideration to our credit rating. The aggregate fair value of our OTC derivative instruments containing credit-risk related contingent features, netted by counterparty, that were in a liability position on December 31, 2016 was \$0.9 billion for which we posted cash and non-cash collateral of \$0.8 billion in the normal course of business. A reduction in our credit ratings may trigger additional collateral requirements related to our OTC derivative instruments. If a reduction in our credit ratings had triggered additional collateral requirements related to our OTC derivative instruments on December 31, 2016, we would have been required to post an additional \$188 million of collateral to our counterparties. Regulations that take effect March 1, 2017 will require posting of variation margin without the application of any thresholds for OTC derivative transactions executed after that date. As a result, our and the counterparties' credit ratings will no longer be used in determining the amount of collateral to be posted in connection with these transactions.

Cleared and Exchange-Traded Derivatives

The majority of our interest-rate swaps are subject to the central clearing requirement. Changes in the value of open exchange-traded contracts and cleared derivatives are settled or collateralized daily via payments made through the clearinghouse. We net our exposure to cleared derivatives by clearinghouse and clearing member. Exchange-traded derivatives are settled on a daily basis through the payment of variation margin. A reduction in our credit ratings could cause the clearinghouses or clearing members we use for our cleared and exchange-traded derivatives to demand additional collateral.

During 2016, the Chicago Mercantile Exchange made certain amendments to its rule books, which resulted in the legal characterization of variation margin payments for cleared swaps being altered to constitute a settlement rather than a posting of margin collateral. These rule amendments, which are effective January 2017, will require that cleared trades be settled on a daily basis through the payment of variation margin. While we do not expect the Chicago Mercantile Exchange's rule amendments to materially affect our 2017 financial statements and accompanying notes, such amendments will result in certain presentation and disclosure changes, including the reclassification of the portion of the variation margin held as Restricted Cash and Cash Equivalents to Cash and Cash Equivalents in our consolidated balance sheets. As of December 31, 2016, we held approximately \$62 million and posted approximately \$1.2 billion of variation margin related to trades cleared through the Chicago Mercantile Exchange.

While other clearinghouses have made or plan to make similar amendments to their rule books, the amendments that have been implemented to date have not resulted in a change in the legal characterization of variation margin payments for Freddie Mac.

Other Derivatives

We also execute forward purchase and sale commitments of loans and mortgage-related securities, including dollar roll transactions, that are treated as derivatives for accounting purposes. The total exposure on our forward purchase and sale commitments was \$289 million and \$34 million at December 31, 2016 and 2015, respectively.

Financial Statements Notes to the Consolidated Financial Statements | Note 8

Many of our transactions involving forward purchase and sale commitments of mortgage-related securities utilize the Mortgage Backed Securities Division of the Fixed Income Clearing Corporation (“MBSD/FICC”) as a clearinghouse. As a clearing member of the clearinghouse, we post margin to the MBSD/FICC and are exposed to the counterparty credit risk of the organization (including its clearing members). In the event a clearing member fails and causes losses to the MBSD/FICC clearing system, we could be subject to the loss of any or the entire margin that we have posted to the MBSD/FICC. Moreover, our exposure could exceed that amount, as members are generally required to cover losses caused by defaulting members on a pro rata basis. It is difficult to estimate our maximum exposure under these transactions, as this would require an assessment of transactions that we and other members of the MBSD/FICC may execute in the future.

SECURITIES PURCHASED UNDER AGREEMENTS TO RESELL

As an investor, we enter into arrangements to purchase securities under agreements to subsequently resell the identical or substantially the same securities to our counterparty. Our counterparties to these transactions are required to pledge the purchased securities as collateral for their obligation to repurchase those securities at a later date. While such transactions involve the legal transfer of securities, they are accounted for as secured financings because the transferor does not relinquish effective control over the securities transferred. Although it is our practice not to repledge assets held as collateral, these agreements may allow us to repledge all or a portion of the collateral.

We consider the types of securities being pledged to us as collateral when determining how much we lend in transactions involving securities purchased under agreements to resell. Additionally, we regularly review the market values of these securities compared to amounts loaned in an effort to manage our exposure to losses.

SECURITIES SOLD UNDER AGREEMENTS TO REPURCHASE

Securities sold under agreements to repurchase are effectively collateralized borrowings where we sell securities with an agreement to repurchase such securities at a future date. We are required to pledge the sold securities to the counterparties to these transactions as collateral for our obligation to repurchase these securities at a later date. Similar to the securities purchased under agreements to resell transactions, these transactions involve the legal transfer of securities. However, they are accounted for as secured financings because they require the identical or substantially the same securities to be subsequently repurchased. These agreements may allow our counterparties to repledge all or a portion of the collateral.

Financial Statements Notes to the Consolidated Financial Statements | Note 8

OFFSETTING OF FINANCIAL ASSETS AND LIABILITIES

When we receive cash collateral, we recognize the amount received along with a corresponding obligation to return the collateral. When we post cash collateral, we derecognize the amount posted along with a corresponding asset for our right to receive the return of the collateral. We generally do not recognize or derecognize collateral received or pledged in the form of securities as the transferor in such arrangements does not relinquish effective control over the securities transferred. See Note 7 for additional information on our consolidated balance sheets presentation of collateral related to derivatives transactions. At December 31, 2016 and 2015, all amounts of cash collateral related to derivatives with master netting and collateral agreements were offset against derivative assets, net or derivative liabilities, net, as applicable.

The table below displays offsetting and collateral information related to derivatives, securities purchased under agreements to resell, and securities sold under agreements to repurchase. Securities sold under agreements to repurchase are included in debt, net on our consolidated balance sheets.

	(141)	(182)	(197)	Net of tax
AOCI related to defined benefit plans	4	1	4	Salaries and employee benefits
	(1)	—	(2)	Income tax (expense) or benefit
	3	1	2	Net of tax
Total reclassifications in the period	\$369	\$502	\$308	Net of tax

Future Reclassifications from AOCI to Net Income Related to Closed Cash Flow Hedges

The total AOCI related to derivatives designated as cash flow hedges was a loss of \$0.5 billion and \$0.6 billion at December 31, 2016 and 2015, respectively, composed of deferred net losses on closed cash flow hedges. Closed cash flow hedges involve derivatives that have been terminated or are no longer designated as cash flow hedges. Fluctuations in prevailing market interest rates have no effect on the deferred portion of AOCI relating to losses on closed cash flow hedges.

The previously deferred amount related to closed cash flow hedges remains in our AOCI balance and will be recognized into earnings over the expected time period for which the forecasted transactions affect earnings, unless it is deemed probable that the forecasted transactions will not occur. Over the next 12 months, we estimate that approximately \$124 million, net of taxes, of the \$0.5 billion of cash flow hedge losses in AOCI at December 31, 2016 will be reclassified into earnings. The maximum remaining length of time over which we have hedged the exposure related to the variability in future cash flows on forecasted transactions, primarily forecasted debt issuances, is 17 years.

Financial Statements Notes to the Consolidated Financial Statements | Note 9

SENIOR PREFERRED STOCK

Pursuant to the Purchase Agreement described in Note 2, we issued one million shares of senior preferred stock to Treasury on September 8, 2008, in partial consideration of Treasury's commitment to provide funds to us. Shares of the senior preferred stock have a par value of \$1, and have a stated value and initial liquidation preference equal to \$1,000 per share. The liquidation preference of the senior preferred stock is subject to adjustment. Dividends that are not paid in cash for any dividend period will accrue and be added to the liquidation preference of the senior preferred stock. In addition, any amounts Treasury pays to us pursuant to its funding commitment under the Purchase Agreement and any quarterly commitment fees that are not paid in cash to Treasury nor waived by Treasury will be added to the liquidation preference of the senior preferred stock. As described below, we may make payments to reduce the liquidation preference of the senior preferred stock in limited circumstances. As discussed in Note 2, the quarterly commitment fee has been suspended.

Treasury, as the holder of the senior preferred stock, is entitled to receive quarterly cash dividends, when, as and if declared by our Board of Directors. The dividends we have paid to Treasury on the senior preferred stock have been declared by, and paid at the direction of, the Conservator, acting as successor to the rights, titles, powers and privileges of the Board. The dividend is presented in the period in which it is determinable for the senior preferred stock, as a reduction to net income (loss) available to common stockholders and net income (loss) per common share. The dividend is declared and paid in the following period and recorded as a reduction to equity in the period declared. Total dividends paid in cash during 2016, 2015, and 2014 at the direction of the Conservator were \$5.0 billion, \$5.5 billion, and \$19.6 billion, respectively. See Note 2 for a discussion of our net worth sweep dividend.

The senior preferred stock is senior to our common stock and all other outstanding series of our preferred stock, as well as any capital stock we issue in the future, as to both dividends and rights upon liquidation. The senior preferred stock provides that we may not, at any time, declare or pay dividends on, make distributions with respect to, or redeem, purchase or acquire, or make a liquidation payment with respect to, any common stock or other securities ranking junior to the senior preferred stock unless:

• Full cumulative dividends on the outstanding senior preferred stock (including any unpaid dividends added to the liquidation preference) have been declared and paid in cash; and

• All amounts required to be paid with the net proceeds of any issuance of capital stock for cash (as described below) have been paid in cash.

Shares of the senior preferred stock are not convertible. Shares of the senior preferred stock have no general or special voting rights, other than those set forth in the certificate of designation for the senior preferred stock or otherwise required by law. The consent of holders of at least two-thirds of all outstanding shares of senior preferred stock is generally required to amend the terms of the senior preferred stock or to create any class or series of stock that ranks prior to or on parity with the senior preferred stock.

We are not permitted to redeem the senior preferred stock prior to the termination of Treasury's funding commitment set forth in the Purchase Agreement; however, we are permitted to pay down the liquidation preference of the outstanding shares of senior preferred stock to the extent of accrued and unpaid dividends previously added to the liquidation preference and not previously paid down and quarterly

Financial Statements Notes to the Consolidated Financial Statements | Note 9

commitment fees previously added to the liquidation preference and not previously paid down. In addition, if we issue any shares of capital stock for cash while the senior preferred stock is outstanding, the net proceeds of the issuance must be used to pay down the liquidation preference of the senior preferred stock; however, the liquidation preference of each share of senior preferred stock may not be paid down below \$1,000 per share prior to the termination of Treasury's funding commitment. Following the termination of Treasury's funding commitment, we may pay down the liquidation preference of all outstanding shares of senior preferred stock at any time, in whole or in part. If, after termination of Treasury's funding commitment, we pay down the liquidation preference of each outstanding share of senior preferred stock in full, the shares will be deemed to have been redeemed as of the payment date.

The table below provides a summary of our senior preferred stock outstanding at December 31, 2016.

(In millions, except initial liquidation preference price per share)	Shares Authorized	Shares Outstanding	Total Par Value	Initial Liquidation Preference Price per Share	Total Liquidation Preference
Draw Date:					
September 8, 2008	1.00	1.00	\$1.00	\$1,000	\$1,000
November 24, 2008	—	—	—	N/A	13,800
March 31, 2009	—	—	—	N/A	30,800
June 30, 2009	—	—	—	N/A	6,100
June 30, 2010	—	—	—	N/A	10,600
September 30, 2010	—	—	—	N/A	1,800
December 30, 2010	—	—	—	N/A	100
March 31, 2011	—	—	—	N/A	500
September 30, 2011	—	—	—	N/A	1,479
December 30, 2011	—	—	—	N/A	5,992
March 30, 2012	—	—	—	N/A	146
June 29, 2012	—	—	—	N/A	19
Total, senior preferred stock	1.00	1.00	\$1.00		\$72,336

No cash was received from Treasury under the Purchase Agreement in 2016, because we had positive net worth at December 31, 2015, March 31, 2016, June 30, 2016, and September 30, 2016 and, consequently, FHFA did not request a draw on our behalf. At December 31, 2016, our assets exceeded our liabilities under GAAP; therefore no draw is being requested from Treasury under the Purchase Agreement. Our quarterly senior preferred stock dividend is the amount, if any, by which our Net Worth Amount at the end of the immediately preceding fiscal quarter exceeds the applicable Capital Reserve Amount, which was established at \$3 billion for 2013 and declines to zero in 2018. Based on our Net Worth Amount at December 31, 2016 and the Capital Reserve Amount of \$0.6 billion in 2017, our dividend obligation to Treasury in March 2017 will be \$4.5 billion. See Note 2 for additional information. The aggregate liquidation preference on the senior preferred stock owned by Treasury was \$72.3 billion as of both December 31, 2016 and 2015. See Note 15 for additional information.

COMMON STOCK WARRANT

Pursuant to the Purchase Agreement described in Note 2, on September 7, 2008, we issued a warrant to purchase common stock to Treasury, in partial consideration of Treasury's commitment to provide funds to us.

Financial Statements Notes to the Consolidated Financial Statements | Note 9

The warrant may be exercised in whole or in part at any time on or before September 7, 2028, by delivery to us of a notice of exercise, payment of the exercise price of \$0.00001 per share, and the warrant. If the market price of one share of our common stock is greater than the exercise price, then, instead of paying the exercise price, Treasury may elect to receive shares equal to the value of the warrant (or portion thereof being canceled) pursuant to the formula specified in the warrant. Upon exercise of the warrant, Treasury may assign the right to receive the shares of common stock issuable upon exercise to any other person.

We account for the warrant in permanent equity. At issuance on September 7, 2008, we recognized the warrant at fair value, and we do not recognize subsequent changes in fair value while the warrant remains classified in equity. We recorded an aggregate fair value of \$2.3 billion for the warrant as a component of additional paid-in-capital. We derived the fair value of the warrant using a modified Black-Scholes model. If the warrant is exercised, the stated value of the common stock issued will be reclassified to common stock in our consolidated balance sheets. The warrant was determined to be in-substance non-voting common stock, because the warrant's exercise price of \$0.00001 per share is considered non-substantive (compared to the market price of our common stock). As a result, the shares associated with the warrant are included in the computation of basic and diluted earnings (loss) per share. The weighted average shares of common stock outstanding for the years ended December 31, 2016, 2015, and 2014 included shares of common stock that would be issuable upon full exercise of the warrant issued to Treasury.

PREFERRED STOCK

We have the option to redeem our preferred stock on specified dates, at their redemption price plus dividends accrued through the redemption date. However, without the consent of Treasury, we are restricted from making payments to purchase or redeem preferred stock as well as paying any preferred dividends, other than dividends on the senior preferred stock. All 24 classes of preferred stock are perpetual and non-cumulative, and carry no significant voting rights or rights to purchase additional Freddie Mac stock or securities. Costs incurred in connection with the issuance of preferred stock are charged to additional paid-in capital.

Financial Statements Notes to the Consolidated Financial Statements | Note 9

Edgar Filing: FEDERAL HOME LOAN MORTGAGE CORP - Form 10-K

2007 Fixed-to-floating rate ⁽⁹⁾	December 4, 2007				December 31, 2012
Total, preferred stock		464.17	464.17	\$464.17	\$14,109

(1) Dividend rate resets quarterly and is equal to the sum of three-month LIBOR plus 1% divided by 1.377, and is capped at 9.00%.

(2) Issued through private placement.

(3) Dividend rate resets quarterly and is equal to the sum of three-month LIBOR plus 1% divided by 1.377, and is capped at 7.50%.

(4) Dividend rate resets on January 1 every five years after January 1, 2005 based on a five-year Constant Maturity Treasury rate, and is capped at 11.00%. Optional redemption on December 31, 2004 and on December 31 every five years thereafter.

(5) Dividend rate resets on April 1 every two years after April 1, 2003 based on the two-year Constant Maturity Treasury rate plus 0.10%, and is capped at 11.00%. Optional redemption on March 31, 2003 and on March 31 every two years thereafter.

(6) Dividend rate resets on April 1 every year based on 12-month LIBOR minus 0.20%, and is capped at 11.00%. Optional redemption on March 31, 2003 and on March 31 every year thereafter.

(7) Dividend rate resets on July 1 every two years after July 1, 2003 based on the two-year Constant Maturity Treasury rate plus 0.20%, and is capped at 11.00%. Optional redemption on June 30, 2003 and on June 30 every two years thereafter.

(8) Dividend rate resets quarterly and is equal to the sum of three-month LIBOR plus 0.50% but not less than 4.00%.

(9) Dividend rate is set at an annual fixed rate of 8.375% from December 4, 2007 through December 31, 2012. For the period beginning on or after January 1, 2013, dividend rate resets quarterly and is equal to the higher of: (a) the sum of three-month LIBOR plus 4.16% per annum; or (b) 7.875% per annum. Optional redemption on December 31, 2012, and on December 31 every five years thereafter.

Financial Statements Notes to the Consolidated Financial Statements | Note 9

STOCK-BASED COMPENSATION

Following the implementation of the conservatorship in September 2008, we suspended the operation of and/or ceased making grants under our stock-based compensation plans. Under the Purchase Agreement, we cannot issue any new options, rights to purchase, participations or other equity interests without Treasury's prior approval. However, grants outstanding as of the date of the Purchase Agreement remain in effect in accordance with their terms.

We did not repurchase or issue any of our common shares or non-cumulative preferred stock during 2016 and 2015, except for issuances of treasury stock as reported on our consolidated statements of equity relating to stock-based compensation granted prior to conservatorship. Common stock delivered under these stock-based compensation plans consists of treasury stock or shares acquired in market transactions on behalf of the participants. During 2016, the deferral period lapsed on 1,240 RSUs. At December 31, 2016, 9,510 RSUs remained outstanding. There are no remaining restrictions on outstanding RSUs. In addition, there were 41,160 shares of restricted stock outstanding at both December 31, 2016 and 2015. No stock options were exercised and 46,416 stock options were forfeited or expired during 2016. At December 31, 2016, no stock options were outstanding.

EARNINGS PER SHARE

Under our prior stock-based compensation plans we issued participating securities related to options and RSUs with dividend equivalent rights that receive dividends as declared on an equal basis with common shares but are not obligated to participate in undistributed net losses. These participating securities consist of:

- Vested options to purchase common stock; and
- Vested RSUs that earn dividend equivalents at the same rate when and as declared on common stock.

Consequently, in accordance with accounting guidance, we use the "two-class" method of computing earnings per common share. The "two-class" method is an earnings allocation formula that determines earnings per share for common stock and participating securities based on dividends declared and participation rights in undistributed earnings.

Basic earnings per common share is computed as net income attributable to common stockholders divided by the weighted average common shares outstanding for the period. The weighted average common shares outstanding for the period includes the weighted average number of shares that are associated with the warrant for our common stock issued to Treasury pursuant to the Purchase Agreement. These shares are included since the warrant is unconditionally exercisable by the holder at a minimal cost.

Diluted earnings per common share is computed as net income attributable to common stockholders divided by the weighted average common shares outstanding during the period adjusted for the dilutive effect of common equivalent shares outstanding. For periods with net income attributable to common stockholders, the calculation includes the effect of the following common stock equivalent shares outstanding:

- Weighted average shares related to stock options if the average market price during the period

Financial Statements Notes to the Consolidated Financial Statements | Note 9

exceeds the exercise price; and

• The weighted-average of RSUs.

During periods in which a net loss attributable to common stockholders has been incurred, potential common equivalent shares outstanding are not included in the calculation because it would have an antidilutive effect. For purposes of the earnings-per-share calculation, antidilutive potential common shares excluded from the computation of dilutive potential common shares were 22,684, 146,474, and 494,227 at December 31, 2016, 2015, and 2014, respectively.

DIVIDENDS DECLARED

No common dividends were declared in 2016. During the three months ended March 31, 2016, June 30, 2016, September 30, 2016, and December 31, 2016, we paid dividends of \$1.7 billion, \$0 billion, \$0.9 billion, and \$2.3 billion, respectively, in cash on the senior preferred stock at the direction of our Conservator. We did not declare or pay dividends on any other series of Freddie Mac preferred stock outstanding during 2016.

DELISTING OF COMMON STOCK AND PREFERRED STOCK FROM NYSE

On July 8, 2010, we delisted our common and 20 previously listed classes of preferred stock from the NYSE pursuant to a directive by our Conservator.

Our common stock and the classes of preferred stock that were previously listed on the NYSE are traded exclusively in the OTCQB Marketplace. Shares of our common stock now trade under the ticker symbol FMCC. We expect that our common stock and the previously listed classes of preferred stock will continue to trade in the OTCQB Marketplace so long as market makers demonstrate an interest in trading the common and preferred stock.

Financial Statements Notes to the Consolidated Financial Statements | Note 10

NOTE 10: INCOME TAXES
INCOME TAX (EXPENSE) BENEFIT

The total income tax (expense) benefit includes:

• Deferred tax (expense) benefit, which represents the net change in the deferred tax asset or liability balance during the year and any change in the valuation allowance, if any; and

• Current tax (expense) benefit, which represents the amount of tax currently payable to or receivable from a tax authority, including related interest and penalties, and amounts accrued for unrecognized tax benefits, if any.

Income tax (expense) benefit excludes the tax effects related to adjustments recorded to other comprehensive income, such as unrealized gains and losses on available-for-sale securities.

The table below presents the components of our federal income tax expense for 2016, 2015, and 2014. We are exempt from state and local income taxes.

(In millions)	Year Ended December 31,		
	2016	2015	2014
Current income tax expense	(\$1,037)	(\$1,243)	(\$1,028)
Deferred income tax expense	(2,787)	(1,655)	(2,284)
Total income tax expense	(\$3,824)	(\$2,898)	(\$3,312)

The increase in income tax expense from 2015 to 2016 is primarily due to an increase in pre-tax income. The decrease in income tax expense from 2014 to 2015 is primarily due to a decrease in pre-tax income.

The table below presents reconciliation between our federal statutory income tax rate and our effective tax rate for 2016, 2015 and 2014.

(Dollars in millions)	Year Ended December 31,					
	2016		2015		2014	
	Amount	Percent	Amount	Percent	Amount	Percent
Statutory corporate tax rate	(\$4,074)	35.0 %	(\$3,246)	35.0 %	(\$3,851)	35.0 %
Tax-exempt interest	36	(0.3)	52	(0.6)	73	(0.7)
Tax credits	243	(2.1)	346	(3.7)	438	(4.0)
Other	(29)	0.3	(50)	0.5	28	(0.2)
Effective tax rate	(\$3,824)	32.9 %	(\$2,898)	31.2 %	(\$3,312)	30.1 %

DEFERRED TAX ASSETS, NET

We use the asset and liability method of accounting for income taxes for financial reporting purposes. Under this method, deferred tax assets and liabilities are recognized based upon the expected future tax consequences of existing temporary differences between the financial reporting and the tax reporting basis of assets and liabilities using enacted statutory tax rates as well as tax net operating loss and tax credit carryforwards. To the extent tax laws change, deferred tax assets and liabilities are adjusted in the period that the tax change is enacted. The realization of these net deferred tax assets is dependent upon the generation of sufficient taxable income.

Financial Statements Notes to the Consolidated Financial Statements | Note 10

The table below presents the balance of significant deferred tax assets and liabilities at December 31, 2016 and 2015.

(In millions)	2016	2015
Deferred tax assets:		
Deferred fees	\$6,662	\$7,008
Basis differences related to derivative instruments	4,006	5,912
Credit related items and allowance for loan losses	1,045	170
Basis differences related to assets held for investment	2,310	3,303
LIHTC partnerships and AMT credit carryforward	2,156	2,764
Basis differences related to debt	48	—
Other items, net	83	81
Total deferred tax assets	16,310	19,238
Deferred tax liabilities:		
Unrealized gains related to available-for-sale securities	(492)	(937)
Basis differences related to debt	—	(96)
Total deferred tax liabilities	(492)	(1,033)
Deferred tax assets, net	\$15,818	\$18,205

As of December 31, 2016, we had a LIHTC partnership carryforward of \$1.7 billion that will expire over multiple years beginning in 2032. Our AMT credit carryforward of \$433 million will not expire.

Valuation Allowance

A valuation allowance is recorded to reduce the net deferred tax asset when it is more likely than not that all or part of our tax benefits will not be realized. On a quarterly basis, we determine whether a valuation allowance is necessary. In doing so, we consider all evidence available, both positive and negative, in determining whether, based on the weight of the evidence, it is more likely than not that the net deferred tax asset will be realized.

We are not permitted to consider in our analysis the impacts proposed legislation may have on our business because the timing and certainty of those actions are unknown and beyond our control.

At December 31, 2016, we determined that the positive evidence, particularly the evidence that was objectively verifiable, outweighed the negative evidence.

The positive evidence included the following:

- Our three-year cumulative income position and taxable income for the past four years;
- Our current loss carryback capacity and the length of the carryforward period available to utilize our tax credit carryforward under current tax law;
- Our access to capital under the agreements associated with conservatorship; and
- Our expected 2016 taxable income and forecasts of future book income.

Accordingly, we concluded that it is more likely than not that our net deferred tax asset will be realized and that a valuation allowance against our net deferred tax asset was not necessary at December 31, 2016.

Financial Statements Notes to the Consolidated Financial Statements | Note 10

UNRECOGNIZED TAX BENEFITS AND IRS EXAMINATIONS

We recognize a tax position taken or expected to be taken (and any associated interest and penalties) if it is more likely than not that it will be sustained upon examination, including resolution of any related appeals or litigation processes, based on the technical merits of the position. We measure the tax position at the largest amount of benefit that is greater than 50% likely of being realized upon ultimate settlement. We evaluated all income tax positions and determined that there were no uncertain tax positions that required reserves as of December 31, 2016.

We have accrued gross interest receivable of \$32 million and \$65 million as of December 31, 2016 and 2015, respectively, related to payments on account with the IRS.

Freddie Mac 2016 Form 10-K 291

Financial Statements Notes to the Consolidated Financial Statements | Note 11

NOTE 11: SEGMENT REPORTING

We have three reportable segments, which are based on the type of business activities each performs - Single-family Guarantee, Multifamily, and Investments. The chart below provides a summary of our three reportable segments and the All Other category.

Segment	Description	Activities/Items	Financial Performance Measurement Basis
Single-family Guarantee	The Single-family Guarantee segment reflects results from our purchase, securitization, and guarantee of single-family loans and the management of single-family credit risk. In most instances, we securitize the loan and guarantee the payment of principal and interest on the mortgage-related securities in exchange for guarantee fees. Segment Earnings for this segment consist primarily of guarantee fee income, less credit-related expenses, credit risk transfer expenses, administrative expenses, allocated funding costs, and amounts related to net float income or expenses.	Guarantee fees on PCs, including those retained by us, and certain single-family loans in the mortgage-related investments portfolio, inclusive of upfront credit delivery and buy-down fees Adjustments to guarantee fees for the price performance of our PCs relative to comparable Fannie Mae securities Costs and recoveries of credit risk transfer transactions Credit losses on all single-family assets Net float income or expense on the single-family credit guarantee portfolio Settlements, including legal settlements related to representation and warranty claims Gains (losses) on sale of non-performing loans Tax expense/benefit and changes in the deferred tax asset valuation allowance (if any) Allocated debt costs and administrative expenses	Contribution to GAAP net income (loss)
Multifamily	The Multifamily segment reflects results from our purchase, securitization, and guarantee of multifamily loans and securities, our investments in those loans and securities, and the management of multifamily mortgage credit risk and mortgage market spread risk. Our primary business model is to purchase multifamily loans for aggregation and then securitization through issuance of multifamily K	Multifamily loans held-for-sale and associated securitization activities (i.e., K Certificates and SB Certificates) Investments in CMBS and multifamily loans held-for-investment	Contribution to GAAP comprehensive income (loss)

Certificates and SB Certificates. We also issue and guarantee other securitization products, issue other credit risk transfer products, and provide other mortgage-related guarantees.

Segment Earnings for this segment consist primarily of returns on assets related to multifamily investment activities and guarantee fee income, less credit-related expenses, administrative expenses, and allocated funding costs.

Other mortgage-related guarantees
Other securitization products
Other credit risk transfer products
Tax expense/benefit and changes in the deferred tax asset valuation allowance (if any)
Allocated debt costs and administrative expenses

Financial Statements Notes to the Consolidated Financial Statements | Note 11

		Investments in single-family mortgage-related securities and single-family performing loans	
		All other traded non-mortgage related instruments and securities	
	The Investments segment reflects results from managing the company's mortgage-related investments portfolio (excluding Multifamily segment investments, single-family seriously delinquent loans, and the credit risk of single-family performing loans), treasury function, and interest-rate risk.	Debt issuances	
		Interest rate risk management	
Investments		Guarantee buy-ups, net of execution gains / losses	Contribution to GAAP
		Cash and liquidity management	comprehensive income (loss)
	Segment Earnings for this segment consist primarily of the returns on these investments, less the related funding, hedging, and administrative expenses.	Settlements, including legal settlements, relating to non-agency mortgage-related securities	
		Tax expense/benefit and changes in the deferred tax asset valuation allowance (if any)	
		Allocated administrative expenses	
		Tax settlements, as applicable	
		Legal settlements, as applicable	
All Other	The All Other category consists of material corporate-level activities that are infrequent in nature and based on decisions outside the control of the management of our reportable segments.	Tax expense/benefit and changes in the deferred tax asset valuation allowance (if any)	N/A
		FHFA-mandated termination of our pension plan	
Segment Earnings			

We present Segment Earnings by reclassifying certain credit-related activities, investment-related activities, and mortgage-loan reclassification activities between various line items on our GAAP consolidated statements of comprehensive income and allocating certain revenues and expenses, including certain returns on assets and funding costs, and all administrative expenses to our three reportable segments.

We do not consider our assets by segment when evaluating segment performance or allocating resources. We operate our business in the United States and its territories, and accordingly, we generate no revenue from and have no long-lived assets, other than financial instruments, in geographic locations other than the United States and its

territories.

We evaluate segment performance and allocate resources based on a Segment Earnings approach, subject to the conduct of our business under the direction of the Conservator. See Note 2 for information about the conservatorship. During the first quarter of 2016, we changed how we calculate certain components of our Segment Earnings for our Single-family Guarantee and Investments segments. The purpose of these changes is to simplify Segment Earnings results relative to GAAP results. Prior period results have been revised to conform to the current period presentation. Changes include:

The discontinuation of adjustments to net interest income and guarantee fee income which reflected the amortization of cash premiums and discounts on the consolidated Freddie Mac mortgage-related securities we purchased as investments, as well as the amortization of certain guarantee buy-up and buy-down fees and credit delivery fees on mortgage loans we purchased. The discontinuation of the adjustments resulted in an increase to net interest income for the Investments segment of \$781 million and \$635 million and a decrease to guarantee fee income for the Single-family Guarantee

Financial Statements Notes to the Consolidated Financial Statements | Note 11

segment of \$254 million and \$303 million for the years ended December 31, 2015 and 2014, respectively, to align with the current presentation.

Adjustments to record amortization of premiums and discounts on loans that were securitized in other non-interest income. Previously when we securitized loans into PCs, the premiums and discounts on the loans were amortized in net interest income. We reclassified \$1.4 billion and \$780 million of expense from net interest income into other non-interest income (loss) for the Investments segment for the years ended December 31, 2015 and 2014, respectively, to align with the current presentation.

Adjustments to reflect the impacts from the reclassification of mortgage loans from held-for-investment to held-for-sale as other non-interest income. We reclassified \$2.3 billion and \$147 million of benefit from (provision) benefit for credit losses and \$1.1 billion and \$62 million of expense from other non-interest expense into other non-interest income (loss) for the Single-family Guarantee segment for the years ended December 31, 2015 and 2014, respectively, to align with the current presentation.

In addition, during the third quarter of 2016, we changed how we calculate certain components of our Segment Earnings for our Single-family Guarantee and Multifamily segments. The purpose of these changes is to better reflect how management evaluates the Single-family Guarantee and Multifamily segments. Prior period results have been revised to conform to the current period presentation. Changes include:

Adjustments to record amortization of non-cash premiums and discounts on single-family loans in trusts and on the associated consolidated PCs and amortization of discounts on loans purchased with deteriorated credit quality that are on accrual status into other non-interest income (loss). Previously this activity was included in net interest income. We reclassified \$338 million and \$156 million of income from net interest income into other non-interest income (loss) for the Single-family Guarantee segment for the years ended December 31, 2015 and 2014, respectively, to align with the current presentation.

Adjustments to record STACR debt note expense and net float income or expense into other non-interest expense. Previously this activity was included in net interest income. We reclassified \$443 million and \$258 million of expense from net interest income into other non-interest expense for the Single-family Guarantee segment for the years ended December 31, 2015 and 2014, respectively, to align with the current presentation.

Multifamily segment net interest income previously reflected the internally allocated costs associated with the refinancing of debt related to held-for-investment loans which we securitized. These costs are now reflected in other non-interest income (loss). We reclassified \$122 million and \$0 million of expense from net interest income into other non-interest income (loss) for the Multifamily segment for the years ended December 31, 2015 and 2014, respectively, to align with the current presentation.

The sum of Segment Earnings for each segment and the All Other category equals GAAP net income (loss). Likewise, the sum of comprehensive income (loss) for each segment and the All Other category equals GAAP comprehensive income (loss). However, the accounting principles we apply to present certain financial statement line items in Segment Earnings for our reportable segments differ significantly from those applied in preparing the comparable line items in our consolidated financial statements prepared in accordance with GAAP in order to reflect the business activities each segment performs. The

Financial Statements Notes to the Consolidated Financial Statements | Note 11

significant reclassifications are discussed below. Many of the reclassifications and allocations described below relate to the amendments to the accounting guidance for transfers of financial assets and consolidation of VIEs, which we adopted effective January 1, 2010. These amendments require us to consolidate our single-family PC trusts and certain other VIEs. Due to the adoption of this guidance, the results of our operating segments from a GAAP perspective do not reflect how the Segments are managed.

Credit Activity-Related Reclassifications

Certain credit activity-related income and costs are included in Segment Earnings guarantee fee income or provision for credit losses.

• Net guarantee fees are reclassified in Segment Earnings from net interest income to guarantee fee income.

• Implied guarantee fee income related to unsecuritized loans held in the mortgage investments portfolio is reclassified in Segment Earnings from net interest income to guarantee fee income.

• A portion of the amount reversed for accrued but uncollected interest upon placing loans on a non-accrual status is reclassified in Segment Earnings from net interest income to provision for credit losses.

• The revenue and expense related to the 10 basis point increase which was legislated in the Temporary Payroll Tax Cut Continuation Act of 2011 are netted within guarantee fee income.

Investment Activity-Related Reclassifications

We move certain items into or out of net interest income so that, on a Segment Earnings basis, net interest income reflects how we measure the effective yield earned on securities held in our mortgage investments portfolio and our other investments and cash portfolio.

We use derivatives extensively in our investment activity. The reclassifications described below allow us to reflect, in Segment Earnings net interest income, the costs associated with this use of derivatives.

The accrual of periodic cash settlements of all derivatives is reclassified in Segment Earnings from derivative gains (losses) into net interest income to fully reflect the periodic cost associated with the protection provided by these contracts.

Up-front cash paid or received upon the purchase or writing of swaptions and other option contracts is reclassified in Segment Earnings prospectively on a straight-line basis from derivative gains (losses) into net interest income over the contractual life of the instrument to fully reflect the periodic cost associated with the protection provided by these contracts.

Amortization related to certain items is not relevant to how we measure the effective yield earned on the securities held in our investments portfolios. Therefore, as described below, we reclassify the following items in Segment Earnings from net interest income to non-interest income:

• Amortization related to derivative commitment basis adjustments associated with mortgage-related and non-mortgage-related securities.

• Amortization related to accretion of other-than-temporary impairments on available-for-sale securities.

• Amortization related to premiums and discounts, including non-cash premiums and discounts, on single-family loans in trusts and on the associated consolidated PCs.

Financial Statements Notes to the Consolidated Financial Statements | Note 11

Amortization of discounts on loans purchased with deteriorated credit quality that are on accrual status.

Amortization related to premiums and discounts associated with PCs issued by our consolidated trusts that we previously held and subsequently transferred to third parties. The amortization is related to deferred gains (losses) on transfers of these securities.

Certain debt-related costs are not relevant to how we measure the effective yield earned on the securities held in our investments portfolio. Therefore, as described below, we reclassify the following items in Segment Earnings from net interest income to non-interest income:

Costs associated with STACR debt note expense.

Internally allocated costs associated with the refinancing of debt related to Multifamily segment held-for-investment loans which we securitized.

Mortgage Loan Classification-Related Reclassifications

The GAAP impacts of our reclassification of mortgage loans from held-for-investment to held-for-sale affect various financial statement line items. In order to better reflect how we manage our Single-family Guarantee segment, we reclassify the impacts of these mortgage loan reclassifications from benefit (provision) for credit losses and other non-interest expense into other non-interest income (loss).

Segment Allocations

The results of each reportable segment include directly attributable revenues and expenses. Administrative expenses that are not directly attributable to a segment are allocated to our segments using various methodologies, depending on the nature of the expense. Net interest income for each segment includes allocated debt funding and hedging costs related to certain assets of each segment. Funding and interest rate risk is consolidated and primarily managed by the Investments segment for all other business segments. In connection with this activity, the Investments segment transfers a cost to the other segments. The actual costs may vary relative to these intra-company transfers. In addition, the financial statement volatility associated with the use of derivatives to hedge certain assets outside the Investments segment is not fully allocated to other segments. These allocations do not include the effects of dividends paid on our senior preferred stock.

Financial Statements Notes to the Consolidated Financial Statements | Note 11

The table below presents Segment Earnings by segment.

(In millions)	Year Ended December 31,		
	2016	2015	2014
Segment Earnings (loss), net of taxes:			
Single-family Guarantee	\$2,170	\$1,778	\$1,547
Multifamily	1,818	827	1,636
Investments	3,827	3,771	4,520
All Other	—	—	(13)
Total Segment Earnings, net of taxes	7,815	6,376	7,690
Net income	\$7,815	\$6,376	\$7,690
Comprehensive income (loss) of segments:			
Single-family Guarantee	\$2,161	\$1,790	\$1,537
Multifamily	1,582	566	1,459
Investments	3,375	3,415	6,471
All Other	—	28	(41)
Comprehensive income of segments	7,118	5,799	9,426
Comprehensive income	\$7,118	\$5,799	\$9,426

The table below presents detailed reconciliations between our GAAP financial statements and Segment Earnings for our reportable segments and All Other.

(In millions)	Year Ended December 31, 2016				Total Segment Earnings (Loss)	Reclassifications	Total per Consolidated Statements Comprehensive Income

Financial Statements Notes to the Consolidated Financial Statements | Note 12

NOTE 12: CONCENTRATION OF CREDIT AND OTHER RISKS

Concentrations of credit risk may arise when we do business with a number of customers or counterparties that engage in similar activities or have similar economic characteristics that make them vulnerable in similar ways to changes in industry conditions, which could affect their ability to meet their contractual obligations. Concentrations of credit risk may also arise when there are a limited number of counterparties in a certain industry. Based on our assessment of business conditions that could affect our financial results, we have determined that concentrations of credit risk exist among certain borrowers (including geographic concentrations and loans with certain higher risk characteristics), loan sellers and servicers, mortgage insurers, bond insurers, cash, derivative and other investment counterparties, and non-agency mortgage-related security issuers. In the sections below, we discuss our concentration of credit risk for each of the groups to which we are exposed. For a discussion of our derivative counterparties as well as related master netting and collateral agreements, see Note 8.

SINGLE-FAMILY CREDIT GUARANTEE PORTFOLIO

Regional economic conditions may affect a borrower's ability to repay his or her loan and the property value underlying the loan. Geographic concentrations increase the exposure of our portfolio to changes in credit risk. Single-family borrowers are primarily affected by home prices, unemployment rates and interest rates.

Financial Statements Notes to the Consolidated Financial Statements | Note 12

The table below summarizes the concentration by book and geographic area of approximately \$1.8 trillion and \$1.7 trillion UPB of our single-family credit guarantee portfolio at December 31, 2016 and 2015, respectively. See Note 4 and Note 5 for more information about credit risk associated with loans and mortgage-related securities that we hold or guarantee.

Region designation: West (AK, AZ, CA, GU, HI, ID, MT, NV, OR, UT, WA); Northeast (CT, DE, DC, MA, ME, (1)MD, NH, NJ, NY, PA, RI, VT, VA, WV); North Central (IL, IN, IA, MI, MN, ND, OH, SD, WI); Southeast (AL, FL, GA, KY, MS, NC, PR, SC, TN, VI); Southwest (AR, CO, KS, LA, MO, NE, NM, OK, TX, WY).

(2) States presented based on those with the highest percentage of credit losses during the year ended December 31, 2016.

The REO balance, net at December 31, 2016 and 2015 associated with single-family properties was \$1.2 billion and \$1.7 billion, respectively, and the balance associated with multifamily properties was \$0 million and \$4 million, respectively. Our single-family REO inventory consisted of 11,418 properties and 17,004 properties at December 31, 2016 and 2015, respectively. In recent years, the foreclosure process has been slowed in many geographic areas, particularly in states that require a judicial foreclosure process, which extends the time it takes for loans to be foreclosed upon and the underlying property to transition to REO.

Financial Statements Notes to the Consolidated Financial Statements | Note 12

CREDIT PERFORMANCE OF CERTAIN HIGHER-RISK SINGLE-FAMILY LOAN CATEGORIES

Participants in the mortgage market often characterize single-family loans based upon their overall credit quality at the time of origination, generally considering them to be prime or subprime. Many mortgage market participants classify single-family loans with credit characteristics that range between their prime and subprime categories as Alt-A.

Although we discontinued new purchases of loans with lower documentation standards beginning March 1, 2009, we continued to purchase certain amounts of these loans in cases where the loan was either:

• Purchased pursuant to a previously issued other mortgage-related guarantee;

• Part of our relief refinance initiative; or

• In another refinance loan initiative and the pre-existing loan (including Alt-A loans) was originated under less than full documentation standards.

In the event we purchase a refinance loan and the original loan had been previously identified as Alt-A, such refinance loan may no longer be categorized or reported as Alt-A in the table below because the new refinance loan replacing the original loan would not be identified by the seller/servicer as an Alt-A loan. As a result, our reported Alt-A balances may be lower than would otherwise be the case had such refinancing not occurred.

Although we do not categorize single-family loans we purchase or guarantee as prime or subprime, we recognize that there are a number of loan types with certain characteristics that indicate a higher degree of credit risk.

For example, a borrower's credit score is a useful measure for assessing the credit quality of the borrower. Statistically, borrowers with higher credit scores are more likely to repay or have the ability to refinance than those with lower scores.

Presented below is a summary of the serious delinquency rates of certain higher-risk categories (based on characteristics of the loan at origination) of single-family loans in our single-family credit guarantee portfolio based on UPB. The table includes a presentation of each higher-risk category in isolation. A single loan may fall within more than one category (for example, an interest-only loan may also have an original LTV ratio greater than 90%). Loans with a combination of these attributes will have an even higher risk of delinquency than those with an individual attribute.

	Percentage of Portfolio ⁽¹⁾		Serious Delinquency Rate ⁽¹⁾			
	December 31, 2016	December 31, 2015	December 31, 2016	December 31, 2015	December 31, 2016	December 31, 2015
Interest-only	1 %	1 %	4.34 %	6.02 %		
Alt-A	2 %	2 %	5.21 %	6.32 %		
Original LTV ratio greater than 90% ⁽²⁾	16 %	16 %	1.58 %	2.01 %		
Lower credit scores at origination (less than 620)	2 %	2 %	5.73 %	6.67 %		

(1) Excludes loans underlying certain other securitization products for which data was not available.

(2) Includes HARP loans, which we purchase as part of our participation in the MHA Program.

We categorize our investments in non-agency mortgage-related securities as subprime, option ARM, or Alt-A if the securities were identified as such based on information provided to us when we entered into

Financial Statements Notes to the Consolidated Financial Statements | Note 12

these transactions. We have not identified option ARM, CMBS, obligations of states and political subdivisions, and manufactured housing securities as either subprime or Alt-A securities. See Note 5 for further information on these categories and other concentrations in our investments in securities.

MULTIFAMILY MORTGAGE PORTFOLIO

Numerous factors affect a multifamily borrower's ability to repay the loan and the value of the property underlying the loan. The most significant factors affecting credit risk are rental rates and capitalization rates for the mortgaged property. Rental rates vary among geographic regions of the United States. The average UPB for multifamily loans is significantly larger than for single-family loans and, therefore, individual defaults for multifamily borrowers can result in more significant losses.

The table below summarizes the concentration of multifamily loans in our multifamily mortgage portfolio classified by legal structure, based on UPB.

(Dollars in billions)	December 31, 2016			December 31, 2015		
	UPB	Delinquency Rate ⁽¹⁾	%	UPB	Delinquency Rate ⁽¹⁾	%
Unsecuritized loans	\$42.4	0.04	%	\$49.1	0.04	%
K Certificates and SB Certificates	139.4	0.02	%	103.1	0.02	%
Other securitization products	8.2	0.03	%	6.7	—	%
Other mortgage-related guarantees	9.7	—	%	9.5	—	%
Total	\$199.7	0.03	%	\$168.4	0.02	%

(1)Based on loans two monthly payments or more delinquent or in foreclosure.

In the multifamily mortgage portfolio, the primary concentration of credit risk is based on the legal structure of the investments we hold. Our exposure to credit risk in K Certificates and SB Certificates is minimal, as the expected credit risk is absorbed by the subordinate tranches, which are generally sold to private investors. As a result, our multifamily credit risk is primarily related to loans that have not been securitized.

SELLERS AND SERVICERS

We acquire a significant portion of our single-family and multifamily loan purchase volume from several large sellers. The table below summarizes the concentration of single-family and multifamily sellers who provided 10% or more of our purchase volume.

Financial Statements Notes to the Consolidated Financial Statements | Note 12

	2016	2015
Single-family Sellers		
Wells Fargo Bank, N.A.	15 %	12 %
Bank of America, N.A.	4	11
Other top 10 sellers	30	27
Top 10 single-family sellers	49 %	50 %
Multifamily Sellers		
CBRE Capital Markets, Inc.	19 %	15 %
Berkadia Commercial Mortgage LLC	17	13
Walker & Dunlop, LLC	10	11
Holliday Fenoglio Fowler, L.P.	8	11
Other top 10 sellers	25	28
Top 10 multifamily sellers	79 %	78 %

In recent years, there has been a shift in our single-family purchase volume from depository institutions to non-depository and smaller depository financial institutions. Some of these non-depository sellers have grown rapidly in recent years, and we purchase a significant share of our loans from them. Our top three non-depository sellers provided approximately 12% of our single-family purchase volume during 2016.

We are exposed to counterparty credit risk arising from the potential insolvency or non-performance by our sellers and servicers of their obligations to repurchase loans or (at our option) indemnify us in the event of breaches of the representations and warranties they made when they sold the loans to us or failure to comply with our servicing requirements. Our contracts require that a seller/servicer repurchase a loan after we issue a repurchase request, unless the seller/servicer avails itself of an appeals process provided for in our contracts, in which case the deadline for repurchase is extended until we decide on the appeal. As of December 31, 2016 and 2015, the UPB of loans subject to our repurchase requests issued to our single-family sellers and servicers was approximately \$0.3 billion and \$0.4 billion, respectively (these figures include repurchase requests for which appeals were pending). During 2016 and 2015, we recovered amounts that covered losses with respect to \$0.6 billion and \$0.8 billion, respectively, in UPB of loans subject to our repurchase requests.

At the direction of FHFA, Freddie Mac and Fannie Mae have revised their representation and warranty framework for conventional loans purchased by the GSEs on or after January 1, 2013. The objective of the revised framework is to clarify lenders' repurchase exposures and liability on future sales of loans to Freddie Mac and Fannie Mae. This framework does not affect seller/servicers' obligations under their contracts with us with respect to loans sold to us prior to January 1, 2013. This framework also does not affect their obligation to service these loans in accordance with our servicing standards. Under this framework, sellers are relieved of certain repurchase obligations for loans that meet specific payment requirements. This includes, subject to certain exclusions, loans with 36 months (12 months for relief refinance loans) of consecutive, on-time payments after we purchase them.

In May 2014, we announced changes to our representation and warranty framework for loans acquired on and after July 1, 2014. These changes relieve sellers of additional representations and warranties for these loans and provide relief for loans we have fully reviewed in our quality control process and determined to be acceptable. As of December 31, 2016, approximately 61% in UPB of loans in our single-

Financial Statements Notes to the Consolidated Financial Statements | Note 12

family credit guarantee portfolio were purchased since January 1, 2013 and are subject to our revised representation and warranty framework.

At the direction of FHFA, we implemented a new remedies framework for the categorization of loan origination defects for loans with settlement dates on or after January 1, 2016. Among other items, the framework provides that "significant defects" will result in a repurchase request or a repurchase alternative, such as recourse or indemnification. We may require the seller to pay us additional fees or provide us with additional data on the loan. The ultimate amounts of recovery payments we receive from seller/servicers related to their repurchase obligations may be significantly less than the amount of our estimates of potential exposure to losses. Our estimate of probable incurred losses for exposure to seller/servicers for their repurchase obligations is considered in our allowance for loan losses. See Note 4 for further information.

We are also exposed to the risk that servicers might fail to service loans in accordance with our contractual requirements, resulting in increased credit losses. For example, our servicers have an active role in our loss mitigation efforts and therefore we have exposure to them to the extent a decline in their performance results in a failure to realize the anticipated benefits of our loss mitigation plans. Since we do not have our own servicing operation, if our servicers lack appropriate controls, experience a failure in their controls, or experience an operating disruption in their ability to service loans, our business and financial results could be adversely affected.

Significant portions of our single-family and multifamily loans are serviced by several large servicers. The table below summarizes the concentration of single-family and multifamily servicers who serviced 10% or more of our single-family credit guarantee portfolio and our multifamily mortgage portfolio, excluding loans underlying multifamily securitizations where we are not in first loss position, primarily K Certificates and SB Certificates.

	December		December	
	31, 2016		31, 2015	
Single-family Servicers				
Wells Fargo Bank, N.A.	19	%	20	%
JPMorgan Chase Bank, N.A.	9		10	
Other top 10 sellers	32		35	
Top 10 single-family servicers	60	%	65	%
Multifamily Servicers				
Wells Fargo Bank, N.A.	15	%	16	%
CBRE Capital Markets, Inc.	14		13	
Berkadia Commercial Mortgage LLC	11		15	
Other top 10 servicers	39		35	
Top 10 multifamily servicers	79	%	79	%

In recent years, there has been a shift in our single-family servicing from depository institutions to non-depository servicers. Some of these non-depository servicers have grown rapidly in recent years and now service a large share of our loans. As of both December 31, 2016 and 2015, approximately 10% of our single-family credit guarantee portfolio was serviced by our three largest non-depository servicers, on a combined basis. One of our non-depository servicers also services a large share of the loans underlying

Financial Statements Notes to the Consolidated Financial Statements | Note 12

our investments in non-agency mortgage-related securities. We routinely monitor the performance of our largest non-depository servicers.

In our multifamily business, we are exposed to the risk that multifamily seller/servicers could come under financial pressure, which could potentially cause degradation in the quality of the servicing they provide us, including their monitoring of each property's financial performance and physical condition. This could also, in certain cases, reduce the likelihood that we could recover losses through lender repurchases, recourse agreements, or other credit enhancements, where applicable. This risk primarily relates to multifamily loans that we hold on our consolidated balance sheets where we retain all of the related credit risk. We monitor the status of all our multifamily seller/servicers in accordance with our counterparty credit risk management framework.

MORTGAGE INSURERS

We have counterparty credit risk relating to the potential insolvency of, or non-performance by, mortgage insurers that insure single-family loans we purchase or guarantee. We evaluate the recovery and collectability from mortgage insurers as part of the estimate of our loan loss reserves. See Note 4 for additional information. As of December 31, 2016, mortgage insurers provided coverage with maximum loss limits of \$75.0 billion, for \$292.9 billion of UPB, in connection with our single-family credit guarantee portfolio. These amounts are based on gross coverage without regard to netting of coverage that may exist to the extent an affected loan is covered under both primary and pool insurance.

The table below summarizes the concentration of mortgage insurer counterparties who provided 10% or more of our overall mortgage insurance coverage. On January 3, 2017, Arch Capital Group Ltd. announced that it had completed its purchase of United Guaranty Corporation at the end of 2016. The table below reflects this transaction. On October 23, 2016, Genworth Financial, Inc. announced that it had entered into an agreement to be acquired by China Oceanwide Holdings Group Co., Ltd. Genworth Mortgage Insurance Corporation is a subsidiary of Genworth Financial, Inc.

		Mortgage Insurance Coverage December December	
	Credit Rating ⁽¹⁾	31, 2016	31, 2015
Arch Mortgage Insurance Company	BBB+	25%	23 %
Radian Guaranty Inc.	BBB-	21	22
Mortgage Guaranty Insurance Corporation	BBB-	20	21
Genworth Mortgage Insurance Corporation	BB+	15	14
Essent Guaranty, Inc.	BBB	10	9
Total		91%	89 %

Ratings are for the corporate entity to which we have the greatest exposure. Coverage amounts may include (1) coverage provided by affiliates and subsidiaries of the counterparty. Latest rating available as of December 31, 2016. Represents the lower of S&P and Moody's credit ratings stated in terms of the S&P equivalent.

We received proceeds of \$0.5 billion and \$0.7 billion during 2016 and 2015, respectively, from our primary and pool mortgage insurance policies for recovery of losses on our single-family loans. We had outstanding receivables from mortgage insurers of \$0.1 billion and \$0.3 billion (excluding deferred payment obligations associated with unpaid claim amounts) as of December 31, 2016 and 2015, respectively. The balance of these receivables, net of associated reserves, was approximately \$0.1 billion and \$0.2 billion at December 31, 2016 and 2015, respectively.

Financial Statements Notes to the Consolidated Financial Statements | Note 12

PMI Mortgage Insurance Co. and Triad Guaranty Insurance Corp. are both under the control of their state regulators and are in run-off. A substantial portion of their claims is recorded by us as deferred payment obligations. These insurers no longer issue new insurance but continue to pay a portion of their respective claims in cash. In 2014, PMI began paying valid claims 67% in cash and 33% in deferred payment obligations and made a one-time cash payment to us for claims that were previously settled for 55% in cash. In 2015, PMI began paying valid claims 70% in cash and 30% in deferred payment obligations and made a one-time cash payment to us for claims that were previously settled for 67% in cash. In 2013, Triad began paying valid claims 75% in cash and 25% in deferred payment obligations and made a one-time cash payment to us for claims that were previously settled for 60% in cash. If, as we currently expect, these insurers do not pay the full amount of their deferred payment obligations in cash, we would lose a portion of the coverage from these insurers. As of both December 31, 2016 and 2015, we had cumulative unpaid deferred payment obligations of \$0.5 billion from these insurers. We reserved for all of these unpaid amounts as collectability is uncertain. It is not clear how the regulators of these companies will administer their respective deferred payment plans in the future, nor when or if those obligations will be paid.

RMIC is under regulatory supervision and is no longer issuing new insurance. In 2014, RMIC resumed paying valid claims at 100% of the claim amount. Previously, RMIC had been paying all valid claims 60% in cash and 40% in deferred payment obligations.

BOND INSURERS

Bond insurance is a credit enhancement covering certain of the non-agency mortgage-related securities we hold. Some policies were acquired by the securitization trust that issued the securities we purchased, while others were acquired by us. At December 31, 2016, the maximum principal exposure to credit losses related to such policies was \$5.2 billion. At December 31, 2016, our top four bond insurers, Ambac Assurance Corporation (Ambac), National Public Finance Guarantee Corp., Financial Guaranty Insurance Company (FGIC), and MBIA Insurance Corp., each accounted for more than 10% of our overall bond insurance coverage and collectively represented approximately 94% of our coverage.

In 2012, a rehabilitation order was signed granting the Superintendent of Financial Services of the State of New York the authority to take possession and/or control of FGIC's property and assets and to conduct FGIC's business. In 2013, FGIC's plan of rehabilitation was approved, under which permitted claims are paid 17% in cash and the remainder in deferred payment obligations.

In 2010, Ambac established a segregated account for certain Ambac-insured securities, including some of those held by Freddie Mac. Upon the request of the Wisconsin Office of the Commissioner of Insurance, the Wisconsin circuit court put the segregated account into rehabilitation (i.e., a state insolvency proceeding). The Office of the Commissioner of Insurance subsequently filed a plan of rehabilitation with the court. In 2012, Ambac began making partial cash payments of 25% of the permitted amount of each policy claim. In 2013, Ambac began making supplemental payments, equal to all or a portion of the permitted policy claim, with respect to certain specified securities. In 2014, an amended plan was approved by the court. The amended plan provided for Ambac to increase the amount of cash payments to 45% of the permitted amount of each policy claim, with the remainder to be paid in deferred payment obligations. Ambac made a one-time cash payment to us for claims that were previously settled for 25% in cash.

Financial Statements Notes to the Consolidated Financial Statements | Note 12

We expect to receive substantially less than full payment of our claims from Ambac and FGIC as these companies are either insolvent or in rehabilitation. We believe that we will also likely receive substantially less than full payment of our claims from some of our other bond insurers, because we believe they also lack sufficient ability to fully meet all of their expected lifetime claims-paying obligations to us as such claims emerge. We evaluate the expected recovery from bond insurance policies as part of our impairment analysis for our investments in securities. Bond insurance is included as a feature at issuance of some of our non-agency mortgage-backed securities. The expected benefits from bond insurers, or the inability of bond insurers to perform on their obligations, is captured in the fair value of these securities. See Note 5 for further information on our investments in securities covered by bond insurance.

CASH AND OTHER INVESTMENT COUNTERPARTIES

We are exposed to counterparty credit risk relating to the potential insolvency of, or the non-performance by, counterparties relating to cash and other investments (including non-mortgage-related securities and cash equivalents) transactions, including those entered into on behalf of our securitization trusts. Our policies require that the issuer be rated as investment grade at the time the financial instrument is purchased. We base the permitted term and dollar limits for each of these transactions on the counterparty's financial strength in order to further mitigate our risk. Our cash and other investments (including non-mortgage-related securities and cash equivalents) counterparties are primarily major financial institutions, including other GSEs, Treasury, the Federal Reserve Bank of New York, highly-rated supranational institutions, and government money market funds. As of December 31, 2016 and 2015, including amounts related to our consolidated VIEs, there were \$73.8 billion and \$83.8 billion, respectively, of cash and securities purchased under agreements to resell invested with counterparties, U.S. Treasury securities classified as cash equivalents, or cash deposited with the Federal Reserve Bank of New York. As of December 31, 2016, all of our securities purchased under agreements to resell were fully collateralized.

NON-AGENCY MORTGAGE-RELATED SECURITY ISSUERS

We are engaged in various loss mitigation efforts concerning certain investments in non-agency mortgage-related securities, including the matters described below.

In 2011, FHFA, as Conservator for Freddie Mac and Fannie Mae, filed lawsuits against a number of corporate families of financial institutions and related defendants alleging securities laws violations and, in some cases, fraud. The lawsuits against Nomura Holding America, Inc. (or Nomura) and The Royal Bank of Scotland Group PLC remain outstanding. In March 2015, FHFA's case against Nomura went to trial in the U.S. District Court for the Southern District of New York. In May 2015, the judge ruled against the defendants and ordered them to pay an aggregate of \$806 million, of which \$779 million will be paid to Freddie Mac. The order also provides for Freddie Mac to transfer the mortgage-related securities at issue in this trial to the defendants. The defendants have agreed to pay for certain costs, legal fees and expenses if FHFA prevails in the litigation. This expense reimbursement payment is subject to various conditions, and is capped at \$33 million (half of any such payment would be made to Freddie Mac). The defendants have filed a notice of appeal and the Court has stayed enforcement of the judgment during the pendency of the appeal.

Financial Statements Notes to the Consolidated Financial Statements | Note 12

We worked with three investor consortia to enforce certain claims with Countrywide, Citigroup and J.P. Morgan Chase & Co., respectively, relating to a number of non-agency mortgage-related securities. Settlement agreements were entered into with respect to these claims. Our benefit from the related settlements, which totaled approximately \$418 million, will be recognized in earnings over the expected remaining life of the securities, unless the securities are sold, at which time the benefit would be considered in the sales price of the securities.

The majority of the single-family loans underlying our investments in non-agency mortgage-related securities is serviced by non-depository servicers. As of December 31, 2016 and 2015, approximately \$8.4 billion and \$13.0 billion, respectively, in UPB of loans underlying our investments in single-family non-agency mortgage-related securities were serviced by subsidiaries and/or affiliates of Ocwen Financial Corp.

Financial Statements Notes to the Consolidated Financial Statements | Note 13

NOTE 13: FAIR VALUE DISCLOSURES

The accounting guidance for fair value measurements and disclosures defines fair value, establishes a framework for measuring fair value, and sets forth disclosure requirements regarding fair value measurements. This guidance applies whenever other accounting guidance requires or permits assets or liabilities to be measured at fair value. Fair value represents the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. Fair value measurement assumes that the transaction to sell the asset or transfer the liability takes place either in the principal market for the asset or liability, or, in the absence of a principal market, in the most advantageous market for the asset or liability.

We use fair value measurements for the initial recording of certain assets and liabilities and periodic remeasurement of certain assets and liabilities on a recurring or non-recurring basis.

FAIR VALUE MEASUREMENTS

The accounting guidance for fair value measurements and disclosures establishes a three-level fair value hierarchy that prioritizes the inputs into the valuation techniques used to measure fair value. The levels of the fair value hierarchy are defined as follows in priority order:

• Level 1 - inputs to the valuation techniques are based on quoted prices in active markets for identical assets or liabilities.

• Level 2 - inputs to the valuation techniques are based on observable inputs other than quoted prices in active markets for identical assets or liabilities.

• Level 3 - one or more inputs to the valuation technique are unobservable and significant to the fair value measurement.

We use quoted market prices and valuation techniques that seek to maximize the use of observable inputs, where available, and minimize the use of unobservable inputs. Our inputs are based on the assumptions a market participant would use in valuing the asset or liability. Assets and liabilities are classified in their entirety within the fair value hierarchy based on the lowest level input that is significant to the fair value measurement.

VALUATION RISK AND CONTROLS OVER FAIR VALUE MEASUREMENTS

Valuation risk is the risk that fair values used for financial disclosures, risk metrics and performance measures do not reasonably reflect market conditions and prices.

We designed our control processes so that our fair value measurements are appropriate and reliable, that they are based on observable inputs where possible, and that our valuation approaches are consistently applied and the assumptions and inputs are reasonable. Our control processes provide a framework for segregation of duties and oversight of our fair value methodologies, techniques, validation procedures, and results.

Groups within our Finance Division, independent of our business functions, execute and validate the valuation processes and are responsible for determining the fair values of the majority of our financial assets and liabilities. In determining fair value, we consider the credit risk of our counterparties in

Financial Statements Notes to the Consolidated Financial Statements | Note 13

estimating the fair values of our assets and our own credit risk in estimating the fair values of our liabilities. The fair values determined by our Finance Division are further verified by an independent group within our ERM Division. The independent validation procedures performed by ERM Division are intended to ensure that the prices we receive from third parties are consistent with our observations of market activity, and that fair value measurements developed using internal data reflect the assumptions that a market participant would use in pricing our assets and liabilities. These validation procedures include performing a daily price review and a monthly independent verification of fair value measurements through independent modeling, analytics, and comparisons to other market source data, if available. Where applicable, prices are back-tested by comparing actual transaction prices to our fair value measurements. Analytical procedures include automated checks consisting of prior-period variance analysis, comparisons of actual prices to internally calculated expected prices based on observable market changes, analysis of changes in pricing ranges, relative value comparisons, and comparisons using modeled yields. Thresholds are set for each product category by ERM Division to identify exceptions that require further analysis. If a price is outside of our established thresholds, we perform additional verification procedures, including supplemental analytics and/or follow up discussions with the third-party provider. If we are unable to validate the reasonableness of a given price, we ultimately do not use that price for fair value measurements in our consolidated financial statements. These procedures are risk-based and are executed before we finalize the prices used in preparing our fair value measurements for our financial statements.

In addition to performing the validation procedures noted above, ERM Division provides independent risk governance over all valuation processes by establishing and maintaining a corporate-wide valuation framework and control policy. ERM Division also independently reviews significant judgments, methodologies, and valuation techniques to ensure compliance with established policies.

Our Valuation & Finance Model Committee (“Valuation Committee”), which includes representation from our business areas, ERM Division, and Finance Division, provides senior management’s governance over valuation processes, methodologies, controls and fair value measurements. Identified exceptions are reviewed and resolved through the verification process and reviewed at the Valuation Committee.

Where models are employed to assist in the measurement and verification of fair values, changes made to those models during the period are reviewed and approved according to the corporate model change governance process, with all material changes reviewed at the Valuation Committee. Inputs used by models are regularly updated for changes in the underlying data, assumptions, valuation inputs, and market conditions, and are subject to the valuation controls noted above.

Use of Third-Party Pricing Data in Fair Value Measurement

Many of our valuation techniques use, either directly or indirectly, data provided by third-party pricing services or dealers. The techniques used by these pricing services and dealers to develop the prices generally are either:

- A comparison to transactions involving instruments with similar collateral and risk profiles, adjusted as necessary based on specific characteristics of the asset or liability being valued; or
- Industry-standard modeling, such as a discounted cash flow model.

Financial Statements Notes to the Consolidated Financial Statements | Note 13

The prices provided by the pricing services and dealers reflect their observations and assumptions related to market activity, including risk premiums and liquidity adjustments. The models and related assumptions used by the pricing services and dealers are owned and managed by them and, in many cases, the significant inputs used in the valuation techniques are not reasonably available to us. However, we have an understanding of the processes and assumptions used to develop the prices based on our ongoing due diligence, which includes discussions with our vendors at least annually and often more frequently. We believe that the procedures executed by the pricing services and dealers, combined with our internal verification and analytical procedures, provide assurance that the prices used in our financial statements comply with the accounting guidance for fair value measurements and disclosures and reflect the assumptions that a market participant would use in pricing our assets and liabilities. The price quotes we receive are non-binding both to us and to our counterparties.

In many cases, we receive quotes from third-party pricing services or dealers and use those prices without adjustment. For a large majority of the assets and liabilities we value using pricing services and dealers, we obtain quotes from multiple external sources and use the median of the prices to measure fair value. This technique is referred to below as “median of external sources.” The significant inputs used in the fair value measurement of assets and liabilities that are valued using the median of external sources pricing technique are the third-party quotes. Significant increases (decreases) in any of the third-party quotes in isolation may result in a significantly higher (lower) fair value measurement. In limited circumstances, we may be able to receive pricing information from only a single external source. This technique is referred to below as “single external source.”

VALUATION TECHNIQUES

The following table contains a description of the valuation techniques we use for fair value measurement and disclosure; the significant inputs used in those techniques (if applicable); the classification within the fair value hierarchy; and, for those measurements that we report on our consolidated balance sheets and are classified as Level 3 of the hierarchy, a narrative description of the sensitivity of the fair value measurement to changes in significant unobservable inputs. Although the sensitivities of the unobservable inputs are discussed below in isolation, interrelationships exist among the inputs such that a change in one unobservable input can result in a change to one or more of the other inputs. For example, the most common interrelationship that affects the majority of our fair value measurements is between future interest rates, prepayment speeds, and probabilities of default. Generally, a change in the assumption used for future interest rates results in a directionally opposite change in the assumption used for prepayment speeds and a directionally similar change in the assumption used for probabilities of default.

Each technique discussed below may not be used in a given reporting period, depending on the composition of our assets and liabilities measured at fair value and relevant market activity during that period.

Instrument	Valuation Technique	Classification in the Fair Value Hierarchy
Securities		

	Valuations are based	
U.S. Treasury Securities	on quoted prices in active markets.	Level 1

Financial Statements Notes to the Consolidated Financial Statements | Note 13

Instrument	Valuation Technique	Classification in the Fair Value Hierarchy
Agency mortgage-related securities	Valuations are based on:	
	Fixed-rate single-class: Observable prices for similar TBA securities adjusted for specific collateral characteristics	Level 2
	Adjustable-rate single-class and majority of multi-class securities: Median of external sources	Predominantly Level 2
	Certain multi-class securities: Single external source	Levels 2 and 3
	Certain multi-class securities with limited market activity: Discounted cash flows or risk metric pricing. Under risk metric pricing, securities are valued by starting with a prior period price and adjusting that price for market changes in certain key risk metrics such as key rate durations. Significant inputs used in the discounted cash flow technique include OAS. Significant inputs used in the risk metric pricing technique include key risk metrics, such as key rate durations. Significant increases (decreases) in the OAS in isolation would result in a significantly lower (higher) fair value. Significant increases(decreases) in key rate durations in isolation would result in a significant increase (decrease) in the magnitude of change of fair value measurement in response to key rate movements	Level 3
Commercial mortgage-related securities	Valuations are based on the median of external sources or, in limited circumstances, a single external source.	Predominantly Level 2
Other non-agency mortgage-related securities	Valuations are based on the median of external sources.	Level 3
Mortgage Loans	Valuations are based on:	
	GSE Securitization Market: Benchmark security pricing for actively traded mortgage-related securities with similar characteristics, adjusting for the value of our guarantee fee and our credit obligation related to performing our guarantee (see Guarantee Obligation). The credit obligation is based on: delivery and guarantee fees we charge under current market pricing for loans that qualify under our current underwriting standards (Level 2) and internal credit models for loans that do not qualify under our current underwriting standards (Level 3).	Level 2 or 3
	Whole Loan Market: Median of external sources, referencing market activity for deeply delinquent and modified loans, where available	Level 3
	Impaired held-for-investment: Internal models that estimate the fair value of the underlying collateral for impaired loans. Significant inputs used by our internal models include REO disposition, short sale and third-party sale values, combined with mortgage loan level characteristics using the repeat housing sales index to estimate the current fair value of the mortgage loan. Significant	Level 3

increases (decreases) in the historical average sales proceeds per mortgage loan in isolation would result in significantly higher (lower) fair value measurements.

Financial Statements Notes to the Consolidated Financial Statements | Note 13

Instrument	Valuation Technique	Classification in the Fair Value Hierarchy
Multifamily loans	Valuations are based on:	
	Held-for-sale: Market prices from a third-party pricing service, using discounted cash flows based on K Certificate and SB Certificates market spreads	Level 2
	Held-for-investment: Market prices from a third-party pricing service using discounted cash flows incorporating credit spreads for similar loans based on the loan's LTV and DSCR	Level 3
Derivative Assets, Net and Derivative Liabilities, Net		
Derivatives	Valuations are based on:	
	Exchange-traded futures: Quoted prices in active markets	Level 1
	Interest-rate swaps: Discounted cash flows. Significant inputs include market-based interest rates.	Level 2
	Option-based derivatives: Option-pricing models. Significant inputs include Interest-rate volatility matrices.	Level 2
	Purchase and Sale Commitments: see Agency Mortgage-Related Securities	Level 2
Other Assets and Other Liabilities		
Guarantee asset	Valuations are based on:	
	Single-family: Median of external sources with adjustments for specific loan characteristics	Level 3
	Multifamily: Discounted cash flows. Significant inputs include current OAS-to-benchmark interest rates for new guarantees. Significant increases (decreases) in the OAS in isolation would result in a significantly lower (higher) fair value measurement.	Level 3
Mortgage servicing rights	Valuations are based on market prices from a third party using discounted cash flows. Significant inputs include:	Level 3
	Estimated prepayment rates, Estimated costs to service both performing and non-accrual loans, and Estimated servicing income per loan (including ancillary income).	
	Significant increases (decreases) in cost to service per loan and prepayment rate in isolation would result in a significantly lower (higher) fair value measurement. Significant increases (decreases) in servicing income per loan in isolation would result in a significantly higher (lower) fair value measurement. Valuations are based on an internal model, which uses REO disposition prices combined with loan level characteristics, using the repeat housing sales index.	
Single-family REO	Significant inputs include the historical sales proceeds per property and the repeat housing sales index. Significant increases (decreases) in the historical sales proceeds per property in isolation would result in significantly higher (lower) fair value measurement.	Level 3

Financial Statements Notes to the Consolidated Financial Statements | Note 13

Instrument	Valuation Technique	Classification in the Fair Value Hierarchy
Guarantee obligation	Valuations are based on: Single-family	
	The delivery and guarantee fees that we charge under our current market pricing	Level 2
	Internal credit models. Significant inputs include loan characteristics, loan performance, and status information.	Level 3
	Multifamily: Discounted cash flows. Significant inputs are similar to those used in the valuation technique for the Multifamily Guarantee Asset.	Level 3
Debt		
Debt securities of consolidated trusts held by third parties	Valuations are based on the valuation techniques we use to value our investments in agency securities.	Level 2 or 3
Other debt	Valuations are based on: Median of external sources Single external source Published yield matrices	Predominantly Level 2

HARP Loans

For loans that have been refinanced under HARP, we value our guarantee obligation using the guarantee fees currently charged by us under that initiative. HARP loans valued using this technique are classified as Level 2, as the fees charged by us are observable. The majority of our HARP loans are classified as Level 2. If, subsequent to delivery, the refinanced loan no longer qualifies for purchase based on current underwriting standards (such as becoming past due or being modified), the fair value of the guarantee obligation is then measured using our internal credit models or the median of external sources, if the loan's principal market has changed to the whole loan market. HARP loans valued using either of these techniques are classified as Level 3 as significant inputs are unobservable.

The total compensation that we receive for the delivery of a HARP loan reflects the pricing that we are willing to offer because HARP is a part of a broader government program intended to provide assistance to homeowners and prevent foreclosures. When HARP ends in September 2017, the beneficial pricing afforded to HARP loans may no longer be reflected in the pricing structure of our guarantee fees. If these benefits were not reflected in the pricing for these loans, the fair value of our loans would have decreased by \$5.3 billion and \$12.9 billion as of December 31, 2016 and 2015, respectively. The total fair value of the loans in our portfolio that reflect the pricing afforded to HARP loans as of December 31, 2016 and 2015 was \$52.8 billion and \$82.8 billion, respectively.

ASSETS AND LIABILITIES ON OUR CONSOLIDATED BALANCE SHEETS MEASURED AT FAIR VALUE ON A RECURRING BASIS

The following tables present our assets and liabilities measured on our consolidated balance sheets at fair value on a recurring basis subsequent to initial recognition, including instruments where we have elected the fair value option.

Financial Statements Notes to the Consolidated Financial Statements | Note 13

ASSETS ON OUR CONSOLIDATED BALANCE SHEETS MEASURED AT FAIR VALUE ON A NON-RECURRING BASIS

We may be required, from time to time, to measure certain assets at fair value on a non-recurring basis after our initial recognition. These adjustments usually result from the application of lower-of-cost-or-fair-value accounting or measurement of impairment based on the fair value of the underlying collateral.

The table below presents assets measured on our consolidated balance sheets at fair value on a non-recurring basis.

(In millions)	December 31,				2015		
	2016		Total	2015		Total	
	Level 1	Level 2		Level 1	Level 2		Level 3
Assets measured at fair value on a non-recurring basis:							
Mortgage loans ⁽¹⁾	\$-199	\$2,483	\$2,682	\$-1,130	\$5,851	\$6,981	

(1) Includes loans that are classified as held-for-investment and have been measured for impairment based on the fair value of the underlying collateral and held-for-sale loans where the fair value is below cost.

LEVEL 3 FAIR VALUE MEASUREMENTS

The table below presents a reconciliation of all assets and liabilities measured on our consolidated balance sheets at fair value on a recurring basis using significant unobservable inputs (Level 3), including transfers into and out of Level 3 assets and liabilities. The table also presents gains and losses due to changes in fair value, including both realized and unrealized gains and losses, recognized in our consolidated statements of comprehensive income for Level 3 assets and liabilities. When assets and liabilities are transferred between levels, we recognize the transfer as of the beginning of the period.

Changes in fair value for available-for-sale securities are recorded in AOCI, while gains and losses from sales are recorded in other gains (losses) on investment securities recognized in earnings on our consolidated statements of (1) comprehensive income. For mortgage-related securities classified as trading, the realized and unrealized gains (losses) are recorded in other gains (losses) on investment securities recognized in earnings on our consolidated statements of comprehensive income.

Transfers out of Level 3 during the year ended December 31, 2016 consisted primarily of certain mortgage-related securities due to an increased volume and level of activity in the market and availability of price quotes from (2) dealers and third-party pricing services. Certain Freddie Mac securities are classified as Level 3 at issuance and generally are classified as Level 2 when they begin trading. Transfers into Level 3 during the year ended December 31, 2016 consisted primarily of certain mortgage-related securities due to a lack of market activity and relevant price quotes from dealers and third-party pricing services.

(3) Changes in fair value of the guarantee asset are recorded in other income on our consolidated statements of comprehensive income.

(4) Amounts are prior to counterparty netting, cash collateral netting, net trade/settle receivable or payable and net derivative interest receivable or payable.

Financial Statements Notes to the Consolidated Financial Statements | Note 13

The table below provides valuation techniques, the range, and the weighted average of significant unobservable inputs for assets and liabilities measured on our consolidated balance sheets at fair value on a non-recurring basis using unobservable inputs (Level 3). Certain of the fair values in the table below were not obtained as of the period end, but were obtained during the period.

(Dollars in millions, except for certain unobservable inputs as shown) Non-recurring fair value measurements	December 31, 2016		Unobservable Inputs		
	Level 3 Fair Value	Predominant Valuation Technique(s)	Type	Range	Weighted Average
Mortgage loans	\$2,483				
		Internal model	Historical sales proceeds	\$3,000 - \$770,000	\$167,137
		Internal model	Housing sales index	42 - 374 bps	96 bps
		Income capitalization ⁽¹⁾	Capitalization rates	7% - 10%	7%
		Median of external sources	External pricing sources	\$37.0 - \$94.3	\$75.0
(Dollars in millions, except for certain unobservable inputs as shown) Non-recurring fair value measurements	December 31, 2015		Unobservable Inputs		
	Level 3 Fair Value	Predominant Valuation Technique(s)	Type	Range	Weighted Average
Mortgage loans	\$5,851				
		Internal model	Historical sales proceeds	\$3,000 - \$788,699	\$191,957
		Internal model	Housing sales index	44 - 428 bps	90 bps
		Third-party appraisal	Property value	\$1 million - \$30 million	\$28 million
		Income capitalization ⁽¹⁾	Capitalization rates	6% - 9%	7%
		Median of external sources	External pricing sources	\$39.0 - \$94.6	\$70.0

(1) The predominant valuation technique used for multifamily loans. Certain loans in this population are valued using other techniques, and the capitalization rate for those is not represented in the "Range" or "Weighted Average" above.

Financial Statements Notes to the Consolidated Financial Statements | Note 13

FAIR VALUE OF FINANCIAL INSTRUMENTS

The table below presents the carrying value and estimated fair value of our financial instruments. For certain types of financial instruments, such as cash and cash equivalents, restricted cash and cash equivalents, securities purchased under agreements to resell, advances to lenders and certain other debt, the carrying value on our GAAP balance sheets approximates fair value, as these assets are short-term in nature and have limited market value volatility.

(1) Represents counterparty netting, cash collateral netting, and net derivative interest receivable or payable.

FAIR VALUE OPTION

We elected the fair value option for certain types of investments in securities, multifamily held-for-sale loans, certain multifamily held-for-sale loan purchase commitments, and certain debt.

Investments in Securities

We elected the fair value option for certain mortgage-related securities that contained embedded derivatives, including investments in securities that can contractually be prepaid or otherwise settled in such a way that we may not recover substantially all of our initial recorded investment, or are not of high credit quality at the acquisition date and are

identified as within the scope of the accounting guidance for

Freddie Mac 2016 Form 10-K 324

Financial Statements Notes to the Consolidated Financial Statements | Note 13

investments in beneficial interests in securitized financial assets. These securities are classified as trading securities. By electing the fair value option for these instruments, we reflect valuation changes through our consolidated statements of comprehensive income in the period they occur. In addition, upon adoption of the accounting guidance for the fair value option, we elected this option for securities within the scope of the accounting guidance for investments in beneficial interests in securitized financial assets to better reflect any valuation changes that would occur subsequent to impairment write-downs previously recorded on these instruments.

Interest income is recognized using the prospective effective interest method. We recognize as interest income (over the life of these securities) the excess of all estimated cash flows attributable to these interests over their book value using the effective interest method. We update our estimates of expected cash flows periodically and recognize changes in the calculated effective interest rate on a prospective basis. For information regarding the net unrealized gains (losses) on trading securities, which include gains (losses) for other items that are not selected for the fair value option, see Gains (losses) on trading securities within the reconciliation of Segment Earnings to GAAP results in Note 11.

Multifamily Held-For-Sale Loans

We elected the fair value option for multifamily loans that were purchased for securitization. These loans are classified as held-for-sale loans on our consolidated balance sheets to reflect our intent to sell in the future and are measured at fair value on a recurring basis, with subsequent gains or losses related to changes in fair value (net of accrued interest income) reported in other income in our consolidated statements of comprehensive income. We elected to report separately the portion of the changes in fair value of the loans related to accrued interest from the remaining changes in fair value. Related interest income continues to be reported, based on the stated terms of the loans, as interest income in our consolidated statements of comprehensive income.

Debt Securities of Consolidated Trusts Held by Third Parties and Other Debt

We elected the fair value option on debt that contains embedded derivatives, primarily certain STACR debt notes. Fair value changes are recorded in other income in our consolidated statements of comprehensive income. For debt where we have elected the fair value option, upfront costs and fees are recognized in earnings as incurred and not deferred. Related interest expense continues to be reported as interest expense based on the stated terms of the debt securities. The table below presents the fair value and UPB related to certain items for which we have elected the fair value option.

(In millions)	December 31, 2016		2015	
	Multifamily Held-For-Sale Loans	Other Debt - Long Term	Multifamily Held-For-Sale Loans	Other Debt - Long Term
Fair value	\$16,255	\$5,866	\$17,660	\$7,045
Unpaid principal balance	16,231	5,584	17,673	7,093
Difference	\$24	\$282	(\$13)	(\$48)

Financial Statements Notes to the Consolidated Financial Statements | Note 13

Changes in Fair Value under the Fair Value Option Election

We recorded gains (losses) of \$250 million, (\$38) million, and \$0.9 billion for the years ended December 31, 2016, 2015, and 2014, respectively, from the change in fair value on multifamily held-for-sale loans recorded at fair value in other income in our consolidated statements of comprehensive income.

We recorded gains of \$663 million for the year ended December 31, 2016 from the change in fair value of multifamily held-for-sale loan purchase commitments recorded at fair value in other income in our consolidated statements of comprehensive income. We elected the fair value option for these commitments in 2016.

Gains (losses) on debt securities with the fair value option elected were \$63 million, (\$9) million, and \$144 million for the years ended December 31, 2016, 2015, and 2014, respectively, and were recorded in other income in our consolidated statements of comprehensive income.

Changes in fair value attributable to instrument-specific credit risk were not material for the years ended December 31, 2016, 2015, or 2014 for any assets or liabilities for which we elected the fair value option.

Financial Statements Notes to the Consolidated Financial Statements | Note 14

NOTE 14: LEGAL CONTINGENCIES

We are involved as a party in a variety of legal and regulatory proceedings arising from time to time in the ordinary course of business including, among other things, contractual disputes, personal injury claims, employment-related litigation and other legal proceedings incidental to our business. We are frequently involved, directly or indirectly, in litigation involving mortgage foreclosures. From time to time, we are also involved in proceedings arising from our termination of a seller/servicer's eligibility to sell loans to, and/or service loans for, us. In these cases, the former seller/servicer sometimes seeks damages against us for wrongful termination under a variety of legal theories. In addition, we are sometimes sued in connection with the origination or servicing of loans. These suits typically involve claims alleging wrongful actions of seller/servicers. Our contracts with our seller/servicers generally provide for indemnification of Freddie Mac against liability arising from seller/servicers' wrongful actions with respect to loans sold to or serviced for Freddie Mac.

Litigation and claims resolution are subject to many uncertainties and are not susceptible to accurate prediction. In accordance with the accounting guidance for contingencies, we reserve for litigation claims and assessments asserted or threatened against us when a loss is probable (as defined in such guidance) and the amount of the loss can be reasonably estimated.

PUTATIVE SECURITIES CLASS ACTION LAWSUIT: OHIO PUBLIC EMPLOYEES RETIREMENT SYSTEM VS. FREDDIE MAC, SYRON, ET AL.

This putative securities class action lawsuit was filed against Freddie Mac and certain former officers on January 18, 2008 in the U.S. District Court for the Northern District of Ohio purportedly on behalf of a class of purchasers of Freddie Mac stock from August 1, 2006 through November 20, 2007. FHFA later intervened as Conservator, and the plaintiff amended its complaint on several occasions. The plaintiff alleged, among other things, that the defendants violated federal securities laws by making false and misleading statements concerning our business, risk management, and the procedures we put into place to protect the company from problems in the mortgage industry. The plaintiff seeks unspecified damages and interest, and reasonable costs and expenses, including attorney and expert fees. In October 2013, defendants filed motions to dismiss the complaint. In October 2014, the District Court granted defendants' motions and dismissed the case in its entirety against all defendants, with prejudice. In November 2014, plaintiff filed a notice of appeal in the U.S. Court of Appeals for the Sixth Circuit. On July 20, 2016, the Court of Appeals reversed the District Court's dismissal and remanded the case to the District Court for further proceedings. At present, it is not possible for us to predict the probable outcome of this lawsuit or any potential effect on our business, financial condition, liquidity, or results of operations. In addition, we are unable to reasonably estimate the possible loss or range of possible loss in the event of an adverse judgment in the foregoing matter due to the following factors, among others: the inherent uncertainty of pre-trial litigation and the fact that the District Court has not yet ruled upon motions for class certification or summary judgment. In particular, absent the certification of a class, the identification of a class period, and the identification of the alleged statement or statements that survive dispositive motions, we cannot reasonably estimate any possible loss or range of possible loss.

Financial Statements Notes to the Consolidated Financial Statements | Note 14

LITIGATION RELATED TO THE TAYLOR, BEAN & WHITAKER (TBW) BANKRUPTCY

In August 2009, TBW, which had been one of our single-family seller/servicers, filed for bankruptcy in Florida. We entered into a settlement with TBW and the TBW creditors' committee regarding the TBW bankruptcy in 2011. However, we continue to be involved in litigation with other parties relating to the TBW bankruptcy, as described below.

On or about May 14, 2010, certain underwriters at Lloyds, London and London Market Insurance Companies brought an adversary proceeding in the U.S. Bankruptcy Court for the Middle District of Florida against TBW, Freddie Mac and other parties seeking a declaration rescinding \$90 million of mortgage bankers bonds providing fidelity and errors and omissions insurance coverage. Several excess insurers on the bonds thereafter filed similar claims in that action. Freddie Mac filed a proof of loss under the bonds. In March 2016, a settlement agreement among the parties was submitted to the Bankruptcy Court for approval. On April 25, 2016, the Bankruptcy Court approved the settlement. On May 6, 2016, Sovereign Bank, which was not a party to the settlement agreement, appealed the order approving the settlement agreement and various other prior Bankruptcy Court orders to the U.S. District Court for the Middle District of Florida. Sovereign's appeal and related motions are pending.

LIBOR LAWSUIT

On March 14, 2013, Freddie Mac filed a lawsuit in the U.S. District Court for the Eastern District of Virginia against the British Bankers Association and the 16 U.S. Dollar LIBOR panel banks and a number of their affiliates. The case was subsequently transferred to the U.S. District Court for the Southern District of New York. The complaint alleges, among other things, that the defendants fraudulently and collusively depressed LIBOR, a benchmark interest rate indexed to trillions of dollars of financial products, and asserts claims for antitrust violations, breach of contract, tortious interference with contract and fraud. Freddie Mac filed an amended complaint in July 2013, and a second amended complaint in October 2014. In August 2015, the District Court dismissed the portion of our claim related to antitrust violations and fraud and we filed a motion for reconsideration. On March 31, 2016, the District Court granted a portion of our motion, finding personal jurisdiction over certain defendants, and denied the portion of our motion with respect to statutes of limitation for our fraud claims. Subsequently, in a related case, the U.S. Court of Appeals for the Second Circuit reversed the District Court's dismissal of certain plaintiffs' antitrust claims and remanded the case to the District Court for consideration of whether, among other things, the plaintiffs are "efficient enforcers" of the antitrust laws.

On December 20, 2016, after briefing and argument on the defendants' renewed motions to dismiss on personal jurisdiction and efficient enforcer grounds, the District Court denied defendants' motions in part and granted them in part. The District Court held that Freddie Mac is an efficient enforcer of the antitrust laws, but dismissed on personal jurisdiction grounds Freddie Mac's antitrust claims against all defendants except HSBC USA, N.A. Freddie Mac and other plaintiffs requested clarification of the District Court's ruling to determine whether it intended to dismiss defendants located in the United States for lack of personal jurisdiction, which request the District Court denied on February 2, 2017. Freddie Mac also filed a motion for reconsideration of the District Court's opinion dismissing Freddie Mac's (and other plaintiffs') antitrust claims on personal jurisdiction grounds.

Freddie Mac 2016 Form 10-K 328

LITIGATION CONCERNING THE PURCHASE AGREEMENT

Since July 2013, a number of lawsuits have been filed against us concerning the August 2012 amendment to the Purchase Agreement, which created the net worth sweep dividend provisions of the senior preferred stock. The plaintiffs in the lawsuits allege that they are holders of common stock and/or junior preferred stock issued by Freddie Mac and Fannie Mae. (For purposes of this discussion, junior preferred stock refers to the various series of preferred stock of Freddie Mac and Fannie Mae other than the senior preferred stock issued to Treasury.) It is possible that similar lawsuits will be filed in the future. The lawsuits against us are described below.

Litigation in the U.S. District Court for the District of Columbia

In re Fannie Mae/Freddie Mac Senior Preferred Stock Purchase Agreement Class Action Litigations. This case is the result of the consolidation of three putative class action lawsuits: Cacciapelle and Bareiss vs. Federal National Mortgage Association, Federal Home Loan Mortgage Corporation and FHFA, filed on July 29, 2013; American European Insurance Company vs. Federal National Mortgage Association, Federal Home Loan Mortgage Corporation and FHFA, filed on July 30, 2013; and Marneu Holdings, Co. vs. FHFA, Treasury, Federal National Mortgage Association and Federal Home Loan Mortgage Corporation, filed on September 18, 2013. (The Marneu case was also filed as a shareholder derivative lawsuit.) A consolidated amended complaint was filed in December 2013. In the consolidated amended complaint, plaintiffs allege, among other items, that the August 2012 amendment to the Purchase Agreement breached Freddie Mac's and Fannie Mae's respective contracts with the holders of junior preferred stock and common stock and the covenant of good faith and fair dealing inherent in such contracts. Plaintiffs sought unspecified damages, equitable and injunctive relief, and costs and expenses, including attorney and expert fees.

The Cacciapelle and American European Insurance Company lawsuits were filed purportedly on behalf of a class of purchasers of junior preferred stock issued by Freddie Mac or Fannie Mae who held stock prior to, and as of, August 17, 2012. The Marneu lawsuit was filed purportedly on behalf of a class of purchasers of junior preferred stock and purchasers of common stock issued by Freddie Mac or Fannie Mae over a not-yet-defined period of time.

Arrowood Indemnity Company vs. Federal National Mortgage Association, Federal Home Loan Mortgage Corporation, FHFA and Treasury. This case was filed on September 20, 2013. The allegations and demands made by plaintiffs in this case were generally similar to those made by the plaintiffs in the In re Fannie Mae/Freddie Mac Senior Preferred Stock Purchase Agreement Class Action Litigations case described above. Plaintiffs in the Arrowood lawsuit also requested that, if injunctive relief were not granted, the Arrowood plaintiffs be awarded damages against the defendants in an amount to be determined including, but not limited to, the aggregate par value of their junior preferred stock, the total of which they stated to be approximately \$42 million.

American European Insurance Company, Cacciapelle and Miller vs. Treasury and FHFA. This case was filed as a shareholder derivative lawsuit, purportedly on behalf of Freddie Mac as a "nominal" defendant, on July 30, 2014. The complaint alleged that, through the August 2012 amendment to the Purchase Agreement, Treasury and FHFA breached their respective fiduciary duties to Freddie Mac, causing Freddie Mac to suffer damages. The plaintiffs asked that Freddie Mac be awarded compensatory damages and disgorgement, as well as attorneys' fees, costs and other expenses.

Freddie Mac 2016 Form 10-K 329

Financial Statements Notes to the Consolidated Financial Statements | Note 14

FHFA, joined by Freddie Mac and Fannie Mae, moved to dismiss the In re Fannie Mae/Freddie Mac Senior Preferred Stock Purchase Agreement Class Action Litigations case and the other related cases in January 2014. Treasury filed a motion to dismiss the same day. In September 2014, the District Court granted the motions and dismissed the plaintiffs' claims. In October 2014, plaintiffs in the In re Fannie Mae/Freddie Mac Senior Preferred Stock Purchase Agreement Class Action Litigations case filed a notice of appeal of the District Court's decision. The scope of this appeal includes the American European Insurance Company shareholder derivative lawsuit. In October 2014, Arrowood filed a notice of appeal of the District Court's decision. Defendants have opposed the appeals.

Litigation in the U.S. Court of Federal Claims

Reid and Fisher vs. the United States of America and Federal Home Loan Mortgage Corporation. This case was filed as a derivative lawsuit, purportedly on behalf of Freddie Mac as a "nominal" defendant, on February 26, 2014. The complaint alleges, among other items, that the net worth sweep dividend provisions of the senior preferred stock constitute an unlawful taking of private property for public use without just compensation. The plaintiffs ask that Freddie Mac be awarded just compensation for the U.S. government's alleged taking of its property, attorneys' fees, costs and other expenses.

Rafter, Rattien and Pershing Square Capital Management vs. the United States of America et al. This case was filed as a shareholder derivative lawsuit, purportedly on behalf of Freddie Mac as a "nominal" defendant, on August 14, 2014. The complaint alleges that the net worth sweep dividend provisions of the senior preferred stock constitute an unlawful taking of private property for public use without just compensation, and the U.S. government breached an implied-in-fact contract with Freddie Mac. In September 2015, plaintiffs filed an amended complaint, which contains one claim involving Freddie Mac. The amended complaint alleges that Freddie Mac's charter is a contract with its common stockholders, and that, through the August 2012 amendment to the Purchase Agreement, the U.S. government breached the implied covenant of good faith and fair dealing inherent in such contract. Plaintiffs ask that they be awarded damages or other appropriate relief for the alleged breach of contract as well as attorneys' fees, costs and expenses.

Litigation in the U.S. District Court for the District of Delaware

Jacobs and Hinds vs. FHFA and Treasury. This case was filed on August 17, 2015 as a putative class action lawsuit purportedly on behalf of a class of holders of preferred stock or common stock issued by Freddie Mac or Fannie Mae. The case was also filed as a shareholder derivative lawsuit, purportedly on behalf of Freddie Mac and Fannie Mae as "nominal" defendants. The complaint alleges, among other items, that the August 2012 amendment to the Purchase Agreement violated applicable state law and constituted a breach of contract, as well as a breach of covenants of good faith and fair dealing. Plaintiffs seek equitable and injunctive relief (including restitution of the monies paid by Freddie Mac and Fannie Mae to Treasury under the net worth sweep dividend), compensatory damages, attorneys' fees, costs and expenses. The case was stayed pending resolution of FHFA's motion to the U.S. Judicial Panel on Multidistrict Litigation to transfer this case to the U.S. District Court for the District of Columbia. This motion was denied on June 2, 2016, and the stay was lifted on July 13, 2016. Plaintiffs filed an application for certification of a question to the Delaware and Virginia Supreme Courts, which was denied on September 12, 2016. On September 7, 2016, plaintiffs filed a motion to amend the complaint, which Treasury opposed in part.

Freddie Mac 2016 Form 10-K 330

Financial Statements Notes to the Consolidated Financial Statements | Note 14

Litigation in the U.S. District Court for the Eastern District of Virginia

Pagliara vs. Federal Home Loan Mortgage Corporation. This case was filed on March 14, 2016 in the Circuit Court of Fairfax County, Virginia, and subsequently removed to the U.S. District Court for the Eastern District of Virginia. The plaintiff seeks an order to permit inspection and copying of corporate records under Virginia law, primarily for the purpose of investigating potential claims arising from the net worth sweep. The case was stayed pending resolution of FHFA's request to the U.S. Judicial Panel on Multidistrict Litigation to transfer this case to the U.S. District Court for the District of Columbia, which was denied on June 2, 2016. On June 17, 2016, Freddie Mac and FHFA filed a motion to dismiss or, in the alternative, substitute FHFA as plaintiff in the case. On August 23, 2016, the U.S. District Court for the Eastern District of Virginia dismissed the case. The plaintiff filed a notice of appeal on September 21, 2016, which was dismissed at plaintiff's request on January 30, 2017.

At present, it is not possible for us to predict the probable outcome of the lawsuits discussed above in the U.S. District Courts and the U.S. Court of Federal Claims (including the outcome of any appeal) or any potential effect on our business, financial condition, liquidity, or results of operations. In addition, we are unable to reasonably estimate the possible loss or range of possible loss in the event of an adverse judgment in the foregoing matters due to a number of factors, including the inherent uncertainty of pre-trial litigation. In addition, with respect to the In re Fannie Mae/Freddie Mac Senior Preferred Stock Purchase Agreement Class Action Litigations case, the plaintiffs have not demanded a stated amount of damages they believe are due, and the Court has not certified a class.

Financial Statements Notes to the Consolidated Financial Statements | Note 15

NOTE 15: REGULATORY CAPITAL

In October 2008, FHFA announced that it was suspending capital classification of us during conservatorship in light of the Purchase Agreement. FHFA continues to monitor our capital levels, but the existing statutory and FHFA-directed regulatory capital requirements are not binding during conservatorship. We continue to provide quarterly submissions to FHFA on minimum capital.

REGULATORY CAPITAL STANDARDS

The GSE Act established minimum, critical, and risk-based capital standards for us. However, per guidance received from FHFA, we no longer are required to submit risk-based capital reports to FHFA.

Prior to our entry into conservatorship, those standards determined the amounts of core capital that we were to maintain to meet regulatory capital requirements. Core capital consisted of the par value of outstanding common stock (common stock issued less common stock held in treasury), the par value of outstanding non-cumulative, perpetual preferred stock, additional paid-in capital and retained earnings (accumulated deficit), as determined in accordance with GAAP.

Minimum Capital

The minimum capital standard required us to hold an amount of core capital that was generally equal to the sum of 2.50% of aggregate on-balance sheet assets and approximately 0.45% of the sum of our PCs held by third parties and other aggregate off-balance sheet obligations.

Pursuant to regulatory guidance from FHFA, our minimum capital requirement was not affected by adoption of amendments to the accounting guidance for transfers of financial assets and consolidation of VIEs effective January 1, 2010. Specifically, upon adoption of these amendments, FHFA directed us, for purposes of minimum capital, to continue reporting single-family PCs and certain other securitization products held by third parties using a 0.45% capital requirement. FHFA reserves the authority under the GSE Act to raise the minimum capital requirement for any of our assets or activities.

Critical Capital

The critical capital standard required us to hold an amount of core capital that was generally equal to the sum of 1.25% of aggregate on-balance sheet assets and approximately 0.25% of the sum of our PCs held by third parties and other aggregate off-balance sheet obligations.

PERFORMANCE AGAINST REGULATORY CAPITAL STANDARDS

The table below summarizes our minimum capital requirements and deficits and net worth.

(In millions)	December	
	31, 2016	31, 2015
GAAP net worth	\$5,075	\$2,940
Core capital (deficit) ⁽¹⁾⁽²⁾	(\$67,717)	(\$70,549)
Less: Minimum capital requirement ⁽¹⁾	18,933	19,687
Minimum capital surplus (deficit) ⁽¹⁾	(\$86,650)	(\$90,236)

(1) Core capital and minimum capital figures are estimates and represent amounts submitted to FHFA. FHFA is the authoritative source for our regulatory capital.

Financial Statements Notes to the Consolidated Financial Statements | Note 15

(2) Core capital excludes certain components of GAAP total equity (i.e., AOCI and the liquidation preference of the senior preferred stock) as these items do not meet the statutory definition of core capital.

The Purchase Agreement provides that, if FHFA determines as of quarter end that our liabilities have exceeded our assets under GAAP, Treasury will contribute funds to us in an amount at least equal to the difference between such liabilities and assets.

Under the GSE Act, FHFA must place us into receivership if FHFA determines that our assets are and have been less than our obligations for a period of 60 days. FHFA has notified us that the measurement period for any mandatory receivership determination with respect to our assets and obligations would commence no earlier than the SEC public filing deadline for our quarterly or annual financial statements and would continue for 60 calendar days after that date. FHFA has advised us that, if, during that 60-day period, we receive funds from Treasury in an amount at least equal to the deficiency amount under the Purchase Agreement, the Director of FHFA will not make a mandatory receivership determination. If funding has been requested under the Purchase Agreement to address a deficit in our net worth, and Treasury is unable to provide us with such funding within the 60-day period specified by FHFA, FHFA would be required to place us into receivership if our assets remain less than our obligations during that 60-day period.

At December 31, 2016, our assets exceeded our liabilities under GAAP; therefore, no draw is being requested from Treasury under the Purchase Agreement. As of December 31, 2016, our aggregate funding received from Treasury under the Purchase Agreement was \$71.3 billion. This aggregate funding amount does not include the initial \$1 billion liquidation preference of senior preferred stock that we issued to Treasury in September 2008 as an initial commitment fee and for which no cash was received.

SUBORDINATED DEBT COMMITMENT

In October 2000, we announced our adoption of a series of commitments designed to enhance market discipline, liquidity, and capital. In September 2005, we entered into a written agreement with FHFA that updated those commitments and set forth a process for implementing them. FHFA, as Conservator of Freddie Mac, has suspended the requirements in the September 2005 agreement with respect to issuance, maintenance, and reporting and disclosure of Freddie Mac subordinated debt during the term of conservatorship and thereafter until directed otherwise.

NOTE 16: SELECTED FINANCIAL STATEMENT LINE ITEMS

The table below presents the significant components of other income (loss) and other expense on our consolidated statements of comprehensive income.

(In millions)	Year Ended December 31,		
	2016	2015	2014
Other income (loss):			
Non-agency mortgage-related securities settlements ⁽¹⁾	\$—	\$65	\$6,084
Gains (losses) on loans	(463)	(2,094)	731
All other	1,717	1,150	1,229
Total other income (loss)	\$1,254	(\$879)	\$8,044
Other expense:			
Property tax and insurance expense on held-for-sale loans	(\$90)	(\$1,094)	(\$62)
All other	(509)	(412)	(176)
Total other expense	(\$599)	(\$1,506)	(\$238)

⁽¹⁾ Settlement agreements primarily related to lawsuits regarding our investments in certain non-agency mortgage-related securities and were a significant component of other income in 2014.

The table below presents the significant components of other assets and other liabilities on our consolidated balance sheets.

(In millions)	December	
	31, 2016	31, 2015
Other assets:		
Real estate owned, net	\$1,198	\$1,725
Accounts and other receivables ⁽¹⁾	5,083	3,625
Guarantee asset	2,298	1,753
Advances to lenders	1,278	910
All other	2,501	1,025
Total other assets	\$12,358	\$9,038
Other liabilities:		
Servicer liabilities	\$730	\$1,191
Guarantee obligation	2,208	1,729
Accounts payable and accrued expenses	957	1,286
Payables related to securities	4,510	72
All other	1,082	968
Total other liabilities	\$9,487	\$5,246

⁽¹⁾ Primarily consists of servicer receivables and other non-interest receivables.

Income (loss) per common share – basic and diluted ⁽¹⁾	(\$0.07)	\$0.08	(\$0.15)	\$0.13	(\$0.01)

Earnings (loss) per common share is computed independently for each of the quarters presented. Due to the use of weighted average common shares outstanding when calculating earnings (loss) per share, the sum of the four (1) quarters may not equal the full-year amount. Earnings (loss) per common share amounts may not recalculate using the amounts shown in this table due to rounding.

Controls and Procedures

CONTROLS AND PROCEDURES

MANAGEMENT'S REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

Management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Exchange Act Rule 13a-15(f). Internal control over financial reporting is a process designed by, or under the supervision of, our Chief Executive Officer and Chief Financial Officer and effected by the Board of Directors, management and other personnel to provide reasonable assurance regarding the reliability of our financial reporting and the preparation of financial statements for external purposes in accordance with GAAP.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. It is a process that involves human diligence and compliance and is, therefore, subject to lapses in judgment and breakdowns resulting from human error. It also can be circumvented by collusion or improper management override. Because of its limitations, there is a risk that internal control over financial reporting may not prevent or detect, on a timely basis, errors that could cause a material misstatement of the financial statements.

We assessed the effectiveness of our internal control over financial reporting as of December 31, 2016. In making our assessment, we used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission, or COSO, in Internal Control — Integrated Framework (2013 Framework). A material weakness is a deficiency, or a combination of deficiencies, in internal control over financial reporting, such that there is a reasonable possibility that a material misstatement of the company's annual or interim financial statements will not be prevented or detected on a timely basis by a company's internal controls. Based on our assessment, we identified a material weakness related to our inability to update our disclosure controls and procedures in a manner that adequately ensures the accumulation and communication to management of information known to FHFA that is needed to meet our disclosure obligations under the federal securities laws, including disclosures affecting our consolidated financial statements.

We have been under conservatorship of FHFA since September 6, 2008. FHFA is an independent agency that currently functions as both our Conservator and our regulator with respect to our safety, soundness and mission. Because we are in conservatorship, some of the information that we may need to meet our disclosure obligations may be solely within the knowledge of FHFA. As our Conservator, FHFA has the power to take actions without our knowledge that could be material to investors and could significantly affect our financial performance. Although we and FHFA have attempted to design and implement disclosure policies and procedures to account for the conservatorship and accomplish the same objectives as disclosure controls and procedures for a typical reporting company, there are inherent structural limitations on our ability to design, implement, test or operate effective disclosure controls and procedures under the circumstances of conservatorship. As our Conservator and regulator, FHFA is limited in its ability to design and implement a complete set of disclosure controls and procedures relating to us, particularly with respect to current reporting pursuant to Form 8-K. Similarly, as a regulated entity, we are limited in our ability to design, implement, operate and test the controls and procedures for which FHFA is responsible. For example, FHFA may formulate certain intentions with respect to the conduct of

Controls and Procedures

our business that, if known to management, would require consideration for disclosure or reflection in our financial statements, but that FHFA, for regulatory reasons, may be constrained from communicating to management. As a result of these considerations, we have concluded that this control deficiency constitutes a material weakness in our internal control over financial reporting.

Because of this material weakness, we have concluded that our internal control over financial reporting was not effective as of December 31, 2016 based on the COSO criteria (2013 Framework). PricewaterhouseCoopers LLP, an independent registered public accounting firm, audited the effectiveness of our internal control over financial reporting as of December 31, 2016 and also determined that our internal control over financial reporting was not effective. PricewaterhouseCoopers LLP's report appears in "Financial Statements and Supplementary Data — Report of Independent Registered Public Accounting Firm."

EVALUATION OF DISCLOSURE CONTROLS AND PROCEDURES

Disclosure controls and procedures include, without limitation, controls and procedures designed to ensure that the information we are required to disclose in reports that we file or submit under the Exchange Act is recorded, processed, summarized and reported within the time periods specified by the SEC's rules and forms and that such information is accumulated and communicated to management of the company, including the company's Chief Executive Officer and Chief Financial Officer, as appropriate, to allow timely decisions regarding required disclosure. In designing our disclosure controls and procedures, we recognize that any controls and procedures, no matter how well designed and operated, can provide only reasonable assurance of achieving the desired control objectives, and we must apply judgment in implementing possible controls and procedures.

Management, including the company's Chief Executive Officer and Chief Financial Officer, conducted an evaluation of the effectiveness of our disclosure controls and procedures as of December 31, 2016. As a result of management's evaluation, our Chief Executive Officer and Chief Financial Officer concluded that our disclosure controls and procedures were not effective as of December 31, 2016, at a reasonable level of assurance, because we have not been able to update our disclosure controls and procedures to provide reasonable assurance that information known by FHFA on an ongoing basis is communicated from FHFA to Freddie Mac's management in a manner that allows for timely decisions regarding our required disclosure under the federal securities laws. As discussed above, we consider this situation to be a material weakness in our internal control over financial reporting. Based on discussions with FHFA and the structural nature of this continuing weakness, we believe it is likely that we will not remediate this material weakness while we are under conservatorship.

Controls and Procedures

MITIGATING ACTIONS RELATED TO THE MATERIAL WEAKNESS IN INTERNAL CONTROL OVER FINANCIAL REPORTING

As described above under "Management's Report on Internal Control Over Financial Reporting," we have one material weakness in internal control over financial reporting as of December 31, 2016 that we have not remediated.

Given the structural nature of this material weakness, we believe it is likely that we will not remediate it while we are under conservatorship. However, both we and FHFA have continued to engage in activities and employ procedures and practices intended to permit accumulation and communication to management of information needed to meet our disclosure obligations under the federal securities laws. These include the following:

FHFA has established the Division of Conservatorship, which is intended to facilitate operation of the company with the oversight of the Conservator.

We provide drafts of our SEC filings to FHFA personnel for their review and comment prior to filing. We also provide drafts of external press releases, statements and speeches to FHFA personnel for their review and comment prior to release.

FHFA personnel, including senior officials, review our SEC filings prior to filing, including this Form 10-K, and engage in discussions with us regarding issues associated with the information contained in those filings. Prior to filing this Form 10-K, FHFA provided us with a written acknowledgment that it had reviewed the Form 10-K, was not aware of any material misstatements or omissions in the Form 10-K, and had no objection to our filing the Form 10-K.

The Director of FHFA is in frequent communication with our Chief Executive Officer, typically meeting (in person or by phone) on at least a bi-weekly basis.

FHFA representatives attend meetings frequently with various groups within the company to enhance the flow of information and to provide oversight on a variety of matters, including accounting, credit and capital markets management, external communications, and legal matters.

Senior officials within FHFA's accounting group meet frequently with our senior financial executives regarding our accounting policies, practices, and procedures.

In view of our mitigating actions related to this material weakness, we believe that our consolidated financial statements for the year ended December 31, 2016 have been prepared in conformity with GAAP.

Controls and Procedures

CHANGES IN INTERNAL CONTROL OVER FINANCIAL REPORTING DURING THE QUARTER ENDED DECEMBER 31, 2016

We evaluated the changes in our internal control over financial reporting that occurred during the quarter ended December 31, 2016 and concluded that there were no changes that materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Freddie Mac 2016 Form 10-K 340

Directors, Corporate Governance, and Executive Officers Directors

DIRECTORS, CORPORATE GOVERNANCE, AND EXECUTIVE OFFICERS

DIRECTORS

ELECTION OF DIRECTORS

As Conservator, FHFA determines the size of the company's Board and the scope of its authority. At the start of Conservatorship, FHFA determined that the Board is to have a Non-Executive Chairman, and is to consist of a minimum of 9 and not more than 13 directors, with the CEO being the only corporate officer serving as a member of the Board. The company currently has 13 Board members and expects to maintain the current Board size.

In addition, because FHFA as Conservator has succeeded to the rights of all stockholders of the company, the Conservator elects the directors. Accordingly, we will not solicit proxies, distribute a proxy statement to stockholders, or hold an annual meeting of stockholders in 2017. Instead, the Conservator has elected directors by written consent in lieu of an annual meeting. Annually, the Board identifies director nominees for the Conservator to consider for election by written consent. When there is a vacancy on the Board, the Board may exercise the authority delegated to it by the Conservator to fill such vacancy, subject to review by the Conservator.

On February 13, 2017, the Conservator executed a written consent, effective as of that date, re-electing each of the 13 then-current directors as a member of our Board. The individuals elected as directors by the Conservator are listed below.

Raphael W. Bostic Christopher S. Lynch

Carolyn H. Byrd Sara Mathew

Lance F. Drummond Saiyid T. Naqvi

Thomas M. Goldstein Nicolas P. Retsinas

Richard C. Hartnack Eugene B. Shanks, Jr.

Steven W. Kohlhagen Anthony A. Williams

Donald H. Layton

See "Director Biographical Information" for information about each of our re-elected directors. The terms of those directors will end on the date of the next annual meeting of our stockholders or when the Conservator next elects directors by written consent, whichever occurs first.

Freddie Mac 2016 Form 10-K 341

Directors, Corporate Governance, and Executive Officers Directors

DIRECTOR CRITERIA, DIVERSITY, QUALIFICATIONS, EXPERIENCE, AND TENURE

Our Board seeks candidates for director who have achieved a high level of stature, success, and respect in their principal occupations.

Each of our current directors was selected as a candidate because of his or her character, judgment, experience, and expertise. Consistent with our Charter and FHFA's rule regarding the Responsibilities of Boards of Directors, Corporate Practices and Corporate Governance Matters (the "Corporate Governance Rule"), the factors considered include the knowledge directors would have, as a group, in the areas of business, finance, accounting, risk management, public policy, mortgage lending, real estate, low-income housing, homebuilding, regulation of financial institutions, and any other areas that may be relevant to our safe and sound operation. We also considered whether a candidate's other commitments, including the number of other board memberships held by the candidate, would permit the candidate to devote sufficient time to the candidate's duties and responsibilities as a director. Our Charter provides that our Board must at all times have at least one person from each of the homebuilding, mortgage lending, and real estate industries and at least one person from an organization representing community or consumer interests or one person who has demonstrated a career commitment to the provision of housing for low-income households.

In addition, the Board has adopted a policy (articulated in our Corporate Governance Guidelines, or the "Guidelines") with regard to the consideration of diversity in identifying director nominees and candidates. As articulated in the Guidelines, the Board seeks to have a diversity of talent, perspectives, expertise, experience, and cultures among its members, including minorities, women, and individuals with disabilities, and considers such diversity in the candidate identification and nomination processes. The Guidelines explain that when identifying director nominees, the Nominating and Governance Committee considers, among other factors, our needs, the talents and skills then available on the Board, and, with respect to incumbent directors, their continued involvement in business and professional activities relevant to us, the skills and experience that should be represented on the Board, the availability of other individuals with desirable skills to join the Board, and the desire to maintain a diverse Board.

FHFA has promulgated a rule regarding minority and women inclusion. This rule implements section 1116 of the Reform Act and generally requires us to encourage the consideration of diversity and the inclusion of women, minorities, and individuals with disabilities in all activities, including considering diversity in the process of nominating directors.

DIRECTOR BIOGRAPHICAL INFORMATION

The following summarizes each director's Board service, experience, qualifications, attributes, and/or skills that led to his or her selection as a director, and provides other biographical information, as of February 16, 2017:

Freddie Mac 2016 Form 10-K 342

Member of the Board and Audit Committee of Meruelo Maddox Properties, Inc. (2007-2009)

Directors, Corporate Governance, and Executive Officers Corporate Governance

CORPORATE GOVERNANCE

OUR CORPORATE GOVERNANCE PRACTICES

The company is committed to best practices in corporate governance. The Board regularly reviews our governance practices, assesses the regulatory and legislative environment, and adopts governance practices that are in the best interests of the company.

Our Board has adopted the company's Corporate Governance Guidelines. The Guidelines are available on our website at www.freddiemac.com/governance/pdf/gov_guidelines.pdf. The Guidelines are reviewed annually by our Board and were last updated in June 2016. The Guidelines establish corporate governance practices, and include: qualifications for directors, a limitation on the number of boards on which a director may serve, term limits, director orientation and continuing education, and a requirement that the Board and each of its committees perform an annual self-evaluation. We regularly review our practices to ensure effective collaboration of management and the Board. We have instituted the following specific corporate governance practices:

Our Board has an independent Non-Executive Chairman, whose responsibilities include presiding over meetings of the Board and executive sessions of the non-employee or independent directors. Mr. Lynch has served as Non-Executive Chairman since December 2011.

Of the Board's 13 directors, 12 are independent, including the Non-Executive Chairman.

Our directors are elected annually.

Each of the Audit, Compensation, Nominating and Governance, and Risk Committees consists entirely of independent directors.

Each committee operates pursuant to a written charter that has been approved by the Board (these charters are available at www.freddiemac.com/governance/bd_committees.html).

Independent directors meet regularly without management.

The Board and each of the Audit, Compensation, Nominating and Governance, and Risk Committees conduct an annual self-evaluation.

New directors receive a full orientation regarding the company and issues specific to the committees to which they have been appointed.

All directors are provided with access to, and are encouraged to utilize, third party continuing education.

Management provides the Board and committees with in-depth technical briefings on substantive issues affecting the company.

The Board reviews management talent and succession planning at least annually.

DIRECTOR INDEPENDENCE AND RELEVANT CONSIDERATIONS

Our non-employee Board members evaluated the independence, as defined in Sections 4 and 5 of the Guidelines and in Section 303A.02 of the NYSE Listed Company Manual, of each of our current non-employee Board members, all of whom also served on our Board in 2016. Our non-employee Board

Directors, Corporate Governance, and Executive Officers Corporate Governance

members determined that all current members of our Board (other than Mr. Layton, our CEO) are independent. Mr. Layton is not considered an independent director because he is our CEO.

Our non-employee Board members concluded that all current members of our Audit Committee, Compensation Committee, and Nominating and Governance Committee are independent within the meaning of Sections 4 and 5 of the Guidelines and Section 303A.02 of the NYSE Listed Company Manual. Our Board also determined that: (i) all current members of our Audit Committee are independent within the meaning of Exchange Act Rule 10A-3 and Section 303A.06 of the NYSE Listed Company Manual; and (ii) all current members of our Compensation Committee are independent within the meaning of Exchange Act Rule 10C-1 and Section 303A.02(a)(ii) of the NYSE Listed Company Manual.

In determining the independence of each Board member, our non-employee Board members reviewed the following categories or types of relationships, in addition to those specifically addressed by the standards contained in Section 5 of the Guidelines, to determine whether those relationships, either individually or in aggregate, would constitute a material relationship between the director and us that would impair a director's judgment as a member of the Board or create the perception or appearance of such an impairment:

Employment Affiliations with Business Partners - During 2016 and currently, Mr. Williams has served as an employee of a firm that engages or has engaged in business with us resulting in payments between us and the firm. Under the Guidelines, no specific independence determination is required with respect to these payments because they do not exceed the greater of \$1 million or 2% of the firm's consolidated gross revenues for each of the last three fiscal years. After considering the nature and extent of the specific relationship between the firm and us, our non-employee Board members concluded that the business relationship does not constitute a material relationship between Mr. Williams and us that would impair his independence as our director.

Board Memberships with Business Partners - During 2016 and currently, Ms. Byrd and Messrs. Bostic, Lynch, Retsinas, Shanks, and Williams have served as directors of other companies that engage or have engaged in business with us resulting in payments between us and such companies during the past three fiscal years. After considering the nature and extent of the specific relationship between each of those companies and us, and the fact that these Board members are directors of these other companies rather than employees, our non-employee Board members concluded that those business relationships do not constitute material relationships between any of the directors and us that would impair their independence as our directors.

Board Memberships with Charitable Organizations to Which We Have Made Payments - During 2016 and currently, Mr. Bostic has served as a board member of a charitable organization that received payments from us. Under the Guidelines, no specific independence determination is required with respect to these payments because they do not exceed the greater of \$1 million or 2% of the organization's consolidated gross revenues for each of the last three fiscal years. During 2016 and currently, Mr. Retsinas has served as Director Emeritus of a charitable organization that received payments from us. Because the total annual amount paid to the charitable organization did not exceed the greater of \$1 million or 2% of the organization's consolidated gross revenues for each of the last three fiscal years, no specific independence determination with respect to these payments is required under the Guidelines; moreover, since Mr. Retsinas is neither a board member nor a trustee of the charitable organization, the payments would not require an independence determination in any event. The non-employee members of the Board considered the payments and the nature of the

Directors, Corporate Governance, and Executive Officers Corporate Governance

organizations and concluded that the relationships with the charitable organizations do not constitute a material relationship between Mr. Bostic or Mr. Retsinas and us that would impair their independence as our directors.

Financial Relationships with For-Profit Business Partners - Mr. Hartnack owns stock of US Bancorp. In the aggregate, this stock represents a material portion of his net worth. US Bancorp conducts significant business with Freddie Mac, including as a single-family seller/servicer and as trustee of some of Freddie Mac's securitization transactions. In order to eliminate any potential conflict of interest that might arise as a result of this stock ownership, Mr. Hartnack has agreed to recuse himself from discussing and acting upon any matters that are to be considered by the full Board or any of the committees of which he is a member, and that relate directly to US Bancorp. The Audit Committee Chair, in consultation with the Non-Executive Chairman, will address any questions that may arise regarding whether recusal from a particular discussion or action is appropriate.

In evaluating Mr. Hartnack's independence in light of his ownership of US Bancorp stock, our non-employee Board members considered the nature and extent of Freddie Mac's business relationship with US Bancorp and any potential impact that his stock ownership might have on his independent judgment as a Freddie Mac director, taking into account the recusal arrangement. Our non-employee Board members concluded that Mr. Hartnack's recusal arrangement concerning US Bancorp would address any actual or potential conflicts of interest that might arise with respect to his ownership of US Bancorp stock. Accordingly, our non-employee Board members concluded that Mr. Hartnack's ownership of US Bancorp stock does not constitute a material relationship between him and Freddie Mac that would impair his independence as a Freddie Mac director.

Mr. Naqvi owns stock of PNC Financial Services Group, Inc. ("PNC"). In the aggregate, this stock represents a material portion of his net worth. PNC conducts significant business with Freddie Mac, including as a single-family seller/servicer and as trustee of some of Freddie Mac's securitization transactions. In order to eliminate any potential conflict of interest that might arise as a result of this stock ownership, Mr. Naqvi has agreed to recuse himself from discussing and acting upon any matters that are to be considered by the full Board or any of the committees of which he is a member, and that relate directly to PNC. The Audit Committee Chair, in consultation with the Non-Executive Chairman, will address any questions that may arise regarding whether recusal from a particular discussion or action is appropriate.

In evaluating Mr. Naqvi's independence in light of his ownership of PNC stock, our non-employee Board members considered the nature and extent of Freddie Mac's business relationship with PNC and any potential impact that his stock ownership might have on his independent judgment as a Freddie Mac director, taking into account the recusal arrangement. Our non-employee Board members concluded that Mr. Naqvi's recusal arrangement concerning PNC would address any actual or potential conflicts of interest that might arise with respect to his ownership of PNC stock. Accordingly, our non-employee Board members concluded that Mr. Naqvi's ownership of PNC stock does not constitute a material relationship between him and Freddie Mac that would impair his independence as a Freddie Mac director.

Directors, Corporate Governance, and Executive Officers Corporate Governance

BOARD AND COMMITTEE INFORMATION

AUTHORITY OF THE BOARD AND BOARD COMMITTEES

The directors serve on behalf of, and exercise authority as directed by, the Conservator. The Conservator has delegated to the Board and its committees authority to function in accordance with the duties and authorities set forth in applicable statutes, regulations, guidance, orders and directives, and our Bylaws and committee charters, while reserving certain powers of approval to itself. The Conservator has instructed the Board that it should oversee that management consults with, and obtains approval of, the Conservator before taking action in the following areas:

- Matters requiring the approval of or consultation with Treasury under the covenants of the Purchase Agreement (see “MD&A — Conservatorship and Related Matters — Purchase Agreement, Warrant and Senior Preferred Stock” and Note 2);
- Redemptions or repurchases of subordinated debt, except as necessary to comply with the debt limit in the Purchase Agreement;
- Increases in Board risk limits, material changes in accounting policy, and reasonably foreseeable material increases in operational risk;
- Matters that relate to the Conservator’s powers, the status of Freddie Mac in conservatorship, or the legal effect of the conservatorship on contracts, such as, but not limited to, the initiation of material actions in connection with litigation addressing the actions or authority of the Conservator, repudiation of contracts, qualified financial contracts in dispute due to conservatorship status, and counterparties attempting to nullify or amend contracts due to conservatorship status;
- Retention and termination of external auditors and law firms serving as consultants to the Board;
- Agreements relating to litigation, claims, regulatory proceedings, or tax-related matters where the value of the claim is in excess of \$50 million, including related matters that aggregate to more than \$50 million (but excluding loan workouts);
- Alterations or changes to the terms of any master agreement between us and any of our top five single-family sellers or servicers that are not otherwise mandated by FHFA and that will alter, in a material way, the business relationship between the parties;
- Termination of a contract (other than by expiration pursuant to its terms) between us and any of our top five single-family sellers or servicers;
- Actions that, in the reasonable business judgment of management at the time that the action is to be taken, are likely to cause significant reputational risk to us or result in substantial negative publicity;
- Creation of any subsidiary or affiliate, or entering into a substantial transaction with a subsidiary or affiliate, except for the creation of, or a transaction with, a subsidiary or affiliate undertaken in the ordinary course of business (e.g., creation of a securitization trust or REMIC);
- Servicing transfers involving:
 - 100,000 or more loans to a non-bank transferee; or
 - 25,000 or more loans to any transferee if the transfer would increase the number of the transferee's Freddie Mac- and Fannie Mae-owned seriously delinquent loans by at least 25 percent and the servicing transfer has a minimum of 500 seriously delinquent loans;
- Setting or increasing the compensation or benefits payable to directors;
- Entering into new compensation arrangements or increasing amounts or benefits payable under existing compensation arrangements for senior vice presidents and above and other officers as FHFA may deem necessary to successfully execute its role as Conservator;

Directors, Corporate Governance, and Executive Officers Corporate Governance

Any establishment or modification by us of performance management processes for such officers, including the establishment or modification of a Conservatorship Scorecard; and

Establishing the annual operating budget.

Other than for large servicing transfers, FHFA requires prior Board approval for anything requiring Conservator approval. In addition, FHFA requires us to provide FHFA with timely notice of any significant changes in business processes or operations, including changes to single-family or multifamily credit policies and loss mitigation strategies, other than changes made at the direction or request of FHFA. FHFA will then determine whether any such items require Conservator and/or Board review or approval.

BOARD COMMITTEES

The Board has five standing committees: Audit, Compensation, Executive, Nominating and Governance, and Risk. All standing committees, other than the Executive Committee, meet regularly and are chaired by, and consist entirely of, independent directors. The Committees perform essential functions on behalf of the Board. The Committee Chairs review and approve agendas for all meetings of their respective Committees. Charters for the standing committees have been adopted by the Board and approved by the Conservator, and describe each committee's responsibilities. These charters are available on our website at www.freddiemac.com/governance/bd_committees.html. The membership of each committee as of February 16, 2017 is set forth below, together with a description of the primary responsibilities of each committee.

Audit Committee Chair:

Members:

Carolyn H. Byrd Lance F. Drummond
 Thomas M. Goldstein
 Sara Mathew
 Nicolas P. Retsinas
 Eugene B. Shanks, Jr.

The Audit Committee provides oversight of the company's accounting and financial reporting and disclosure processes, the adequacy of the systems of disclosure and internal control established by management, and the audit of the company's financial statements. Among other things, the Audit Committee: (i) appoints the independent auditor and evaluates its independence and performance; (ii) reviews the audit plans for and results of the independent audit and internal audits; and (iii) reviews reports related to processes established by management to provide compliance with legal and regulatory requirements. The Audit Committee's activities during 2016 with respect to the oversight of the independent auditor are described in more detail in "Principal Accounting Fees and Services — Approval of Independent Auditor Services and Fees." The Audit Committee also periodically reviews the company's guidelines and policies governing the processes for assessing and managing the company's risks and generally reviews the company's major financial risk exposures and the steps taken to monitor and control such exposures. The Audit Committee also approves all decisions regarding the appointment, removal, and compensation of the General Auditor and the appointment or removal of the CCO. The General Auditor and the CCO report independently to the Audit Committee, in addition to the CEO.

Our Audit Committee satisfies the definition of "audit committee" in Exchange Act Section 3(a)(58)(A) and the requirements of Exchange Act Rule 10A-3. Although our stock has been delisted from the NYSE, certain of the corporate governance requirements of the NYSE Listed Company Manual, including those

Directors, Corporate Governance, and Executive Officers Corporate Governance

relating to audit committees, continue to apply to us because they are incorporated by reference in the Corporate Governance Rule. Our Audit Committee satisfies the “audit committee” requirements in Sections 303A.06 and 303A.07 of the NYSE Listed Company Manual. The Board has determined that all members of our Audit Committee are independent and that Ms. Byrd, a member of the Audit Committee since December 2008 and its current chair, and Ms. Mathew, a member of the Audit Committee since December 2013 and its chair effective March 1, 2017, meet the definition of an “audit committee financial expert” under SEC regulations.

In 2016, the Audit Committee met separately nine times and jointly with the Risk Committee four times.

Executive Committee Chair:

Members:

Christopher S. Lynch	Carolyn H. Byrd
	Richard C. Hartnack
	Donald H. Layton
	Saiyid T. Naqvi
	Nicolas P. Retsinas

The Executive Committee, which, with the exception of our CEO, Mr. Layton, consists of independent directors, is authorized to exercise the corporate powers of the Board between meetings of the Board, except for those powers reserved to the Board by our Bylaws or otherwise.

The Executive Committee did not meet in 2016.

Compensation Committee Chair:

Members:

Nicolas P. Retsinas	Raphael W. Bostic
	Carolyn H. Byrd
	Steven W. Kohlhagen
	Saiyid T. Naqvi
	Eugene B. Shanks, Jr.

The Compensation Committee oversees the company’s compensation and benefits policies and programs. The company’s processes for consideration and determination of executive compensation, and the role of the Compensation Committee in those processes, are further described in “Executive Compensation — CD&A.” The Compensation Committee Report is included in “Executive Compensation — CD&A — Compensation Committee Report.”

The Compensation Committee consists entirely of independent directors. None of the members of the Compensation Committee during fiscal year 2016 were officers or employees of Freddie Mac or had any relationship with us that would be required to be disclosed by us under Item 407(e)(4) of Regulation S-K.

The Compensation Committee met eight times in 2016.

Directors, Corporate Governance, and Executive Officers Corporate Governance

Nominating and Governance Committee	Chair:	Members:
	Richard C. Hartnack	Lance F. Drummond
		Thomas M. Goldstein
		Sara Mathew
		Anthony A. Williams

The Nominating and Governance Committee, which consists entirely of independent directors, oversees the company's corporate governance, including reviewing the company's Bylaws and the Guidelines. It also assists the Board and its committees in conducting annual self-evaluations and identifying qualified individuals to become members of the Board. The Nominating and Governance Committee also reviews Board member independence and qualifications and recommends membership of the Board committees.

The Nominating and Governance Committee met six times in 2016.

Risk Committee Chair:	Members:
Saiyid T. Naqvi	Raphael W. Bostic
	Richard C. Hartnack
	Steven W. Kohlhagen
	Anthony A. Williams

The Risk Committee, which consists entirely of independent directors, oversees on an enterprise-wide basis the company's risk management framework, including credit risk, market risk, liquidity risk, operational risk, and enterprise-wide strategic risk. The Risk Committee reviews and approves the company's Enterprise Risk Policy and Board-level risk limits and metrics, and reviews significant: (i) enterprise risk exposures; (ii) risk management strategies; (iii) results of risk management reviews and assessments; and (iv) emerging risks, among other responsibilities. The Risk Committee also approves all decisions regarding the appointment or removal of the CERO, and the CERO reports independently to the Risk Committee, in addition to the CEO.

In 2016, the Risk Committee met separately five times, and jointly with the Audit Committee four times.

BOARD LEADERSHIP STRUCTURE

The positions of CEO and Non-Executive Chairman of the Board are held by different individuals. This leadership structure was established by the Conservator. FHFA's Corporate Governance Rule requires that the position of chairperson of the Board be filled by an independent director as defined under the rules of the NYSE. See "MD&A — Risk Management — Overview" for more information on the Board's role in risk oversight.

For a discussion of the Compensation Committee's conclusion that our compensation policies and practices do not create risks that are reasonably likely to have a material adverse effect on us, see "Executive Compensation — Compensation and Risk."

Directors, Corporate Governance, and Executive Officers Corporate Governance

COMMUNICATIONS WITH DIRECTORS

Interested parties wishing to communicate any concerns or questions about Freddie Mac to the Board or its directors may do so by U.S. mail, addressed to the Corporate Secretary, Freddie Mac, 8200 Jones Branch Drive, McLean, VA 22102-3110. Communications may be directed to the Non-Executive Chairman, to any other director or directors, or to groups of directors, such as the independent or non-employee directors.

DIRECTOR COMPENSATION

Non-employee Board members receive compensation in the form of cash retainers only, paid on a quarterly basis. Non-employee directors are also reimbursed for reasonable out-of-pocket costs for attending meetings of the Board or a Board committee of which they are a member and for other reasonable expenses associated with carrying out their responsibilities as directors.

Our directors are compensated entirely in cash because the Purchase Agreement prohibits us from issuing any shares of our equity securities without the prior written consent of Treasury. See “Executive Compensation — CD&A — Overview of Executive Management Compensation Program.” Unlike compensation for our executives, there is no provision in the director compensation program for pay that varies depending on business results. Although such incentive compensation is deemed appropriate to give management strong incentives to devise and execute business plans and achieve positive financial results, it is viewed as inconsistent with the oversight role of directors.

2016 NON-EMPLOYEE DIRECTOR COMPENSATION LEVELS

Board compensation levels during conservatorship are shown in the table below.

Board Service (Cash)

Annual Retainer for Non-Executive Chairman	\$290,000
Annual Retainer for Directors (other than the Non-Executive Chairman)	160,000
Committee Service (Cash)	
Annual Retainer for Audit Committee Chair	\$25,000
Annual Retainer for Risk Committee Chair	15,000
Annual Retainer for Committee Chairs (other than Audit or Risk)	10,000
Annual Retainer for Audit Committee Members	10,000

Freddie Mac 2016 Form 10-K 358

Directors, Corporate Governance, and Executive Officers Corporate Governance

2016 DIRECTOR COMPENSATION

The following table summarizes the 2016 compensation earned by all persons who served as non-employee directors during 2016.

Name	Fees Earned or Paid in Cash ⁽¹⁾	Total
C. Lynch	\$290,000	\$290,000
R. Bostic	160,000	160,000
C. Byrd	185,000	185,000
L. Drummond	170,000	170,000
T. Goldstein	170,000	170,000
R. Hartnack ⁽²⁾	170,000	170,000
S. Kohlhagen ⁽²⁾	166,593	166,593
S. Mathew	170,000	170,000
S. Naqvi ⁽²⁾	168,407	168,407
N. Retsinas ⁽²⁾	177,418	177,418
E. Shanks, Jr. ⁽²⁾	171,291	171,291
A. Williams ⁽²⁾	161,291	161,291

Because we do not have pension or retirement plans for our non-employee directors and all compensation is paid in (1) cash, “Change in Pension Value and Non-qualified Deferred Compensation Earnings” and “All Other Compensation” columns have been omitted.

In addition to the annual Board service and appropriate Committee Chair retainers, the amount represents partial annual compensation for service as a member of the Audit Committee or as a Committee Chair during 2016. In February 2016, Mr. Hartnack left, and Mr. Retsinas joined, the Audit Committee, the Chair of the Nominating and (2) Governance Committee transitioned from Mr. Shanks to Mr. Hartnack, and the Chair of the Compensation Committee transitioned from Mr. Williams to Mr. Retsinas. In June 2016, the Chair of the Risk Committee transitioned from Mr. Kohlhagen to Mr. Naqvi.

Indemnification. We have made arrangements to indemnify our directors against certain liabilities which are similar to the terms on which our executive officers are indemnified. For a description of such terms, see “Executive Compensation — CD&A — Written Agreements Relating to NEO Employment — Indemnification Agreements.”

Freddie Mac 2016 Form 10-K 359

Directors, Corporate Governance, and Executive Officers Executive Officers

EXECUTIVE OFFICERS

As of February 16, 2017, our executive officers are as follows:

Donald H. Layton Position:
Age: 66 Chief Executive Officer
Year of Affiliation: 2012

Mr. Layton has served as our CEO and a member of our Board since May 2012. See “Director Biographical Information” for a brief biographical description for Mr. Layton.

James G. Mackey Position:
Age: 49 Executive Vice President - Chief Financial Officer
Year of Affiliation: 2013

Mr. Mackey has served as our EVP - Chief Financial Officer since November 2013. He joined us from Ally Financial Inc., an auto finance and direct banking financial services company, where he served as Executive Vice President and Chief Financial Officer beginning in June 2011, after serving as Interim Chief Financial Officer from April 2010. Mr. Mackey joined Ally Financial in March 2009 as Group Vice President and Senior Finance Executive. Previously, he served as Chief Financial Officer for the Corporate Investments, Corporate Treasury, and Private Equity divisions at Bank of America Corporation, a financial services firm, from 2007 to 2009.

David M. Brickman Position:
Age: 51 Executive Vice President - Multifamily
Year of Affiliation: 1999

Mr. Brickman has served as our EVP - Multifamily since February 2014 and prior to that served as our SVP - Multifamily since July 2011. In these roles, he has been responsible for overall management of our Multifamily business line. From June 2011 until July 2011, he served as SVP - Multifamily Capital Markets, and from March 2004 to June 2011, he served as Vice President in charge of various units responsible for Multifamily Capital Markets. In his previous roles at Freddie Mac, Mr. Brickman led the multifamily securitization, pricing, costing, portfolio management, and research teams; was responsible for the development and implementation of new quantitative pricing models and financial risk analysis frameworks for all multifamily programs; and designed several of our multifamily loan and securitization products, including the Capital Markets Execution and the K-Deal Securitization Program. Prior to joining Freddie Mac in 1999, Mr. Brickman co-led the Mortgage Finance and Credit Analysis group in the consulting practice at PricewaterhouseCoopers LLP.

Anil D. Hinduja Position:
Age: 53 Executive Vice President - Chief Enterprise Risk
Year of Affiliation: 2015 Officer

Mr. Hinduja has served as our EVP - Chief Enterprise Risk Officer since July 2015. In this role, he provides overall direction and leadership for the Risk function and is responsible for leading an integrated risk management framework for all aspects of risk across the entire company. He joined Freddie Mac from Barclays PLC, where he served in increasingly broader risk management roles beginning in 2009,

Freddie Mac 2016 Form 10-K 360

Directors, Corporate Governance, and Executive Officers Executive Officers

including Chief Risk Officer for Barclays Africa Group Limited, Group Credit Director for Retail Credit Risk, and Chief Risk Officer for Barclays' retail bank in the U.K. Prior to joining Barclays, Mr. Hinduja spent 19 years at Citigroup in diverse roles with increasing responsibility across finance, operations, sales and distribution, business, and risk management in global consumer businesses. In risk, he was Director for Global Consumer Credit Risk and then Chief Risk Officer for the Consumer Lending Group, where he was responsible for managing risk in the mortgage, auto, and student loan businesses. His tenure at Citigroup culminated in his term as President and CEO of Citi Home Equity.

Michael T. Hutchins Position:
Age: 61 Executive Vice President - Investments and
Year of Affiliation: 2013 Capital Markets

Mr. Hutchins has served as our EVP - Investments and Capital Markets since January 2015 and prior to that served as SVP - Investments and Capital Markets from July 2013. Previously, Mr. Hutchins was Co-Founder and Chief Executive Officer of PrinceRidge, a financial services firm. Prior to PrinceRidge, he was with UBS from 1996 to 2007, holding a variety of positions, including the Global Head of the Fixed Income Rates & Currencies Group. Prior to UBS, Mr. Hutchins worked at Salomon Brothers from 1986 to 1996, where he held a number of management positions, including Co-Head of Fixed Income Capital Markets.

David B. Lowman Position:
Age: 59 Executive Vice President - Single-Family Business
Year of Affiliation: 2013

Mr. Lowman has served as our EVP - Single-Family Business since May 2013. In addition, since November 2014 he has served as a member of the Board of Managers of CSS. Previously, Mr. Lowman served as a Senior Advisor to The Boston Consulting Group. Prior to that, he was the Chief Executive Officer of Chase Home Lending from 2006 to 2011. Before Chase Home Lending, he spent a decade in senior leadership roles in various lending businesses of Citigroup, including head of CitiMortgage and Citicorp Trust Bank, FSB. Before joining Citigroup, Mr. Lowman spent 11 years at The Prudential Home Mortgage Company, Inc. in progressively senior leadership roles. He started his career at KPMG where his clients included banks, thrifts, and mortgage bankers.

Robert Lux Position:
Age: 53 Executive Vice President - Chief Information Officer
Year of Affiliation: 2010

Mr. Lux has served as our EVP - Chief Information Officer since January 2015 and prior to that served as SVP - Chief Information Officer from October 2010. Prior to joining Freddie Mac, from 2008 to 2010, Mr. Lux served as a Principal at Towers Watson, a leading global professional services company, where he was responsible for leading teams on three continents in the delivery of commercial risk modeling applications for the insurance industry. From 2003 to 2008, Mr. Lux held a series of positions with increasing responsibilities, including service as the Chief Architect for GMAC Financial Services and Chief Technology Officer for GMAC Residential Capital. Prior to that, he held information technology leadership positions at Electronic Data Systems and Reuters Group PLC.

Directors, Corporate Governance, and Executive Officers Executive Officers

William H. McDavid Position:

Age: 70 Executive Vice President - General Counsel &

Year of Affiliation: 2012 Corporate Secretary

Mr. McDavid has served as our EVP - General Counsel & Corporate Secretary since July 2012. Previously, he was Co-General Counsel of JPMorgan Chase from 2004 until his retirement in 2006 and was General Counsel of JPMorgan Chase from 2000 to 2004. Prior to that, he was General Counsel of various predecessors to JPMorgan Chase, including The Chase Manhattan Corporation from 1996 to 2000 and Chemical Banking Corporation from 1988 to 1996. From 1981 to 1988, he was an Associate General Counsel at Bankers Trust Company, and from 1972 to 1981, he was an attorney with the law firm of Debevoise & Plimpton.

Jerry Weiss Position:

Age: 58 Executive Vice President - Chief Administrative

Year of Affiliation: 2003 Officer

Mr. Weiss has served as our EVP - Chief Administrative Officer since August 2010. In this role, he manages the services and operations of Freddie Mac's External Relations, including Government and Industry Relations and Public Policy; Public Relations and Corporate Marketing; Internal Communications; Conservatorship and Corporate Strategic Initiatives; Enterprise Program Management; Making Home Affordable - Compliance; Economic and Housing Research; Corporate Services; and Strategic Sourcing and Procurement organizations. In addition, since November 2014 he has served as a member of the Board of Managers of CSS. He also served as our CCO from August 2010 until June 2011. Prior to August 2010, Mr. Weiss served as our SVP and CCO and in various other senior management capacities since joining us in October 2003. Prior to joining us, Mr. Weiss worked from 1990 at Merrill Lynch Investment Managers, most recently as First Vice President and Global Head of Compliance. From 1982 to 1990, Mr. Weiss was with a national law practice in Washington, D.C., where he specialized in securities regulation and corporate finance matters.

CODES OF CONDUCT

We have separate codes of conduct for our employees and Board members. The employee code also serves as the code of ethics for senior executives and financial officers required by the Sarbanes-Oxley Act of 2002 and SEC regulations. All employees, including senior executives and financial officers, are required to sign an annual acknowledgment that they have read the employee code and agree to abide by it and will report suspected deviations from the employee code. When joining our Board, our directors acknowledge that they have reviewed and understand the director code and agree to be bound by its provisions, and each director executes a related confirmation annually.

Copies of our employee and director codes of conduct are available, and any amendments or waivers that would be required to be disclosed are posted, on our website at www.freddiemac.com.

Executive Compensation Compensation Discussion and Analysis

EXECUTIVE COMPENSATION
COMPENSATION DISCUSSION AND ANALYSIS

This section contains information regarding our compensation programs and policies (all of which have been approved by FHFA) and the compensation of the following individuals who we determined to be our Named Executive Officers, or NEOs, for the year ended December 31, 2016.

Named Executive Officers

Donald H. Executive Officer
Layton, Executive Vice President
James G. - Chief Financial Officer
Anil K. Vice President
D. - Chief Enterprise Risk Officer
David B. - Vice President
Lowry, Single-Family Business Executive
William H. - General Counsel & Corporate Secretary

For information on our primary business objectives and the progress we made during 2016 toward accomplishing those objectives, see “Introduction — About Freddie Mac.”

OVERVIEW OF EXECUTIVE MANAGEMENT COMPENSATION PROGRAM

Compensation in 2016 for each NEO, other than Mr. Layton, whose compensation is discussed below, was governed by the Executive Management Compensation Program, or EMCP. The EMCP balances our need to retain and attract executive talent with promoting the conservatorship objectives included in FHFA’s Conservatorship Scorecard, as well as goals separately established by management related to the commercial aspects of our business, which are included in our Corporate Scorecard. All compensation under the EMCP is delivered in cash because the Purchase Agreement does not permit us to provide equity-based compensation to our employees unless approved by Treasury.

Additional information about the EMCP is provided below and in our Quarterly Report on Form 10-Q for the fiscal quarter ended June 30, 2015 filed on August 4, 2015.

Executive Compensation Compensation Discussion and Analysis

ELEMENTS OF TARGET TOTAL DIRECT COMPENSATION

Compensation under the EMCP in 2016 consisted of the following elements:

Deferred Salary

Base Salary	Fixed Deferred Salary	At-Risk Deferred Salary	Conservatorship Scorecard	Corporate Scorecard/ Individual
<p>Cannot exceed \$500,000 without FHFA approval Earned and paid bi-weekly</p>	<p>To encourage executive retention</p> <p>Equal to total Deferred Salary less the At-Risk portion</p>	<p>To encourage achievement of conservatorship, corporate, and individual performance goals</p> <p>Subject to reduction based on Conservatorship Scorecard performance</p>		<p>Subject to reduction based on performance against both the Corporate Scorecard and individual objectives</p>
	<p>The amount earned in each quarter is paid on the last pay date of the corresponding quarter in the following year, referred to as the Approved Payment Schedule</p> <p>Interest accrues on Deferred Salary at one-half of the one-year Treasury Bill rate in effect on the last business day immediately preceding the year in which the Deferred Salary is earned and is paid at the same time as the Deferred Salary to which it relates.</p>			

The objectives against which 2016 corporate performance was measured, together with the assessment of actual performance against those objectives, are described in “Determination of 2016 At-Risk Deferred Salary — At-Risk Deferred Salary Based on Conservatorship Scorecard Performance” and “Determination of 2016 At-Risk Deferred Salary — At-Risk Deferred Salary Based on Corporate Scorecard Goals and Individual Performance.” These performance measures were chosen because they reflected our 2016 priorities during conservatorship.

See “Other Executive Compensation Considerations — Effect of Termination of Employment” for information on the effect of a termination of employment, including the timing and payment of any unpaid portion of Deferred Salary and related interest.

EXECUTIVE COMPENSATION BEST PRACTICES

What We Do	What We Don't Do
<p>ü Clawback provisions with a significant portion of compensation subject to recapture and/or forfeiture</p>	<p>ý No agreements that guarantee a specific amount of compensation for a specified term of employment</p>
<p>ü Use of an independent compensation consultant by the Board's Compensation Committee</p>	<p>ý No golden parachute payments or other similar change in control provisions</p>
<p>ü</p>	<p>ý</p>

Annual compensation risk review		No tax “gross-ups”
Single executive		No hedging or pledging of company securities permitted
ü perquisite, reimbursement of tax, estate, and/or personal financial planning expenses (up to \$4,500 annually, with an additional \$2,500 in the first year of eligibility)	ý	
ü Evaluation of company performance against multiple measures, including non-financial measures		

Executive Compensation Compensation Discussion and Analysis

CEO COMPENSATION

Mr. Layton's compensation in 2016 consisted solely of an annual Base Salary of \$600,000, a level established by FHFA pursuant to the Equity in Government Compensation Act of 2015. In 2016, he did not, and currently does not, participate in the EMCP and therefore has no compensation subject to either corporate or individual performance. Mr. Layton's compensation in 2017 is unchanged from 2016.

Mr. Layton is eligible to participate in all employee benefit plans offered to Freddie Mac's other senior executives under the terms of those plans.

DETERMINATION OF 2016 TARGET TDC FOR NEOs

ROLE OF COMPENSATION CONSULTANT

As part of the annual process to determine the Target TDC for each of the NEOs, the Compensation Committee receives guidance from Meridian Compensation Partners, LLC ("Meridian"), its independent compensation consultant. In addition to the annual process to determine Target TDC, Meridian provides guidance to the Compensation Committee throughout the year on other executive compensation matters.

Meridian has not provided the Compensation Committee with any non-executive compensation services, nor has the firm provided any consulting services to our management. During 2016, the Compensation Committee reviewed Meridian's independence based on the factors outlined in Exchange Act Rule 10C-1(b)(4) and determined that Meridian continues to be independent.

2016 COMPARATOR GROUP COMPANIES

The Compensation Committee annually evaluates each eligible NEO's Target TDC in relation to the compensation of executives in comparable positions at companies that are either in a similar line of business or are otherwise comparable for purposes of recruiting and retaining individuals with the necessary skills and capabilities. We refer to this group of companies as the Comparator Group.

When there is either no reasonable match or insufficient data from the Comparator Group for a position, or if Meridian believes that additional data sources would strengthen the analysis of competitive market compensation levels, the Compensation Committee may use alternative survey sources.

At FHFA's recommendation, Freddie Mac and Fannie Mae have aligned their Comparator Groups so that consistent compensation data is used by both companies for the same or similar senior officer positions.

The Comparator Group used to determine compensation for 2016 consisted of the following companies, which include no changes from the 2015 Comparator Group:

Allstate Group*	PNC
Ally Fannie Mae Financial	Prudential
AIG Fifth Third Bancorp	Regions Financial Bank
Bank of The Hartford America*	State Street
Bank of New York Morgan Chase*	SunTrust
Mellon Bank	U.S. Bancorp
BBK Capital Northern Trust One	Wells Fargo*

*Only mortgage or real estate
division-level compensation data from

these diversified banking firms may be utilized where available and appropriate for the position being benchmarked.

Executive Compensation Compensation Discussion and Analysis

The Compensation Committee has determined that these same companies will comprise the 2017 Comparator Group. ESTABLISHING TARGET TDC

The Compensation Committee developed its 2016 Target TDC recommendations for the eligible NEOs by reviewing data from the Comparator Group. The Compensation Committee's 2016 Target TDC recommendation for each of the eligible NEOs was reviewed and approved by FHFA.

2016 TARGET TDC

The following table sets forth the components of 2016 Target TDC for each of our eligible NEOs.

Named Executive Officer ⁽¹⁾	2016 Target TDC			
	Base Salary	Fixed Deferred Salary	At-Risk Deferred Salary	Target TDC
James G. Mackey	500,000	1,600,000	900,000	3,000,000
Anil D. Hinduja	500,000	1,075,000	675,000	2,250,000
David B. Lowman	500,000	1,600,000	900,000	3,000,000
William H. McDavid	500,000	1,320,000	780,000	2,600,000

Mr. Layton did not participate in the EMCP in 2016 and therefore is not included in this table. For a discussion of

(1) Mr. Layton's compensation, see "CEO Compensation" above.

The 2016 Target TDC amounts shown above for eligible NEOs were the same as in 2015.

2017 TARGET TDC

The following table sets forth the components of 2017 Target TDC for each of our eligible NEOs.

Named Executive Officer ⁽¹⁾	2017 Target TDC			
	Base Salary	Fixed Deferred Salary	At-Risk Deferred Salary	Target TDC
James G. Mackey	500,000	1,775,000	975,000	3,250,000
Anil D. Hinduja	500,000	1,180,000	720,000	2,400,000
David B. Lowman	500,000	1,775,000	975,000	3,250,000
William H. McDavid	500,000	1,460,000	840,000	2,800,000

Mr. Layton will not participate in the EMCP in 2017 and therefore is not included in this table. For a discussion of

(1) Mr. Layton's compensation, see "CEO Compensation" above.

The Compensation Committee developed its 2017 Target TDC recommendations for the eligible NEOs by reviewing data from the Comparator Group, their current compensation positioning relative to the competitive market data, and their individual performance. The Compensation Committee recommended increases to 2017 Target TDCs for each of the NEOs after taking into account their individual performance and to move their compensation closer to the 50th percentile of the Comparator Group. The Compensation Committee's 2017 Target TDC recommendation for each of the eligible NEOs was reviewed and approved by FHFA.

DETERMINATION OF 2016 AT-RISK DEFERRED SALARY

Executive Compensation Discussion and Analysis

The Compensation Committee and FHFA considered our achievements in pursuing our primary business objectives, as well as other factors, in determining the funding level for At-Risk Deferred Salary in 2016. FHFA determined the funding level for the portion of At-Risk Deferred Salary based on Conservatorship Scorecard performance, and the Compensation Committee determined, with FHFA's review and approval, the amounts payable to each eligible NEO for the portion of At-Risk Deferred Salary based on Corporate Scorecard goals and individual performance.

AT-RISK DEFERRED SALARY BASED ON CONSERVATORSHIP SCORECARD PERFORMANCE

Half of each eligible NEO's 2016 At-Risk Deferred Salary, or 15% of Target TDC, was subject to reduction based on FHFA's assessment of the company's performance against the objectives in the 2016 Conservatorship Scorecard. FHFA independently assessed the company's performance and determined that a 98% funding level was justified for the portion of the eligible NEOs' At-Risk Deferred Salary based on the 2016 Conservatorship Scorecard. FHFA noted the following considerations in assessing our performance against the 2016 Conservatorship Scorecard:

Our contribution to maintaining the national housing finance markets through rolling out a program which provides lenders an alternative for resolving loan-level disputes on repurchase demands for selling and servicing breaches as well as our diligence and collaboration on the Neighborhood Stabilization Initiative;

- Our continuing efforts to reduce taxpayer risk by pursuing new and innovative approaches to single-family and multifamily risk transfer transactions and advancing the Risk Management framework; and
- Our collaboration with CSS to complete Release 1 of the common securitization platform.

In making its assessment, FHFA also took into consideration the following:

• The extent to which the company conducts initiatives in a safe and sound manner consistent with FHFA's expectations for all activities;

• The extent to which the outcomes of the company's activities support a competitive and resilient secondary mortgage market to support homeowners and renters;

• The extent to which the company conducts initiatives with the consideration for diversity and inclusion consistent with FHFA's expectations for all activities;

• Cooperation and collaboration with FHFA, Fannie Mae, CSS, the industry, and other stakeholders; and

• The quality, thoroughness, creativity, effectiveness, and timeliness of the company's work products.

The table below presents the Conservatorship Scorecard objectives and FHFA's assessment of our achievement against those objectives.

Executive Compensation Compensation Discussion and Analysis

Performance Goals	FHFA's Summary of Performance
<p>1 Maintain in a safe and sound manner, credit availability and foreclosure prevention activities for new and refinanced mortgages to foster liquid, efficient, competitive and resilient national housing finance markets (40%)</p> <p>Work to increase access to single-family mortgage credit for creditworthy borrowers, consistent with the full extent of applicable credit requirements and risk management practices:</p> <ul style="list-style-type: none"> • Continue to assess impediments to credit access and develop recommendations to address barriers, including work to: <ul style="list-style-type: none"> • Continue to evaluate practices, including underwriting criteria, to improve access to single-family credit in a manner consistent with safety and soundness and implement improvements as appropriate. • Consider options to use automated underwriting systems for 	<p>All goals were achieved with important progress made with the rollout of the Independent Resolution program which provides lenders an alternative for resolving loan-level disputes on repurchase demands for selling and servicing breaches. Significant progress has also been made with updating the mortgage insurer master policy rescission relief principles which is expected to be completed in 2017.</p>

- loans that are currently manually underwritten. Evaluate options that would enable greater liquidity for Freddie Mac financing of energy or water efficiency investments in single-family and multifamily properties.
- Complete work to enhance the Representation and Warranty Framework and continue work on related efforts to:
 - Complete the independent dispute resolution process in support of the Representation and Warranty Framework.
 - Work with lenders to improve the quality and efficiency of the loan origination process, including providing lenders with feedback soon after delivery.
 - Continue to assess policies and tools to review collateral valuations in

the
Representation
and Warranty
Framework
context.

- Update mortgage insurer master policy rescission relief principles to address early rescission relief offerings.

- Assess improvements identified in 2015 to increase the effectiveness of pre-purchase and early delinquency counseling as well as homeownership education and begin implementation of initiatives as appropriate. Informed by the analysis conducted in 2015, conclude assessment of leveraging alternate or updated credit scores for underwriting, pricing, and investor disclosures and, as appropriate, plan for implementation.

Develop Post-Crisis Loss Mitigation Activities and Prepare for the Expiration of HARP and HARP:

- Complete assessment and, as appropriate, begin development of a high loan-to-value ratio refinance program to ensure a January 2017 implementation. All goals were achieved.
- Develop and implement final strategy to promote HARP prior to expiration.
- Finalize post-crisis loss mitigation options for borrowers, including loan modifications, and develop an implementation plan and timeline.
- Enhance the Uniform Borrower Assistance Form.
- Update and enhance Freddie Mac's servicer scorecard methodology.

Continue to Responsibly Reduce the Number of Severely-Aged Delinquent Loans and Real Estate Owned Properties:

- Provide a plan for continuing non-performing loan (NPL) sales to FHFA for approval. The plan should address: 1) Freddie Mac's broad NPL sales strategy; 2) potential expansion to multi-servicer pools; 3) efforts to continue offering small pools and strengthening nonprofit access and purchase opportunities; 4) consideration for improving borrower outcomes and, where appropriate, impacts on neighborhood stabilization; and 5) public reporting of loan performance post sale.

All goals were achieved with the company demonstrating diligence and collaboration in the Neighborhood Stabilization initiative program resulting in responsible disposition of Real Estate Owned properties in hardest-hit communities.

- Continue to responsibly reduce the number of severely-aged delinquent loans held by Freddie Mac at the national and local level.
- Continue to responsibly reduce the number of real estate owned properties held by Freddie Mac, including through the Neighborhood Stabilization Initiative.

Executive Compensation Compensation Discussion and Analysis

Maintain the dollar volume of new multifamily business at \$36.5 billion or below:

- Loans in affordable and underserved market segments, as defined by FHFA, are to be excluded from the \$36.5 billion cap.

Goal was achieved.

2 Reduce taxpayer risk through increasing the role of private capital in the mortgage market (30%)

Single-Family Credit Risk Transfers

Because Freddie Mac's single-family credit risk transfers have evolved into a core business practice, it is FHFA's current expectation that single-family credit risk transfers will continue to be an ongoing conservatorship requirement. FHFA will adjust targets as necessary to reflect market conditions and economic considerations.

- Meet the following credit risk transfer objectives:

Transfer credit risk on at least 90 percent of the unpaid principal balance of newly acquired

- single-family mortgages in loan categories targeted for risk transfer.

For 2016, target single-family loan categories include: non-HARP, fixed-rate terms greater than 20 years, and loan-to-value ratios above 60%.

Transfer a substantial portion of the credit risk on the targeted loan categories covering most of the

- credit losses projected to occur during stressful economic scenarios.

Continue efforts to evaluate, and implement if economically feasible, ways to transfer credit risk on other types of newly acquired single-family mortgages that are not included in the targeted loan categories.

Continue to evaluate obstacles to expanding the investor base, propose ways to overcome these

- challenges, and work with FHFA to address them where possible.

Work with FHFA to conduct an analysis and assessment of front-end credit risk transfer transactions,

- including work to support a forthcoming FHFA Request for Input.

- Work with FHFA to engage key stakeholders and solicit their feedback.

After conducting the necessary analysis and assessment, work with FHFA to take appropriate steps to

- continue front-end credit risk transfer transactions.

All goals were achieved through the company's innovative approaches to transfer risk on single-family mortgages.

Multifamily Credit Risk Transfers

- Continue current multifamily credit risk transfer initiatives and explore additional risk transfer opportunities.

Goal was achieved through expediting new multi-family transactions to transfer credit risk

to
third-party
investors
for loans
not efficient
for K-Deal
execution.

Retained Portfolio

Execute FHFA-approved retained portfolio plans to meet, even under adverse conditions, the annual

- PSPA requirements and the \$250 billion PSPA cap by December 31, 2018:

Goal was
achieved.

- Any sales should be commercially reasonable transactions that consider impacts to the market, borrowers, and neighborhood stability.

Risk Measurement Framework

Support FHFA's development of its risk measurement framework for evaluating Freddie Mac business decisions during conservatorship.

Goal was
achieved
with
demonstrated
leadership.

- 3 Build a new single-family infrastructure for use by the Enterprises and adaptable for use by other participants in the secondary market in the future (30%)

Executive Compensation Compensation Discussion and Analysis

<p>Common Securitization Platform and Single Security</p> <p>The Common Securitization Platform (CSP) and Single Security are significant, multiyear initiatives, and FHFA expects these inter-related projects to remain ongoing conservatorship priorities. FHFA expects the Enterprises and Common Securitization Solutions, LLC (CSS) to implement these initiatives on the following timeline:</p> <p>i. Release 1: In 2016, implement the CSP for Freddie Mac’s existing single-class securities; and</p> <p>ii. Release 2: In 2018, implement the Single Security on the CSP for both Fannie Mae and Freddie Mac.</p>	<p>All goals were achieved, except for the publication of timeline for the Single Security implementation. Although the publication of the timeline was not met, significant work was done and many objectives were achieved.</p>
--	---

Continue working with FHFA, Fannie Mae, and CSS to meet the Release 1 and Release 2 timelines, which includes work to: 1) build and test the CSP; 2) implement the changes necessary to integrate the Enterprises’ related systems and operations with the CSP; and 3) implement the Single Security on the CSP for both Enterprises.

- Incorporate the following design principles in developing the CSP:

- Focus on the functions necessary for current Enterprise single-family securitization activities.

- Include the development of operational and system capabilities necessary for CSP to facilitate the issuance and

administration of
a Single Security
for the
Enterprises.

- Allow for the integration of additional market participants in the future.

In 2016, publish an aligned timeline for implementing the Single Security on the CSP for both Enterprises in 2018. The timeline must provide stakeholders with at least 12 months notice prior to implementing the Single Security. Work with FHFA to develop and implement a process at each Enterprise to:

- Assess new or revised Enterprise programs, policies, and practices for their effects on the cash flows of TBA mortgage-backed securities (e.g., prepayments and loan buy-outs).

- Provide on-going monitoring of purchases, security issuances, and prepayments.

- Provide all relevant information on a timely basis to support FHFA's review process.

- Continue to work with CSS to obtain and utilize input from the

Single Security/CSP Industry
Advisory Group.

Provide active support for mortgage data
standardization initiatives.

All goals were
achieved.

- Continue the development and implementation of the Uniform Closing Disclosure Dataset.
- Continue the development and implementation of the Uniform Loan Application Dataset.
- Assess and, as appropriate, implement strategies to improve the lending industry's ability to originate and deliver e-mortgages to the Enterprises.

AT-RISK DEFERRED SALARY BASED ON CORPORATE SCORECARD GOALS AND INDIVIDUAL PERFORMANCE

The other half of each eligible NEO's At-Risk Deferred Salary, also equal to 15% of Target TDC, was subject to reduction based on a combination of the company's performance against the Corporate Scorecard goals and the NEO's individual performance. The five Corporate Scorecard goals drive how we manage and improve the commercial aspects of our business and are intended to complement the FHFA Strategic Plan and Conservatorship Scorecard. Certain of the individual performance objectives for the eligible NEOs were either Conservatorship Scorecard objectives or Corporate Scorecard goals, or directly supported their achievement.

Executive Compensation Compensation Discussion and Analysis

No weightings were assigned to the Corporate Scorecard goals. As a result, it was necessary for the Compensation Committee to use its judgment in determining the overall level of performance. In making its determination, the Committee primarily considered the fact that the vast majority of the Corporate Scorecard goals were achieved or exceeded. The Compensation Committee determined that, based on the company's performance against the Corporate Scorecard, a 100% funding level was justified for this portion of At-Risk Deferred Salary.

The Board has adopted Corporate Scorecard goals for 2017 that are substantially similar to the 2016 goals.

The table below presents the Corporate Scorecard goals and the Compensation Committee's assessment of our achievement against those goals.

Corporate Scorecard Goal	Assessment of Performance
Our Customers Compete for business by being a customer-centric organization	The company achieved or exceeded almost all elements of this goal. Significant improvements were made in the quality of customer service with a strong increase in customer satisfaction survey scores for the multifamily business. In addition, the single-family customer satisfaction survey results remained in line with top performing financial institutions.
People and Culture Hire and retain talented people in a winning culture	Most elements of this goal were achieved or exceeded. Focused efforts to build the company's desired culture have yielded positive results,

including improved scores on the company's People Survey. The company also increased the retention of high-performing employees and continued to improve leadership diversity. Although the company improved its practice of filling management roles with internal candidates, it did not do so to the full extent desired.

Operating
Performance

Operate as well as the best-run financial institutions

All elements of this goal were achieved or exceeded. Single-family core new book earnings and multifamily comprehensive income were above plan, and the company had lower core G&A expenses. Multifamily new business volume was also above plan, and the company achieved its single-family GSE market share target.

Risk and Capital
Management

All elements of this goal were achieved or

Manage risk and exceeded. The capital as well as company the largest continued to financial mitigate the its institutions risk through the transfer of credit risk on single-family new business, developed additional types of multifamily risk transfer transactions, and pro-actively and efficiently reduced legacy assets.

Community Mission Based on Responsibly preliminary increase access information, the to housing company finance believes it met three of the single-family affordable housing goals, but believes that it fell short of meeting the FHFA benchmark level for the other two single-family goals. The company believes it achieved all three multifamily affordable housing goals and exceeded the target for new multifamily affordable lending. The company continued to close the gap on

its single-family affordable housing goals, which were missed by the smallest margin in the past three years. The single-family business continued to broaden access to credit with outreach and training and with the Home Possible Advantage and Housing Finance Agency Advantage mortgage products. The multifamily business continued its focus on workforce and affordable housing by rolling out the company's Green Advantage suite of offerings and investing in the Targeted Affordable business and the moderate rehabilitation lending program.

The Compensation Committee also assessed the individual performance of each eligible NEO. In making its assessments, the Committee took into consideration input from Mr. Layton as well as the company's Corporate Scorecard performance. In each case, the Compensation Committee's determination was consistent with Mr. Layton's recommendation. FHFA reviewed and approved the compensation associated with these determinations. Each NEO's individual performance is discussed below.

Executive Compensation Compensation Discussion and Analysis

James

Executive Vice President — Chief Financial Officer

Mackey

Performance Highlights:

Near-complete development and implementation of hedge accounting with full safety and soundness.

Improved budgeting process, with more timely budget development, greater transparency, and improved internal cost allocation capabilities.

Further financial planning and analysis improvement, including training, tools, and productivity metrics.

Continued operation efficiency improvements, which included streamlining records management, SEC reporting and disclosures, redefined segment earnings and press release design, and Dodd-Frank Stress Testing (“DFAST”) process submissions.

Continued strengthening of legacy controls, including the successful remediation of the Master Trust Agreement cash process.

Strong leadership in the development of management in the Finance Division, including ongoing job rotation programs for key personnel.

At-Risk Deferred Salary (Corporate Scorecard/Individual) Funding Decision:

The Compensation Committee determined that Mr. Mackey should receive 100% of his At-Risk Deferred Salary that was subject to reduction based on the company’s performance against the Corporate Scorecard and his individual performance.

Anil

Executive Vice President — Chief Enterprise Risk Officer

Hinduja

Performance Highlights:

Significantly upgraded the company’s Enterprise Risk Framework, Policies, and Standards, addressing accountabilities, risk types, and governance.

Successfully aided development of the FHFA Conservator Capital Framework and prepared for 2017 implementation.

Defined the strategy and roadmap for a major strengthening of operational risk management in the company, including personal leadership across the entire enterprise.

Developed risk appetite methodology for Credit, Market and Liquidity Risks.

Increased the capabilities of the Enterprise Risk Management Division by hiring experienced officers in several key areas.

At-Risk Deferred Salary (Corporate Scorecard/Individual) Funding Decision:

The Compensation Committee determined that Mr. Hinduja should receive 100% of his At-Risk Deferred Salary that was subject to reduction based on the company's performance against the Corporate Scorecard and his individual performance.

David

Executive Vice President — Single-Family Business Lowman

Performance Highlights:

Achieved higher Single-Family earnings (excluding the legacy portfolio) in 2016 over the prior year.

Led the successful launch of the Loan Advisor Suite.

Expanded credit risk transfer offerings, including STACR Collateral, ACIS Stand Alone and Deep MI.

Improved the performance of meeting all of the company's single-family affordable housing goals.

Continued ongoing improvement in customer service; 2016 results were consistent with customer satisfaction at the best financial institutions.

At-Risk Deferred Salary (Corporate Scorecard/Individual) Funding Decision:

The Compensation Committee determined that Mr. Lowman should receive 100% of his At-Risk Deferred Salary that was subject to reduction based on the company's performance against the Corporate Scorecard and his individual performance.

William

Executive Vice President — General Counsel & Corporate Secretary McDavid

Performance Highlights:

Supervised the successful resolution of a variety of lawsuits resulting in favorable settlements and helped effectively navigate a number of new regulatory initiatives.

Provided sound legal advice to the Board and senior management on a wide variety of significant issues.

Successfully supported the increased volume and complexity of Single-Family transactions and securitizations.

Successfully supported the substantially increased volume of Multifamily transactions.

Continued to maintain a high level of internal client satisfaction.

At-Risk Deferred Salary (Corporate Scorecard/Individual) Funding Decision:

The Compensation Committee determined that Mr. McDavid should receive 95% of his At-Risk Deferred Salary that was subject to reduction based on the company's performance against the Corporate Scorecard and his individual performance.

Executive Compensation Discussion and Analysis

2016 DEFERRED SALARY

The following chart reports the actual amounts of 2016 Deferred Salary for each eligible NEO. The actual amount earned in each calendar quarter is scheduled to be paid on the last pay date of the corresponding calendar quarter in 2017.

Named Executive Officer ⁽¹⁾	2016 Actual Deferred Salary				Total Actual Deferred Salary	% of Target
	Fixed	At-Risk	Conservatorship Scorecard % of Target	Corporate Scorecard/ Individual % of Target		
Mr. Mackey	1,600,000	441,000	98%	450,000	100%	2,491,000 99.6%
Mr. Hinduja	1,075,000	330,750	98%	337,500	100%	1,743,250 99.6%
Mr. Lowman	1,600,000	441,000	98%	450,000	100%	2,491,000 99.6%
Mr. McDavid	1,320,000	382,200	98%	370,500	95%	2,072,700 98.7%

(1)Mr. Layton was not eligible for deferred salary in 2016 and therefore is not included in this table.

WRITTEN AGREEMENTS RELATING TO NEO EMPLOYMENT

We entered into letter agreements with each of our NEOs in connection with their hiring. Although the letter agreements set forth specific initial levels of Base Salary and, where applicable, Target TDC, the compensation of each NEO is subject to change by FHFA and to the terms of the EMCP.

We also entered into restrictive covenant and confidentiality agreements with each of our NEOs in connection with their hiring. The non-competition and non-solicitation provisions included in the restrictive covenant and confidentiality agreements are described in “Restrictive Covenant and Confidentiality Agreements.”

The NEOs are not currently entitled to a guaranteed level of severance benefits upon any type of termination event. For additional information on compensation and benefits payable in the event of a termination of employment, see “Potential Payments Upon Termination of Employment.”

MR. LAYTON

We entered into a letter agreement and a restrictive covenant and confidentiality agreement with Mr. Layton in connection with his employment as our CEO. The terms of Mr. Layton’s letter agreement provide him with an annual Base Salary of \$600,000 and the opportunity to participate in all employee benefit plans offered to Freddie Mac’s executive officers pursuant to the terms of these plans. Copies of Mr. Layton’s letter agreement and restrictive covenant and confidentiality agreement were filed as Exhibits 10.1 and 10.2, respectively, to our Current Report on Form 8-K filed on May 10, 2012.

MR. MACKEY

We entered into a letter agreement and a restrictive covenant and confidentiality agreement with Mr. Mackey in connection with his employment as our CFO. The terms of Mr. Mackey’s letter agreement provide him with an annual Target TDC opportunity of \$3,000,000, consisting of Base Salary of \$500,000 and Deferred Salary of \$2,500,000, and the opportunity to participate in all employee benefit plans offered to Freddie Mac’s executive officers pursuant to the terms of these plans.

Executive Compensation Compensation Discussion and Analysis

Mr. Mackey's letter agreement also provided for a cash sign-on award of \$960,000 in recognition of the forfeited compensation at his prior employer and commuting expenses during the first several months of his employment. This award was paid in installments during Mr. Mackey's first year of employment with us, as follows: (i) first installment: \$510,000 on the same date on which Mr. Mackey received his first payment of Base Salary; (ii) second installment: \$225,000 on the six-month anniversary of his hire date; and (iii) third installment: \$225,000 on the one-year anniversary of his hire date. Copies of Mr. Mackey's letter agreement and restrictive covenant and confidentiality agreement were filed as Exhibits 10.1 and 10.2, respectively, to our Current Report on Form 8-K filed on September 30, 2013.

MR. HINDUJA

We entered into a letter agreement and a restrictive covenant and confidentiality agreement with Mr. Hinduja in connection with his employment as our EVP - Chief Enterprise Risk Officer. The terms of Mr. Hinduja's letter agreement provide him with an annual Target TDC opportunity of \$2,250,000, consisting of Base Salary of \$500,000 and Deferred Salary of \$1,750,000, and the opportunity to participate in all employee benefit plans offered to Freddie Mac's executive officers pursuant to the terms of these plans.

Mr. Hinduja's letter agreement also provided for a cash sign-on award of \$1,200,000 in recognition of the forfeited compensation at his prior employer. This award is paid in installments as follows: (i) first installment: \$350,000 on the same date on which Mr. Hinduja received his first payment of Base Salary; (ii) second installment: \$400,000 in March 2016; (iii) third installment: \$300,000 in March 2017; and (iv) fourth installment: \$150,000 in March 2018. As required by the terms of Mr. Hinduja's letter agreement and as a result of the imposition of a waiting period by his prior employer during which he was not permitted to begin his employment with us, the amount of the second installment was increased by \$262,500. Each installment is subject to repayment in the event that, prior to the first anniversary of an installment payment date, Mr. Hinduja terminates his employment with Freddie Mac for any reason or Freddie Mac terminates his employment due to the occurrence of any of the Forfeiture Events described in his Recapture and Forfeiture Agreement. Copies of Mr. Hinduja's letter agreement and restrictive covenant and confidentiality agreement are filed as Exhibits 10.28 and 10.29, respectively, to this Form 10-K.

MR. LOWMAN

We entered into a letter agreement and a restrictive covenant and confidentiality agreement with Mr. Lowman in connection with his employment as our EVP - Single-Family Business. The terms of Mr. Lowman's letter agreement provide him with an annual Target TDC opportunity of \$3,000,000, consisting of Base Salary of \$500,000 and Deferred Salary of \$2,500,000, and the opportunity to participate in all employee benefit plans offered to Freddie Mac's executive officers pursuant to the terms of these plans. Copies of Mr. Lowman's letter agreement and restrictive covenant and confidentiality agreement are filed as Exhibits 10.48 and 10.49, respectively, to our Form 10-K for the fiscal year ended December 31, 2013 filed on February 27, 2014.

MR. MCDAVID

We entered into a letter agreement and a restrictive covenant and confidentiality agreement with Mr. McDavid in connection with his employment as our EVP - General Counsel and Corporate Secretary. The terms of Mr. McDavid's letter agreement provide him with an annual Target TDC opportunity of \$2,600,000, which consists of Base Salary of \$500,000 and Deferred Salary of \$2,100,000, and the

Executive Compensation Compensation Discussion and Analysis

opportunity to participate in all employee benefit plans offered to Freddie Mac's executive officers pursuant to the terms of these plans. Copies of Mr. McDavid's letter agreement and restrictive covenant and confidentiality agreement were filed as Exhibits 10.1 and 10.2, respectively, to our Current Report on Form 8-K filed on July 9, 2012.

RESTRICTIVE COVENANT AND CONFIDENTIALITY AGREEMENTS

Each of our NEOs is subject to a restrictive covenant and confidentiality agreement with us. Each agreement provides that the NEO will not seek employment with designated competitors that involves performing similar duties for a specified period immediately following termination of employment, regardless of whether the executive's employment is terminated by the executive, by us, or by mutual agreement. The specified period is twenty-four months for Mr. Layton and twelve months for the other NEOs. During the twelve-month period immediately following termination, each NEO agrees not to solicit or recruit any of our managerial employees. The agreements also provide for the confidentiality of information that constitutes trade secrets or proprietary or other confidential information.

RECAPTURE AND FORFEITURE AGREEMENT

Freddie Mac has adopted, with the approval of FHFA, the Recapture and Forfeiture Agreement (the "Recapture Agreement"). In order to participate in the EMCP, each of our NEOs has entered into a Recapture Agreement. Mr. Layton's Recapture Agreement applies only to the Deferred Salary he earned from July 1, 2015 through November 24, 2015.

The Recapture Agreement provides for the recapture and/or forfeiture of Deferred Salary (including related interest) earned, paid, or to be paid pursuant to the terms of the EMCP if, after providing the required notice, our Board of Directors, in the good faith exercise of its sole discretion, determines that a Forfeiture Event has occurred. The Forfeiture Events and the Deferred Salary subject to recapture and/or forfeiture are described below.

Materially Inaccurate Information

Forfeiture Event: The NEO has earned or obtained the legally binding right to a payment of Deferred Salary based on materially inaccurate financial statements or any other materially inaccurate performance measure.

Compensation Subject to Recapture and/or Forfeiture: Any Deferred Salary in excess of the amount that the Board determines would likely have been otherwise earned using accurate measures during the two years prior to the Forfeiture Event.

Termination for Felony Conviction or Willful Misconduct

Forfeiture Event: The NEO's employment is terminated in any of the following circumstances:

Termination of employment because the NEO is convicted of, or pleads guilty or nolo contendere to, a felony; Subsequent to termination of employment, the NEO is convicted of, or pleads guilty or nolo contendere to, a felony, based on conduct occurring prior to termination, and within one year of such conviction or plea, the Board determines that such conduct is materially harmful to Freddie Mac.

Termination of employment because, or within two years of termination, the Board determines that, the NEO engaged in willful misconduct in the performance of his or her duties that was materially harmful to Freddie Mac.

Executive Compensation Compensation Discussion and Analysis

Compensation Subject to Recapture and/or Forfeiture: Any Deferred Salary earned during the two years prior to the date that the NEO is terminated, any Deferred Salary scheduled to be paid within two years after termination, and any cash payment made or to be made as consideration for any release of claims agreement.

Gross Neglect or Gross Misconduct

Forfeiture Event: The NEO's employment is terminated because, in carrying out his or her duties, the NEO engages in conduct that constitutes gross neglect or gross misconduct that is materially harmful to Freddie Mac, or within two years after the NEO's termination of employment, the Board determines that the NEO, prior to his or her termination, engaged in such conduct.

Compensation Subject to Recapture and/or Forfeiture: Any Deferred Salary paid at the time of termination or subsequent to the date of termination, including any cash payment made as consideration for any release of claims agreement.

Violation of a Post-Termination Non-Competition Covenant

Forfeiture Event: The NEO violates a post-termination non-competition covenant set forth in the restrictive covenant and confidentiality agreement in effect when a payment of Deferred Salary is scheduled to be made.

Compensation Subject to Recapture and/or Forfeiture: 50% of the Deferred Salary paid during the twelve months immediately preceding the violation and 100% of any unpaid Deferred Salary.

Under the Recapture Agreement, the Board has discretion to determine the appropriate dollar amount, if any, to be recaptured from and/or forfeited by the NEO, which is intended to be the gross amount of compensation in excess of what Freddie Mac would have paid the NEO had Freddie Mac taken the Forfeiture Event into consideration at the time such compensation decision was made.

A copy of the form of the Recapture Agreement is filed as Exhibit 10.18 to this Form 10-K.

The following additional event is applicable only to the CEO and CFO, to the extent they have compensation subject to reimbursement in accordance with Section 304 of the Sarbanes-Oxley Act.

Accounting Restatement Resulting from Misconduct - If, as a result of misconduct, we are required to prepare an accounting restatement due to material non-compliance with financial reporting requirements, the CEO and CFO are required to reimburse us for amounts determined in accordance with Section 304.

INDEMNIFICATION AGREEMENTS

We have entered into indemnification agreements with each of our current executive officers (including each of our NEOs) and directors, each an indemnitee. For indemnification agreements entered into with executive officers in or after August 2011, the form of agreement has been revised to provide that indemnification rights under the agreement would terminate if and when the executive officer remained with Freddie Mac after ceasing to report directly to the CEO with respect to any claims arising from matters occurring after the officer no longer reported directly to the CEO. Similar indemnification rights would continue to be available to such executive officers under the Bylaws going forward. The indemnification agreements provide that we will indemnify the indemnitee to the fullest extent permitted by our Bylaws and Virginia law. This obligation includes, subject to certain terms and conditions, indemnification against all liabilities and expenses (including attorneys' fees) actually and reasonably incurred by the indemnitee in connection with any threatened or pending action, suit, or proceeding, except such liabilities and expenses as are incurred because of the indemnitee's willful misconduct or

Executive Compensation Compensation Discussion and Analysis

knowing violation of criminal law. The indemnification agreements provide that if requested by the indemnitee, we will advance expenses, subject to repayment by the indemnitee of any funds advanced if it is ultimately determined that the indemnitee is not entitled to indemnification. The rights to indemnification under the indemnification agreements are not exclusive of any other right the indemnitee may have under any statute, agreement, or otherwise. Our obligations under the indemnification agreements will continue after the indemnitee is no longer a director or officer of the company with respect to any possible claims based on the fact that the indemnitee was a director or officer, and the indemnification agreements will remain in effect in the event the conservatorship is terminated. The indemnification agreements also provide that indemnification for actions instituted by FHFA will be governed by the standards set forth in FHFA's Notice of Proposed Rulemaking, published in the Federal Register on November 14, 2008, implementing 12 U.S.C. 4518. That proposed rulemaking has not yet been finalized, and FHFA published a revised Proposed Rule on Indemnification Payments in the Federal Register on September 20, 2016. The revised Proposed Rule specifies restrictions on indemnification for actions instituted by FHFA, but indicates that the rule would not apply to regulated entities that are operating in conservatorship.

OTHER EXECUTIVE COMPENSATION CONSIDERATIONS

EFFECT OF TERMINATION OF EMPLOYMENT

The timing and payment of any unpaid portion of Deferred Salary and related interest is based upon the reason for termination, as discussed in "Potential Payments Upon Termination of Employment."

PERQUISITES

We believe that perquisites should be a minimal part of the compensation package for our NEOs. Total annual perquisites for any NEO cannot exceed \$25,000 without FHFA approval, and we do not provide a gross-up to cover any taxes due on the perquisite itself. The only perquisite provided to our NEOs during 2016 was reimbursement for assistance with personal financial planning, tax planning, and/or estate planning, up to an annual maximum benefit of \$4,500, with an additional \$2,500 allowance provided in the first year in which an NEO becomes eligible for the benefit.

SERP

Our NEOs are eligible to participate in our SERP. The SERP is designed to provide participants with the full amount of benefits to which they would have been entitled under our Thrift/401(k) Plan if that plan was not subject to certain dollar limits under the Internal Revenue Code. This is referred to as the "SERP Benefit." For participants in the EMCP (or prior executive compensation programs), benefits under the SERP Benefit are limited in any calendar year to two times a participant's Base Salary.

For additional information regarding these benefits, see "2016 Compensation Information for NEOs" and "Nonqualified Deferred Compensation."

STOCK OWNERSHIP, HEDGING, AND PLEDGING POLICIES

Our stock ownership guidelines were suspended when conservatorship began because we ceased paying our executives stock-based compensation. The Purchase Agreement prohibits us from issuing any shares of our equity securities without the prior written consent of Treasury. The suspension of stock

Executive Compensation Compensation Discussion and Analysis

ownership requirements is expected to continue through the conservatorship and until such time that we resume granting stock-based compensation.

Pursuant to our company policy, all employees, including our NEOs, are prohibited from:

Engaging in all transactions (including purchasing and selling equity and non-equity securities) involving our securities (except selling company securities owned prior to the implementation of the policy and then only with pre-clearance);

Purchasing or selling derivative securities related to our equity securities or dealing in any derivative securities related to our equity securities;

Transacting in options (other than options granted by us, and then only with pre-clearance) or other hedging instruments related to our securities; and

Holding our securities in a margin account or pledging our securities as collateral for a loan.

FHFA'S ROLE IN SETTING COMPENSATION

Although the Compensation Committee plays a significant role in considering and recommending executive compensation, FHFA is actively involved in determining such compensation. During conservatorship, the Compensation Committee's authority and flexibility have been subject to the following limitations:

The powers of FHFA as our Conservator include the authority to set executive compensation. Under the terms of the Purchase Agreement, FHFA is required to consult with Treasury on any increases in compensation or new compensation arrangements for our executive officers.

Our directors serve on behalf of FHFA and exercise their authority as directed by FHFA. More information about the role of our directors is provided above in "Directors, Corporate Governance, and Executive Officers — Board and Committee Information — Authority of the Board and Board Committees."

FHFA has directed us to obtain its approval before we: (i) enter into new compensation arrangements or increase amounts or benefits payable under existing compensation arrangements for officers at the SVP level and above and for other officers as FHFA may deem necessary to successfully carry out its role as Conservator; or (ii) establish or modify performance management processes for such officers.

FHFA retains the authority not only to approve both the terms and amount of any compensation prior to payment to any of our executive officers, but also to modify any existing compensation arrangements.

SECTION 162(m) LIMITS ON THE TAX DEDUCTIBILITY OF COMPENSATION EXPENSES

Section 162(m) of the Internal Revenue Code imposes a \$1 million limit on the amount that a company may annually deduct for compensation to its CEO and certain other NEOs, unless, among other things, the compensation is "performance-based," as defined in section 162(m). Given the conservatorship and the desire to maintain flexibility to promote our corporate goals, At-Risk Deferred Salary is not structured to qualify as performance-based compensation under section 162(m).

Executive Compensation Compensation Discussion and Analysis

COMPENSATION COMMITTEE REPORT

The Compensation Committee has reviewed and discussed the Compensation Discussion and Analysis with management and, based on such review and discussion, has recommended to the Board that the Compensation Discussion and Analysis be included in this Form 10-K.

This report is respectfully submitted by the members of the Compensation Committee.

Nicolas P. Retsinas, Chair

Raphael W. Bostic

Carolyn H. Byrd

Steven W. Kohlhagen

Saiyid T. Naqvi

Eugene B. Shanks, Jr.

Executive Compensation Compensation and Risk

COMPENSATION AND RISK

Our management conducted an assessment of our compensation policies and practices that were in place during 2016 and that were applicable to employees at all levels, including those participating in the EMCP. The purpose of the assessment was to determine whether any elements of the overall compensation program encourage unnecessary or excessive risk taking by employees in the achievement of stated corporate objectives or pursuit of individual compensation targets. The assessment was conducted by members of our ERM and human resources teams.

The review included an evaluation of:

- The types of compensation offered (including fixed, variable, and deferred);
- Eligibility for participation in compensation programs;
- Compensation program design and governance;
- The process for establishing performance objectives; and
- Processes and program approvals for our compensation programs.

The assessment was discussed with the Compensation Committee in January 2017. Management's conclusion, with which the Compensation Committee concurred, is that the company's compensation programs and practices do not encourage unnecessary or excessive risk behaviors in pursuit of Corporate or Conservatorship Scorecard objectives or otherwise, and the programs and practices would not be reasonably likely to have a material adverse effect on Freddie Mac.

Executive Compensation 2016 Compensation Information for NEOs

2016 COMPENSATION INFORMATION FOR NEOs

The following sections set forth compensation information for our NEOs: our CEO, CFO, and the three other most highly compensated executive officers who were serving as executive officers as of December 31, 2016.

SUMMARY COMPENSATION TABLE

	Year	Salary Earned During Year ⁽¹⁾	Deferred Compensation ⁽²⁾	Bonus ⁽³⁾	Non-Equity Incentive Plan Compensation ⁽⁴⁾	All Other Compensation ⁽⁵⁾	Total
Donald H. Layton	2016	\$600,000	\$—	\$—	\$—	\$101,609	\$701,609
Chief Executive Officer	2015 ⁽⁶⁾	660,345	818,886	—	472,748	56,958	2,008,937
	2014	600,000	—	—	—	60,586	660,586
James G. Mackey	2016	500,000	1,600,000	—	893,896	89,874	3,083,770

	2014	500,000	1,320,000	—	780,507	110,168	2,710,675

(1) Amounts shown reflect Base Salary earned during the year.

Amounts shown reflect Fixed Deferred Salary earned during the year. The interest rate for Fixed Deferred Salary earned during 2016, 2015, and 2014 was 0.325%, 0.125%, and 0.065%, respectively, which is equal to 50% of the one-year Treasury Bill rate as of December 31 of the applicable prior year. Fixed Deferred Salary earned during

(2) each quarter is paid in cash on the last pay date of the corresponding quarter in the following year, along with accrued interest. The remaining portion of Deferred Salary is reported in “Non-Equity Incentive Plan Compensation” and is referred to as “At-Risk” because it is subject to reduction based on corporate and individual performance. Interest on Fixed Deferred Salary earned during 2016, 2015, and 2014 is included in All Other Compensation.

(3) Amounts shown reflect cash sign-on payments made to Messrs. Mackey and Hinduja in connection with their hiring. See “Written Agreements Relating to NEO Employment” for additional information.

(4) Amounts shown reflect At-Risk Deferred Salary earned during each year as well as interest on that At-Risk Deferred Salary. The interest rate for At-Risk Deferred Salary earned during 2016, 2015, and 2014 was 0.325%, 0.125%, and 0.065%, respectively, which is equal to 50% of the one-year Treasury Bill rate as of December 31 of the applicable prior year. At-Risk Deferred Salary earned during each quarter is paid in cash on the last pay date of the corresponding quarter in the following year. See “Determination of 2016 At-Risk Deferred Salary.”

(5) Amounts for 2016 reflect (i) employer contributions earned under our tax-qualified Thrift/401(k) Plan for the year; (ii) accruals earned pursuant to the SERP Benefit for the year; (iii) interest (as described in footnote 2) on Fixed Deferred Salary earned during the year; and (vi) perquisites. These amounts for 2016 are as follows:

Executive Compensation 2016 Compensation Information for NEOs

	Thrift/401(k) Plan Contributions	SERP Benefit Accruals	Interest on Fixed Deferred Salary	Perquisites
Mr. Layton	\$22,525	\$79,084	\$—	\$—
Mr. Mackey	22,525	62,149	5,200	—
Mr. Hinduja	6,625	29,199	3,494	—
Mr. Lowman	22,525	62,149	5,200	—
Mr. McDavid	22,525	62,149	4,290	—

Employer contributions to the Thrift/401(k) Plan are generally available on the same terms to all of our employees. After the first year of employment, we match up to 6% of eligible compensation at 100% of the employee's contributions. Employee contributions and our matching contributions are invested in accordance with the employee's investment elections and are immediately vested. After their first year of employment, employees receive an additional employer contribution to our Thrift/401(k) Plan equal to 2.5% of compensation earned in the prior year and are automatically vested in that contribution. For additional information regarding the SERP Benefit, see "Nonqualified Deferred Compensation."

Perquisites are valued at their aggregate incremental cost to us. During the years reported, the aggregate value of perquisites received by all NEOs was less than \$10,000. In accordance with SEC rules, amounts shown under "All Other Compensation" do not include perquisites for an NEO that, in the aggregate, amount to less than \$10,000.

On June 29, 2015, FHFA approved Mr. Layton's participation in the EMCP, effective July 1, 2015. On December 1, 2015, FHFA subsequently directed Freddie Mac to suspend, pursuant to the Equity in Government Compensation Act of 2015, his participation as of November 24, 2015. The components of Mr. Layton's Target TDC under the EMCP are described in the company's Annual Report on Form 10-K for the year ended December 31, 2015 in "Executive Compensation — Compensation Discussion and Analysis — Determination of 2015 Target TDC for NEOs — 2015 Target TDC."

GRANTS OF PLAN-BASED AWARDS

The following table contains information concerning grants of plan-based awards to each of the NEOs during 2016. The Purchase Agreement prohibits us from issuing equity securities without Treasury's consent. No stock awards were granted during 2016. For a description of the performance and other measures used to determine payouts, see "Elements of Target Total Direct Compensation," "Determination of 2016 Target TDC for NEOs," "Determination of At-Risk Deferred Salary," and "2016 Deferred Salary."

Name ⁽¹⁾	At-Risk Deferred Salary Award	Estimated Future Payouts Under Non-Equity Incentive Plan Awards ⁽²⁾	
		Threshold	Maximum
Mr. Mackey	Conservatorship Scorecard	—	450,000
	Corporate Scorecard/Individual	—	450,000
	Total	—	900,000
Mr. Hinduja	Conservatorship Scorecard	—	337,500
	Corporate Scorecard/Individual	—	337,500
	Total	—	675,000
Mr. Lowman	Conservatorship Scorecard	—	450,000
	Corporate Scorecard/Individual	—	450,000
	Total	—	900,000
Mr. McDavid	Conservatorship Scorecard	—	390,000

Edgar Filing: FEDERAL HOME LOAN MORTGAGE CORP - Form 10-K

Corporate Scorecard/Individual — 390,000

Total — 780,000

(1)Mr. Layton was not eligible to receive Deferred Salary in 2016 and therefore is not included in this table.

Freddie Mac 2016 Form 10-K 382

Executive Compensation 2016 Compensation Information for NEOs

The amounts reported reflect At-Risk Deferred Salary granted in 2016 which is subject to reduction based on: (i) corporate performance against the Conservatorship Scorecard; and (ii) an officer's individual performance and the company's performance against the Corporate Scorecard goals. The amount of At-Risk Deferred Salary actually earned can range from 0% of target (reported in the Threshold column) to a maximum of 100% of target (reported in the Target/Maximum column). Actual At-Risk Deferred Salary amounts earned during 2016 are reported in the "Non-Equity Incentive Plan Compensation" column of the "Summary Compensation Table."

OUTSTANDING EQUITY AWARDS AT FISCAL YEAR-END

None of the NEOs had unexercised options or unvested RSUs as of December 31, 2016.

OPTION EXERCISES AND STOCK VESTED

None of the NEOs exercised options or had RSUs vest during 2016.

PENSION BENEFITS

Freddie Mac previously offered a Pension Plan, which was a tax-qualified, defined benefit pension plan, covering substantially all employees hired before 2012 who had attained age 21 and completed one year of service with us. In October 2013, FHFA directed us to cease accruals under the Pension Plan effective December 31, 2013 and to commence terminating the Pension Plan. None of the NEOs was pension-eligible prior to the termination of the Pension Plan. Accordingly, a Pension Benefits table is not presented.

NONQUALIFIED DEFERRED COMPENSATION

Non-qualified deferred compensation for the NEOs consists of the SERP Benefit. The SERP is an unfunded, non-qualified defined contribution plan designed to provide participants with the full amount of benefits to which they would have been entitled under the Thrift/401(k) Plan if that plan was not subject to certain dollar limits under the Internal Revenue Code. The SERP Benefit equals the amount of the employer matching and 2.5% contributions for each NEO that would have been made to the Thrift/401(k) Plan during the year, based upon the participant's eligible compensation, without application of those limits, less the amount of the matching contributions and 2.5% contributions annually made to the Thrift/401(k) Plan during the year, but not to exceed two times the NEO's Base Salary. We believe the SERP Benefit is an appropriate benefit because offering such a benefit helps us remain competitive with the companies in our Comparator Group. Participants are credited with earnings or losses in their SERP Benefit accounts based upon each participant's individual direction of the investment of such notional amounts among the virtual investment funds available under the SERP, which are the same as the investment options available under the Thrift/401(k) Plan.

To be eligible for the SERP Benefit, the NEO must be eligible for matching contributions and the 2.5% contribution under the Thrift/401(k) Plan for part of the year, as discussed in Footnote 5 to the Summary Compensation Table. In addition, to be eligible for the portion of the SERP Benefit attributable to employer matching contributions, the NEO must contribute the maximum amount permitted under the terms of the Thrift/401(k) Plan on a pre- or post-tax basis. SERP Benefits are generally distributed in a lump sum 90 days after the end of the calendar year in which a separation from service occurs. A six-month delay in the commencement of distributions on account of a separation from service applies to key employees, in accordance with Internal Revenue Code

Executive Compensation 2016 Compensation Information for NEOs

Section 409A. If the NEO dies, the vested SERP Benefit is paid in the form of a lump sum within 90 days of death. The following table shows the contributions, earnings, withdrawals and distributions, and accumulated balances under the SERP Benefit for each NEO.

SERP BENEFIT

Name	Executive Contribution in Last FY (\$) ⁽¹⁾	Freddie Mac Accruals in Last FY (\$) ⁽²⁾	Aggregate Earnings in Last FY (\$) ⁽³⁾	Aggregate Withdrawals/ Distrib. (\$)	Balance at Last FYE (\$) ⁽⁴⁾
Mr. Layton	\$—	\$79,084	\$13,178	\$—	\$182,863
Mr. Mackey	—	62,149	579	—	138,489
Mr. Hinduja	—	29,199	960	—	30,159
Mr. Lowman	—	62,149	6,979	—	173,266
Mr. McDavid	—	62,149	1,102	—	235,846

(1) The SERP does not allow for employee contributions.

Amounts reported reflect accruals under the SERP Benefit during 2016, including accruals for the plan year 2016

(2) 2.5% contribution which will be allocated to NEO accounts in 2017. These amounts are also reported in the “All Other Compensation” column in the Summary Compensation Table.

(3) Amounts reported represent the total interest and other earnings credited to each NEO under the SERP Benefit.

Amounts reported reflect the accumulated balances under the SERP Benefit for each NEO and include the plan

(4) year 2016 2.5% contribution which will be allocated to NEO accounts in 2017. All NEOs are fully vested in their SERP Benefit account balances.

The following 2015 SERP Benefit accrual amounts were reported in the “All Other Compensation” column in the 2015 Summary Compensation Table as compensation for each NEO for whom accruals were made and reported during 2015: Mr. Layton: \$33,409, Mr. Mackey: \$62,149, Mr. Lowman: \$62,149, and Mr. McDavid: \$62,149. See our Form 10-K for the fiscal year ended December 31, 2015 filed on February 18, 2016. The following 2014 SERP Benefit accrual amounts were reported in the “All Other Compensation” column in the 2014 Summary Compensation Table as compensation for each NEO for whom accruals were made and reported during 2014: Mr. Layton: \$32,111, Mr. Mackey: \$13,559, Mr. Lowman: \$52,275, and Mr. McDavid: \$80,835. See our Form 10-K for the fiscal year ended December 31, 2014 filed on February 19, 2015.

POTENTIAL PAYMENTS UPON TERMINATION OF EMPLOYMENT

We have entered into various agreements in connection with the employment of the NEOs that call for us to pay compensation to our NEOs in the event of a termination of employment. The actual payment of any level of termination benefits is subject to FHFA review and approval. For more information, see “Written Agreements Relating to NEO Employment.”

In addition, the EMCP addresses the treatment of Base Salary and Deferred Salary upon various termination events. Base Salary ceases upon an NEO’s termination of employment, regardless of the termination reason. An NEO generally does not need to be employed by us on the payment date to receive payments of Deferred Salary (including related interest) that are unpaid at the time of termination of employment. The following table describes the effect of various termination events upon unpaid Deferred Salary.

Executive Compensation 2016 Compensation Information for NEOs

Forfeiture Event — All earned but unpaid Fixed and At-Risk Deferred Salary (including related interest) is subject to forfeiture upon the occurrence of a Forfeiture Event, as described above under “Written Agreements Relating to NEO Employment — Recapture and Forfeiture Agreement.”

Death — All earned but unpaid Fixed and At-Risk Deferred Salary (including related interest) is paid in full as soon as administratively possible, but not later than 90 calendar days after the date of death. Any earned but unpaid At-Risk Deferred Salary is not subject to reduction based on corporate and individual performance if the reduction has not been determined as of the date of death.

Long-Term Disability — All earned but unpaid Fixed and At-Risk Deferred Salary (including related interest) is paid in full in accordance with the Approved Payment Schedule. Any earned but unpaid At-Risk Deferred Salary is not subject to reduction based on corporate and individual performance if the reduction has not been determined as of the termination date.

Any Other Reason (including, but not limited to, voluntary termination, retirement, and involuntary termination for any reason other than a Forfeiture Event) — All earned but unpaid Deferred Salary (including related interest) is paid in accordance with the Approved Payment Schedule, and earned but unpaid At-Risk Deferred Salary remains subject to the performance assessment and reduction process. Except in the case of retirement, the amount of earned but unpaid Fixed Deferred Salary will be reduced by 2% for each full or partial month by which the NEO’s termination precedes January 31 of the second calendar year following the calendar year in which the Fixed Deferred Salary is earned. No such reduction is applicable if an NEO retires, which is deemed to have occurred upon a voluntary termination of employment after attaining or exceeding 62 years of age, without regard to length of service, or attaining or exceeding 55 years of age with 10 or more years of service.

The table below describes the compensation and benefits that would have been payable to each NEO had the officer terminated his employment under various circumstances as of December 31, 2016. Mr. Layton is excluded from this table because he is not entitled to receive any payments in connection with a termination of employment.

The table below does not address changes in control, as we are not obligated to provide any additional compensation to our NEOs in connection with a change in control. The table also does not address potential payments upon a termination for cause, which is a termination resulting from the occurrence of an event or conduct described in the Recapture Agreement. All earned but unpaid Deferred Salary is subject to forfeiture upon the occurrence of such a termination. However, the amount of compensation, if any, to be recaptured and/or forfeited is determined by the Board of Directors, which can only occur following the occurrence of a for cause termination. See “Written Agreements Relating to NEO Employment — Recapture and Forfeiture Agreement.”

The table below also does not include vested balances in the SERP. All NEOs are fully vested in their account balances. Amounts shown in the table also do not include certain items available to all employees generally upon a termination event.

The table below also does not include stock options or RSUs, as there were no outstanding stock options or RSUs held by NEOs as of December 31, 2016.

Executive Compensation 2016 Compensation Information for NEOs

	Death	Disability	Retirement ⁽¹⁾	All Other Not For Cause Terminations ⁽²⁾

(1) Mr. McDavid is the only retirement-eligible NEO under the EMCP.

All Other Not For Cause Terminations refer to voluntary terminations other than for retirement and involuntary terminations other than for cause. No amounts are shown for Mr. McDavid because he is retirement eligible. In accordance with early termination provisions in the EMCP, the amounts disclosed for Deferred Salary: Fixed for all other NEOs have been reduced by 26% to reflect a December 31, 2016 termination event.

The amounts reported for Deferred Salary: At Risk-Conservatorship Scorecard in the Retirement and All Other Not For Cause Terminations columns reflect the funding level determined by FHFA with respect to performance

(3) against the 2016 Conservatorship Scorecard. In cases of death or disability, the process for determining the funding level is waived if the funding level has not been determined at the date of termination. The funding level had not been determined as of December 31, 2016 and, as a result, no reduction has been applied to these amounts.

(4) The amounts reported for Deferred Salary: At Risk-Corporate Scorecard/Individual in the Retirement and All Other Not For Cause Terminations columns reflect the assessment of 2016 performance approved by the

Edgar Filing: FEDERAL HOME LOAN MORTGAGE CORP - Form 10-K

Compensation Committee and FHFA. For death or disability, the provisions are the same as for the amounts reported for Deferred Salary: At Risk-Conservatorship Scorecard.

Interest on Deferred Salary is accrued and paid in accordance with the terms of the EMCP. The amount of interest (5) in the Death column assumes that payment occurs on the 90th day following the date of death, which is assumed to be December 31, 2016.

Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters

SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED STOCKHOLDER MATTERS
SECURITY OWNERSHIP

Our only class of voting stock is our common stock. Upon its appointment as Conservator, FHFA immediately succeeded to the voting rights of holders of our common stock. The following table shows the beneficial ownership of our common stock as of February 14, 2017 by our current directors, our NEOs, all of our directors and executive officers as a group, and holders of more than 5% of our common stock. Beneficial ownership is determined in accordance with SEC rules for computing the number of shares of common stock beneficially owned by a person and the percentage ownership of that person. As of February 14, 2017, each director and NEO, and all of our directors and executive officers as a group, owned less than 1% of our outstanding common stock. Unless otherwise noted, the information presented below is based on information provided to us by the individuals or entities specified in the table.

STOCK OWNERSHIP BY DIRECTORS AND EXECUTIVE OFFICERS

Name	Position	Common Stock Beneficially Owned Excluding Stock Options ⁽¹⁾	Stock Options Exercisable Within 60 Days of Feb. 14, 2017	Total Common Stock Beneficially Owned

(1) Includes shares of stock beneficially owned as of February 14, 2017.

Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters

STOCK OWNERSHIP BY GREATER-THAN 5% HOLDERS

5% Holder ⁽¹⁾	Common Stock Beneficially Owned	Percent of Class
U.S. Department of the Treasury 1500 Pennsylvania Avenue, NW Washington, D.C. 20220	Variable ⁽²⁾	79.9%

(1) Pershing Square Capital Management, L.P., PS Management GP, LLC, and William A. Ackerman (“Pershing”) have filed certain reports on Schedule 13D, the latest of which was filed on March 31, 2014. In that report, Pershing reported a beneficial ownership percentage calculation of 9.78%, based solely on the 650,039,533 shares of our common stock outstanding as reported in our Form 10-K for the fiscal year ended December 31, 2013, and excluding the shares issuable to Treasury pursuant to the warrant. The Schedule 13D indicated that Pershing also had additional economic exposure to approximately 8,434,958 notional shares of common stock, bringing the total aggregate economic exposure on the date of that filing to 72,010,523 shares of common stock (approximately 11.08% of the outstanding common stock). In that filing, Pershing indicated that because it believes our common stock is not a voting security, it had determined not to file future reports on Schedule 13D. We do not know Pershing’s current beneficial ownership of our common stock.

(2) In September 2008, we issued to Treasury a warrant to purchase, for one one-thousandth of a cent (\$0.00001) per share, shares of our common stock equal to 79.9% of the total number of shares of our common stock outstanding on a fully diluted basis at the time the warrant is exercised. The warrant may be exercised in whole or in part at any time until September 7, 2028. As of the date of this filing, Treasury has not exercised the warrant. The information above assumes Treasury beneficially owns no other shares of our common stock.

SECTION 16(a) BENEFICIAL OWNERSHIP REPORTING COMPLIANCE

Section 16(a) of the Exchange Act requires the directors and executive officers of a reporting company and persons who own more than 10% of a registered class of such company’s equity securities to file reports of ownership and changes in ownership with the SEC. Based solely on a review of such reports, we believe that during 2016 all of our directors and executive officers complied with such reporting obligations.

SECURITIES AUTHORIZED FOR ISSUANCE UNDER EQUITY COMPENSATION PLANS

The following table provides information about our common stock that may be issued upon the exercise of options, warrants, and rights under our existing equity compensation plans at December 31, 2016. Prior to conservatorship, stockholders approved the Employee Stock Purchase Plan, the 2004 Stock Compensation Plan, and the 1995 Stock Compensation Plan (together, the “Employee Plans”), and the 1995 Directors’ Stock Compensation Plan (the “Directors’ Plan”). We suspended the operation of these plans following our entry into conservatorship and are no longer granting awards under such plans.

Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters

EQUITY COMPENSATION PLAN INFORMATION

Plan Category	Number of securities to be issued upon exercise of outstanding options, warrants and rights	Weighted average exercise price of outstanding options, warrants and rights	Number of securities remaining available for future issuance under equity compensation plans (excluding securities reflected in column (a))
Equity compensation plans approved by stockholders	50,670	N/A	35,871,004 ⁽¹⁾
Equity compensation plans not approved by stockholders	None	N/A	None

Includes 28,352,108 shares, 5,845,739 shares, and 1,673,157 shares available for issuance under the 2004 Stock (1) Compensation Plan, the Employee Stock Purchase Plan, and the Directors' Plan, respectively. No shares are available for issuance under the 1995 Stock Compensation Plan.

Certain Relationships and Related Transactions

CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS POLICY GOVERNING RELATED PERSON TRANSACTIONS

The Board has adopted a written policy governing the approval of related person transactions. This policy sets forth procedures for the review and approval or ratification of transactions involving related persons. Under the policy, “related person” means any person who is, or was at any time since the beginning of our last completed fiscal year, a director, a director nominee, an executive officer, or an immediate family member of any of the foregoing persons. Under authority delegated by the Board, our General Counsel and the Nominating and Governance Committee (or its Chair under certain circumstances), each an Authorized Approver, are responsible for applying the Related Person Transactions Policy. Transactions covered by the Related Person Transactions Policy consist of any transaction, arrangement, or relationship or series of similar transactions, arrangements, or relationships, in which:

- The aggregate amount involved exceeded or is expected to exceed \$120,000;
- We were or are expected to be a participant; and
- Any related person had or will have a direct or indirect material interest.

The Related Person Transactions Policy includes a list of categories of transactions identified by the Board as having no significant potential for an actual conflict of interest or the appearance of a conflict or improper benefit to a related person, and thus such transactions are not considered potential related person transactions subject to review.

Our Legal Division assesses whether any proposed transaction involving a related person is covered by the Related Person Transactions Policy. If so, the transaction is reviewed by the appropriate Authorized Approver. In consultation with the Chair of the Nominating and Governance Committee, the General Counsel may refer any proposed transaction to the Nominating and Governance Committee for review and approval.

If possible, approval of a related person transaction is obtained prior to the effectiveness or consummation of the transaction. If advance approval of a related person transaction by the appropriate Authorized Approver is not feasible or otherwise not obtained, then the transaction is considered promptly by the appropriate Authorized Approver to determine whether ratification is warranted.

In determining whether to approve or ratify a related person transaction covered by the Related Person Transactions Policy, the appropriate Authorized Approver reviews and considers all relevant information, which may include:

- The nature of the related person’s interest in the transaction;
- The approximate total dollar value of, and extent of the related person’s interest in, the transaction;
- Whether the transaction was or would be undertaken in the ordinary course of our business;

Certain Relationships and Related Transactions

• Whether the transaction is proposed to be, or was, entered into on terms no less favorable to us than terms that could have been reached with an unrelated third party; and

¶ The purpose, and potential benefits to us, of the transaction.

TRANSACTIONS WITH 5% SHAREHOLDERS

In connection with our entry into conservatorship, we issued a warrant to Treasury to purchase shares of our common stock equal to 79.9% of the total number of shares of our common stock outstanding, on a fully diluted basis. There were a number of transactions between us and Treasury since the beginning of 2016, as discussed in “MD&A — Consolidated Results of Operations,” “MD&A — Risk Management — Credit Risk — Single-Family Mortgage Credit Risk,” “MD&A — Conservatorship and Related Matters,” “MD&A — Regulation and Supervision,” Note 2, Note 4, Note 6, Note 9, Note 10, and Note 11.

FHFA, as conservator, approved the Purchase Agreement and our role as compliance agent in the MHA Program and the Memorandum of Understanding with Treasury, FHFA, and Fannie Mae under the HFA Initiative. FHFA also instructed us to implement a \$5,000 principal reduction incentive under HAMP in which Treasury will pay the incentive for borrowers with certain of our HAMP modified loans. The remaining transactions described in the sections referenced above did not require review and approval under any of our policies and procedures relating to transactions with related persons.

We are the compliance agent for Treasury for certain foreclosure avoidance activities under HAMP. Among other duties, as the program compliance agent, we conduct examinations and review servicer compliance with the published requirements for the program.

TRANSACTIONS WITH INSTITUTIONS RELATED TO DIRECTORS

In the ordinary course of business, we were a party during 2016, and expect to continue to be a party during 2017, to certain business transactions with institutions affiliated with members of our Board. Management believes that the terms and conditions of the transactions were no more and no less favorable to us than the terms of similar transactions with unaffiliated institutions to which we are, or expect to be, a party. None of these transactions were required to be disclosed under SEC rules.

TRANSACTIONS WITH INSTITUTIONS RELATED TO EXECUTIVE OFFICERS

Mr. Layton joined us in May 2012 as CEO and as a member of the Board. Mr. Layton previously served as a senior executive officer of JPMorgan Chase, ending his service in 2004.

Freddie Mac has an extensive business relationship with JPMorgan Chase (through its subsidiaries). As of December 31, 2016, JPMorgan Chase was one of Freddie Mac’s largest servicers, and serviced approximately 1 million loans for Freddie Mac. JPMorgan Chase had an aggregate UPB of loans of approximately \$150.7 billion as of December 31, 2016 and continues to have a substantial aggregate UPB of loans with the company. JPMorgan Chase sold approximately \$19 billion in single-family loans to Freddie Mac in 2016.

Certain Relationships and Related Transactions

JPMorgan Chase also is a significant capital markets, derivatives, and multifamily counterparty and is an underwriter of our debt and mortgage securities. As of January 31, 2017, JPMorgan Chase and its subsidiaries had an aggregate notional balance of \$19.9 billion of derivatives and \$11.5 billion of reverse repurchase agreements with Freddie Mac. From January 1, 2016 through January 31, 2017, JPMorgan Chase served as underwriter for \$82.5 billion of Freddie Mac's debt securities and \$20.6 billion of Freddie Mac's mortgage-related securities.

Mr. Layton receives a pension from JPMorgan Chase in connection with his retirement in 2004. In addition, Mr. Layton has a deferred compensation balance under JPMorgan Chase's Deferred Compensation Plan which earns a return based upon a defined list of mutual funds that Mr. Layton designates. Payments on the deferred compensation balance began in January 2016 with thirteen annual installments remaining. Mr. Layton also had deferred compensation (less than 10% of the total deferred compensation balance) in the form of "private equity balance," which was paid in full in 2016. Mr. Layton's deferred compensation balance is less than 10% of his total net worth on an after-tax basis. Mr. Layton also has brokerage and deposit accounts with JPMorgan Chase.

The amounts of Mr. Layton's pension and deferred compensation do not depend in any way on JPMorgan Chase's results as long as JPMorgan Chase is able to meet its obligations. In addition, in order to eliminate any potential conflicts of interest, Mr. Layton agreed to recuse himself from acting upon matters directly relating to JPMorgan Chase that may be considered by the Board, or presented to him in his capacity as CEO and a member of the Board, if such matter has the potential to affect JPMorgan Chase's ability to satisfy its obligations to him. For the reasons described above, the Board has determined that Mr. Layton does not have a material interest in our relationship with JPMorgan Chase. The relationships described above were not required to be reviewed, approved, or ratified under our Related Person Transactions Policy.

CONSERVATORSHIP AGREEMENTS

Treasury, FHFA, and the Federal Reserve have taken a number of actions to support us during conservatorship, including entering into the Purchase Agreement, described in this Form 10-K. See "MD&A — Conservatorship and Related Matters" and Note 2.

Principal Accounting Fees and Services

PRINCIPAL ACCOUNTING FEES AND SERVICES

DESCRIPTION OF FEES

PricewaterhouseCoopers LLP has served as our independent public accountants since 2002. The following is a description of fees billed to us by PricewaterhouseCoopers LLP during 2016 and 2015.

AUDITOR FEES⁽¹⁾

	2016	2015
	(In thousands)	
Audit Fees ⁽²⁾	\$23,175	\$23,321
Audit-Related Fees ⁽³⁾	5,122	3,888
Tax Fees ⁽⁴⁾	55	64
All Other Fees ⁽⁵⁾	218	264
Total	\$28,570	\$27,537

(1) These fees represent amounts billed (including reimbursable expenses within the designated year).

(2) Audit fees include fees in connection with quarterly reviews of our interim financial information and the audit of our annual consolidated financial statements.

Audit-related fees include: (i) fees for the performance of certain agreed-upon procedures regarding aspects of compliance with the Purchase Agreement covenants; (ii) compliance evaluation of the minimum servicing standards as set forth in the Uniform Single Attestation Program for Mortgage Bankers; (iii) transaction validation and attestation related to certain of Freddie Mac's risk transfer and structured transactions; (iv) fees for pre-implementation assistance for hedge accounting; and (v) fees related to accounting policy consultations.

The tax fees billed relate to non-audit tax consulting services to provide advice and recommendations related to tax planning or reporting matters, as well as non-audit tax services to provide assistance with the IRS tax audit matters and ongoing examinations, including information requests and associated responses.

All other fees include: (i) our subscription to a web-based suite of human resources benchmark data; (ii) advice and recommendations related to retention strategies; (iii) our subscription to accounting research software; and (iv) non-audit advice and recommendations related to technology implementation in the governance process.

APPROVAL OF INDEPENDENT AUDITOR SERVICES AND FEES

Under its charter, the Audit Committee is responsible for the following:

• Appointing our independent public accounting firm (subject to FHFA approval as required);

• Approving all audit and non-audit services permitted under applicable law to be performed by the independent public accounting firm (subject to FHFA approval as required); and

• Approving the scope of the annual audit.

The Sarbanes-Oxley Act of 2002 and related SEC rules require that all services provided to companies subject to the reporting requirements of the Exchange Act by their independent auditors be pre-approved by their audit committee or by authorized members of the committee, with certain exceptions. The Audit Committee's charter requires that the Audit Committee pre-approve any audit services, and any non-audit

Principal Accounting Fees and Services

services permitted under applicable law, to be performed by our independent auditors (or to designate one or more members of the Audit Committee to pre-approve such services and report such pre-approval to the Audit Committee). Audit services that are within the scope of an auditor's engagement approved by the Audit Committee prior to the performance of those services are deemed pre-approved and do not require separate pre-approval. Audit services not within the scope of an Audit Committee-approved engagement, as well as permissible non-audit services, must be separately pre-approved by the Audit Committee.

When the Audit Committee pre-approves a service, it typically sets a dollar limit for such service. Management endeavors to obtain pre-approval of the Audit Committee, or of the Chair of the Audit Committee (when the Chair of the Audit Committee has been delegated such authority), before it incurs fees exceeding the dollar limit. If the Chair of the Audit Committee approves the increase, the Chair will report such approval at the Audit Committee's next scheduled meeting. The Audit Committee has delegated to the Chair the authority to address requests to pre-approve certain additional audit and non-audit services to be performed by the company's independent auditor with fees totaling up to a maximum of \$250,000 per quarter, with reporting of any such approval decisions to the Audit Committee at its next scheduled meeting.

The pre-approval procedure is administered by our senior financial management, which reports throughout the year to the Audit Committee. The Audit Committee pre-approved all audit, audit-related, tax, and other services performed by our independent public accounting firm in 2016 and 2015.

The Audit Committee appoints the independent public accounting firm on an annual basis. In evaluating the performance of the independent public accounting firm, the Audit Committee considers a number of factors, including the following:

- The firm's status as a registered public accounting firm with the Public Company Accounting Oversight Board (United States) ("PCAOB") as required by the Sarbanes-Oxley Act of 2002 and the Rules of the PCAOB;

- Its independence and processes for maintaining its independence;

- Its approach to resolving significant accounting and auditing matters;

- Its capability and expertise in handling the complexity of the company's business, including the expertise and capability of the lead audit partner and of the key members of the engagement team;

- Historical and recent performance, including the extent and quality of the independent public accounting firm's communications with the Audit Committee, and the results of a management survey of the independent public accounting firm's overall performance;

- Data related to audit quality and performance, including recent PCAOB inspection reports on the firm; and

- The appropriateness of its fees, both on an absolute basis and as compared with peers.

The Audit Committee has determined that the non-audit services rendered by PricewaterhouseCoopers during its most recent fiscal year are compatible with maintaining PricewaterhouseCoopers' independence.

Glossary

GLOSSARY

This Glossary includes acronyms and defined terms that are used throughout this report.

ACIS - Agency Credit Insurance Structure - In a typical ACIS credit risk transfer transaction, we purchase insurance policies (typically underwritten by a group of insurers and reinsurers) that obligate the counterparties to reimburse us for specified credit events (based on either actual losses or losses calculated using a predefined formula) up to an aggregate limit that occur on our first loss and/or mezzanine loss positions associated with STACR debt note transactions in exchange for our payment of periodic premiums. We also enter into ACIS transactions that provide credit protection for certain specified credit events on loans not included in a reference pool created for a STACR debt note transaction.

Administration - Executive branch of the U.S. government.

Agency securities - Generally refers to mortgage-related securities issued by the GSEs or government agencies.

Alt-A loan - Although there is no universally accepted definition of Alt-A, many mortgage market participants classify single-family loans with credit characteristics that range between their prime and subprime categories as Alt-A because these loans have a combination of characteristics of each category, may be underwritten with lower or alternative income or asset documentation requirements compared to a full documentation loan, or both. We categorize loans in our single-family credit guarantee portfolio as Alt-A if the lender that delivers them to us classified the loans as Alt-A, or if the loans had reduced documentation requirements as well as a combination of certain credit characteristics and expected performance characteristics at acquisition which, when compared to full documentation loans in our portfolio, indicate that the loan should be classified as Alt-A. In the event we purchase a refinance loan and the original loan had been previously identified as Alt-A, such refinance loan may no longer be categorized as an Alt-A loan because the refinance loan is not identified by the servicer as an Alt-A loan. We categorize our investments in non-agency mortgage-related securities as Alt-A if the securities were identified as such based on information provided to us when we entered into these transactions.

AMT - Alternative Minimum Tax

AOCI - Accumulated other comprehensive income (loss), net of taxes

ARM - Adjustable-rate mortgage - A mortgage loan with an interest rate that adjusts periodically over the life of the loan based on changes in a benchmark index.

Board - Board of Directors

Bps - Basis points - One one-hundredth of 1%. This term is commonly used to quote the yields of debt instruments or movements in interest rates.

CCO - Chief Compliance Officer

CD&A - Compensation Discussion and Analysis

CEO - Chief Executive Officer

CERO - Chief Enterprise Risk Officer

Glossary

CFO - Chief Financial Officer

CFPB - Consumer Financial Protection Bureau

Charge-offs, gross - Represent the amount of a loan that has been discharged in order to remove the loan from our consolidated balance sheets when the loan is deemed uncollectible, regardless of when the impact of the credit loss was recorded on our consolidated statements of comprehensive income. Generally the amount of a charge-off is the recorded investment in excess of the fair value of the loan's collateral.

Charter - The Federal Home Loan Mortgage Corporation Act, as amended, 12 U.S.C. § 1451 et seq.

CMBS - Commercial mortgage-backed security - A security backed by loans on commercial property (often including multifamily rental properties) as opposed to one-to-four family residential real estate. Although the loan pools underlying CMBS can include loans financing multifamily properties and commercial properties, such as office buildings and hotels, the classes of CMBS that we hold receive distributions of scheduled cash flows only from multifamily properties.

Comprehensive income (loss) - Consists of net income (loss) plus other comprehensive income (loss).

Conforming loan/Conforming jumbo loan/Conforming loan limit - A conventional single-family loan with an original principal balance that is equal to or less than the applicable statutory conforming loan limit, which is a dollar amount cap on the original principal balance of single-family loans we are permitted by law to purchase or securitize. The conforming loan limit is determined annually based on changes in FHFA's housing price index. The base conforming loan limit for a one-family residence has been set at \$424,100 for 2017, and was set at \$417,000 from 2006 to 2016. Higher limits have been established in certain "high-cost" areas (for 2017, up to \$636,150 for a one-family residence). Higher limits also apply to two- to four-family residences, and for loans secured by properties in Alaska, Guam, Hawaii and the U.S. Virgin Islands.

Actual high-cost area loan limits are set by FHFA for each county (or equivalent), and the loan limit for specific high-cost areas may be lower than the maximum amounts. We refer to loans that we have purchased with a UPB exceeding the base conforming loan limit (i.e., \$424,000 for 2017) as conforming jumbo loans.

Conservator - The Federal Housing Finance Agency, acting in its capacity as Conservator of Freddie Mac.

Convexity - A measure of how much a financial instrument's duration changes as interest rates change.

Core single-family book - Consists of loans in our single-family credit guarantee portfolio that were originated since 2008. We do not include relief refinance loans, including HARP loans, in this book as underwriting procedures for relief refinance loans are limited, and, in many cases, do not include all of the changes in underwriting standards we have implemented since 2008.

Credit enhancement - A financial arrangement that is designed to reduce credit risk by partially or fully compensating an investor in a mortgage or security (e.g., Freddie Mac) in the event of specified losses. Examples of credit enhancements include insurance, credit risk transfer transactions, overcollateralization, indemnification agreements, and government guarantees.

Glossary

Credit losses - Consists of charge-offs, net and REO operations (income) expense.

Credit-related (benefit) expenses (or credit-related expenses) - Consists of our provision (benefit) for credit losses and REO operations (income) expense.

Credit score - Credit score data is based on FICO scores, a credit scoring system developed by Fair, Isaac and Co. FICO scores are currently the most commonly used credit scores. FICO scores are ranked on a scale of approximately 300 to 850 points with a higher value indicating a lower likelihood of credit default. Although we obtain updated credit information on certain borrowers after the origination of a loan, such as those borrowers seeking a modification, the scores presented in our reports represent the credit score of the borrower at either the time of loan origination or our purchase and may not be indicative of the current credit worthiness of the borrower.

CSS - Common Securitization Solutions, LLCSM

Current LTV Ratio or CLTV - The current LTV ratios are management estimates, which are updated on a monthly basis. Current market values are estimated by adjusting the value of the property at origination based on changes in the market value of homes in the same geographic area since that time. Changes in market value are derived from our internal index, which measures price changes for repeat sales and refinancing activity on the same properties using Freddie Mac and Fannie Mae single-family loan acquisitions, including foreclosure sales. Estimates of the current LTV ratio exclude any secondary financing by third parties.

Deed in lieu of foreclosure - An alternative to foreclosure in which the borrower voluntarily conveys title to the property to the lender and the lender accepts such title (sometimes together with an additional payment by the borrower) in full satisfaction of the mortgage indebtedness.

Delinquency - A failure to make timely payments of principal and/or interest on a loan. For single-family loans, we generally report delinquency rate information based on the number of loans that are seriously delinquent. For multifamily loans, we report delinquency rate information based on the UPB of loans that are two monthly payments or more past due or in the process of foreclosure. Loans that have been modified are not counted as delinquent as long as the borrower is not delinquent under the modified terms.

Delivery fee - An upfront fee charged to sellers above base contractual guarantee fees to compensate us for higher levels of risk in some loan products.

Derivative - A financial instrument whose value depends upon the characteristics and value of an underlying such as a financial asset or index. Examples of an underlying include a security or commodity price, interest or currency rates, and other financial indices.

Dodd-Frank Act - Dodd-Frank Wall Street Reform and Consumer Protection Act

Dollar roll transactions - Transactions whereby we enter into an agreement to sell and subsequently repurchase (or purchase and subsequently resell) agency securities.

DSCR - Debt Service Coverage Ratio - An indicator of future credit performance for multifamily loans. The DSCR estimates a multifamily borrower's ability to service its mortgage obligation using the secured property's cash flow, after deducting non-mortgage expenses from income. The higher the DSCR, the more likely a multifamily borrower will be able to continue servicing its loan obligation.

Glossary

Duration - Duration is a measure of a financial instrument's price sensitivity to changes in interest rates.

Duration gap - One of our primary interest rate risk measures. Duration gap is a measure of the difference between the estimated durations of our interest rate sensitive assets and liabilities. We present the duration gap of our financial instruments in units expressed as months. A duration gap of zero implies that the change in value of our interest rate sensitive assets from an instantaneous change in interest rates would be expected to be accompanied by an equal and offsetting change in the value of our interest rate sensitive liabilities, thus leaving economic value unchanged.

EMCP - Executive Management Compensation Program

ERC - Enterprise Risk Committee

ERM - Enterprise Risk Management

EVP - Executive Vice President

Exchange Act - Securities Exchange Act of 1934, as amended

Fannie Mae - Federal National Mortgage Association

FASB - Financial Accounting Standards Board

Federal Reserve - Board of Governors of the Federal Reserve System

FHA - Federal Housing Administration

FHFA - Federal Housing Finance Agency - An independent agency of the U.S. government with responsibility for regulating Freddie Mac, Fannie Mae, and the FHLBs.

FHLB - Federal Home Loan Bank

Fixed-rate loan - Refers to a loan originated at a specific rate of interest that remains constant over the life of the loan. For purposes of presentation in this report, we have categorized a number of modified loans as fixed-rate loans, even though the modified loans have rate adjustment provisions. In these cases, while the terms of the modified loans provide for the interest rate to adjust in the future, such future rates are determined at the time of the modification rather than at a subsequent date.

Foreclosure alternative - A workout option pursued when a home retention action is not successful or not possible. A foreclosure alternative is either a short sale or deed in lieu of foreclosure.

Foreclosure or foreclosure transfer - Refers to our completion of a transaction provided for by the foreclosure laws of the applicable state, in which a delinquent borrower's ownership interest in a mortgaged property is terminated and title to the property is transferred to us or to a third party. When we, as loan holder, acquire a property in this manner, we pay for it by extinguishing some or all of the mortgage debt.

Freddie Mac mortgage-related securities - Securities we issue and guarantee that are backed by mortgages.

GAAP - Generally accepted accounting principles in the United States of America.

Giant PCs - Resecuritizations of previously issued PCs or Giant PCs. Giant PCs are single-class

Glossary

securities that involve the straight pass through of all of the cash flows of the underlying collateral to holders of the beneficial interests.

Ginnie Mae - Government National Mortgage Association, which guarantees the timely payment of principal and interest on mortgage-related securities backed by federally insured or guaranteed loans, primarily those insured by FHA or guaranteed by the VA.

GSE Act - The Federal Housing Enterprises Financial Safety and Soundness Act of 1992, as amended by the Reform Act.

GSEs - Government sponsored enterprises - Refers to certain legal entities created by the U.S. government, including Freddie Mac, Fannie Mae, and the FHLBs.

Guarantee fee - The fee that we receive for guaranteeing the payment of principal and interest to mortgage security investors, which consists primarily of a combination of base contractual guarantee fees paid on a monthly basis, as a percentage of the UPB of the underlying loans, and initial upfront payments, such as delivery fees.

Guidelines - Corporate Governance Guidelines, as revised

HAMP - Home Affordable Modification Program - Refers to the effort under the MHA Program whereby the U.S. government, Freddie Mac and Fannie Mae committed funds to help eligible homeowners avoid foreclosure and keep their homes through loan modifications. HAMP ended in December 2016.

HARP - Home Affordable Refinance Program - Refers to the effort under the MHA Program that seeks to help eligible borrowers with existing loans that are guaranteed by us or Fannie Mae to refinance into loans with more affordable monthly payments and/or fixed-rate terms without obtaining new mortgage insurance in excess of the insurance coverage, if any, that was already in place. HARP is targeted at borrowers with current LTV ratios above 80%. The relief refinance program, under which we also allow borrowers with LTV ratios of 80% and below to participate, is our implementation of HARP for our loans. The relief refinance program (including HARP) will end in September 2017 and will be replaced by a new program.

HFA - State or local Housing Finance Agency

HFA Initiative - Refers to the effort whereby we and Fannie Mae, in conjunction with Treasury, provided assistance to state and local HFAs so that the HFAs could continue to meet their mission of providing affordable financing for both single-family and multifamily housing. The HFA initiative included the New Issue Bond Program (NIBP) and the Temporary Credit and Liquidity Facility Program (TCLFP). Pursuant to the NIBP, we and Fannie Mae issued partially-guaranteed pass-through securities to Treasury that are backed by bonds issued by various state and local HFAs. The NIBP provided financing for HFAs to issue new housing bonds. Treasury is obligated to absorb losses under the NIBP up to a certain level before we are exposed to any losses. Pursuant to the TCLFP, we and Fannie Mae issued credit and liquidity guarantees to holders of variable-rate demand obligations issued by various state and local HFAs. Treasury is obligated to absorb losses under the TCLFP up to a certain level before we are exposed to any losses. The TCLFP was scheduled to expire on December 31, 2012. However, Treasury gave participants the option to extend their individual TCLFP facilities to December 31, 2015. No outstanding guarantees existed as of December 31, 2015.

HUD - U.S. Department of Housing and Urban Development - HUD has authority over Freddie Mac with

Glossary

respect to fair lending.

Implied volatility - A measurement of how the value of a financial instrument changes due to changes in the market's expectation of potential changes in future interest rates. A decrease in implied volatility generally increases the estimated fair value of our mortgage-related assets and decreases the estimated fair value of our callable debt and option-based derivatives, while an increase in implied volatility generally has the opposite effect.

Initial margin - The collateral that we post with a derivatives clearinghouse in order to do business with such clearinghouse. The amount of initial margin varies over time.

Interest-only loan - A loan that allows the borrower to pay only interest (either fixed-rate or adjustable-rate) for a fixed period of time before payments of principal begin. After the interest-only period, the borrower may choose to refinance the loan, pay the principal balance in total, or begin paying the scheduled principal payment due on the loan.

IRS - Internal Revenue Service

K Certificates - Structured pass-through certificates backed primarily by recently originated multifamily loans purchased by Freddie Mac.

Legacy single-family book - Consists of loans in our single-family credit guarantee portfolio that were originated in 2008 and prior.

LIBOR - London Interbank Offered Rate

LIHTC partnerships - Low-income housing tax credit partnerships - Prior to 2008, we invested in LIHTC partnerships as a limited partner. These LIHTC partnerships invest directly in limited partnerships that own and operate affordable multifamily rental properties that generate federal income tax credits and deductible operating losses.

Liquidation preference - Generally refers to an amount that holders of preferred securities are entitled to receive out of available assets upon liquidation of a company. The initial liquidation preference of our senior preferred stock was \$1.0 billion. The aggregate liquidation preference of our senior preferred stock includes the initial liquidation preference plus amounts funded by Treasury under the Purchase Agreement. In addition, dividends not paid in cash are added to the liquidation preference of the senior preferred stock. We may make payments to reduce the liquidation preference of the senior preferred stock only in limited circumstances.

Liquidity and Contingency Operating Portfolio - Subset of our other investments and cash portfolio. Consists of cash and cash equivalents, certain securities purchased under agreements to resell, and certain non-mortgage-related securities.

Long-term debt - Other debt due after one year based on the original contractual maturity of the debt instrument. Our long-term debt issuances include medium-term notes, Reference Notes[®] securities, and STACR debt notes.

LTV ratio - Loan-to-value ratio - The ratio of the unpaid principal amount of a loan to the value of the property that serves as collateral for the loan, expressed as a percentage. We report LTV ratios based solely on the amount of the loan purchased or guaranteed by us, generally excluding any second-lien

Glossary

loans (unless we own or guarantee the second lien).

Market spread - The difference between the yields of two debt securities, or the difference between the yield of a debt security and a benchmark yield, such as LIBOR. We measure market spreads primarily using our models.

MD&A - Management's Discussion and Analysis of Financial Condition and Results of Operations

MHA Program - Making Home Affordable Program - Formerly known as the Housing Affordability and Stability Plan, the MHA Program was announced by the Administration in February 2009. The MHA Program is designed to help in the housing recovery, promote liquidity and housing affordability, expand foreclosure prevention efforts, and set market standards. The MHA Program includes HARP and HAMP.

Mortgage assets - Refers to both loans and the mortgage-related securities we hold in our mortgage-related investments portfolio.

Mortgage-related investments portfolio - Our investment portfolio, which consists of mortgage-related securities and unsecuritized single-family and multifamily loans. The size of our mortgage-related investments portfolio under the Purchase Agreement is determined without giving effect to the January 1, 2010 change in accounting guidance related to transfers of financial assets and consolidation of VIEs.

Mortgage-to-debt OAS - The net OAS between the mortgage asset and agency debt sectors. This is an important factor in determining the expected level of net interest yield on a new mortgage asset. Higher mortgage-to-debt OAS means that a newly purchased mortgage asset is expected to provide a greater return relative to the cost of the debt issued to fund the purchase of the asset and, therefore, a higher net interest yield. Mortgage-to-debt OAS tends to be higher when there is weak demand for mortgage assets and lower when there is strong demand for mortgage assets.

Multifamily loan - A loan secured by a property with five or more residential rental units or by a manufactured housing community.

Multifamily mortgage portfolio - Consists of multifamily mortgage loans held by us on our consolidated balance sheets as well as our guarantee of K Certificates, SB Certificates, other securitization products, and other mortgage-related guarantees, but excluding those underlying our guarantees of HFA bonds.

Multifamily new business activity - Represents loan purchases, issuances of other mortgage-related guarantees, and issuances of other securitization products for which we have not previously purchased the underlying loans.

Net worth (deficit) - The amount by which our total assets exceed (or are less than) our total liabilities as reflected on our consolidated balance sheets prepared in conformity with GAAP.

Net worth sweep dividend, Net Worth Amount, and Capital Reserve Amount - For each quarter from January 1, 2013 through and including December 31, 2017, the dividend payment on the senior preferred stock will be the amount, if any, by which our Net Worth Amount at the end of the immediately preceding fiscal quarter, less the applicable Capital Reserve Amount, exceeds zero. The term Net Worth Amount is defined as the total assets of Freddie Mac (excluding Treasury's commitment and any unfunded amounts thereof), less our total liabilities (excluding any obligation in respect of capital stock), in each case as reflected on our consolidated balance sheets prepared in conformity with GAAP. If the calculation of the dividend payment for a quarter does not exceed zero, then no dividend shall accrue or be payable for that

Glossary

quarter. The applicable Capital Reserve Amount was \$1.2 billion for 2016, is \$600 million for 2017, and declines to zero on January 1, 2018. For each quarter beginning January 1, 2018, the dividend payment will be the amount, if any, by which our Net Worth Amount at the end of the immediately preceding fiscal quarter exceeds zero.

Non-accrual loan - A loan for which we are not accruing interest income. We place loans on non-accrual status when we believe collectability of principal and interest in full is not reasonably assured, which generally occurs when a loan is three monthly payments past due, unless the loan is well secured and in the process of collection based upon an individual loan assessment.

NYSE - New York Stock Exchange

OAS - Option-adjusted spread - An estimate of the incremental yield spread between a particular financial instrument (e.g., a security, loan or derivative contract) and a benchmark yield curve (e.g., LIBOR or agency or U.S. Treasury securities). This includes consideration of potential variability in the instrument's cash flows resulting from any options embedded in the instrument, such as prepayment options. When the OAS on a given asset widens, the fair value of that asset will typically decline, all other market factors being equal. The opposite is true when the OAS on a given asset tightens.

Option ARM loan - Loans that permit a variety of repayment options, including minimum, interest-only, fully amortizing 30-year and fully amortizing 15-year payments. The minimum payment alternative for option ARM loans allows the borrower to make monthly payments that may be less than the interest accrued for the period. The unpaid interest is added to the principal balance of the loan, known as negative amortization. For our non-agency mortgage-related securities that are backed by option ARM loans, we categorize securities as option ARM if the securities were identified as such based on information provided to us when we entered into these transactions. We have not identified option ARM securities as either subprime or Alt-A securities.

Original LTV Ratio - A credit measure for loans, calculated as the UPB of the loan divided by the lesser of the appraised value of the property at the time of loan origination or the borrower's purchase price. Second liens not owned or guaranteed by us are excluded from the LTV ratio calculation. The existence of a second-lien loan reduces the borrower's equity in the home and, therefore, can increase the risk of default and the amount of the gross loss if a default occurs.

OTC - Over-the-counter

OTCQB - A marketplace, operated by the OTC Markets Group Inc., for OTC-traded U.S. companies that are registered and current in their reporting with the SEC or a U.S. banking or insurance regulator.

Other Investments and Cash Portfolio - Consists of: (i) the Liquidity and Contingency Operating Portfolio; (ii) cash and other investments held by consolidated trusts; (iii) collateral pledged by derivative and other counterparties; (iv) investments in unsecured agency debt; and (v) advances to lenders.

PCs - Participation Certificates - Single-class pass-through securities that we issue and guarantee as part of a securitization transaction. Typically we purchase loans from sellers, place a pool of loans into a PC trust and issue PCs from that trust. The PCs are generally transferred to the seller of the loans in consideration of the loans or are sold to third-party investors or retained by us if we purchased the loans for cash.

Pension Plan - The Federal Home Loan Mortgage Corporation Employees' Pension Plan

Glossary

Performing loan - A loan where the borrower is less than three monthly payments past due, and not in the process of foreclosure. Conversely, a non-performing loan is one where the borrower is three months or more past due or is in the process of foreclosure. A reperforming loan is a loan that was previously classified as non-performing, but the borrower subsequently made payments such that the loan returns to less than three months past due.

PMVS - Portfolio Market Value Sensitivity - One of our primary interest-rate risk measures. PMVS measures are estimates of the amount of average potential pre-tax loss in the market value of our net assets due to parallel (PMVS-L) and non-parallel (PMVS-YC) changes in LIBOR.

Primary mortgage market - The market where lenders originate loans by lending funds to borrowers. We do not lend money directly to homeowners and do not participate in this market.

Purchase Agreement / Senior Preferred Stock Purchase Agreement - An agreement the Conservator, acting on our behalf, entered into with Treasury on September 7, 2008, relating to Treasury's purchase of senior preferred stock, which was subsequently amended and restated on September 26, 2008 and further amended on May 6, 2009, December 24, 2009, and August 17, 2012.

Recorded investment - The dollar amount of a loan recorded on our consolidated balance sheets, excluding any allowance, such as the allowance for loan losses, but including direct write-downs of the investment. Recorded investment excludes accrued interest income.

Recoveries of charge-offs - Recoveries of charge-offs primarily result from foreclosure alternatives and REO acquisitions on loans where a share of default risk has been assumed by mortgage insurers, servicers, or third parties through certain credit enhancements, or we received a reimbursement of our losses from a seller/servicer associated with a repurchase request on a loan that experienced a foreclosure transfer or a foreclosure alternative.

Reform Act - The Federal Housing Finance Regulatory Reform Act of 2008, which, among other things, amended the GSE Act by establishing a single regulator, FHFA, for Freddie Mac, Fannie Mae, and the FHLBs.

REIT - Real estate investment trust

Relief refinance loan - A single-family loan delivered to us for purchase or guarantee that meets the criteria of the Freddie Mac Relief Refinance Mortgagesm initiative. Part of this initiative is our implementation of HARP for our loans, and relief refinance options are also available for certain non-HARP loans. Although HARP is targeted at borrowers with current LTV ratios above 80%, our initiative also allows borrowers with LTV ratios of 80% and below to participate.

REMIC - Real Estate Mortgage Investment Conduit - A type of multiclass mortgage-related security that divides the cash flows (principal and interest) of the underlying mortgage-related assets into two or more classes that meet the investment criteria and portfolio needs of different investors.

REO - Real estate owned - Real estate which we have acquired through foreclosure or through a deed in lieu of foreclosure.

RMBS - Residential mortgage-backed security - A security backed by loans on one-to-four family residential real estate.

Glossary

RSU - Restricted stock unit

S&P - Standard & Poor's

SB Certificates - Structured pass-through certificates backed primarily by recently originated small balance multifamily loans purchased by Freddie Mac.

SCR debt note - Structured Credit Risk debt notes - A debt security where the principal balance is subject to the performance of a reference pool of multifamily loans guaranteed by Freddie Mac.

SEC - U.S. Securities and Exchange Commission

Secondary mortgage market - A market consisting of institutions engaged in buying and selling loans in the form of whole loans (i.e., loans that have not been securitized) and mortgage-related securities. We participate in the secondary mortgage market by issuing guaranteed mortgage-related securities, principally PCs, and by purchasing loans and mortgage-related securities for investment.

Senior preferred stock - The shares of Variable Liquidation Preference Senior Preferred Stock issued to Treasury under the Purchase Agreement.

Seriously delinquent or SDQ - Single-family loans that are three monthly payments or more past due or in the process of foreclosure as reported to us by our servicers.

SERP - The Federal Home Loan Mortgage Corporation Supplemental Executive Retirement Plan

Short sale - An alternative to foreclosure consisting of a sale of a mortgaged property in which the homeowner sells the home at market value and the lender accepts proceeds (sometimes together with an additional payment or promissory note from the borrower) that are less than the outstanding loan indebtedness in full satisfaction of the loan.

Short-term debt - Other debt due within one year based on the original contractual maturity of the debt instrument.

Our short-term debt issuances include discount notes and Reference Bills[®] securities.

Single-family credit guarantee portfolio - Consists of unsecuritized single-family loans, single-family loans held by consolidated trusts, single-family loans underlying non-consolidated resecuritization products, single-family loans covered by long-term standby commitments, and certain mortgage-related securities not issued by us that we guarantee that are collateralized by single-family loans. Excludes our resecuritizations of Ginnie Mae Certificates because these guarantees do not expose us to meaningful amounts of credit risk due to the credit enhancement provided on them by the U.S. government.

Single-family loan - A loan secured by a property containing four or fewer residential dwelling units.

STACR debt note - Structured Agency Credit Risk debt note - A debt security where the principal balance is subject to the performance of a reference pool of single-family loans owned or guaranteed by Freddie Mac.

Step-rate modified loan - A term that we generally use to refer to our HAMP loans that have provisions for reduced interest rates that remain fixed for the first five years and then increase over a period of time to a market rate.

Stripped Giant PCs - Multiclass securities that are formed by resecuritizing previously issued PCs or

Glossary

Giant PCs and issuing principal-only and interest-only securities backed by the cash flows from the underlying collateral.

Subprime - Participants in the mortgage market may characterize single-family loans, based upon their overall credit quality at the time of origination, generally considering them to be prime or subprime. Subprime generally refers to the credit risk classification of a loan. There is no universally accepted definition of subprime. The subprime segment of the mortgage market primarily serves borrowers with poorer credit payment histories and such loans typically have a mix of credit characteristics that indicate a higher likelihood of default and higher loss severities than prime loans. Such characteristics might include, among other factors, a combination of high LTV ratios, low credit scores or originations using lower underwriting standards, such as limited or no documentation of a borrower's income. While we have not historically characterized the loans in our single-family credit guarantee portfolio as either prime or subprime, we monitor the amount of loans we have guaranteed with characteristics that indicate a higher degree of credit risk. Certain security collateral underlying our other securitization products has been identified as subprime based on information provided to Freddie Mac when the transactions were entered into. We also categorize our investments in non-agency mortgage-related securities as subprime if they were identified as such based on information provided to us when we entered into these transactions.

SVP - Senior Vice President

Swaption - An option contract to enter into an interest-rate swap. In exchange for an option premium, a buyer obtains the right but not the obligation to enter into a specified swap agreement with the issuer on a specified future date.

Target TDC - Target total direct compensation

TBA - To be announced

TDR - Troubled debt restructuring - A restructuring of a debt constitutes a TDR if the creditor for economic or legal reasons related to the debtor's financial difficulties grants a concession to the debtor that it would not otherwise consider.

Thrift/401(k) Plan - The Federal Home Loan Mortgage Corporation Thrift/401(k) Savings Plan

Total mortgage portfolio - Includes loans and mortgage-related securities held on our consolidated balance sheets as well as our non-consolidated issued and guaranteed single-class and multiclass securities, and other mortgage-related guarantees issued to third parties.

Total other comprehensive income (loss) (or other comprehensive income (loss)) - Consists of the after-tax changes in the unrealized gains and losses on available-for-sale securities, the effective portion of derivatives accounted for as cash flow hedge relationships, and defined benefit plans.

Treasury - U.S. Department of the Treasury

UPB - Unpaid principal balance - Loan UPB amounts in this report have not been reduced by charge-offs recognized prior to the loan being subject to a foreclosure transfer, deed in lieu of foreclosure, or short sale transaction.

USDA - U.S. Department of Agriculture

Glossary

VA - U.S. Department of Veterans Affairs

Variation margin - Payments we make to or receive from a derivatives clearinghouse based on the change in fair value of a derivative instrument. Variation margin is typically transferred within one business day.

VIE - Variable Interest Entity - A VIE is an entity that has a total equity investment at risk that is not sufficient to finance its activities without additional subordinated financial support provided by another party, or where the group of equity holders does not have: (i) the ability to make significant decisions about the entity's activities; (ii) the obligation to absorb the entity's expected losses; or (iii) the right to receive the entity's expected residual returns.

Warrant - Refers to the warrant we issued to Treasury on September 7, 2008 pursuant to the Purchase Agreement. The warrant provides Treasury the ability to purchase, for a nominal price, shares of our common stock equal to 79.9% of the total number of shares of Freddie Mac common stock outstanding on a fully diluted basis on the date of exercise.

Workforce housing - Multifamily housing that is affordable to the majority of low to middle income households.

Workout, or loan workout - A workout is either a home retention action, which is either a loan modification, repayment plan, or forbearance agreement, or a foreclosure alternative, which is either a short sale or a deed in lieu of foreclosure.

XBRL - eXtensible Business Reporting Language

Yield curve - A graphical display of the relationship between yields and maturity dates for bonds of the same credit quality. The slope of the yield curve is an important factor in determining the level of net interest yield on a new mortgage asset, both initially and over time. For example, if a mortgage asset is purchased when the yield curve is inverted (i.e., short-term interest rates higher than long-term interest rates), our net interest yield on the asset will tend to be lower initially and then increase over time. Likewise, if a mortgage asset is purchased when the yield curve is steep (i.e., short-term interest rates lower than long-term interest rates), our net interest yield on the asset will tend to be higher initially and then decrease over time.
