PRESENTATION OF FINANCIAL INFORMATION		

Companhia Energética de Minas Gerais CEMIG is a *sociedade de economia mista* (a state-controlled mixed capital company) organized and existing with limited liability under the laws of the Federative Republic of Brazil, or Brazil. References in this annual report to CEMIG, we or the Company are to Companhia Energética de Minas Gerais CEMIG and its consolidated subsidiaries, except when the reference is specifically to Companhia Energética de Minas Gerais CEMIG (parent company only) or the context otherwise requires. References to the *real*, *reais* or R\$ are to Brazilian *reais* (plural) and the Brazilian *real* (singular), the official currency of Brazil, and references to U.S. dollars, dollars or US\$ are to United States dollars.

We maintain our books and records in *reais*. We prepare our financial statements in accordance with accounting practices adopted in Brazil, including the principles that are established primarily through Law No. 6,404 of December 15, 1976, Law No. 9,457 of May 5, 1997 and Law No. 10,303 of October 31, 2001, which we refer to collectively as the Brazilian Corporate Law. For purposes of this annual report, we have presented, and in future reports to be filed with the United States Securities and Exchange Commission, or the Commission, we intend to present, our consolidated financial statements and other financial information in *reais* in accordance with accounting principles generally accepted in the United States, or U.S. GAAP. For purposes of this annual report we prepared balance sheets as of December 31, 2005 and 2004 and the related statements of operations and comprehensive income, cash flows and changes in shareholders' equity for the years ended December 31, 2005, 2004 and 2003, in *reais* all in accordance with U.S. GAAP. Deloitte Touche Tohmatsu Auditores Independentes has audited our consolidated financial statements at December 31, 2005 and 2004 and for each of the three years ended December 31, 2005, 2004 and 2003.

From and after January 1, 1998, Brazil ceased to be considered a highly inflationary economy under U.S. GAAP and we have not restated financial information to reflect the effects of inflation as from that date. Therefore, for subsequent periods and dates, our financial statements and other financial data are presented in nominal *reais* and do not reflect effects of inflation. See Note 2(b) to our consolidated financial statements.

This annual report contains translations of certain *real* amounts into U.S. dollars at specified rates solely for the convenience of the reader. Unless otherwise indicated, such U.S. dollar amounts have been translated from *reais* at an exchange rate of R\$2.3340 to US\$1.00, the noon buying rate in New York City for cable transfers in *reais* as certified for customs purposes by the Federal Reserve Bank of New York, or the noon buying rate, as of December 30, 2005. The *real* has historically experienced high volatility. See Item 3. Key Information Exchange Rates for additional information regarding exchange rates. We cannot guarantee that U.S. dollars can be converted into *reais*, or that *reais* can be converted into U.S. dollars, at the above rate or at any other rate.

MARKET POSITION AND OTHER INFORMATION

The information contained in this annual report regarding our market position is, unless otherwise indicated, presented for the twelve-month period ended December 31, 2005 and is based on, or derived from, reports issued by the *Agência Nacional de Energia Elétrica* (The Brazilian National Electric Energy Agency), or ANEEL.

Certain terms are defined the first time they are used in this annual report. As used herein, all references to GW and GWh are to gigawatts and gigawatt hours, respectively, references to MW and MWh are to megawatts and megawatt-hours, respectively, and references to kW and kWh are to kilowatts and kilowatt-hours, respectively.

References in this annual report to the common shares and preferred shares are to our common shares and preferred shares, respectively. References to American Depositary Shares or ADSs are to American Depositary Shares, each representing 1,000 preferred shares. The ADSs are evidenced by American Depositary Receipts, or ADRs, issued pursuant to a Second Amended and Restated Deposit Agreement, dated as of August 10, 2001, by and among us, Citibank, N.A., as depositary, and the holders and beneficial owners of ADSs evidenced by ADRs issued thereunder.

FORWARD-LOOKING INFORMATION

This annual report includes forward-looking statements, principally in Item 3. Key Information and Item 11. Quantitative and Qualitative Disclosures about Market Risk. We have based these forward-looking statements largely on our current expectations and projections about future events and financial trends affecting our business. These forward-looking statements are subject to risks, uncertainties and assumptions relating to, among other things:

- general economic, political and business conditions, principally in Latin America, Brazil and the State of Minas Gerais, Brazil, or Minas Gerais;
- inflation and changes in currency exchange rates;
- enforcement of legal regulation in Brazil's electricity sector;
- changes in volumes and patterns of consumer electricity usage;
- competitive conditions in Brazil's electricity generation, transmission and distribution markets;
- our expectations and estimates concerning future financial performance, financing plans and the effects of competition;
- our level of debt;
- the likelihood that we will receive payment in connection with accounts receivable;
- trends in the electricity generation, transmission and distribution industry in Brazil and Minas Gerais;
- changes in rainfall and the water levels in the reservoirs used to run our hydroelectric power generation facilities;
- our capital expenditure plans;
- our ability to serve our consumers on a satisfactory basis;

- existing and future governmental regulation as to electricity rates, electricity usage, competition in our concession area and other matters;
- our ability to integrate the operations of companies we may acquire;
- existing and future policies of the Federal Government of Brazil, which we refer to as the Federal Government;
- existing and future policies of the government of Minas Gerais, which we refer to as the State Government, including policies affecting its investment in us and the plans of the State Government for future expansion of electricity generation, transmission and distribution in Minas Gerais; and
- other risk factors as set forth under Item 3. Key Information Risk Factors.

The forward-looking statements referred to above also include information with respect to our capacity expansion projects that are under way and those that we are currently evaluating. In addition to the above risks and uncertainties, our potential expansion projects involve engineering, construction, regulatory and other significant risks, which may:

- delay or prevent successful completion of one or more projects;
- increase the costs of projects; and
- result in the failure of facilities to operate or generate income in accordance with our expectations.

The words believe, may, will, estimate, continue, anticipate, intend, expect and similar words are intended to identify forward-looking statements. We undertake no obligation to update publicly or revise any forward-looking statements because of new information, future events or otherwise. In light of these risks and uncertainties, the forward-looking information, events and circumstances discussed in this annual report might not occur. Our actual results and performance could differ substantially from those anticipated in our forward-looking statements.

Neither our independent auditors, nor any other independent accountants, have compiled, examined or performed any procedures with respect to the forward-looking financial information contained herein, nor have they expressed any opinion or any other form of assurance on such information or its achievability, and they assume no responsibility for, and disclaim any association with, such forward-looking financial information.

PART I

Item 1. Identity of Directors, Senior Management and Advisers

Not applicable.

Item 2. Offer Statistics and Expected Timetable

Not applicable.

Item 3. Key Information

Selected Consolidated Financial Data

The following tables present our selected consolidated financial and operating information in U.S. GAAP as of the dates and for each of the periods indicated. You should read the following information together with our consolidated financial statements, including the notes thereto, included in this annual report and the information set forth in Item 5. Operating and Financial Review and Prospects.

The selected consolidated financial data as of December 31, 2005 and 2004 and for each of the three years ended December 31, 2005, 2004 and 2003 have been derived from our audited consolidated financial statements and the notes thereto included elsewhere in this annual report. The selected consolidated data as of December 31, 2003, 2002 and 2001 and for the each of the two years ended December 31, 2002 and 2001 has been derived from our audited consolidated financial statements and notes thereto, which are not included in this annual report.

U.S. dollar amounts in the table below are presented for your convenience. Unless otherwise indicated, these U.S. dollar amounts have been translated from *reais* at R\$2.3340 per US\$1.00, the noon buying rate as of December 30, 2005. The *real* has historically experienced high volatility. We cannot guarantee that U.S. dollars can be converted into *reais*, or that *reais* can be converted into U.S. dollars, at the above rate or at any other rate. On June 28, 2006, the noon buying rate for *reais* was R\$2.2275 per US\$1.00. See Exchange Rates.

Exchange Rates

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

Prior to March 14, 2005 there were two principal foreign exchange markets in Brazil - the commercial rate exchange market and the floating rate exchange market. Most trade and financial foreign-exchange transactions were carried out on the commercial rate exchange market. The floating market rate generally applied to transactions to which the commercial market rate did not apply. Prior to February 1999, the exchange rate in each market was established independently, resulting in different rates during some periods. As of February 1, 1999, the Central

7

Bank of Brazil (Banco Central do Brazil), or the Central Bank, placed the commercial rate exchange market and the floating rate exchange market under identical operational limits, which led to a convergence in the pricing and liquidity of both markets.

On March 4, 2005, the National Monetary Council (Conselho Monetário Nacional) enacted Resolution No. 3,265 that, effective March 14, 2005, consolidated the two foreign exchange markets into one foreign exchange market for the general purpose of making foreign exchange transactions simpler and more efficient. All foreign exchange transactions are now carried out in this single foreign exchange market through financial institutions authorized to operate in the market.

Brazilian law provides that, whenever there (i) is a significant imbalance in Brazil's balance of payments, or (ii) are major reasons to foresee a significant imbalance in Brazil's balance of payments, temporary restrictions may be imposed on remittances of foreign capital abroad. In the past, the Central Bank has intervened occasionally to control unstable movements in foreign exchange rates. We cannot predict whether the Central Bank or the Brazilian government will continue to let the *real* float freely or will intervene in the exchange rate market through a currency band system or otherwise. The *real* may depreciate or appreciate against the U.S. dollar and other currencies substantially in the future. Exchange rate fluctuations may affect the U.S. dollar amounts received by the holders of ADSs. We will make any distributions with respect to our preferred shares in *reais* and the depositary will convert these distributions into U.S. dollars for payment to the holders of ADSs. Exchange rate fluctuations may also affect the U.S. dollar equivalent of the *real* price of the preferred shares on the Brazilian stock exchange where they are traded. Exchange rate fluctuations may also affect our results of operations. See Risk Factors Exchange rate instability may adversely affect our business, results of operations and financial condition and the market price of the ADSs and our preferred shares.

The table below sets forth, for the periods indicated, the low, high, average and period-end noon buying rates for *reais*, expressed in *reais* per US\$1.00.

Month	Reais per US\$1.00			
	Low	High	Average	Period-end
December 2005	2.1695	2.3755	2.2809	2.3340
January 2006	2.2045	2.3320	2.2666	2.2094
February 2006	2.1160	2.2250	2.1587	2.1180
March 2006	2.1030	2.2233	2.1528	2.1720
April 2006	2.0900	2.1485	2.1281	2.0900
May 2006	2.0549	2.3580	2.1697	2.3007
June 2006 (through June 28, 2006)	2.2320	2.2920	2.2614	2.2335

Year Ended December 31,	Reais per US\$1.00			
	Low	High	Average	Period-end
2001	1.9380	2.7880	2.3527	2.3120
2002	2.2730	3.9450	2.9213	3.5400
2003	2.8230	3.6640	3.0757	2.8950
2004	2.6510	3.2085	2.9262	2.6550
2005	2.1695	2.7755	2.4352	2.3340

Risk Factors

You should consider the following risks as well as the other information in this annual report in evaluating an investment in our company.

Risks Relating to CEMIG

We are controlled by the State Government which may have interests that are different from yours.

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

As our controlling shareholder, the government of the State of Minas Gerais exercises substantial influence on the management and orientation of the business of CEMIG. It is not possible to analyze the impact and effects this may have on us or our results of operations. The government of the State of Minas Gerais currently holds approximately 51% of our common shares and, consequently, has the right to the majority of votes in decisions of the General Meetings of our Shareholders, and can (i) elect the majority of the members of the Board of Directors of CEMIG, and (ii) decide matters requiring approval by a specific majority of our shareholders, including transactions with related parties, shareholding reorganizations and the date and payment of any dividends.

The operations of CEMIG have had and will continue to have an important impact on the commercial and industrial development of the State of Minas Gerais, and on its social conditions. In the past, the State Government has used, and may use in the future, its status as our controlling shareholder to decide that we should engage in certain activities and make certain investments aimed, principally, to promote its political, economic or social objectives and not necessarily to meet the objective of improving our business and/or operational results.

We are subject to extensive governmental legislation and regulation.

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

The Brazilian Federal Government has been implementing policies that have a far-reaching impact on the Brazilian power industry and, in particular, the electricity industry. As part of the restructuring of the industry, Federal Law No. 10,848 of March 15, 2004, (Law No. 10,848/04 or the New Industry Model Law) introduced a new regulatory framework for the Brazilian electricity industry.

Law No. 10,848/04 and Decree 5,163/04 of July 30, 2004 governing the purchase and sale of electricity under the New Industry Model Law remain subject to the implementation of resolutions by ANEEL. Moreover, the constitutionality of Law No. 10,848/04 is currently being challenged before the Brazilian Supreme Court. The Brazilian Supreme Court has not yet reached a final decision and, therefore, Law No. 10,848/04 is currently in force. If all or a portion of Law No. 10,848/04 is considered to be unconstitutional by the Brazilian Supreme Court, all or a portion of the regulatory scheme introduced by Law No. 10,848/04 may not come into effect, generating uncertainty as to how and when the Federal Government will be able to introduce changes to the electricity industry. Accordingly, we cannot now evaluate the impact of the new regulation to be issued by ANEEL or the impact that a decision on the constitutionality of Law No. 10,848/04 would have on our future activities, results of operations and financial condition.

New rules for the sale of electric energy and market conditions may affect our generation sale prices.

Under the New Industry Model Law, our generation company must sell our electric energy that was previously sold under self-dealing initial supply contracts between our generating and distribution companies with regulated prices (the Initial Contracts) directly in a regulated market through public auctions conducted by ANEEL or in the Free Contracting Environment (the ACL). We also expect to have additional power capacity from new developments yet to be operational that we are planning to sell under the auctions to be held under the Regulated Contracting Environment (the ACR) or in the ACL as described in this annual report. Legislation allows distributors that contract with our generation company under the ACR to reduce the quantity of energy contracted under these contracts until a certain limit, exposing the generation company to the risk of failing to contract this reduced energy with adequate prices.

Contracts in the ACL with consumers allowed to purchase energy directly from generating companies or energy traders (generally consumers with demand equal to or greater than 3 MW, and referred to as Free

Consumers) will also give such consumers the flexibility to purchase less energy from us than was originally contracted for by such consumers, which may adversely impact our business, results of operations and financial condition.

If we are unable to sell all of our energy capacity in the auctions or in the ACL, we may be forced to sell it at significantly lower prices in the spot market and our revenues and our results of operations may be adversely affected.

ANEEL has substantial discretion to establish the rates we charge to captive consumers and the rates we charge to Free Consumers for using our distribution system. Such rates are determined pursuant to concession contracts entered with ANEEL and in accordance with ANEEL's regulatory decision-making authority.

Concession agreements and Brazilian law establish a price cap mechanism that permits three types of rate adjustments: (1) the annual adjustment; (2) the periodic revision; and (3) the extraordinary revision. We are entitled to apply each year for the annual adjustment, which is designed to offset some of the effects of inflation on rates and pass through to consumers certain changes in our cost structure that are beyond our control, such as the cost of electricity we purchase from certain sources and certain other regulatory charges, including charges for the use of transmission and distribution facilities. In addition, ANEEL carries out a periodic revision every five years that is aimed at identifying variations in our costs as well as setting a factor based on our operational efficiency that will be applied against the index of our ongoing annual rate adjustments, the intended effect of which is to reward the good management of our costs while sharing any related gains with our consumers. We are also entitled to request an extraordinary revision of our rates if unpredictable events significantly alter our cost structure. The periodic revision and extraordinary revision are subject to a certain degree of ANEEL's discretion.

Although our concession agreement provides that the company must remain in economic and financial balance, we cannot assure you that ANEEL will establish rates that will adequately compensate us and that our revenues and results of operations will not be adversely affected by such rates. In addition, to the extent any of these adjustments are not granted by ANEEL in a timely manner, our business, results of operations and financial condition may be adversely affected.

We may not be able to collect the full amount of a significant receivable from the State Government.

We have an account receivable from the State Government, referred to as the CRC Account, that totaled R\$2,942 million as of December 31, 2004. The agreement between CEMIG and the State Government that governs the CRC Account receivable is referred to as the CRC Account Agreement. Historically we have had difficulty collecting amounts due from the State Government under the CRC Account. On January 23, 2006, CEMIG and the State Government executed a Fourth Amendment to the CRC Account Agreement, under which the State Government agreed to pay its debt in 61 semi-annual payments and irrevocably authorized us to retain 65% of the dividends and interest on capital due to it through June 30, 2035 to offset amounts due under the CRC Account Agreement. However, no assurance can be given that we will be able to pay dividends sufficient to allow us to retain dividends due to the State Government in the amount necessary to cover the repayment of the full amount of the principal and interest due under the CRC Account. See Item 10. Additional Information Material Contracts CRC Account Agreement .

We are strictly liable for any damages resulting from inadequate rendering of electricity services, and our contracted insurance policies may not fully cover such damages.

Under Brazilian law, we are strictly liable for direct and indirect damages resulting from the inadequate rendering of electricity transmission and distribution services. In addition, the damages caused to end consumers as a result of interruptions or disturbances arising from the generation, transmission or distribution systems, whenever these interruptions or disturbances are not attributed to an identifiable member of the Operador Nacional do Sistema (National System Operator, or ONS) or the ONS itself, shall be shared among generation, distribution and transmission companies. Until a final criteria is defined, the liability for such damages shall be shared in the proportion of 35.7% to distribution agents, 28.6% to transmission agents and 35.7% to generation agents. Therefore, our business, results of operations and financial condition may be adversely affected.

We are subject to rules and limits applied to levels of public sector borrowing and to restrictions on the use of certain funds we raise, which could prevent us from obtaining financing.

As a state controlled company, we are subject to rules and limits on the level of credit applicable to the public sector issued by the National Monetary Council and by the Central Bank. These rules set certain parameters and conditions for financial institutions to be able to offer credit to public sector entities. Thus, if our operations do not fall within these parameters and conditions, we may have difficulty in obtaining financing from Brazilian financial institutions, which could create difficulties in the implementation of our investment plan or in refinancing our financial obligations. Brazilian legislation also establishes that a state-controlled company, in general, may only use proceeds of external or local transactions (debt, including bonds) to refinance financial obligations for which there is no other source of repayment. As a result of these regulations, our capacity to incur debt is again limited, and this could negatively affect the implementation of our investment plan or the refinancing of our obligations.

There are contractual restrictions on our capacity to incur debt.

We are subject to certain restrictions on our ability to incur debt due to covenants set forth in our loan agreements. In the event of our non-compliance with any such covenants in our loan agreements, the total principal, future interest and any penalties due under these agreements may become immediately due and payable. Early maturity of our obligations could adversely affect our financial condition especially in light of cross default provisions in several of our loan and financing contracts. The existence of limitations on our indebtedness could prevent us from borrowing to finance our operations or to refinance our existing obligations which could adversely affect our business, results of operations and financial condition.

We could be penalized by ANEEL for failing to comply with the terms of our concession agreements, which could result in fines, other penalties and, depending on the severity of non-compliance, expropriation of the concession agreements.

We conduct our generation, transmission and distribution activities pursuant to concession agreements entered into with the Federal Government through ANEEL. ANEEL may impose penalties on us if we fail to comply with any provision of the concession agreements, including compliance with the established quality standards. Depending on the severity of the non-compliance, these penalties could include:

- fines per breach of up to 2.0% of the concessionaire's revenues in the year ended immediately prior to the date of the relevant breach;
- injunctions related to the construction of new facilities and equipment;
- restrictions on the operation of existing facilities and equipment;
- temporary suspension from participating in bidding processes for new concessions;
- intervention by ANEEL in the management of the concessionaire in breach; and
- termination of the concession.

In addition, the Federal Government has the power to terminate any of our concessions prior to the end of the concession term in the case of bankruptcy or dissolution, or by means of expropriation for reasons related to the public interest.

We cannot assure you that ANEEL will not impose penalties or terminate our concessions in the event of a breach. Any compensation we may receive upon the termination of the concession contract may not be sufficient to compensate us for the full value of certain investments. If any of our concession agreements are terminated and we are at fault, the effective amount of compensation could be reduced through fines or other penalties. Termination or imposition of penalties could adversely affect our business, results of operations and financial condition.

We are uncertain as to the renewal of our concessions.

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

We carry out our generation, transmission and distribution activities pursuant to concession agreements entered into with the Federal Government. The Brazilian Constitution requires that all concessions relating to public services be awarded through a bidding process. In 1995, in an effort to implement these constitutional provisions, the Federal Government adopted certain laws and regulations, known collectively as the Concessions Law, governing bidding procedures in the electricity industry. In accordance with the Concessions Law, as modified by the New Industry Model Law, upon application by the concessionaire, existing concessions may be renewed by the Federal Government for additional periods of up to 20 years without being subject to the bidding process, provided that the concessionaire has met minimum performance standards and that the proposal is otherwise acceptable to the Federal Government.

In light of the degree of discretion granted to the Federal Government by the Concessions Law with respect to new concession contracts and the renewal of existing concessions, and given the lack of long-standing precedents with respect to the Federal Government's exercise of such discretion and interpretation and application of the Concessions Law, we cannot assure you that new concessions will be obtained or that concessions will be renewed on terms as favorable as those currently in effect. See Item 4. Information on the Company Competition Concessions and The Brazilian Power Industry Concessions in Annex A. Non-renewal of our concessions could adversely affect our business, results operations and financial condition.

The present structure of the Brazilian electricity sector is highly concentrated in hydroelectric generation, which makes it subject to certain risks.

The present structure of the Brazilian electricity sector is highly concentrated in hydroelectric generation, which mak

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

The Brazilian electricity industry is highly concentrated in hydroelectric generation and faces a natural limitation on its generation capacity, as hydroelectric power plants cannot generate more electricity than is made possible by the country's water resources. As a result, natural factors may affect our generating capacity, by increasing or reducing the level of reservoirs. Control of the level of reservoirs by the ONS seeks to optimize the level of water available for hydroelectric generation in each of the power plants associated with the respective reservoirs. In this context, the ONS could, for example, prevent a generating plant located at the beginning of a river from increasing its throughput of water, if this increase were to negatively affect other plants further downstream. In the same way, the ONS may decide to increase thermal generation and reduce hydro generation in order to conserve water in the reservoirs.

Shortages and/or rationing due to bad hydrological conditions not covered by the Energy Reallocation Mechanism (as described in The Brazilian Power Industry Energy Reallocation Mechanism Annex A) could result in increased costs and reduced cash flow. In addition, if the new energy auctions under the new industry model fail to result in an expansion in electricity generation capacity to adequate levels to meet growing demand, rationing measures could be implemented. Any limitation on our electricity generation capacity could adversely affect our business, results of operations and financial condition.

Delays in the expansion of our facilities may significantly increase our costs.

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

We are currently engaged in the construction of additional hydroelectric plants and the evaluation of other potential expansion projects. Our ability to complete an expansion project on time, within a determined budget and without adverse economic effects, is subject to a number of risks. For instance:

- we may experience problems in the construction phase of an expansion project;
- we may face regulatory or legal challenges that delay the initial operation date of an expansion project;
- our new or modified facilities may not operate at designated capacity or may cost more to operate than we expect;
- we may not be able to obtain adequate working capital to finance our expansion projects; and

12

- we may encounter environmental issues and claims by the local population during power plant construction.

If we experience these or other problems relating to the expansion of our electricity generation, transmission or distribution capacity, our ability to sell electric energy in amounts in line with our projections may be harmed and we may be exposed to increased costs. Consequently, we may fail to produce the revenues we anticipate in connection with such expansion projects.

Impositions and restrictions by the environmental agencies could cause additional costs for us.

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

Our operations related to the generation, transmission and distribution of electricity as well as to the distribution of natural gas, are subject to various federal, state and municipal laws and regulations, and also to numerous requirements relating to the protection of health and the environment.

Non-compliance with environmental laws and regulations could, independently of the obligation to redress any damages that may be caused, result in criminal and administrative sanctions being applied. Based on Brazilian legislation, criminal penalties such as restricting rights, and even imprisonment, may be applied to individuals (including managers of legal entities), and penalties such as fines, restriction of rights or community service may be applied to legal entities. With respect to administrative sanctions, depending on the circumstances, the environmental authorities may impose warnings and fines, require partial or total suspension of activities; suspend or restrict tax benefits or cancel or suspend financing lines from governmental lending establishments as well as prohibit the entity from contracting with governmental agencies, companies and authorities. Any of these events could adversely affect our business, results of operations or financial condition.

Our level of consumer default could adversely affect our business, results of operations and financial condition.

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

As of December 31, 2005, our total past due receivables from final consumers were approximately R\$547 million, corresponding to 7.1% of our net revenue for 2005. As of December 31, 2005, our allowance for doubtful accounts was R\$214 million. Approximately 15.4% of the past due receivables were owed by entities in the public sector. We may be unable to recover debts from several municipalities and other defaulting clients. If these debts are not totally or partially recovered, we will experience an adverse impact on our business, results of operations and financial condition. In addition, any consumer defaults in excess of our allowance for doubtful accounts could have an adverse effect on our business, results of operations and financial condition.

We may not be able to complete our proposed capital expenditure program.

We plan to spend approximately R\$4.0 billion during the period from 2006 through 2010 on the construction of new power installations and the refurbishment and maintenance of existing power plants and transmission and distribution systems. Our ability to carry out this capital expenditure program is dependent upon a number of factors, including our ability to charge adequate rates for our services, our access to domestic and international capital markets and a variety of operating and other factors. In addition, our plans to expand our generation and transmission capacity are subject to the competitive bidding process governed by the Concessions Law. We cannot give you any assurance that we will have the financial resources to complete this program.

Our ability to distribute dividends is subject to limitations.

Whether or not you receive a dividend depends on the amount of the mandatory distribution required under our bylaws, whether our financial condition permits us to distribute dividends under Brazilian law, and whether our shareholders, on the recommendation of our Board of Directors acting in its discretion, determine that our financial condition warrants a suspension of the distribution of dividends.

Because Companhia Energética de Minas Gerais CEMIG is a holding company with no revenue-producing operations other than those of its operating subsidiaries, we will be able to distribute dividends to shareholders only if Companhia Energética de Minas Gerais CEMIG receives dividends or other cash distributions

from its operating subsidiaries. The dividends that our regulated subsidiaries may distribute to us depend on our subsidiaries generating a sufficient profit in any given fiscal year. Dividends can be paid out from accumulated profits from previous years or from capital reserves. Such profits are calculated and paid in accordance with Brazilian Corporate Law and the provisions of the bylaws of each of our regulated subsidiaries. Any capital reduction that would enable our shareholders to receive distributions would be subject to the prior approval of ANEEL.

Our investment in the telecommunications sector may not have the return we expect.

Empresa de Infovias S.A., our telecommunications subsidiary, began operations in January 2001 and its subsidiary, WAY TV Belo Horizonte S.A., or WAY TV, began operations in 2002. In light of the need for additional investments in our telecommunications subsidiaries in order to take advantage of the opportunities in voice over internet protocol services, our Board of Directors decided on December 22, 2005 to authorize the sale, through an auction on a stock exchange, of all of Empresa de Infovias S.A.'s equity interest in WAY TV. A minimum sale amount will be set based on the estimated market value of 100% of WAY TV of R\$80 million. The sale is conditional upon the sale of 100% of the shares of WAY TV by all its shareholders, through an auction on the Bovespa stock exchange. On June 14, 2006 the auction notice was published and the auction is expected to take place at Bovespa on July 27, 2006. We also perform periodic evaluations of Empresa de Infovias S.A. and WAY TV, in order to determine their ability to run their businesses on a stand-alone and profitable basis, as well as to determine the need for an impairment reserve for this investment. Although currently available projections do not indicate a need for an impairment reserve, we can not assure that such an impairment reserve will not be required or that our investment in the telecommunications sector will not have an adverse impact on our financial condition.

We operate without general third party liability and catastrophe insurance policies.

We do not have general third party liability insurance covering accidents and have not asked for bids relating to this type of insurance. In addition, we have not asked for bids for, nor do we carry, insurance coverage for major catastrophes affecting our facilities such as earthquakes and floods, for business interruption risk or for operating system failures. Accidents or catastrophic events may adversely affect our business, results of operations or financial condition. See Item 10. Additional Information Insurance.

We will need short-term funds to pay and refinance our obligations.

On December 31, 2005, our total debt was R\$4,826 million, of which R\$985 million matures in 2006. We will need funds in the short term to pay and refinance these obligations. For this reason, we intend to refinance our debt profile in 2006 to lengthen maturities. We plan to raise approximately R\$2,3 billion in 2006.

We cannot assure you that we will be able to raise these funds prior to the maturities of our current debt obligations, in the amounts necessary or at competitive rates. If the refinancing does not successfully take place, we may not be able to pay our debt. On the other hand, if we simply pay our debt without refinancing, our investment program could suffer significant delays, which could adversely affect our business, results of operations or financial condition.

We may incur losses in connection with pending litigation and arbitration.

We are currently defending several legal proceedings relating to civil, administrative, environmental, tax and other claims. These claims involve a wide range of issues and seek substantial amounts of money. Several individual disputes account for a significant part of the total amount of claims against us. Our consolidated financial statements include reserves relating to litigation and arbitration claims totaling R\$263 million as of December 31, 2005 (excluding labor-related matters) for probable and reasonably estimable losses and expenses we may incur in connection with pending litigation. In the event that our reserves for litigation and arbitration claims prove to be insufficient, the payment of litigation claims in an amount in excess of the reserved amounts could have an adverse effect on our business, results of operations or financial condition.

Labor-related legal claims, strikes and/or work stoppages could have an adverse impact on our business.

Substantially all of our employees are covered by Brazilian labor legislation applicable to private sector employees. We have entered into a collective bargaining agreement with the labor unions representing most of these employees.

We are currently defending a number of labor-related claims brought by our employees that generally relate to overtime and hazardous occupation compensation. As of December 31, 2005, these employees were seeking, in the aggregate, approximately R\$141.9 million in compensation, and at that date we had accrued a liability of approximately R\$114 million for losses we expect from these claims. For a more detailed discussion of labor-related proceedings, see Item 8. Financial Information Legal Proceedings Labor and Pension Fund Obligations.

We have not experienced any material labor unrest during the last five years. Nevertheless, our operations might be interrupted by a labor disturbance in the future. We do not carry insurance for losses incurred as a result of business interruptions caused by labor action. In the event of a strike, we might face an immediate loss of revenue.

Contract disputes, strikes, legal claims or other types of conflicts relating to our employees or the labor unions that represent them may have an adverse effect on our business, results of operations or financial condition and our ability to maintain ordinary service levels or otherwise operate our business in the manner that our consumers expect.

Foreign shareholders may not be able to enforce judgments against our directors or officers.

All of our directors and officers named in this annual report reside in Brazil. Substantially all of our assets, as well as the assets of these persons, are located in Brazil. As a result, it may not be possible for foreign shareholders to effect service of process within the United States or other jurisdictions outside Brazil upon these persons, attach their assets, or enforce against them or us in United States courts, or the courts of other jurisdictions outside Brazil, judgments predicated upon the civil liability provisions of the securities laws of the United States or the laws of such other jurisdictions. See Item 10. Additional Information Difficulties of Enforcing Civil Liabilities Against Non-U.S. Persons.

Effective control of CEMIG is subject to judicial challenge.

In connection with the purchase in 1997 of approximately 33% of our common shares by Southern Electric Brasil Participações Ltda., or Southern, the State Government entered into a shareholders' agreement with Southern, granting Southern control over certain significant corporate decisions. In 1999, the State Government filed a lawsuit seeking to nullify the shareholders' agreement on constitutional grounds. In August 2001, after several rulings and appeals, the Minas Gerais State Court of Appeals ruled that the shareholders' agreement is null and void. In December 2003, this ruling was appealed to the Superior Tribunal de Justiça (Superior Court of Justice), which upheld the Minas Gerais State Court of Appeals ruling. The decision of the Superior Court of Justice is subject to request for amendment and therefore the effective control of CEMIG remains subject to further judicial challenge in the Supreme Court (Supremo Tribunal Federal). As a result, Southern could retroactively challenge the legitimacy of certain decisions taken by our Board of Directors while these legal proceedings are pending. See Item 8. Financial Information Legal Proceedings Shareholders' Agreement and Item 10. Additional Information Material Contracts Shareholders' Agreement, dated June 18, 1997, between the State Government and Southern.

Risks Relating to Brazil

The Federal Government exercises significant influence on the Brazilian economy. Political and economic conditions can have a direct impact on our business.

The Federal Government intervenes frequently in the country's economy and occasionally makes significant changes in monetary, fiscal and regulatory policy. Our business, results of operations or financial condition may be adversely affected by changes in government policies, and also by:

15

- fluctuations in the exchange rate;
- inflation;
- instability of prices;
- changes in interest rates;
- fiscal policy;
- other political, diplomatic, social and economic developments which may affect Brazil or the international markets;
- control on capital flow; and
- limits on foreign trade.

Measures by the Brazilian government to maintain economic stability, and also speculation on any future acts of the government, can generate uncertainties in the Brazilian economy and increased volatility in the domestic capital markets, adversely affecting our business, results of operations or financial condition. If the political and economic situations deteriorate, we may face increased costs.

A presidential election will be held in Brazil in October 2006. The President of Brazil has considerable power to determine governmental policies and actions that relate to the Brazilian economy and, consequently, affect the operations and financial performance of businesses, such as our company. The run-up to the presidential election may result in changes to existing governmental policies, and the post-election administration even if the President of Brazil is reelected may seek to implement new policies. We cannot assure you that the policies of the current or any new administration would not have an adverse effect on our business, results of operations or financial condition.

Inflation and certain governmental measures to curb inflation may contribute significantly to economic uncertainty in Brazil and could harm our business and the market value of the ADSs and our preferred shares.

Brazil has in the past experienced extremely high rates of inflation. Inflation, and some of the Brazilian government's measures taken in an attempt to curb inflation, have had significant negative effects on the Brazilian economy. Since the introduction of the *real* in 1994, Brazil's inflation rate has been substantially lower than in previous periods. However, inflationary pressures persist, and action taken in an effort to curb inflation, coupled with speculation about possible future governmental actions, have contributed to economic uncertainty in Brazil and heightened volatility in the Brazilian securities market. According to the *Índice Nacional de Preços ao Consumidor Amplo*, or IPCA, a consumer price index, the Brazilian annual inflation rates were 9.3%, 7.6% and 5.7% in 2003, 2004 and 2005, respectively. No assurance can be given that inflation will remain at these levels.

Future measures taken by the Brazilian government, including interest rate increases, intervention in the foreign exchange market and actions to adjust or fix the value of the *real* may trigger increases in inflation, and consequently, have adverse economic impacts on our business, results of operations and financial condition. If Brazil experiences high inflation in the future, we may not be able to adjust the rates we charge our consumers to offset the effects of inflation on our cost structure.

Substantially all of our cash operating expenses are denominated in *reais* and tend to increase with Brazilian inflation. Inflationary pressures may also hinder our ability to access foreign financial markets or may lead to further government intervention in the economy, including the introduction of government policies that could harm our business, results of operations and financial condition or adversely affect the market value of our preferred shares and as a result, our ADSs.

Exchange rate instability may adversely affect our business, results of operations and financial condition and the market price of the ADSs and our preferred shares.

The Brazilian currency has been devalued periodically during the last four decades. Throughout this period, the Brazilian government has implemented various economic plans and utilized a number of exchange rate policies, including sudden devaluations, periodic mini-devaluations during which the frequency of adjustments has ranged from daily to monthly, floating exchange rate systems, exchange controls and dual exchange rate markets. Although over long periods depreciation of the Brazilian currency generally has correlated with the rate of inflation in Brazil, devaluation over shorter periods has resulted in significant fluctuations in the exchange rate between the Brazilian currency and the U.S. dollar and currencies of other countries.

In 2002, the *real* depreciated 52.3% against the U.S. dollar, due in part to political uncertainty surrounding the Brazilian presidential elections and the global economic slowdown. Although the *real* appreciated 18.25% against the U.S. dollar in 2003, 8.1% in 2004 and a further 12.1% in 2005, no assurance can be given that the *real* will not depreciate against the U.S. dollar again. On June 28, 2006, the noon buying U.S. dollar/*real* exchange rate was R\$2.2275 per U.S.\$1.00. See Exchange Rates .

As of December 31, 2005, approximately 16.1% of our total indebtedness was denominated in currencies other than the *real* (83.82% in U.S. dollars). If the U.S. dollar/*real* exchange rate appreciates, our financing expenses will increase and our results of operations and financial condition could be adversely affected. Although 40.8% of our debt denominated in foreign currencies is subject to currency swaps that convert our foreign currency obligations into *reais* in order mitigate this risk.

We also have entered into certain power purchase agreements that are dollar denominated, we cannot assure you that these hedging arrangements and the proceeds from our dollar-denominated purchase agreements will be sufficient to avoid an adverse effect on our business, results of operations and financial condition in case of unfavorable exchange rate fluctuations. See Item 11. Quantitative and Qualitative Disclosures about Market Risk Exchange Rate Risk for information about our foreign exchange risk hedging policy.

Changes in economic and market conditions in other countries, especially Latin American and emerging market countries, may adversely affect our business, results of operations and financial condition, as well as the market price of our preferred shares and ADSs.

The market value of securities of Brazilian companies is affected to varying degrees by economic and markets conditions in other countries, including other Latin American and emerging market countries. Although economic conditions in such countries may differ significantly from economic conditions in Brazil, investors' reactions to developments in these other countries may have an adverse effect on the market value of securities of Brazilian issuers. Crises in other emerging market countries may diminish investor interest in securities of Brazilian issuers, including us. This could also make it more difficult for us access the capital markets and finance our operations in the future on acceptable terms or at all. Due to the characteristics of the Brazilian electricity industry (which requires significant investments in operating assets) and due to our financing needs, if access to the capital and credit markets is limited, we could face difficulties in completing our investment plan and refinancing our obligations which could adversely affect our business, results of operations and financial condition.

Political and economic instability in Brazil may affect us.

In 2005, allegations of unethical or illegal conduct were made with respect to certain figures in the Brazilian government, legislators and party officials. The allegations, which are currently under investigation by the Brazilian congress, relate to alleged violations of rules relating to election laws and campaign financing, allegations of influencing officials and other allegedly corrupt behavior. Several members of both the Brazilian government and the political party of the current president (including the president's chief of staff) have resigned as a result. If the allegations or investigations lead to a materially adverse perception of Brazil among investors, the trading value of our preferred shares and ADSs may decline and our ability to access international markets would suffer. In addition, any political instability resulting from the allegations or investigations could cause us to re-evaluate our strategies if the Brazilian economy suffers as a result.

Risks Relating to the Preferred Shares and ADSs

The preferred shares and ADSs generally do not have voting rights.

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

In accordance with the Brazilian Corporate Law and our by-laws, holders of the preferred shares, and, by extension, holders of the ADSs, are not entitled to vote at our shareholders' meetings, except in very limited circumstances. Holders of ADSs may also encounter difficulties in the exercise of certain rights, including limited voting rights. Under some circumstances, such as failure to provide the depositary with voting materials on a timely basis, holders of ADSs may not be able to vote by instructing the depositary.

Exchange controls and restrictions on remittances abroad may adversely affect holders of ADSs.

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

You may be adversely affected by the imposition of restrictions on the remittance to foreign investors of the proceeds of their investments in Brazil and the conversion of *reais* into foreign currencies. The Federal Government imposed remittance restrictions for approximately three months in late 1989 and early 1990. Restrictions like these would hinder or prevent the conversion of dividends, distributions or the proceeds from any sale of preferred shares, as the case may be, from *reais* into U.S. dollars and the remittance of U.S. dollars abroad. We cannot assure you that the Federal Government will not take similar measures in the future. See Item 3. Key Information Exchange Rates.

Changes in Brazilian tax laws may have an adverse impact on the taxes applicable to a disposition of our preferred shares or ADSs.

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

Law No. 10,833 of December 29, 2003 provides that the disposition of assets located in Brazil by a non-resident to either a Brazilian resident or a non-resident is subject to taxation in Brazil, regardless of whether the disposition occurs outside or within Brazil. This provision results in the imposition of income tax on the gains arising from a disposition of our preferred shares by a non-resident of Brazil to another non-resident of Brazil. There is no judicial guidance as to the application of Law No. 10,833 and, accordingly, we are unable to predict whether Brazilian courts may decide that it applies to dispositions of our ADSs between non-residents of Brazil. However, in the event that the disposition of assets is interpreted to include a disposition of our ADSs, this tax law would accordingly result in the imposition of withholding taxes on the disposition of our ADSs by a non-resident of Brazil to another non-resident of Brazil.

Exchanging ADSs for the underlying preferred shares may have unfavorable consequences.

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

The Brazilian custodian for the preferred shares must obtain an electronic certificate of registration from the Central Bank to remit U.S. dollars abroad for payments of dividends, any other cash distributions, or upon the disposition of the shares and sales proceeds related thereto. If you decide to exchange your ADSs for the underlying preferred shares, you will be entitled to continue to rely, for five business days from the date of the exchange, on the depository bank's electronic certificate of registration. Thereafter, you may not be able to obtain and remit U.S. dollars abroad upon the disposition of the preferred shares, or distributions relating to the preferred shares, unless you obtain your own certificate of registration under Resolution No. 2,689 of January 26, 2000, of the Brazilian *Conselho Monetário Nacional*, or National Monetary Council, which entitles foreign investors to buy and sell on the Brazilian stock exchanges. If you do not obtain this certificate, you will be subject to less favorable tax treatment on gains with respect to the preferred shares. If you attempt to obtain your own certificate of registration, you may incur expenses or suffer significant delays in the application process. Obtaining a certificate of registration involves generating significant documentation, including completing and filing various electronic forms with the Central Bank and the *Comissão de Valores Mobiliários* (the Brazilian securities regulatory body), or the CVM. In order to complete this process, the investor will usually need to have a consultant or attorney who has expertise in Central Bank and CVM regulations. Any delay in obtaining this certificate could adversely impact your ability to receive dividends or distributions relating to the preferred shares abroad or the return of your capital in a timely manner. If you decide to exchange your preferred shares back into ADSs once you have registered your investment in the preferred shares, you may deposit your preferred shares with the custodian and rely on the depository bank's certificate of registration, subject to certain conditions. See Item 10. Additional Information Taxation Brazilian Tax Considerations.

We cannot assure you that the depositary bank's certificate of registration or any certificate of foreign capital registration obtained by you may not be affected by future legislative or other regulatory changes, or that additional Brazilian restrictions applicable to you, the disposition of the underlying preferred shares or the repatriation of the proceeds from disposition could not be imposed in the future.

The relative volatility and illiquidity of the Brazilian securities market may adversely affect our shareholders.

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

Investing in Latin American securities, such as the preferred shares or the ADSs, involves a higher degree of risk than investing in securities of issuers from countries with more stable political and economic environments and such investments are generally considered speculative in nature. These investments are subject to certain economic and political risks, such as, among others:

- changes to the regulatory, tax, economic and political environment that may affect the ability of investors to receive payment, in whole or in part, with respect to their investments; and
- restrictions on foreign investment and on repatriation of capital invested.

The Brazilian securities market is substantially smaller, less liquid, more concentrated and more volatile than major securities markets in the United States. This may substantially limit your ability to sell the preferred shares underlying your ADSs at a price and time at which you wish to do so. The *Bolsa de Valores de São Paulo* – *BOVESPA*, or São Paulo Stock Exchange, the only stock exchange in Brazil upon which shares are traded, had a market capitalization of approximately US\$482 billion as of December 31, 2005 and an average daily trading volume of approximately US\$558 million for 2005. In comparison, the New York Stock Exchange, Inc., or the NYSE, had a market capitalization of US\$21.4 trillion as of December 31, 2005 and an average monthly trading volume of approximately US\$1,177.1 billion for 2005.

There is also significantly greater concentration in the Brazilian securities market than in major securities markets in the United States. The ten largest companies in terms of market capitalization represented approximately 51.5% of the aggregate market capitalization of the São Paulo Stock Exchange as of December 31, 2005. The top ten stocks in terms of trading volume accounted for approximately 51.3% of all shares traded on the São Paulo Stock Exchange in 2005. See Item 9. The Offer and Listing Trading Market.

Shareholders may receive reduced dividend payments if our net income does not reach certain levels.

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

Under the Brazilian Corporate Law and our by-laws, we must pay our shareholders a mandatory distribution equal to at least 50% of our adjusted net income for the preceding fiscal year, based on our financial statements prepared in accordance with the accounting practices adopted in Brazil, with holders of preferred shares having priority of payment. In addition, our by-laws require us to pay holders of our preferred shares annual dividends equal to the greater of 10% of the par value of our shares or 3% of the book value of our shares. If we do not have net income or our net income is insufficient in a fiscal year, our management may recommend at the annual shareholders' meeting in respect of that year that the payment of the mandatory dividend should not be made. However, under the guarantee of the State Government, our controlling shareholder, a minimum annual dividend of 6% of par value would in any event be payable to all holders of common shares and preferred shares issued up to August 5, 2004 (other than public and governmental holders) in the event that mandatory distributions were not made for a fiscal year. See Item 8. Financial Information - Dividend Policy and Payments for a more detailed discussion.

Holders of the ADSs and holders of preferred shares have less well-defined shareholders' rights than holders of shares in U.S. companies.

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

Our corporate governance, disclosure requirements and accounting standards applicable to Brazilian companies are governed by our by-laws and by the Brazilian Corporate Law, which may differ from the legal principles that would apply if we were incorporated in a jurisdiction in the United States, such as Delaware or New York, or in other jurisdictions outside Brazil. Your rights to protect your interests relative to actions taken by our

19

Board of Directors or by our controlling shareholder may be less well defined and less well supported by established rules and judicial precedents than under the laws of certain jurisdictions outside Brazil.

Although Brazilian law imposes restrictions on insider trading and price manipulation, the Brazilian securities market is not as highly regulated and supervised as the U.S. securities market or markets in certain other jurisdictions. In addition, rules and policies against self-dealing and regarding the preservation of shareholder interests are less developed and enforced in Brazil than in the United States, potentially disadvantaging holders of the preferred shares and ADSs.

Shares eligible for future sale may adversely affect the market price of the preferred shares and the ADSs.

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

Sales of a substantial number of shares or the perception that such sales could take place could adversely affect the prevailing market price of the preferred shares and ADSs. As a consequence of the issuance of new shares or sales by existing shareholders, the market price of the preferred shares and, by extension, the ADSs, may decrease significantly.

You may not be able to exercise preemptive rights with respect to the preferred shares.

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

You may not be able to exercise the preemptive rights relating to the preferred shares underlying your ADSs unless a registration statement under the United States Securities Act of 1933, as amended, or the Securities Act, is effective with respect to those rights or an exemption from the registration requirements of the Securities Act is available. We are not obligated to file a registration statement with respect to the shares relating to these preemptive rights, and we cannot assure you that we will file any such registration statement. Unless we file a registration statement or an exemption from registration applies, you may receive only the net proceeds from the sale of your preemptive rights by the depositary or, if the preemptive rights cannot be sold, they will be allowed to lapse.

Item 4. Information on the Company

Organization and Historical Background

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

We were organized in Minas Gerais, Brazil on May 22, 1952 as a *sociedade de economia mista* (a state-controlled mixed capital company) with limited liability and indefinite duration, pursuant to Minas Gerais State Law No. 828 of December 14, 1951 and its implementing regulation, Minas Gerais State Decree 3,710 of February 20, 1952. Our full legal name is Companhia Energética de Minas Gerais CEMIG, but we are also known as CEMIG. Our headquarters are located at Avenida Barbacena, 1200, Belo Horizonte, Minas Gerais, Brazil. Our main telephone number is (55-31) 3299 3711.

In order to comply with legal and regulatory provisions pursuant to which we were required to unbundle our vertically integrated businesses, we have incorporated two wholly-owned subsidiaries of CEMIG Cemig Geração e Transmissão S.A., referred to as Cemig Generation and Transmission, and Cemig Distribuição S.A., referred to as Cemig Distribution. Cemig Generation and Transmission and Cemig Distribution were created to carry out the activities of generation and transmission, and distribution, respectively.

On August 4, 2004 the State of Minas Gerais issued Law 15,290 governing the corporate restructuring of CEMIG. Subsequently, ANEEL, by Resolution 407/2004 dated December 23, 2004, approved our proposal for transfer of the concessions, assets and liabilities to the two new companies created, with CEMIG being maintained as a holding company. On December 30, 2004, an extraordinary general shareholders meeting of CEMIG authorized the transfer of assets and liabilities of CEMIG to the two wholly-owned subsidiaries Cemig Generation and Transmission and Cemig Distribution. On the same date, extraordinary general shareholders meetings of Cemig Generation and Transmission and of Cemig Distribution were held and approved capital increases of such subsidiaries. Pursuant to such shareholders meetings, CEMIG subscribed newly issued shares of each such subsidiary, which shares were paid in with assets of CEMIG. As a consequence of this process, the assets and liabilities of the generation and transmission operations and distribution operations were transferred to Cemig

Generation and Transmission and Cemig Distribution, respectively. Cemig Generation and Transmission and Cemig Distribution began their operations on January 1, 2005.

The following chart shows our corporate structure as of June 28, 2006:

Subsidiary	Ownership (%)
1. CEMIG Distribuição S.A	100.00
2. CEMIG Geração e Transmissão S.A.	100.00
3. CEMIG Capim Branco Energia S.A.	100.00
4. Rosal Energia S.A	100.00
5. CEMIG PCH S.A.	100.00

Subsidiary	Ownership (%)
6. Horizontes Energia S.A.	100.00
7. Sá Carvalho S.A.	100.00
8. Central Termelétrica de Cogeração S.A.	100.00
9. Usina Térmica Barreiro S.A.	100.00
10. Usina Térmica Ipatinga S.A.	100.00
11. Central Hidrelétrica Pai Joaquim S.A.	100.00
12. Companhia Transleste de Transmissão	25.00
13. Companhia Transirapé de Transmissão	24.50
14. Companhia de Transmissão Centroeste de Minas	51.00
15. Companhia Transudeste de Transmissão	24.00
16. Transchile Charrúa Transmisión S.A.	49.00
17. CEMIG Trading S.A.	100.00
18. Companhia de Gás de Minas Gerais S. A.	55.19
19. Efficientia S.A.	100.00
20. Rio Minas Energia Participações S.A.	25.00
21. Empresa Paraense de Transmissão de Energia S.A.	25.00
22. Empresa Norte de Transmissão de Energia S.A.	18.00
23. Empresa Regional de Transmissão de Energia S.A.	18.00
24. Empresa Amazonense de Transmissão de Energia S.A.	25.00
25. Empresa Catarinense de Transmissão de Energia S.A.	7.50
26. Empresa de Infovias S.A.	99.94
27. WAY TV Belo Horizonte S.A	69.25 (through Empresa de Infovias S.A.)

Rio Minas Energia Participações S.A. (RME) is a company formed by us together with Andrade Gutierrez Concessões S.A., J.L.A. Participações S.A. and Pactual Energia Participações S.A., in which each partner has a 25% interest. On March 28, 2006, RME signed an agreement (the EDFI Agreement) with EDF International S.A. (EDFI) to purchase from EDFI 88.84% of its shares of LIGHT S.A. (LIGHT), which corresponds to 79.57% of the total registered capital of LIGHT. LIGHT is the holding company which controls, among other companies, the electricity distribution company Light Serviços de Eletricidade S.A., which serves 3.8 million consumers (6.4% of the Brazilian market) in 31 municipalities of the State of Rio de Janeiro, and the generating company Light Energia S.A., which has hydroelectric power plants with aggregate generating capacity of 852 MW. Under the EDFI Agreement, RME will pay US\$319,809,871.91 for EDFI s shares of LIGHT being sold. The total value of the assets to be acquired is approximately US\$1,758,000,000. Closing of the transaction is subject to certain conditions as set forth in the EDFI Agreement including, among others, approval of the transfer of control of Light S.A. being given by ANEEL, the Commission des Participations et des Transferts of France, the Brazilian Development Bank (BNDES) and by other creditors. Additionally, in accordance with Brazilian Corporate Law, RME will launch an offer to buy the remaining floating shares of Light. The transaction will also be submitted to the Brazilian monopolies authority, CADE (Economic Defense Council), in accordance with Law 8884/94.

On May 4, 2006, CEMIG, in partnership with MDU Brasil Ltda. (MDU) and Brascan Brasil Ltda. (Brascan), signed certain share purchase and sale agreements (the Agreements) with Schahin Holding S.A. (Schahin), as seller, and Schahin Engenharia S.A. and Schahin Energia S.A., as guarantors, in connection with the acquisition of Schahin s 50% interest in electricity transmission concessions Empresa Amazonense de Transmissão de Energia S.A. EATE, Empresa Paraense de Transmissão de Energia S.A. ETEP, Empresa Norte de Transmissão de Energia S.A. ENTE and Empresa Regional de Transmissão de Energia S.A. ERTE, and Schahin s 40% interest in Empresa Catarinense de Transmissão de Energia S.A. ECTE. CEMIG, MDU and Brascan agreed to pay R\$656,000,000 for all of Schahin s holdings in the above-mentioned companies. Closing of this transaction is subject to compliance with certain conditions established in the Agreements, including approval of the transfer of shares of the above-mentioned companies by ANEEL, BNDES, and other regulatory agencies. The Brazilian monopolies authority, CADE, will also be notified of the transaction in accordance with Law 8884/94. The following table shows the percentage ownership of the transmission lines by CEMIG, MDU and Brascan upon the closing of this transaction:

	EATE	ETEP	ECTE	ERTE	ENTE
CEMIG	25.00%	25.00%	7.50%	18.00%	18.00%
MDU			25.00%	14.00%	14.00%
Brascan	25.00%	25.00%	7.50%	18.00%	18.00%

Through our subsidiaries, we believe we are the largest integrated concessionaire of electric power generation, transmission and distribution in Brazil. We operate our generation, transmission and distribution businesses pursuant to concession agreements with the Federal Government. Until 1997, we had individual concessions for each of our generation facilities and for various regions within our distribution area. On July 10, 1997, we entered into new concession agreements with ANEEL that consolidated our various generation concessions into one agreement and our several distribution concessions into four distribution concessions covering the northern, southern, eastern and western regions of Minas Gerais. On the same date, we also entered into a new concession agreement with ANEEL with respect to our transmission operations. In connection with the unbundling, our concession for distribution services was transferred to Cemig Distribution on September 16, 2005, and our concession for transmission services was transferred to Cemig Generation and Transmission on September 16, 2005. Our generation concession will also be transferred to Cemig Generation and Transmission, although we cannot assure you of the timing of that transfer as it will be determined by ANEEL.

At December 31, 2005, we generated electricity at 49 hydroelectric plants, four thermoelectric plants and one wind farm, and had a total installed capacity of 6,113 MW. At the same date, we owned and operated 3,040 miles of transmission lines and 245,714 miles of distribution lines. We hold concessions to distribute electricity in 96.7% of the territory of Minas Gerais.

The Brazilian electricity industry has undergone extensive regulatory restructuring as a result of which our electric generation, transmission and distribution businesses have been and will continue to be subjected to increased competition. For a more detailed description of regulatory changes that affect our business, see *The Brazilian Power Industry* in Annex A.

Pursuant to Minas Gerais state legislation, our by-laws were amended in 1984 to allow us to participate in an expanded range of activities relating to the energy sector through separate companies. In 1986, we created *Companhia de Gás de Minas Gerais* - GASMIG, or Gasmig, as a subsidiary to undertake the distribution of natural gas through pipelines located in Minas Gerais. In December 2004, we sold a 40% stake in Gasmig to Petrobras Gás S.A. - Gaspetro, or Gaspetro, and TSS Participações S.A., or TSS, both of which are wholly-owned subsidiaries of Petrobras S.A., for approximately R\$154 million. See *Item 10. Additional Information* - *Material Contracts* - *Gasmig Shareholders Agreement and Association Agreement*.

Additional Minas Gerais state legislative changes enacted in 1997 authorized us to participate in non-energy activities that can be carried out using our operating assets. In January 1999, we incorporated *Empresa de Infovias S.A.*, a telecommunication service provider, as a joint venture with *AES Força Empreendimentos Ltda.*, part of the AES Corporation Group. In 2002, we purchased *AES Força Empreendimentos Ltda.*'s interest in *Empresa de Infovias S.A.* We also provide consulting services and have entered into consulting agreements with electricity companies in several countries.

Brazil's Energy Market

General

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

Traditionally, in the Brazilian electricity sector, generation, transmission and distribution activities are separated, but conducted by a small number of companies that had always been the property of either the Federal Government, or of governments of Brazil's individual states. In the last ten years, several companies controlled by the state were privatized, in an effort to increase efficiency and competition. The previous administration stated its objective to privatize the state-controlled part of the electricity sector, but the present administration has stopped this process, and has implemented a new industry model for the Brazilian electricity sector as set forth in Law No. 10,848, of March 15, 2004.

23

The New Industry Model

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

The main objectives of the new industry model are to guarantee: (i) security of supply; and (ii) reasonableness of rates. To guarantee supply, the new model creates the requirements (a) that distributors must contract their entire load, and will be responsible for making realistic projections of demand requirements and (b) that building new hydroelectric and thermal plants will be determined in ways that best balance security of supply and reasonableness of rates. The means of achieving reasonableness of rates include the following: (a) all purchases of electricity by distributors will occur by auction, based on the lowest-rate criterion; (b) contracting is to be through the Pool system, as described below; and (c) contracting of load will be separated into two types of transactions, both of which will always be by auction: (i) contracting of the electricity of the new plants, which will target expansion; and (ii) contracting of the electricity of the existing plants, which will target the existing electricity demand.

The new industry model also creates two environments for the contracting of electricity supply: (i) the Regulated Contracting Environment (the ACR), for contracting of electricity to meet the demands of distributors supplying captive consumers under regulated rates; and (ii) the Free Contracting Environment (the ACL), for contracting of energy to supply Free Consumers, through freely negotiated contracts. Distributors will be allowed to operate only in the regulated environment, while generators may operate in both, maintaining their competitive characteristics.

Expansion of the sector will be executed by the Federal Government through the Ministry of Mines and Energy (the MME). Two new institutional agents have been created: (i) the Energy Research Company (the EPE), a state-controlled company responsible for execution of the planning of expansion of generation and transmission; and (ii) the Electricity Trading Chamber (the CCEE), a private company, which is the successor of the Wholesale Energy Market, (formerly the MAE), and is responsible for management of the joint contracting of electricity to meet the needs of regulated consumers (the Pool system).

Regulation under the new industry model

The Brazilian electricity industry is regulated and supervised by ANEEL. After the enactment of Law No. 10,848, ANEEL's primary responsibility is to regulate and supervise the power industry in line with the policy to be dictated by the MME and to respond to matters which are delegated to it by the Federal Government and by the MME. ANEEL's current responsibilities include, among others, (i) administering concessions for electricity generation, transmission and distribution activities, including the approval of electricity rates, (ii) enacting regulations for the electricity industry, (iii) implementing and regulating the exploitation of hydroelectric resources, (iv) promoting the public bidding process for new concessions, (v) settling administrative disputes among electricity generation entities and electricity purchasers and (vi) defining the criteria and methodology for the determination of distribution and transmission rates.

Rates

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

Electric energy rates in Brazil are set by ANEEL, which has the authority to readjust and review rates in accordance with the provisions under the relevant concession contracts. Each distribution company's concession contract provides for an annual rate adjustment (reajuste anual). In general, Parcel A costs are fully passed through to consumers. Parcel A costs are the portion of the regular rate calculation formula, which provides for the recovery of certain costs that are not within the control of the distribution company. Parcel B costs, which are costs that are under the control of the distributors, are restated for inflation in accordance with the General Market Price Index (Índice Geral de Preços do Mercado), or IGP-M index.

As part of our annual rate adjustment for 2006, ANEEL, through Resolution No. 310 dated as of April 6, 2006, established an average rate adjustment of 16.19%. This adjustment includes a component of 1.45% to recoup revenue we did not achieve in 2004 due to the lower rates under re-issued Resolution No. 83. On April 6, 2005, through Resolution No. 87, ANEEL established an average rate increase of 23.88%. This adjustment included a component of 1.67% representing an increase to recoup revenue we did not achieve in 2004 due to the lower rates under re-issued Resolution No. 83.

The average annual rate adjustment includes components such as the inter-year variation of fixed costs (CVA) and other financial adjustments, which compensate for changes in the company's costs that were not previously taken into account in the tariff we charged the year before. Since this inter-year variation is to reimburse changes in costs that took place in the previous year, it should not be part of next year's annual adjustment. As a result, our authorized average annual rate for 2006 increase was 16.19%, but the actual increase in the rates we charge from our end consumers during the same period was 6.70%.

Concessionaires of electricity distribution are also entitled to periodic revisions (*revisão periódica*) every few years. These revisions are aimed at (i) assuring necessary revenues to cover efficient Parcel B operational costs and adequate compensation for investments deemed essential for the services within the scope of each such company's concession and (ii) determining the X factor, which is calculated based on expected productivity gains from increases in scale, evaluations by consumers (verified by ANEEL) and labor costs.

On April 8, 2003, we went through our first periodic rate revision and ANEEL established a 31.53% temporary average increase to be applied to our rates. On April 4, 2005, through Resolution No. 71, ANEEL reconsidered such decision and established a 44.41% average increase to be applied to our rates. In order to guarantee low rates to our end consumers, ANEEL only allowed us to reposition our rates up to 31.53% retroactive to April 8, 2003. ANEEL has also indicated that the rate adjustments expected for the years from 2004 to 2007 would be adjusted to recover the difference between the average rate increase of 44.41% we were entitled to and the 31.53% rate adjustment that was authorized. Our rate adjustments on April 8, 2005 and April 8, 2006 each included a recovery of a portion of the difference between the average rate increase of 44.41% we were entitled to by the periodic revision and the rate adjustment of 31.53% that was authorized.

In addition, concessionaires of electricity distribution are entitled to extraordinary review of rates (*revisão extraordinária*), on a case by case basis, to ensure their financial equilibrium and compensate them for unpredictable costs, including taxes, that significantly change their cost structure.

ANEEL has also issued regulations that govern the access to the distribution and transmission facilities and establish the rate for use of the local distribution grid, or Distribution Usage Rates (TUSD), and the rate for the use of the interconnected transmission grid, or Transmission Usage Rates (TUST). The rates to be paid by distribution companies, generators and Free Consumers for use of the interconnected power system are reviewed annually. The review of the TUST takes into account the revenues that are permitted of transmission concessionaires pursuant to their concession contracts. For more detailed information regarding the rate-setting structure in Brazil, see The Brazilian Power Industry Rates for the Use of the Distribution and Transmission Systems in Annex A.

Concessions

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

Under the Brazilian Constitution, companies seeking to construct or operate a generation, transmission or distribution facility in Brazil are required to apply for an authorization or a concession from the Federal Government which is generally granted through a public bidding process conducted by ANEEL. Concessions grant exclusive rights to generate electricity in a particular plant, and to transmit or distribute electricity in a particular area for a specified period of time, generally 35 years for new generation concessions, 30 years for new transmission and distribution concessions, and 20 years for the renewal of existing concessions. For more detailed information regarding concessions, see The Brazilian Power Industry Concessions in Annex A.

Land Acquisition

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

The concessions granted to us by the Federal Government do not include a grant of the land upon which the plants are located. Electricity concessionaires in Brazil typically have to negotiate with the individual landowners to obtain needed land. However, in the event that a concessionaire is unable to obtain needed land in this way, such land may be condemned for the concessionaire's use through specific legislation. In cases of governmental condemnation, the concessionaires may have to participate in negotiations relating to the amount of compensation with landowners and the resettlement of communities to other locations. Our resettlement policy has generally resulted in the settlement of condemnation disputes.

25

Unbundling under the New Industry Model

Law No. 10,848/04, which provides for the new industry model, prohibits holders of distribution concessions, permissions or authorizations that operate in the interconnected power system from: (i) performing activities related to generation, transmission and sale of energy to Free Consumers at freely negotiated prices; (ii) holding interest in other companies, directly or indirectly, other than (a) in companies whose corporate purpose is to manage financial resources necessary for rendering of services or (b) as provided in the concession contracts; or (iii) performing activities outside their corporate purpose, except as provided by law and the concession contracts. These restrictions do not apply to distributors: (i) supplying energy to isolated electricity systems; (ii) supplying their own market, provided such market has a demand of less than 500 GWh/year and the totality of energy produced is destined to such market; or (iii) when funding, investing or borrowing funds destined to the distributor itself or a company of the same economic group, subject to prior agreement by ANEEL. Holders of generation concessions or authorizations that operate in the interconnected system may not be affiliates or controlling shareholders of companies which are responsible for distribution activities.

In order to comply with regulatory provisions pursuant to which we were required to unbundle our vertically integrated businesses, we have incorporated two wholly-owned subsidiaries of CEMIG – Cemig Generation and Transmission, and Cemig Distribution – created to carry out the activities of electricity generation and transmission, and distribution, respectively. For more detailed information regarding these entities and the corporate restructuring of CEMIG, see Organization and Historical Background.

Capital Expenditures

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

Capital expenditures for the years ended December 31, 2005, 2004 and 2003, in millions of *reais*, are as follows:

	Year ended December 31,		
	2005	2004	2003
Acquisitions	32	10	4
Total capital expenditures under affiliates	32	10	4
Generation power projects under Property, plant and equipment	575	679	594
Transmission network expansion	48	59	97
Distribution network expansion	868	245	263
Others	20	78	75
Total capital expenditures under property, plant and equipment	1,511	1,061	1,029
Total Capital expenditures	1,543	1,071	1,033

We currently project total capital expenditures of approximately R\$1,555 million in 2006. The principal uses of these expenditures are expected to be for expansion of our distribution infrastructure and increases in our generation capacity.

Business Overview

General

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

During 2005, we are required, like other Brazilian electric utilities, to purchase electricity from Itaipu in an amount determined by the Federal Government based on our electricity sales. See [Generation and Purchase of Electric Power](#) [Purchase of Electric Power](#) [Itaipu](#). In addition, we purchase energy from other concessionaires and the interconnected power system. See [Generation and Purchase of Electric Power](#)

26

Purchase of Electric Power Interconnected Power System. We also purchase energy generated by self power producers, or SPPs, and independent power producers, or IPPs, that are located within our concession area.

The following table sets forth certain information, in GWh, pertaining to the electricity that we generated, purchased from other sources and delivered during the periods specified:

CEMIG S ELECTRIC ENERGY BALANCE

(GWh)	Year ended December 31,		
	2005	2004	2003
RESOURCES(1) (2)	52,748	45,117	51,927
Electricity generated by CEMIG(3)	30,411	26,922	27,025
Electricity generated by auto-producers	1,098	1,581	1,650
Electricity generated by Ipatinga	299	237	351
Electricity generated by Barreiro	18	72	
Electricity generated by Sá Carvalho(4)	467	468	305
Electricity generated by Horizontes(4)(5)	76	105	59
Electricity generated by Pai Joaquim(5)	16		
Electricity generated by Rosal	417		
Electricity bought from Itaipu	12,144	11,936	12,220
Electricity bought from the national grid and other companies(6)			10,317
Electricity bought from CCEE and other companies(7) (9)	7,802	3,796	
REQUIREMENTS	52,748	45,117	51,927
Electricity delivered to final consumers(8)	38,068	36,669	35,248
Electricity delivered to auto-producers	974	1,472	1,323
Electricity delivered by Ipatinga	299	237	351

Electricity delivered by Sá Carvalho(4)	472	474	305
Electricity delivered by Horizontes(4)	84	80	59
Electricity delivered by Pai Joaquim	61		
Electricity delivered by Rosal	263		
Electricity delivered to the national grid and other companies(6)		9,720	
Electricity delivered to the CCEE and other companies(7) (9)	8,355	1,798	
Losses	4,096	4,315	4,921

(1) In 2004 there was a change in the method of calculating and recording transactions in the wholesale market and with other companies, as stated in Notes 6 and 7 below. This change is responsible for the variation in the figures for sources and demand from 2003 to 2004.

(2) The restrictions related to the unbundling of generation and distribution activities under the New Industry Model Law required Cemig Distribution to buy electricity from non-affiliate third parties and required Cemig Generation and Transmission to sell its energy generated to non-affiliate third parties. Together with the increase in our own generation activities, this resulted in an increase in both sources and uses of electricity from 2004 to 2005.

(3) Discounting the losses attributed to generation and the internal consumption of the generating plants.

(4) Up to 2003, these portions referred to the total amounts of energy available and demand. Beginning in 2004, the short-term transactions on the CCEE and with other companies are included in the items Electricity bought from the CCEE and other companies and Electricity delivered to the CCEE and other companies .

- (5) For 2004, the generation by the Pai Joaquim small hydro plant was included together with Horizontes.
- (6) In previous years, this portion represented contracts and the physical interchanges between CEMIG's network and the national grid, and also optimization supply.
- (7) Beginning in 2004, this amount refers to contracts, purchases and sales of electricity under the CCEE, including the Energy Reallocation Mechanism (*Mecanismo de Realocação de Energia*).
- (8) Includes electricity delivered to consumers outside the concession area.

27

- (9) Includes Initial Contracts and bilateral contracts with other agents of the CCEE.

Generation

According to ANEEL, at December 31, 2005, we were the sixth largest electric power generation concessionaire in Brazil as measured by total installed capacity. At December 31, 2005, we generated electricity at 49 hydroelectric plants, four thermoelectric plants and one wind farm and had a total installed generation capacity of 6,113 MW, of which hydroelectric plants accounted for 5,928 MW, thermoelectric plants accounted for 184 MW and our wind farm accounted for 1 MW. Seven of our hydroelectric plants accounted for approximately 82% of our installed electric generation capacity in 2005. We supplied approximately 94% of the electricity consumed in Minas Gerais during 2005.

Transmission

We are engaged in the electric power transmission business, which consists of transporting electric power from the facilities where it is generated to the distribution networks for delivery to end users. We transport energy produced at our own generation facilities as well as energy that we purchase from Itaipu, the interconnected power system and other concessionaires. Our transmission network is comprised of power transmission lines with a voltage capacity equal to or greater than 230 kV and is part of the national transmission grid regulated by the ONS. See

The Brazilian Power Industry in Annex A. As of December 31, 2005, our transmission network in Minas Gerais consisted of 1,345 miles of 500 kV lines, 1,228 miles of 345 kV lines and 467 miles of 230 kV lines, as well as 32 substations with a total of 92 transformers and an aggregate transformation capacity of 15,393 MVA.

Distribution

We have a distribution concession in Minas Gerais that grants us rights to supply electric energy to consumers within our concession area except for consumers that may be eligible, in accordance with the legislation, to become Free Consumers (currently consumers with demand equal to or greater than 3 MW). Our concession area covers approximately 219,103 square miles, or 96.7% of the territory of the state. As of December 31, 2005, we owned and operated 245,714 miles of distribution lines, through which we supplied electricity to approximately 6.0 million consumers. At December 31, 2005, we were the largest electricity distribution concessionaire in Brazil in terms of GWh sold to end users. Of the total amount of electricity we supplied to final consumers as of December 31, 2005, 61.2% was to industrial consumers, 17.2% was to residential consumers, 9.8% was to commercial consumers and 11.8% was to rural and other consumers. In July 2005, we were once again chosen as the best electricity concessionaire in the Southeastern region of Brazil and received the 2004 IASC Award under the ANEEL Consumer Satisfaction Index. We were assessed in the category of concession holders serving more than 400,000 consumption units in the Southeastern region. In 2002, when ANEEL organized the first IASC Award, we also were the leader in this category.

Other Businesses

While our main business consists of the generation, transmission and distribution of electric power, we also engage in the following businesses: (i) distributing natural gas in Minas Gerais through our majority-owned subsidiary Gasmig; (ii) telecommunications through our consolidated subsidiary Empresa de Infovias S.A., a company created for the purpose of providing a fiber-optics and coaxial cable network installed along our transmission and distribution lines through which telecommunication services can be provided; and (iii) national and international consulting business through our subsidiary Efficientia S.A.

Revenue Sources

The following table shows the revenues attributable to each of our principal revenue sources, for the periods indicated:

	Year ended December 31,		
	2005	2004	2003
Electricity sales to final consumers	8,708	8,541	7,163
Regulatory extraordinary rate adjustment	8	89	63
Deferred rate adjustment	110	640	199
Electricity sales to the interconnected power system	237	36	56
Use of basic transmission network	1,523	245	257
Natural gas sales		420	367
Services rendered	37	29	31
Telecommunication and other	131	87	70
Total	10,754	10,087	8,206

Generation

Generation

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

The following table sets forth certain operating information concerning our electric power generation plants as of December 31, 2005:

Facility	Installed Capacity (MW)	Assured Energy(1) (average MW)	Year Commenced Operations	Installed Capacity % of Total	Date Concession Expires
Major Hydroelectric Plants					
São Simão	1,710	1,281.00	1978	28.0	January 2015
Emborcação	1,192	497.00	1982	19.5	July 2005 (9)
Nova Ponte	510	276.00	1994	8.3	July 2005 (9)
Jaguara	424	336.00	1971	6.9	August 2013
Miranda	408	202.00	1998	6.7	December 2016
Três Marias	396	239.00	1962	6.5	July 2015
Volta Grande	380	229.00	1974	6.2	February 2017
Salto Grande	102	75.00	1956	1.7	July 2015
Sá Carvalho	78	58.00	2000	(2) 1.3	December 2024
Rosal	55	30.00	2004	(2) 0.9	May 2032
Itutinga	52	28.00	1955	0.9	July 2015
Camargos	46	21.00	1960	0.8	July 2015
Porto Estrela	37	(3) 18.60	(3) 2001	0.6	July 2032
Igarapava	30.5	(4) 19.72	(4) 1999	0.5	December 2028
Funil	88	(5) 43.61	(5) 2002	1.4	December 2035
Queimado	86.6	(6) 47.85	(6) 2004	1.4	January 2033
Aimorés	161.7	(7) 19.86	(7)(8) 2005	2.6	December 2035
Pai Joaquim	23	13.91	2004	0.4	April 2032
Piau	18	8.00	1955	(2) 0.3	July 2015
Gafanhoto	14	6.68	1946	0.2	July 2015
Smaller Hydroelectric Plants	116	62.12		1.9	
Thermoelectric Plants					
Igarapé	131	103.00	(10) 1978	2.1	August 2024
Ipatinga	40		2000	(2) 0.7	December 2014
Barreiro	12.90	11.45	2004	0.2	April 2023
Formoso	0.4	0.22	1992	0.0	Indefinite
Wind Farm	1	0.30	1994	0.0	Indefinite
Total	6,113.1	3,627.32		100.0	%

(1) Assured Energy is the plant's long-term average output, as established by ANEEL in accordance with studies conducted by the ONS. Calculation of Assured Energy considers such factors as reservoir capacity and connection to other power plants. Contracts with final consumers and other concessionaires do not provide for amounts in excess of a plant's Assured Energy.

- (2) Indicates our acquisition date.
- (3) Represents our interest in the Porto Estrela plant (33.3%).
- (4) Represents our interest in the Igarapava plant (14.5%).
- (5) Represents our interest in the Funil plant (49.0%).
- (6) Represents our interest in the Queimado plant (82.50%).
- (7) Represents our interest in the Aimorés Plant (49%) .
- (8) Represents the Assured Energy of the plant operating with its reservoir partially filled. Beginning in 2006, when the reservoir is full, the Assured Energy represented by our stake in the Aimorés plant is expected to be 84.3 average MW.
- (9) A renewal request for 20 more years was made to ANEEL in September 2004. See Concessions Competition .
- (10) Represents the available energy established by the EPE.

The following tables set forth certain additional operating information pertaining to our electricity generation operations as of the dates indicated:

Voltage of Connection Lines	Circuit Length of Generation Lines in Miles (from power plants to generation substations) As of December 31,		
	2005	2004	2003
500 kV	4	4	6
345 to 230 kV	8	7	10
161 to 138 kV	43	42	6
69 to 13.8 kV	102	102	(1) 53
Total	157	155	75

	Step-Down Transformation Capacity(2) of Generation Substations As of December 31,		
	2005	2004	2003
Number of step-down substations	54	52	(1) 48
MVA	6,604	6,433	6,240

(1) We increased the circuit length of our 69 kV connection lines in 2004, because we bought the Rosal Facility and the Queimado Facility began operations.

(2) Step-down transformation capacity refers to the ability of a transformer to receive energy at a certain voltage and release it at a reduced voltage for further distribution.

Generation Assets

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

We have formed in Minas Gerais and other states of Brazil, the following subsidiaries to operate certain of our generation facilities and to hold the related concessions:

Usina Térmica Ipatinga S.A. We operate the Ipatinga thermoelectric plant through our subsidiary Usina Térmica Ipatinga S.A. This plant is an SPP installed and operated within the premises of Usinas Siderúrgicas de Minas Gerais S.A. USIMINAS, or Usiminas, a large Brazilian steel manufacturer. The plant supplies power to a large steel mill owned by Usiminas located in eastern Minas Gerais. We acquired the Ipatinga plant in 2000 for R\$90 million from Usiminas as payment for outstanding power supply debts. We have signed a power purchase agreement with Usiminas for power produced at Ipatinga. The plant currently has an installed capacity of 40 MW, generated by two units that began operating in 1984 and that use blast furnace gas as fuel.

Sá Carvalho S.A. We operate the Sá Carvalho hydroelectric power plant, located on the Piracicaba River in the municipality of Antônio Dias in the State of Minas Gerais, through our subsidiary Sá Carvalho S.A., which we acquired in 2000 for R\$87 million from Acesita S.A., or Acesita, a steel company. This acquisition was funded by an issuance of debentures by a special trust, UHESC S.A., which we are obligated to repay. On June 5, 2003, we renegotiated the interest rate applicable to 46.67% of the aggregate principal amount of these debentures for the following two year period and the remaining 53.33% was redeemed for R\$64 million.

Rosal Energia S.A. In November 2004 we bought the *Rosal* hydroelectric plant, which has installed capacity of 55 MW, from Caiuá Serviços de Eletricidade S.A., or Caiuá, for a payment of R\$134 million. The Rosal

plant, the sole asset of Rosal Energia S.A., is located on the Itabapoana River, which runs along the border between the states of Espírito Santo (Municipality of Guaçuí) and Rio de Janeiro (Municipality of Bom Jesus de Itabapoana). It operates in integrated connection with the *Alegre* and *Mimoso do Sul* electricity systems, which are owned by the electricity utility of the State of Espírito Santo, Escelsa (Espírito Santo Centrais Elétricas S.A.). The plant's first and second rotors started operating in December 1999 and January 2000, respectively. It has a concession contract for 35 years, maturing in 2032. ANEEL approved the transfer of control on December 20, 2004.

Cemig Capim Branco Energia S.A. We incorporated Cemig Capim Branco Energia S.A. to develop the Capim Branco Power Facility in partnership with Companhia Vale do Rio Doce - CVRD, or CVRD, a mining company, Comercial e Agrícola Paineiras, an agricultural company, and Companhia Mineira de Metais, or CMM a metallurgic company. On April 11, 2006, ANEEL published its Resolution 314, allowing for the transfer of the electricity generation concession of CMM to Votorantim Metais Zinco S.A. - VMZ. If this material is not presented, the transfer will be void. The project consists of the Capim Branco I and Capim Branco II hydroelectric power plants, with installed capacity of 240 MW and 210 MW, respectively. See *Capim Branco Power Facility*, under *Expansion of Generation Capacity* below. As of December 31, 2005, we had invested R\$31 million in this project. We have entered into a purchase contract with Cemig Capim Branco Energia S.A. under which Cemig Distribution will purchase the energy produced by Capim Branco I and Capim Branco II for 20 years from the start date of each plant's commercial operations, which in the case of Capim Branco I will be to January 2016. This contract was submitted to ANEEL in 2003 and was approved in December 2004. See *Item 8. Financial Information - Legal Proceedings - Legal Proceedings Related to Environmental Matters*.

Horizontes Energia S.A. We formed Horizontes Energia S.A., or Horizontes Energia, to generate and trade electricity as an IPP through the commercial operation of the following of our smaller hydroelectric plants: the Machado Mineiro Power Plant (located on the Pardo River in the municipality of Ninheira in the State of Minas Gerais with an installed capacity of 1.72 MW); the Salto do Paraopeba Power Plant (located on the Paraopeba River in the town of Jeceaba in the State of Minas Gerais with an installed capacity of 2.37 MW); the Salto Voltão Power Plant (located on the Chapecozinho River in the town of Xanxerê in the State of Santa Catarina with an installed capacity of 8.2 MW); and the Salto do Passo Velho Power Plant (located on the Chapecozinho River in the town of Xanxerê in the State of Santa Catarina with an installed capacity of 1.8 MW), as well as other generating projects to be acquired or built with our participation. The concession relating to the Machado Mineiro Power Plant expires on July 7, 2025 and the concessions relating to the other plants expire on October 4, 2030. All the electricity generated by Horizontes Energia S.A. is allocated for sale in the ACL, and part of this electricity has been sold up to the year 2010.

Usina Termelétrica Barreiro S.A. We formed Usina Termelétrica Barreiro S.A. to participate, in partnership with Vallourec & Mannesmann - V&M do Brasil S.A., or Vallourec & Mannesmann, a metallurgic company, in the construction and operation of the 12.9 MW Barreiro thermoelectric power plant, located on Vallourec & Mannesmann's premises in the Barreiro section of the city of Belo Horizonte in Minas Gerais. As of December 31, 2005 we had invested R\$5.9 million in this project. ANEEL requested that we transfer our interest in Usina Termelétrica Barreiro S.A. to a company which we do not control. To fulfill this request, a new company called Central Termelétrica de Cogeração S.A. was formed in 2003 in partnership with Companhia de Saneamento de Minas Gerais - COPASA, or COPASA, the Minas Gerais state-controlled water and sewage company, as described below. ANEEL has authorized Central Termelétrica de Cogeração S.A. to trade energy. As a result of negotiations between CEMIG and COPASA in June 2005, we requested that ANEEL approve the transfer from Central Termelétrica de Cogeração S.A. to Usina Termelétrica Barreiro S.A. of the authorization to produce and sell the energy of the Barreiro thermoelectric power plant. On January 30, 2006, ANEEL approved the transfer. Usina Termelétrica Barreiro S.A. holds the assets of the Barreiro thermoelectric power plant.

CEMIG PCH S.A. We formed CEMIG PCH S.A. to generate and trade electric energy as an IPP. ANEEL requested that we transfer our interest in CEMIG PCH S.A. to a company which we do not control. To fulfill this request, a new

company called Central Hidrelétrica Pai Joaquim S.A. was formed in 2003 in partnership with COPASA. ANEEL authorized Central Hidrelétrica Pai Joaquim S.A to be an IPP. As a result of negotiations between CEMIG and COPASA in June 2005, we requested that ANEEL approve the transfer from Central Hidrelétrica Pai Joaquim S.A. to CEMIG PCH S.A. of the authorization to produce and sell the energy of the Pai Joaquim small hydroelectric power plant. On December 19, 2005, ANEEL approved this transfer. CEMIG PCH

S.A. holds the assets of the Pai Joaquim small hydroelectric power plant which amounted to R\$54.3 million as of December 31, 2005.

Central Hidrelétrica Pai Joaquim S.A. We originally formed Central Hidrelétrica Pai Joaquim S.A. in partnership with COPASA to satisfy ANEEL's request to transfer the concession of Pai Joaquim to a company which we do not control. Central Hidrelétrica Pai Joaquim S.A.'s main activity is the production and sale of electric energy through a small hydroelectric power plant, as an IPP of 23 MW. In June 2005, we and COPASA signed an agreement to end our Central Hidrelétrica Pai Joaquim S.A. partnership and transfer to CEMIG PCH S.A. the authorization for producing and selling the energy of the Pai Joaquim small hydroelectric power plant. ANEEL approved the transfer on December 19, 2005. Central Hidrelétrica Pai Joaquim S.A. is now a wholly-owned subsidiary of CEMIG.

Central Termelétrica de Cogeração S.A. We originally formed Central Termelétrica de Cogeração S.A. in partnership with COPASA to satisfy ANEEL's request to transfer our interest in Usina Termelétrica Barreiro S.A. to a company which we do not control. Central Termelétrica de Cogeração S.A.'s main activity is the production and sale of electric energy through a thermoelectric power plant, as an IPP of 12.9 MW. These assets are still held by Usina Termelétrica Barreiro S.A. Commercial generation began in February 2004. In June 2005, we and COPASA signed an agreement to end our Central Termelétrica de Cogeração S.A. partnership and transfer to Usina Termelétrica Barreiro S.A. the authorization for producing and selling the energy of the Barreiro thermoelectric power plant. ANEEL approved the transfer on January 30, 2006. Central Termelétrica de Cogeração S.A. is now a wholly-owned subsidiary of CEMIG.

Cemig Generation and Transmission also operates the following power plants:

Queimado Hydroelectric Power Plant. Our partner in this project is Companhia Energética de Brasília, or CEB, a state-controlled electricity company. CEB has a 17.5% interest and we have the remaining 82.5%. The plant, with an installed capacity of 105 MW, is located on the Preto River, and encompasses areas in the states of Minas Gerais and Goiás and in Brazil's Federal District. The power plant began its commercial generation on April 9, 2004, with the operation of its first unit. The commercial operation of the second and third units began on June 16, 2004, and July 8, 2004, respectively. As of December 31, 2005, we had invested R\$207 million in the project. The concession relating to this plant expires on January 02, 2033.

Aimorés Hydroelectric Power Plant. The Aimorés hydroelectric power plant located on the Doce River will have an installed capacity of 330 MW. We have a 49% interest in this enterprise and our partner, CVRD, has a 51% interest. Partial commercial generation began on July 30, 2005, and the plant began operating at full capacity in December 2005, when we obtained the operational license from the Brazilian Institute of the Environment and Natural Renewable Resources, or IBAMA. As of December 31, 2005, we had invested R\$601 million in this project. We are a defendant in a class action lawsuit concerning the Aimorés hydroelectric power plant. See Item 8. Financial Information Legal Proceedings Legal Proceedings Related to Environmental Matters.

Expansion of Generation Capacity

Our capital investment plan submitted to ANEEL currently contemplates increasing the installed generation capacity of our hydroelectric facilities by 502 MW during the next four years through the construction of new power plants and the expansion of existing plants. New generation projects have concession periods of 35 years, beginning on the date of the concession agreement. The construction of the Capim Branco I and Capim Branco II hydroelectric power plants, discussed under Generation Assets above, constitute a part of our capital investment plan. The following is a brief description of our other projects, the completion of which are subject to various contingencies, certain of which are beyond our control

Irapé Hydroelectric Power Plant. The Irapé hydroelectric power plant, which will have an installed capacity of 360 MW, is located on the Jequitinhonha River, in northern Minas Gerais. Construction began in April 2002. In December 2005, the State of Minas Gerais Environmental Policy Council, or COPAM, issued the power plant operational license and filling of the reservoir began. As of December 31, 2005, we had invested R\$1,137 million in this project, including

R\$90 million from debentures that were brought by the State Government, using dividends that were due to the State Government pursuant to an agreement between us and the State Government. The concession relating to this plant expires on February 28, 2035. For information regarding a legal proceeding we

32

have been involved with related to the Irapé hydroelectric power plant, see Item 8. Financial Information Legal Proceedings Legal Proceedings Related to Environmental Matters.

Capim Branco Power Facility. This project consists of the Capim Branco I and Capim Branco II hydroelectric power plants, with installed capacity of 240 MW and 210 MW, respectively. These power plants are being built on the Araguari River in western Minas Gerais. Construction of Capim Branco I began in September 2003 and Capim Branco II in March 2004. In December 2005, we obtained the Capim Branco I operational license from COPAM, which allowed for filling of the reservoir. Commercial generation at Capim Branco I began on February 21, 2006 and commercial generation is expected to begin in December 2006 at Capim Branco II. The concessions relating to these plants expire on August 29, 2036. We are a defendant in two lawsuits concerning the environmental licensing of the Capim Branco I and Capim Branco II hydroelectric power plants. See Item 8. Financial Information Legal Proceedings Legal Proceedings Related to Environmental Matters.

Baguari Hydroelectric Power Plant. In December 2005 a consortium formed by Cemig Generation and Transmission, Furnas Centrais Elétricas S.A., or Furnas, an electricity concessionaire of generation and transmission controlled by the Federal Government, and Neoenergia S.A., a private integrated electricity sector holding company, won the concession to build and operate the Baguari hydroelectric power plant and sell its energy. The power plant will have an installed capacity of 140 MW and will be located on the Doce River, in the State of Minas Gerais. Cemig Generation and Transmission will have a 34% interest in this consortium. The energy generated will be commercialized in the ACR. The power plant has a concession period of 35 years, beginning on the date of the concession agreement.

Co-generation Joint Ventures with Consumers

We intend to enter into joint ventures with industrial consumers to develop co-generation facilities. These facilities would be built on consumers premises and would generate electricity using fuel supplied by the consumers' industrial processes. Each co-generation project would be funded in part through an agreement with the particular consumer to purchase the electricity generated in that consumer's facility. We would assume the responsibility for operating and maintaining the co-generation facility.

Wind Farm

Our wind farm, Morro do Camelinho, began operating in 1994. It is located in Gouveia, a municipality in northern Minas Gerais. This project is the first wind farm in Brazil to be connected to the national electricity transmission grid and it is connected to CEMIG's distribution system. It has a total generation capacity of 1 MW, powered by four turbines with a capacity of 250 kW each. Morro do Camelinho was built through a technical and scientific cooperation arrangement with the government of Germany. The cost of the project was US\$1.5 million, with 51% of the cost provided by us and the remaining 49% provided by the government of Germany.

Transmission

Overview

Our transmission business consists of the bulk transfer of electricity from the power plants where it is generated to the distribution system, which carries the electricity to final consumers. Our transmission system is comprised of transmission lines and step-down substations with voltages ranging from 230 kV to 500 kV.

In 1998, ANEEL created the ONS, a non-profit private entity comprised of Free Consumers and energy utilities engaged in the power generation, transmission and distribution activities, in addition to other private participants such as importers and exporters. The ONS's primary role is to coordinate and control the generation and transmission operations in the interconnected power system, subject to ANEEL's regulation and supervision. Until the enactment of Law No. 10,848, the ONS was a self-regulated entity and its management was not subject to interference from the Federal Government. Law No. 10,848 granted the Brazilian government the power to nominate the main directors of the ONS. One of the main objectives of the ONS is to guarantee that all parties in the industry have access to the transmission network in a non-discriminatory

manner. Under ANEEL regulations,

33

owners of different parts of the basic transmission network, Brazil's nationwide electric power transmission network, must transfer operating control of their transmission facilities to the ONS. We complied with this requirement by entering into a transmission service agreement on December 10, 1999. Pursuant to this agreement, the ONS could represent us in contracts with generation companies, distribution companies and Free Consumers for use of the basic transmission network. Pursuant to the contracts between the ONS, acting on our behalf, and users of the basic transmission network, the users pay us a portion of the revenues we are permitted to receive (as determined by ANEEL) pursuant to our concession contract. During the year ended December 31, 2005, we recorded revenue totaling R\$1,523 million as a result of this arrangement. In turn, because we are also a distribution company and because we purchase electricity from Itaipu and others, our use of the basic transmission network requires us to pay scheduled rates to the ONS and owners of different parts of the basic transmission network. During the year ended December 31, 2005, we recorded expenses totaling R\$709 million relating to payments made to the ONS and owners of different portions of the basic transmission network. See Item 5. Operating and Financial Review and Prospects and The Brazilian Power Industry in Annex A.

We transmit both the energy that we generate and the energy that we purchase from Itaipu, the interconnected power system and other sources. On December 31, 2005, we also had 10 industrial consumers whom we supplied directly with high voltage (equal to or greater than 230 kV per industrial consumer) energy through their connections to our transmission lines. These industrial consumers accounted for approximately 13.9% of the total volume of electricity we sold in the year ended December 31, 2005. We also transmit energy to distribution systems through the South/Southeast division of the interconnected power system.

The following tables set forth certain operating information pertaining to our transmission capacity for the dates indicated:

Voltage of Transmission Lines	Circuit Length of Transmission Lines in Miles (from generation substations to distribution substations) As of December 31,		
	2005	2004	2003
500 kV	1,345	1,344	1,344
345 kV	1,228	1,206	1,193
230 kV	467	467	463
Total	3,040	3,017	3,000

	Step-Down Transformation Capacity(1) of Transmission Substations As of December 31,		
	2005	2004	2003
Number of step-down substations	32	32	31
MVA	15,393	15,393	15,169 (2)

(1) Step-down transformation capacity refers to the ability of a transformer to receive energy at a certain voltage and release it at a reduced voltage for further distribution.

(2) Increment due to Itajubá 3 and Vespasiano 2.

Expansion of Transmission Capacity

We believe that our transmission system will need to be reinforced and expanded through the construction of new substations and transmission lines within the next five years. See Item 5. Operating and Financial Review and Prospects Liquidity and Capital Resources.

In accordance with the new regulatory framework in the Brazilian electricity sector, concessions for the expansion of the electricity transmission infrastructure in Brazil are awarded by means of public biddings or are authorized by ANEEL. The following is a brief description of our current transmission projects, the completion of which are subject to various contingencies, certain of which are beyond our control:

Montes Claros - Irapé. In September 2003, a consortium formed by Companhia Técnica de Engenharia Elétrica ALUSA, or ALUSA, Furnas, Orteng Equipamentos e Sistemas Ltda., or Orteng and CEMIG, won the concession auctioned by ANEEL to the Montes Claros Irapé transmission line. As required in the bidding process, the partners formed the Companhia Transleste de Transmissão, which is responsible for building and operating the transmission line. We have a 24.5% interest in this Company. This 345 kV transmission line connects a substation located in Montes Claros, a city in northern Minas Gerais, and the substation of the Irapé Hydroelectric Power Plant, with a length of approximately 93 miles. Construction of the project began in January 2005 and transmission line operations began on December 18, 2005. The concession expires on February 18, 2034. As of December 31, 2005, we had invested R\$12.6 million in this project.

Furnas - Pimenta. In September 2004, a consortium formed by Furnas and CEMIG, with interests of 49%, and 51%, respectively, won the concession auctioned by ANEEL to the Furnas Pimenta transmission line. As required in the bidding process, the partners formed the Companhia de Transmissão Centroeste de Minas, which will be responsible for building and operating the transmission line. This 345 kV transmission line, with a length of approximately 47 miles, will connect the substation of the Furnas Hydroelectric Power Plant and a substation located in Pimenta, a city in the Center West Region of Minas Gerais. We began the project in March 2005 and expect it to be completed in approximately 18 months. As of December 31, 2005, we had invested R\$2.7 million in this project.

Itutinga Juiz de Fora. In September 2004, a consortium formed by , Alusa, Furnas, Orteng and CEMIG, with interests of 41%, 25%, 10%, and 24% respectively, won the concession auctioned by ANEEL to the Itutinga Juiz de Fora transmission line. As required in the bidding process, the partners formed the Companhia Transudeste de Transmissão, which will be responsible for building and operating this transmission line. This 345 kV transmission line, with a length of approximately 87 miles, will connect the substation of the Itutinga Hydroelectric Power Plant and a substation located in Juiz de Fora, a city in the southeastern Minas Gerais. We began the project in March 2005 and expect it to be completed in November 2006. As of December 31, 2005, we had invested R\$6.0 million in this project .

Irapé - Araçuaí. In November 2004, a consortium formed by Alusa, Furnas, Orteng and CEMIG with interests of 41%, 24.5%, 10% and 24.5% respectively, won the concession auctioned by ANEEL to the Irapé Araçuaí transmission line. As required in the bidding process, the partners formed the Companhia Transirapé de Transmissão, which will be responsible for building and operating this transmission line. This 230 kV transmission line, with a length of approximately 40 miles, will connect the substation of the Irapé Hydroelectric Power Plant and a substation to be built in Araçuaí, a city located in the northeastern Minas Gerais. We began the project in March 2005 and expect it to be completed in September 2006. As of December 31, 2005, we had invested R\$5.5 million in this project.

Charrúa Nueva Temuco. In April 2005 a consortium formed by Alusa and CEMIG, with interests of 51% and 49%, respectively, won the concession auctioned by Centro de Despacho Económico de Carga del Sistema Interconectado Central (CDEC SIC) of Chile to operate the Charrúa Nueva Temuco transmission line for 20 years. This was an important event in CEMIG's history, as it was our first asset outside of Brazil. We and Alusa formed Transchile Charrúa Transmisión S.A., a special purpose company incorporated in Chile and responsible for building and operating the transmission line. With a length of approximately 118 miles and 220 kV capacity, the transmission line will connect the substations of Charrúa and Nueva Temuco in central Chile. We began the project in June 2005 and construction is expected to begin in July 2006. Commercial operations are expected to begin in January 2008. As of December 31, 2005, we had invested R\$4.2 million in this project.

Distribution and Purchase of Electric Power

Overview

Our distribution operations consist of the transfer of electricity from distribution substations to final consumers. Our distribution network is comprised of a widespread network of overhead and underground lines and substations with voltages lower than 230 kV. We supply electricity to smaller industrial consumers at the higher end of the voltage range and residential and commercial consumers at the lower end of the range.

35

From January 1, 2001 through December 31, 2005, we invested approximately R\$2,109 million in the construction and acquisition of property, plant and equipment used to expand our distribution system.

The following tables provide certain operating information pertaining to our distribution system, as of the dates presented:

Voltage of Distribution Lines	Circuit Length of Distribution Lines in Miles (from distribution substations to final consumers) As of December 31,					
	2005		2004		2003	
	161 kV	34.2		34.2		34.2
138 kV	6,537.4		6,526.9		6,524.4	
69 kV	2,784.4	(1)	2,823.5	(1)	2,887.5	
34.5 kV + Others	610.8		610.8		610.8	
Total	9,966.8	(1)	9,995.4	(1)	10,056.9	

Type of Distribution Lines	Circuit Length of Distribution Lines in Miles (from distribution substations to final consumers) As of December 31,					
	2005		2004		2003	
	Overhead urban distribution lines	52,086.9		51,461.2		51,051.7
Underground urban distribution lines	471.6		439.9		439.3	
Overhead rural distribution lines	183,188.9		176,412.8		171,769.3	
Total	235,747.4		228,313.9		223,260.3	(2)

	Step-Down Transformation Capacity(3) of Distribution Substations As of December 31,					
	2005		2004		2003	
	Number of substations	354		350		348
MVA	8,070		8,050		7,987	

- (1) The decrease in the circuit length of these lines from 2003 was due to the decommissioning of certain lines.
- (2) In April 2003 PROOBRA was replaced by SIGEM in the management of the distribution company's logistics management program.
- (3) Step-down transformation capacity refers to the ability of a transformer to receive energy at a certain voltage and release it at a reduced voltage for further distribution.

Physical data for the Control and Management Investment Program, or PROOBRA, were calculated by projection from the existing network. In 2003, we began to calculate this as the sum of the linear extension of the medium-voltage network and the low-voltage network available in the GEMINI system, double counting (in relation to the previous criterion) where joint medium and low voltage networks are in existence. The GEMINI system is the manager of CEMIG's distribution network. With the inclusion and startup of the Operation, Projects, Client Registry and Planning modules, all the distributor's assets are now being managed by the GEMINI system and are now the source of information for ANEEL in assembling the data on assets for the rate reviews.

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

As a result, the statistics on extent of networks, number of transformers, public illumination and quantity of transmission posts are now supplied by the GEMINI system on a geo-referenced basis. We believe this has resulted in more precise data, reduction of errors in valuing fixed assets, and increased reliability.

Expansion of Distribution Capacity

Our distribution expansion plan for the next five years is based on projections of market growth. We anticipate that this growth will be fueled by new consumer connections, increased electricity usage among our

36

existing consumers and additional electricity distribution needs from new IPP projects. According to applicable law, IPPs have the right to use our distribution network upon payment of certain fees. During the next five years, we anticipate connecting approximately 805,000 new urban consumers and 177,00 rural consumers. In order to accommodate this growth, we expect that we will need to add 696,000 medium-voltage poles, 1,762 miles of transmission lines and 25 step-down substations to our distribution network, increasing the network's installed capacity to 2,112 MVA. Over the next five years, we expect to invest approximately R\$4.14 billion to expand our distribution system. See Item 5. Operating and Financial Review and Prospects Liquidity and Capital Resources.

We have adopted a rural electricity development program, with the participation of the Federal Government and the State Government, called *Luz Para Todos*. Our plan is to use the *Luz Para Todos* program to meet our target for supply of electricity to 100% of rural consumers in Minas Gerais. To meet this objective, we will need funding in the amount of approximately R\$1,641 million. The *Luz Para Todos* program includes the *Luz no Saber* sub-program, which uses solar energy to light schools, community centers and rural homes in remote locations not yet reached by the distribution network. Additionally, the *Luz no Saber* sub-program connected 479 state and municipal schools in 2004 and 646 in 2005, thereby completing the connection of electricity services to all the schools in the State of Minas Gerais.

The *Projeto Noroeste* will provide infrastructure to promote economic growth in the northwestern region of Minas Gerais, and is expected to connect 27,000 new consumers by the end of the second quarter of 2007. The project involves constructing three new substations, expanding the capacity of the five existing substations and constructing 101 miles of distribution lines and 849 miles of distribution network. As a result, the current electricity supply capacity in the region is expected to double from the current 150 MW to 300 MW by the end of 2006.

The *Cresce Minas* program involves providing infrastructure and improvements to the electricity distribution system throughout Minas Gerais to improve the quality of electricity supply and adapt it to new conditions in the market. We began this project in November 2005 and it is expected to be concluded in December 2008. We expect to invest approximately R\$759.1 million in this project.

Purchase of Electric Power

During the year ended December 31, 2005, we purchased 12,144 GWh of electricity from Itaipu, which represented approximately 31.9% of the electricity we sold to end users. In addition to the electricity purchased from Itaipu, we have two other basic types of supply arrangements: (i) purchases through public auctions, which accounted for approximately 59.5% of the electricity we purchased for resale during the year ended December 31, 2005, and (ii) long-term agreements existing prior to the New Industry Model Law, with represented approximately 8.6% of the electricity we purchased in 2005. Additionally, 2005 was the last year on which we were able to rely on the Initial Contracts for our supply of electricity, which accounted for approximately 9.5% of all the electricity we purchased in 2005.

Itaipu. Itaipu is one of the largest operating hydroelectric plants in the world, with an installed capacity of 12,600 MW. Centrais Elétricas Brasileiras S.A., or Eletrobrás, a holding company controlled by the Federal Government, owns a 50% interest in Itaipu, while the remaining 50% is owned by the government of Paraguay. Brazil, pursuant to its 1973 treaty with Paraguay, has the option to purchase all of the electricity generated by Itaipu that is not consumed by Paraguay. In practice, Brazil generally purchases more than 95% of the electricity generated by Itaipu.

We are one of the 19 electric power distribution companies operating in the South, Southeast and Center West Regions of Brazil that are jointly required to purchase all of Brazil's portion of the electricity generated by Itaipu. The Federal Government allocates Brazil's portion of Itaipu's power among these electric companies in amounts proportionate to their respective historical market share of total electricity sales. We are currently required to purchase approximately 17% of the total amount of electricity purchased by Brazil from Itaipu at rates fixed to defray Itaipu's operating expenses and payments of principal and interest on Itaipu's dollar-denominated borrowings and the cost in *reais* of transmitting such power to the interconnected power system. These rates have been above the national average for bulk supply of power and are calculated in U.S. dollars. Therefore, fluctuations in the U.S. dollar/*real* exchange rate affect the cost, in real terms, of electricity we are required to purchase from Itaipu.

Historically, we have been able to recover the cost of such electricity by charging supply rates to consumers. According to our concession agreement, increases in the supply rate may be transferred to the final consumer upon approval by ANEEL.

Beginning in January 2008, the amount of electricity purchased from Itaipu by each of the electric power distribution companies in South, Southeast and Center West regions of Brazil will be reviewed and reallocated based on the actual consumption of each of these companies in 2004. This change will result in either an increase or decrease in the energy required to be purchased from Itaipu by each of these electric power distribution companies. In CEMIG's case, there will be a reduction of approximately 326 average MW of the total amount of energy we purchase from Itaipu. Companies for which the required Itaipu purchases decrease due the reallocation will be allowed to receive energy to make up for the difference through the Mechanism of Compensation of Surplus and Deficits, or MCSD, which is currently applied to CCEARs (Regulated Environment Energy Sale Contracts). Such companies will also be able to buy this energy in the A-1 Auction that is expected to take place in 2007, in the event that the exchanges in the MCSD alone are not enough to supply their energy requirements. We cannot yet predict the impact of such changes on the rates charged to the final consumer.

Auction Contracts. We purchased electricity in public auctions at the CCEE. These contracts were formalized between CEMIG and the several sellers in accordance with the terms and conditions established in the invitation to bid. The following table sets forth the amounts of electricity contracted, average tariff and prices related to the CCEAR contracts arising from the electricity acquired by CEMIG in the auctions:

Average Tariff	Electricity Contracted (MW average per year)	Term of the Contract
57.51	530.17	2005 to 2012
67.33	919.14	2006 to 2013
83.13	105.40	2008 to 2015

Bilateral Agreements We entered into bilateral agreements with various suppliers prior the enactment of the New Industry Model Law. Such agreements are valid under their original terms but cannot be renewed. During the year ended December 31, 2005, we purchased 673 GWh at an average tariff of R\$110.03 per MWh, which represented 8.6% of the total electricity purchased by us during the year.

Energy Losses

In 2004, the rules under the New Industry Model for the electricity sector resulted in a change in our method of calculating losses resulting from the energy that passes through our system. Under the New Industry Model for the electricity sector, as an incentive for competition, there is now free access to the transmission and distribution networks, enabling certain consumers to buy their electricity freely from other suppliers. Consumers who opt for this free-negotiation mode of supply now have two contracts: one with the owner of the distribution or transmission network for the use of the networks, and the other with the selling agent or generator for the electricity. Also, under the new regulations, (i) our transmission assets with voltage of greater than or equal to 230 kV became part of the national basic grid which is operated by the ONS, referred to as the Basic Grid; and (ii) energy losses occurring in this Basic Grid are divided equally so that 50% is allocated among generation agents in proportion to each of their levels of energy generation and the other 50% is allocated among consumption agents (distributors and Free Consumers) in proportion to each of their energy loads. As a result, the losses in the Basic Grid attributed to a given agent now have no direct relationship with its Basic Grid assets, nor can the agents have control over them. Therefore, these losses take on the status of an electricity transmission service charge for the agents of the sector, and become part of the cost structure covered by the distributors' retail rate, substantially reducing the risk of financial losses.

CEMIG's total energy losses in 2005 were 4,096 GWh, compared to 4,315 GWh in 2004. Of this total in 2005, 409 GWh related to losses in the whole national grid system attributed to CEMIG by the National System Operator (ONS). The remaining 3,686 GWh were losses in CEMIG's own local distribution system and represent 8.9% of the total energy (41,279 GWh) that passed through that local system. Losses in the national grid system are allocated to the operators in proportion to each operator's own total load. Thus, the migration of captive clients to

the free market, which reduced the total load of CEMIG Distribution, reduced the amount of national grid system losses attributed to CEMIG, contributing to the reduction in our total energy loss.

We divide our energy losses into two basic categories: technical losses and non-technical losses. Technical losses account for approximately 90% of our energy losses in the distribution grid. These losses are the inevitable result of the step-down transformation process and the transportation of electric energy through the 3,040 miles of transmission lines and 245,714 miles of distribution lines that we operate.

We attempt to minimize technical losses by performing rigorous and regular evaluations of the quality of our electricity supply. We routinely upgrade and expand our transmission and distribution systems in order to maintain quality and reliability standards, and consequently, reduce technical losses. In addition, we operate our transmission and distribution systems at certain specified voltage levels in order to minimize losses.

Non-technical losses account for the remaining 10% of our energy losses in the distribution grid and result from fraud, illegal connections, metering errors and meter defects. These non-technical losses accounted for 0.9% of the electricity that passed through our distribution grid during 2005. In order to minimize non-technical losses, we regularly take preventive actions, including:

- inspection of consumers meters and connections;
- modernization of metering systems;
- training of meter-reading personnel;
- standardization of meter installation procedures;
- installation of meters with quality control warranties;
- consumer database updating; and
- development of a theft-protected distribution network.

Additionally, we have developed an integrated system designed to help detect and measure controllable losses in all parts of our distribution system.

Consumers and Billing

Consumer Base

Our distribution business consumers, all of whom are located within our concession area in Minas Gerais, are divided into five principal categories: industrial (including mining, manufacturing and processing activities); residential; commercial (including service-oriented businesses, universities and hospitals); rural; and other (including governmental and public entities). During the year ended December 31, 2005, we sold 38,359 GWh of energy.

For 2005, as compared to 2004, the volume of electric power sold by us to industrial, commercial and rural consumers increased by 1.7%, 6.1% and 5.1%, respectively. The other consumer category grew 3.0% (this excludes wholesale supply). The residential consumption increased 1.0% from 2004 to 2005. The following table provides information regarding the number of our consumers as of December 31, 2005 and consumption by consumer category for the years ended December 31, 2005, 2004 and 2003.

Consumer Category	Number of consumers at December 31,		Consumption (GWh) Years ended December 31,		
	2005	2005	2004	2003	
Industrial	69,215	23,472	(3)	23,071 (2)	21,715 (1)
Residential	4,927,966	6,590		6,526	6,529
Commercial	537,656	3,754		3,537	3,402
Rural	417,026	1,941		1,846	1,783
Own consumption	769	(5)29		55	55
Other(4)	57,355	2,573		2,498	2,478
Total	6,009,987	38,359		37,533	35,962

- (1) Includes consumption by *Sá Carvalho S.A.*, *Usina Térmica Ipatinga S.A.* and *Horizontes Energia S.A.*
- (2) In 2004, in addition to the projects noted in footnote 1, the consumption by *Central Hidrelétrica Pai Joaquim* and *Usina Termelétrica Barreiro S.A.* was also included.
- (3) In 2005 the industrial consumer includes consumption by *Sá Carvalho S.A.*, *Usina Térmica Ipatinga S.A.*, *Horizontes Energia S.A.*, *Central Hidrelétrica Pai Joaquim* and *Usina Termelétrica Barreiro S.A.*
- (4) Does not include consumption through supply to other concessionaires.
- (5) Refers to the number of our plants, facilities and offices that use our energy, each of which is considered a consumer pursuant to ANEEL regulations.

In 2005, we added and billed 135,080 new final consumers, representing growth of 2.3% compared to 2004, through the expansion of our transmission and distribution systems.

The largest portion of the energy we sell is purchased by large industrial consumers. At December 31, 2005, 10 of our industrial consumers had high voltage electrical energy supplied through direct connections to our transmission lines. These consumers constituted 13.9% of our total volume of electrical power sales during 2005, and approximately 5.8% of our revenues. In the same period, our ten largest industrial consumers accounted for nearly 19.1% of energy consumed. None of our ten largest consumers is owned by the State Government or by the Federal Government.

As of December 31, 2005, we had entered into power purchase agreements with 3,985 of our industrial consumers, of which 522 consumers had demand above 500 kW. Our power purchase agreement with industrial consumers has a term of three or five years and contains a minimum demand clause that requires the consumer to pay for the contracted demand, which represents the system capacity reserved for that consumer, as well as the consumer's actual consumption. We believe that this billing method provides us with a relatively stable source of revenue.

The following table shows our industrial energy sales volumes by type of industrial consumer as of December 31, 2005:

	Energy Sales Volume in GWh	Consumption as a Percentage of Total Industrial Energy Sales Volume
Industrial Consumers		
Steel industry	6,681	(1) 28.46
Ferroalloy industry	4,033	17.18
Chemical industry	2,632	11.21
Non-ferrous metal industry	1,803	7.68
Mining industry	1,785	7.61
Food processing	1,386	5.90
Cement industry	769	3.28
Others	4,383	(2) 18.68
Total	23,472	100.00

(1) Includes consumption by Sá Carvalho, Barreiro and Ipatinga.

(2) Includes Pai Joaquim and Horizontes Energia S.A.

The following table sets forth the names and related industries of our ten largest consumers in 2005:

Ten Largest Consumers

(listed in order of total GWh of electricity purchased from us in 2005)

	Industry
Companhia Siderúrgica Paulista - COSIPA	Steel
Usinas Siderúrgicas de Minas Gerais S.A. USIMINAS	Steel
Ligas de Alumínio S.A.	Ferroalloys
Companhia Mineira de Metais	Non-ferrous
Companhia Brasileira de Carbureto de Cálcio - CBCC	Ferroalloys
White Martins Gases Industriais S.A.	Chemical
Italmagnésio Nordeste S.A.	Ferroalloys
Companhia Ferro Ligas Minas Gerais	Ferroalloys
Saint Gobain Materiais Cerâmicos Ltda	Chemical
Rima Industrial S.A.	Ferroalloys

As a result of our strategy to maintain and capture a larger market share in the free market, we have entered into contracts with large Free Consumers within and outside of Minas Gerais leading to an electricity sale volume in 2005 of 17,130 GWh. As a result of the unbundling, most of our contracts with large consumers within our concession area were assigned to Cemig Generation and Transmission in 2005. Most of our large clients, that represent almost 50% of the MWh volume of our energy sold, have already bought electricity from Cemig Generation and Transmission for the next several years. Consumers that opt to become Free Consumers are primarily industrial consumers whose demand generally exceeds 3 MW. Consumers that consume between 500 kW and 3 MW may opt to purchase energy from other sources, if such source is a renewable energy source, such as small hydroelectric facilities or biomass. A total of 749 of our clients which currently purchase electricity at regulated rates (captive consumers) representing annual sales revenue of R\$693 million (or 9.1% of our annual sales revenue), may elect to become Free Consumers or opt to purchase energy from alternative sources.

Billing

Our monthly billing and payment procedures for electricity supply vary by consumer category. Our large consumers with direct connections to our transmission network are billed on the same day their meters are read. Payment is required within five days after delivery of the bill. Other consumers receiving high and medium voltage electricity (approximately 8,000 consumers supplied at a voltage level equal to or greater than 2.3 kV or connected by underground distribution lines, with the exception of public sector entities) are billed within one (70%) or two (30%) days of their meter reading and payment is required within five days after delivery of the bill. Our remaining consumers are billed within seven days of their meter reading and payment is required within 10 days after delivery of the bill or 15 days after delivery of the bill in the case of public

sector entities. Bills are prepared from meter readings or on the basis of estimated consumption.

41

Seasonality

Our sales are affected by market seasonality. Usually, an increase in consumption by industrial and commercial consumers occurs in the third quarter due to increases in industrial and commercial activities. In addition, there is generally an increase in usage across all consumer categories during the summer due to the increase in temperatures. Certain figures representing quarterly consumption by final consumers from 2003 through 2005, in GWh, are set forth below:

Year	First Quarter	Second Quarter	Third Quarter	Fourth Quarter
2003(1) (3)	8,831	8,932	8,964	9,235
2004(2) (3)	9,067	9,353	9,496	9,617
2005(2) (3)	8,622	9,730	9,867	10,140

- (1) Includes consumption by *Sá Carvalho S.A., Usina Térmica Ipatinga S.A. and Horizontes Energia S.A.*
- (2) Includes consumption by *Sá Carvalho S.A., Usina Térmica Ipatinga S.A., Usina Térmica Barreiro S.A., Usina Hidrelétrica Pai Joaquim S.A. and Horizontes Energia S.A.*
- (3) Does not include supply to other concessionaires.

Consumption by residential consumers remains sluggish and has not returned to pre-rationing levels.

Competition*Contracts with Free Consumers*

The management of our portfolio through a major commercial effort in relation to our client base resulted in our successfully obtaining signatures to 137 contracts with Free Consumers by December 31, 2005. Fourteen of these contracts are with companies located outside of our distribution company's concession area and which consume 1,673 GWh of energy per year. These contracts with Free Consumers have an average term of three to ten years, and represent a volume of approximately 18,000 GWh/year.

Of our previous captive consumers, only two did not sign contracts with us and instead opted to become Free Consumers. These two formerly captive consumers represented an annual volume of 202 GWh, equivalent to 0.5% of the total volume of electricity sold during 2005. Another seven consumers, representing approximately 963 GWh, elected to opt out of the ACR and choose their own generation subsidiary as a supplier.

In addition to our sales in the ACL auctions, we have been successful in entering into agreements in the ACR that represent a volume of 8,120 GWh/year. These contracts have a term of eight years, beginning in 2006. In addition, in April 2005, we obtained new contracts in the ACR that represent a volume of 920 GWh/year. The contracts have a term of eight years, beginning on January 1, 2008. In addition to the sales opportunities in the ACL, we also have the chance to sell the energy produced by our independent power producers in new energy contracts, with 30-year terms beginning until 2012, in auctions to be held up to 2007. The expectation is that the energy prices of these contracts will be higher than those for the sale of existing energy.

Through this strategy we have been successful in the sale of the greater part of our existing generation capacity through contracts which will mostly be renewed beginning in 2010. At that time, demand of electricity in Brazil is expected to exceed supply, which should result in better price conditions than in the current market where supply exceeds demand.

Concessions

Each concession that we currently hold is subject to a competitive bidding process upon its expiration. However, in accordance with the Concessions Law, existing concessions may be renewed without a bidding process by the Federal Government for an additional period of up to 20 years upon application by the concessionaire, provided the concessionaire has met minimum performance standards and the proposal is otherwise acceptable to the Federal Government. On September 22, 2004, we applied to ANEEL for a 20-year renewal of the concessions

of the Emborcação and Nova Ponte Hydroelectric Plants. We expect these concessions to be renewed, and therefore do not expect to incur any loss due to non-renewal of the present concessions.

In addition, it is possible that a number of our large industrial clients may become SPPs pursuant to the Concessions Law in order to obtain the right to generate electricity for their own use. The granting of certain concessions to our large industrial clients could adversely affect our results of operations.

Raw Materials

Our principal raw materials expense is the purchase of fuel oil, which is consumed by our three thermoelectric plants in the electricity generation process. Fuel oil consumption for the year ended December 31, 2005 represented an expense of R\$852 thousand, which was reimbursed to us by the Conta de Consumo de Combustível (Fuel Usage Quota Account), or CCC Account. The CCC Account was created by the Federal Government to offset the higher marginal operating costs of thermoelectric plants, and we and other electricity concessionaires must make contributions to this account. See Item 5. Operating and Financial Review and Prospects and The Brazilian Power Industry Regulatory Charges in Annex A. We believe that supplies of fuel oil are readily available.

Other Businesses

Natural Gas Distribution

Gasmig was established in Minas Gerais, Brazil in 1986 for the purpose of developing and implementing the distribution of natural gas in Minas Gerais. We own approximately 55% of Gasmig and Petrobras, through its subsidiaries TSS Participações S.A. and Gaspetro Petrobras Gas S.A., owns 40% of Gasmig. The remaining shares are owned by Minas Gerais Participações S.A., or MGI, the investing body of the State Government, and by the city of Belo Horizonte.

In January 1993, the State Government granted to Gasmig an exclusive 30-year natural gas distribution concession covering Minas Gerais territory and the consumers therein located. Gasmig's marketing efforts focus on its ability to provide a more economically efficient and environmentally friendly alternative to oil, liquefied petroleum gas (LPG) and wood. In 2005, Gasmig supplied approximately 1.95 million cubic meters of gas per day to 235 consumers, including two thermal power plants and several retail consumers. Gasmig supplied 0.45 million cubic meters of gas per day to thermal power plants and 1.5 million cubic meters of gas per day to retail consumers. During 2005, Gasmig distributed approximately 5% of all natural gas distributed in Brazil.

Gasmig purchases all its natural gas needs from Petrobras, and such gas is mainly provided by Petrobras' own natural gas deposits. Our relationship with Petrobras is governed by two long term agreements, expiring in 2021 and 2027. The price Gasmig charges its clients is based on the price charged by Petrobras plus a margin. Therefore, all the costs related to the purchase of natural gas are passed to the clients through the tariff.

Minas Gerais accounts for approximately 17% of the total energy consumption in Brazil. Many energy-intensive industries such as the cement, steel, ferroalloys and metallurgy have significant operations in the state. We estimate that the total demand for natural gas in Minas Gerais will amount to nearly 7 million cubic meters of gas per day by 2009, which exceeds the projected available supply. In addition, the recent completion of a natural gas pipeline between Brazil and Bolivia provides a significant source of natural gas, enabling Gasmig to better meet demand. Gasmig's key strategy is to expand its distribution network in order to serve the portion of the demand yet not reached. Gasmig is engaged in the development of new projects to extend its natural gas distribution systems to reach consumers in other areas of Minas Gerais, mainly in heavily industrialized areas.

For 2005, Gasmig had gross revenues of approximately R\$480 million and net income after taxes of approximately R\$52 million.

In 2005, Gasmig invested approximately R\$44 million in the expansion of its gas pipeline network to serve more clients in the State of Minas Gerais. The funds to finance the expansion came primarily from its own cash

flow and dividend reinvestment. Currently, the natural gas pipeline which brings natural gas from the Campos oil basin (State of Rio de Janeiro, Brazil) operates at full capacity and further investment by the Federal Government will be necessary to expand the capacity or construct a new pipeline to supply the growing natural gas demand in the State of Minas Gerais.

On August 25, 2004, CEMIG, Gasmig, Gaspetro and Petrobras entered into an Association Agreement, pursuant to which CEMIG agreed to sell a 40% equity interest in Gasmig to Gaspetro, a subsidiary of Petrobras. Under the terms of the Association Agreement, Petrobras agreed to make investments to expand the capacity of the current pipelines connected to the Gasmig distribution network as well in the construction of new pipelines, and CEMIG and Gaspetro agreed to fund Gasmig's capital expenditure plan to expand its distribution network.

The transaction was implemented on December 15, 2004 when Petrobras, through its subsidiaries Gaspetro and TSS, concluded its acquisition of a 40% equity interest in Gasmig. As a condition to such investment, Petrobras and CEMIG entered into a Shareholders Agreement in which CEMIG agreed with Petrobras and its subsidiaries to share in the management of Gasmig. See Item 10-Additional Information Material Contracts Gasmig Shareholders Agreement and Association Agreement. On December 15, 2004 Gasmig executed an additional supply contract with Petrobras which guarantees a gradual increase in supply of up to 5.1 million m³/day of natural gas, in addition to the 3.5 million m³/day that was previously contracted for. This additional supply agreement is for the supply of natural gas to the regions of the Steel Valley (*Vale do Aço*) and the South of Minas Gerais, and also for expansion of service to the regions of Greater Belo Horizonte, the *Zona da Mata* (in the Southeast of Minas Gerais) and the *Campos das Vertentes* (historic region), in the industrial, commercial, automotive and residential markets. The additional supply agreement has a term of 20 years, and is scheduled to begin the commercial supply in 2007, under this agreement the price will be established based on the international oil price in the New York marketplace.

We expect that the association with Petrobras will expand Gasmig's distribution capacity, as our ability to offer natural gas to our consumers will increase significantly with the implementation of Petrobras's investments in pipelines. We expect that Gasmig's capital expenditure for 2006 will be mostly used for the expansion of our distribution network in highly industrialized areas of Minas Gerais. Gasmig has already begun the necessary expansions to serve the regions of the Steel Valley and the Southern Region of the State of Minas Gerais.

Gasmig is not a consolidated subsidiary in our financial statements as of December 31, 2004 or 2005, in accordance with Emerging Issues Task Force (EITF) Issue No. 96-16, *Investor's Accounting for an Investee When the Investor Has a Majority of the Voting Interest but the Minority Shareholder or Shareholders Have Certain Approval or Veto Rights*. We consolidated Gasmig's revenues and expenses for the period from January 1, 2004 to December 15, 2004, the date of our sale of a 40.00% equity interest in Gasmig to Petrobras.

Telecommunications, Internet and Cable Television

On January 13, 1999, we incorporated Empresa de Infovias S.A. in Minas Gerais, Brazil, as a joint venture with AES Força Empreendimentos Ltda., an affiliate of AES Corporation Group. Currently, we own 100.00% of the common shares of Empresa de Infovias S.A. Empresa de Infovias S.A. has an optical fiber-based long-distance communications backbone installed along our power grid using optical ground wire cables. This communications backbone is connected to an access network that is based on hybrid fiber-coaxial cable technology and is deployed along our power grid. Pursuant to Brazilian telecommunications law, we also make our network infrastructure available to other telecommunications providers interested in leasing it.

Empresa de Infovias S.A. started its business operations in January 2001. The main telecommunication services provided by Empresa de Infovias S.A. through its network are signal transportation and access, both for point-to-point and point-to-multipoint applications, delivered mainly to telecommunications operators and Internet service providers on a clear channel basis. Empresa de Infovias S.A. is also extending its broadband Internet services, currently available in the cities of Belo Horizonte, Poços de Caldas and Barbacena, to other cities in Minas Gerais.

Empresa de Infovias S.A. provides the network for cable television service in 12 cities in Minas Gerais pursuant to a 15-year service agreement with WAY TV Belo Horizonte S.A., or WAY TV, and Brasil Telecomunicações S.A., each a holder of concessions to provide cable television and Internet service in certain cities in Minas Gerais, under which Empresa de Infovias S.A. allows these companies to use its network infrastructure. In return, WAY TV and Brasil Telecomunicações are obligated to deliver to Empresa de Infovias S.A. a percentage of the revenues derived from their cable television and Internet subscribers. At December 31, 2005, these two companies had approximately 54 thousand cable television subscribers and 39.5 thousand Internet service subscribers.

Empresa de Infovias S.A. holds a 69.25% equity interest in WAY TV, including 49.9% of its common shares. The control of WAY TV is exercised by Empresa de Infovias S.A. and CLIC Clube de Investimentos dos Empregados da Cemig, or CLIC, which owns 1.1% of WAY TV's common shares, through a shareholders' agreement. Under this agreement, CLIC has agreed to vote in accordance with Empresa de Infovias S.A.'s interests at the WAY TV shareholders' meetings and board of directors. To date, Empresa de Infovias S.A. has invested approximately R\$62.6 million in WAY TV. In light of the need for additional investments in our telecommunications subsidiaries in order to take advantage of the opportunities in voice over internet protocol services, our Board of Directors decided on December 22, 2005 to authorize the sale, through an auction on a stock exchange, of all of Empresa de Infovias S.A.'s equity interest in WAY TV. A minimum sale amount will be set based on the estimated market value of 100% of WAY TV of R\$80 million. The sale is conditional upon the sale of 100% of the shares of WAY TV by all its shareholders, through an auction on the stock exchange. On June 14, 2006, the auction notice was published and the auction is expected to take place at Bovespa on July 27, 2006. WAY TV's shareholders' agreement has been suspended for the auction.

Empresa de Infovias S.A. also provides intracompany data transmission services to us pursuant to a five-year agreement signed in 2001. We use this service for internal communications as well as for certain communications with our consumers. The agreement expires in 2006 but is expected to be renewed in the fourth quarter of 2006.

During 2005, Empresa de Infovias S.A. had operating revenues of R\$97 million, of which R\$43 million related to the provision of telecommunication services and R\$54 million related to the provision of cable television and Internet services.

Empresa de Infovias S.A.'s capital expenditures for the past five years were R\$352 million. Empresa de Infovias S.A.'s capital expenditures for 2006 will be mostly used for expansion of its telecommunications network.

Consulting and Other Services

We provide consulting services to governments and public utility companies in the electricity industry in order to derive additional revenues from the technology and expertise we have developed through our operations. During the past ten years, we have provided such services to government agencies and utilities in ten countries, including Canada, Paraguay, Honduras and El Salvador and to the government of Panama.

On January 9, 2002 we created Efficientia S.A., referred to as Efficientia, in Minas Gerais, to provide project efficiency optimization solutions and operational and management services to energy supply facilities. We have a 100% interest in Efficientia, which began operating in 2003. Efficientia has increased its market share and revenues in the Brazilian market for specialized consultancy services every year since it began operations. Such services include consultancy in the areas of efficiency, energy solutions, reduction of non-technical losses in other electricity distribution concession holders and the provision of preventive maintenance services. In 2005, Efficientia posted a profit in the amount of R\$191 thousand, exceeding the expectations of its original business plan that had assumed it would operate at a loss for three years. Efficientia achieved this milestone without any capital injection by CEMIG to cover operational needs. Efficientia's net revenues in 2005 was R\$3.4 million. Efficientia's portfolio of projects in December 2005 was 150% larger than in December 2004, primarily due to an increase in projects in electricity co-generation.

Environmental Matters

Overview

Our generation, transmission and distribution activities are subject to comprehensive federal and state legislation relating to the preservation of the environment. See *The Brazilian Power Industry Environmental Regulations* in Annex A. The primary environmental authorities in the State of Minas Gerais are *Fundação Estadual do Meio Ambiente* (State of Minas Gerais Environmental Foundation), or FEAM, *Instituto Mineiro de Gestão das Águas* (State of Minas Gerais Water Management Institute), or IGAM, *Secretaria de Meio Ambiente e Desenvolvimento Sustentável* (State Secretariat for the Environmental and Sustainable Development), or SEMAD, and *Conselho Estadual de Política Ambiental* (State of Minas Gerais Environmental Policy Council), or COPAM. At the Federal level, the main authorities are *Conselho Nacional de Meio Ambiente* (National Environment Council), or CONAMA, *Instituto Brasileiro do Meio Ambiente e dos Recursos Naturais Renováveis* (the Brazilian Institute of the Environment and Natural Renewable Resources), or IBAMA, and *Agência Nacional de Águas* (National Water Agency), or ANA.

We believe that we are in compliance in all material respects with the relevant laws and regulations. **In 2005, we obtained the NBR ISO 14001/2004 environmental certification and the Cemig EMS (Environmental Management System) certification for a total of 180 municipalities, 54 substations, approximately 621 miles of transmission lines with voltage above 138 kV, our materials storage and logistics warehouses and the Nova Ponte, Itutinga and Camargos hydroelectric power plants.**

In 2005, for the sixth consecutive year CEMIG was selected to be a component of Dow Jones Sustainability Index (DJSI World Index) and was also appointed as the world leader in sustainability in the electric power sector. CEMIG was also selected to be a component of the new BOVESPA Sustainability Index (*Índice de Sustentabilidade Empresarial*).

In accordance with our environmental policy, we have established various programs for prevention and control of damage aiming at limiting our risks related to environmental issues.

In 2005 we invested approximately R\$61 million in environmental compliance projects for plant and equipment and the vehicle fleet, and in the implementation of new projects, and also spent R\$24 million on operational and maintenance expenses for our current activities, such as final disposal of waste, putting environmental management systems in place, audits, planting of riverside forests, fish cultivation, putting in place tree pruning and oil policies, environmental education programs, maintenance of conservation units, training and other activities. These amounts also include R\$1.4 million corresponding to environmental research and development projects developed with universities and research institutes.

Licensing

Applicable law in Brazil requires that licenses be obtained in connection with the construction, installation, expansion and operation of any facility that utilizes environmental resources, causes environmental degradation, pollutes or has the potential to cause environmental degradation or pollution or harm archaeological wealth. Generally, state governments manage the environmental licensing process for facilities that are to be built within their territories. However, the Federal Government manages the environmental licensing process for facilities that are expected to have an environmental impact on more than one state and/or are located between two or more states.

COPAM Regulatory Ordinances No. 17, dated December 17, 1996, and No. 23, dated October 21, 1997, provide that operational licenses shall be renewed from time to time for periods of four to eight years depending on the size and pollution potential of the facility. Aimed at surveying and rescuing archaeological wealth that has not been previously considered, the provisions of Ordinance No. 28, dated January 31, 2003, of *Instituto do Patrimônio Histórico e Artístico Nacional* (National Historical and Artistic Heritage Institute), or IPHAN, set forth that the renewal of operational licenses for hydroelectric power plants shall be conditioned on a favorable opinion of IPHAN concerning archaeological studies on the depletion area of the reservoir. These studies are to be sponsored by the plant operator.

Gasmig's distribution of natural gas through pipelines in Minas Gerais is also subject to environmental control. We believe that all licenses for the regular operation of Gasmig's activities have been obtained.

Corrective Environmental Operation Licensing

Pursuant to Resolution No. 6, dated September 16, 1987, of the *Conselho Nacional de Meio Ambiente* (the Brazilian Environmental Council), or CONAMA, environmental impact assessment studies must be undertaken, and a corresponding environmental impact assessment report must be prepared, for all major electric generation facilities built in Brazil after February 1, 1986. While studies are not required for facilities built prior to February 1, 1986, such facilities must obtain corrective environmental operation licenses, which may be acquired by filing a form containing certain information regarding the facility in question.

Federal Law No. 9,605, dated February 12, 1998, sets forth penalties for facilities that operate without environmental licenses. In 1998, the Federal Government issued Provisional Measure No. 1,710 (currently Provisional Measure No. 2,163/41), which establishes the potential for project operators to enter into agreements with relevant environmental regulators for the purpose of coming into compliance with Federal Law No. 9,605/98. Accordingly, we have been negotiating with the *Instituto Brasileiro do Meio Ambiente e dos Recursos Naturais Renováveis* (the Brazilian Institute of the Environment and Natural Renewable Resources), or IBAMA, and FEAM to obtain the corrective environmental operation licensing for all our plants that began operating prior to February 1986. Generation facilities located within the State of Minas Gerais fall within the jurisdiction of FEAM for purposes of corrective licensing. We have agreed with FEAM to bring our facilities located in Minas Gerais into compliance on a gradual basis. We do not currently anticipate any costs and commitments in connection with any recommendations that may be made by IBAMA and FEAM. We currently have operating licenses for the following facilities: (i) hydroelectric plants: Aimorés, Capim Branco I, Igarapava, Irapé, Itutinga, Miranda, Nova Ponte, Porto Estrela, Rosal, Sá Carvalho, Funil and Queimado, (ii) small hydroelectric plants: Pai Joaquim, Rio de Pedras, Santa Luzia, Salto dos Moraes, Poquim and Piçarrão, (iii) thermoelectric plants: Barreiro and Formoso, and (iv) the wind farm: Morro do Camelinho.

Our Emborcação, São Simão, Jaguará and Volta Grande hydroelectric power plants need to obtain corrective environmental operation licenses, since they all began operating prior to February 1986. In 2004, after a technical inspection by IBAMA of the facilities and areas of influence of the Jaguará and Volta Grande hydroelectric power plants, a reference report was issued for the preparation of environmental impact studies for the obtaining of corrective environmental licensing for the Emborcação, Jaguará, São Simão and Volta Grande plants and the transmission systems associated with them. The environmental reports have been completed and sent to IBAMA for analysis and approval.

The environmental licenses, either issued by state or federal bodies, are subject to several conditions imposed in light of the foreseen environmental impacts. In extreme circumstances, the failure to comply with such conditions may result in the revocation of the license. We believe we are in compliance with the requirements mentioned in our licenses.

Compensation measures

According to Federal Law No. 9,985, dated July 18, 2000, and corresponding Decree No. 4,340, dated August 22, 2002, the companies whose activities are deemed to cause high environmental impacts are required to invest in protected areas in order to offset those impacts. These companies are required to invest at least 0.5% of total amounts invested in implementation of its corresponding project in activities and areas defined by environmental agents.

During the licensing procedure, in light of the environmental impacts identified by the environmental assessment studies presented by the operator, environmental bodies may determine the amount to be invested and which protected areas shall be benefited.

The criteria for environmental and social compensation have not been clearly defined, and there is a possibility that requests from environmental agencies, the Public Attorneys' Office, NGOs or affected populations

may be added to those traditionally proposed. Due to these uncertainties, licensing (including corrective licensing), timing and budgets of new projects, and even their feasibility, may be affected. Discussions are currently in progress with official environmental bodies (at both the federal and state level) for the purpose of establishing criteria to govern environmental compensations.

A work group created by the Brazilian Federal Government approved Resolution No. 371, dated April 5, 2006, by the National Environmental Council which set forth criteria for charging environmental compensation. In the approved resolution, the maximum percentage to be applied to the total value of a project for calculation of the compensation is not stated, however a range between 0.5% and 5% of the value of the project is currently being debated. The percentage is expected to be established in subsequent legislation. The resolution does not state whether the payment of environmental compensation will cover projects put in place before the legislation, which would include the majority of CEMIG's facilities. As a result, any decision to backdate compensation may result in additional costs for us.

In the state of Minas Gerais, where CEMIG has most its facilities and enterprises, the Chairman of the state's Environmental Policy Council (COPAM) issued Regulatory Ordinance No. 94 in April 2006, applying an environmental compensation charge, at rates between 0.5% and 1.1% of the total amounts invested in the implementation of the projects that cause environmental impacts. This regulatory ordinance also indicated that the compensation charge applies to projects implemented before the issuance of the new legislation. Since this legislation is still recent, there has not been time to assess what effects it will have on CEMIG, but depending on the manner in which it is applied, it could result in additional costs for CEMIG.

Fishways

The dams at each of our hydroelectric generation facilities can put fish that inhabit the adjoining reservoirs in danger. In order to reduce the impact of these facilities on nearby fish populations, the State Government enacted State Law No. 12,488, dated April 9, 1997, which imposes measures assuring that migratory fish that pass through dams will be redirected to fishways, through which they can pass safely. As of December 31, 2005, we had fishway projects installed at our Aimorés, Funil, Igarapava, Igarapé, Pandeiros and Salto de Moraes facilities. In April 2002 we sent COPAM a study relating to our dams. In July 2002 we received a response from SEMAD that requires us to provide additional studies relating to the feasibility of installing fishways in our dams located in Minas Gerais. We executed an agreement with a non-governmental organization, named SMC (*Sociedade Mineira de Cultura*) and the university PUCMinas (Pontifícia Universidade Católica de Minas Gerais) in order to proceed with the studies for SEMAD in connection with the Gafanhoto, Cajuru and Volta Grande hydroelectric facilities. We are also evaluating the options for the construction of fishways at Miranda and Nova Ponte hydroelectric plants. The studies that are in progress are not yet conclusive as to the need for the provision of fishways. In addition, there has been no decision by the environmental authorities regarding the building of fishway projects at CEMIG's hydroelectric generation facilities. However, there is a possibility that future decisions by the environmental authorities, or changes in the environmental legislation, or even new information obtained from the studies which are in progress, may lead to a need for the construction of fishways at our hydroelectric generation facilities.

Urban occupation of rights of way

Our piped natural gas distribution networks are underground, crossing through inhabited areas, and using public rights of way in common with underground piping utilities operated by other public concession holders and public agencies. This increases the potential for risk of undue work without prior communication and consultation of our gas distribution network registers, and there is a possibility of this causing accidents, with potentially significant personal, property and environmental damage. However, all our gas networks are explicitly, and intensively, marked and signaled. Gasmig, through its Dig Safely (*Escave com Segurança*) program, has been building partnerships with the community, mainly with public authorities and holders of concessions, in addition to the companies which carry out digging in public rights of way, to ensure that before digging close to the natural gas network, they telephone Gasmig's 24-hour helpline and request support for safe execution of their work.

Transmission lines: Several of the safety bands under our transmission lines have been occupied by unauthorized facilities (buildings, etc.) and dwellings. These occupations generate risks of electric shock and

accidents involving people living at the location, and constitute an obstacle to maintenance of our electricity system. It is thus necessary to solve this situation over the coming years, either removing some of the occupants, or introducing improvements to make it possible to live with these invasions. Faced with the risks associated with this situation, we planned two lines of action for the coming years. The first is preparation of a document entitled "Diagnosis of areas invaded and under risk of invasion, for strengthening of inspection activities, including installation of improvements in locations classified as having high invasion risk". In 2004, studies were begun for the contracting of a company specialized in geo-referenced mapping, which will identify the areas with potential for invasion, making possible decisions on measures and procedures in relation to control, monitoring and inspection of the transmission line paths where there is a high risk of invasion. The second line of action involves the evacuation of areas already invaded. The withdrawal of people from these areas involves payment of indemnities, regularization of electricity connections and the opening of bands for the construction of squares and streets.

Environmental regulations

Environmental issues can significantly impact the operations of our company. For example, large hydroelectric power plants can require flooding of considerable areas and as a result relocation of a considerable population. The Brazilian Constitution gives the Federal Government, states and municipalities powers to enact laws designed to protect the environment and issue enabling regulations under these laws. While the Federal Government has the power to promulgate general environmental regulation, state governments have the power to enact more stringent environmental regulation.

The Brazilian National Environment System (SISNAMA *Sistema Nacional do Meio Ambiente*) was created for the purpose of protecting the Brazilian environment. It consists of: an administrative body, the Governing Council (*Conselho Governamental*); a consultative and decision-making body, the National Environment Council, or CONAMA (*Conselho Nacional de Meio Ambiente*); a central body, the Environment Ministry, or MMA (*Ministério do Meio Ambiente*); an executive body, the Brazilian Environment and Renewable Natural Resources Institute, or IBAMA (*Instituto Brasileiro do Meio Ambiente e dos Recursos Naturais Renováveis*); and various local and sectorial bodies. The agencies that merit special attention are CONAMA and IBAMA. CONAMA carries out or approves studies and assists and advises the Government Council on the official orders for government policy on environmental and natural resources, and on decisions, within its attributed scope, on regulations and other legislative rules applicable to the Brazilian environment. IBAMA enforces the national environment policy and inspects, preserves and supports the use of natural resources.

Law No. 6,938/81, of August 31, 1981, is known as the Environmental Policy Law, and regulates civil liability for damage to the environment. In legal terms, this responsibility has an objective nature, and is not only strict but also expands the list of liable parties adopting the principle of joint and several responsibilities. Irrespective of the nature of the offending act, demonstration of a cause-and-effect relationship between the damage caused and an action or omission is enough to create a legal obligation, on the party responsible for the contamination, to redress the environmental damage. Also, compliance with environmental licenses does not eliminate environmental liability.

Activities which cause damage to the environment may also lead to administrative and criminal fines, under Law No. 9,605, of February 12, 1998 (the Environmental Crimes Law). The effects of the aforementioned law apply to any person, individual or legal entity, who by any means contributes to damage caused to the environment to the extent of his/her fault, in the amount of the damage caused. This law provides that a legal entity may be held liable for conduct deemed harmful to the environment, provided that the infraction was committed in its interest or benefit, upon the decision of its legal or contractual representatives or of its plenary board. Management and members of the board who are aware of any criminal conduct of another and are thus able to prevent it but do not do so, are, by their omission, also considered participants in the crime.

The Federal Decree No. 3,179, issued in September 1999, established administrative fines applicable to conduct or activities damaging to the environment and to the regulations governed by the Environmental Crimes Law. This Decree sets forth penalties, such as fines of up to R\$50 million, and authorizes facilities to be closed down.

In relation to water resources, Law No. 9,433 of January 8, 1997 created the National Water Resources Policy, which was organized in accordance with the various river basins of Brazil. This policy is implemented by the governmental and non-governmental agencies, and classifies water as a public asset. Thus, no individual or company may appropriate the use of water, and any use of water does not result in absolute exclusion of all potential users.

Also, public authorities must supply a justification for the concession of rights to use water.

The right to use federal water is given by the National Waters Agency, or ANA (*Agência Nacional de Águas*), created by Law No. 9,984 of July 17, 2000, and regulated by Decree No. 3,692 of December 19, 2000, in collaboration with ANEEL. As well as granting these rights, ANA also regulates and supervises the use of federal water resources and implements the collection of charges for the use of water, at a ratio of 0.75% of the value of the energy generated. Permission for use of non-federal water resources must be obtained from the respective state-level environmental/water resource agency.

The National Water Resources Policy also created the need for the grant of permission for the use of water in the production of electricity. At the phase of planning of the plant, application must be made by ANEEL to the water resources authorities for reservation of water availability, which will be transformed into permission to use water resources and granted together with the grant of concession for commercial operation of hydroelectric energy. The plants which already are in operation, and have the concession grant, automatically also have the grant of the water resources right. However, when application is made for renewal of the concession for commercial use of hydroelectric energy, grant of the right to use the water resources must also be applied for.

For the construction of the hydroelectric power plant, Brazilian electricity companies have to comply with several environmental protection measures. First, an environmental impact study must be prepared by external experts, who should make recommendations on how to minimize the impact of the plant on the environment. The study, in conjunction with a environmental impact assessment report on the project prepared by the company, is then submitted to the state or federal-level governmental authorities for analysis and approval. The project undergoes a process of licensing in three stages, which includes a Prior License which indicates the viability of the project, an Installation License for the beginning of construction, and an Operation License for startup of the plant. Environmental licenses also have to be obtained for expansion of the plant or installation of new equipment. It should be mentioned that on basis of the environmental impact studies conclusions, the issued license is subject to several conditions or requirements that must be observed; otherwise the licenses may be revoked.

Installations that are considered to represent a considerable environmental impact are obliged by law to allocate a minimum of 0.5% of their total investment costs to the creation of environmental preservation areas.

Under the Brazilian Forest Code (*Código Florestal Brasileiro* - Law No. 4,771 of September 15, 1965), the land area surrounding water reservoirs, whether it is natural or artificial, is considered to be a permanent preservation area, which represents restriction on use. The amendments to the Brazilian Forest Code introduced by Provisional Measure 2,166-67 of August 24, 2001 provide that the operator of a reservoir is obliged to acquire such surrounding areas. This requirement can impact the economic viability of new hydroelectric undertakings, but has so far not been enforced.

The Forest Policy of the State of Minas Gerais (Law No. 14,309 of June 19, 2002) and Decree No. 43,710 of January 8, 2004 does not oblige the operator to acquire the land area surrounding the reservoir, but it does demand indemnity for the restriction on use, in forms provided for by law. These rules, when applicable, will result in additional costs in connection with the installation of new hydroelectric power plants.

State Law 15,972 of January 12, 2006, governing environmental inspection, changed the structure of the environmental agencies of Minas Gerais and made several provisions increasing the amounts of fines to be paid in the State and broadening the inspection mechanisms, which now include the Minas Gerais Environmental Police. Some of its articles have not yet been regulated. We believe the promulgation and regulation of this law will strengthen the environmental inspection in the State of Minas Gerais, where the majority of the company's facilities are located.

Any corporate entity involved in activities which cause pollutant effects, or the potential for pollutant effects, or which involve products which are considered dangerous to the environment, is obliged to register with IBAMA. This registry involves quarterly payments of an environmental control and inspection charge TCFA, which for CEMIG's activities is equal to an amount of approximately R\$10 thousand per year.

Carbon Market

The Kyoto Protocol became effective on February 16, 2005. According to the Kyoto Protocol, the reduction of greenhouse gas emissions through projects designed under the Clean Development Mechanism, or CDM, may be converted into Carbon Credits, which may be negotiated worldwide. **Legislation that would govern the carbon market in Brazil and tax incentives in connection therewith is currently before Congress in Brazil. Brazil has great potential to generate Carbon Credits arising from clean energy projects that comply with the CDM.**

CEMIG has implemented a strategy to study CDM project development opportunities in the carbon market. In order to undertake CDM projects, we are training our professionals, including through courses administered by USAID and the World Bank. Last year, CEMIG sponsored a course promoted by USAID and the World Bank at the State of Minas Gerais Industry Federation to discuss CDM projects in the State of Minas Gerais. We have created a multidisciplinary task force to mobilize our wholly-owned subsidiaries and affiliated companies to identify projects that would allow us to obtain certificates of reduction of greenhouse gases.

Operational Technologies

We continue to invest in automated monitoring and control equipment in connection with our strategy of increasing efficiency and further modernizing and automating our generation, distribution and transmission systems.

Load Dispatch Center

The *Centro de Operação de Sistema da Cemig* (System Operation Center), or COS, located at our headquarters in Belo Horizonte, is the nerve center of our operations. The COS is a data clearing house and control center that uses fiber optic and coaxial cables, microwaves and other communication technologies to monitor and coordinate our generation and transmission systems in real time, helping to guarantee the security, continuity, and quality of our energy supply. With the restructuring of the Brazilian utility sector, the COS has begun operating through the ONS, controlling and supervising 40 substations, 23 large plants and 3,040 miles of transmission lines. The COS is certified according to the Quality Standard ISO 9001:2000.

Regional Distribution Operation Centers

Our distribution network is managed through seven *Centros de Operações Regionais de Distribuição* (Regional Distribution Operation Centers), or CODs. The CODs monitor and coordinate our distribution network operations in real time. The CODs are responsible for the supervision and control of 354 distribution substations, 235,747 miles of medium voltage distribution lines, 9,967 miles of sub-transmission lines and 6.0 million consumers in our concession area, comprising 774 municipalities of Minas Gerais.

The seven CODs dispatch an average of 8,000 services a day. All of the CODs are certified according to the Quality Standard ISO 9001: 2000. There are various systems in use to automate and support the CODs processes including trouble call, field crew management, distribution substation supervision and control, restoration of power, emergency switching, network disconnection and inspection. Technologies like geographic information system and radio/satellite data communication help to reduce the consumer restoration time and to provide better consumer attendance.

Geospatial Information & Technology

We are intensively using the geospatial and technical document management technology to support and improve engineering processes. Geo-referenced information of the electrical network, satellite and aerial photographs of the concession area, diagrams and technical document images are stored in geospatial databases and can be easily retrieved by computers connected to our Corporate Network, helping technicians to plan, design,

construct, operate and maintain the generation, transmission and distribution network. We are using mobile technology in service dispatch for distribution network maintenance and medium and high-voltage network data acquisition.

Internal Telecommunications Network

Our telecommunications network is one of the largest in Brazil. It includes a high performance microwave links with 198 communication stations, an optical system with 2.500 km of optical fibers and a mobile communication system with 300 trucking radios.

Corporate Data Network

Our corporate network integrates enterprise servers (one 649 MIPS Mainframe processing the Billing System and 6 Risc machines for the ERP System), more than 7,000 Intel microcomputers, 302 servers and 892 units of connectivity equipment, serving 194 sites in 101 cities of Minas Gerais. The centralized infrastructure uses modern servers and devices with service level agreements for hardware maintenance and software support. The process of reception of meter reading data, digital calculation of electricity bills, and issuance of electricity bills to consumers in CEMIG's secondary network obtained ISO-9001:2000 certification in 2005.

Call Center

We have one call center located in Belo Horizonte. Our final consumers can use a toll-free number to contact our call center to obtain information about their accounts and to report service problems. Our call center is integrated with the technologies available in the CODs, allowing us to provide up-to-the-minute information to consumers about service issues. Our call center is equipped with modern facilities and has more than 1,000 call center attendance staff who are able to receive about 60,000 calls per day. As an indication of the quality of its service, our call center has had ISO 9001 Quality Certification since 2001.

Maintenance and Repair Systems

We use several maintenance and repair systems to minimize unscheduled interruptions in electrical service to our consumers. More than 90% of our service interruptions have resulted from factors such as lightning, fire, vandalism, wind and corrosion on our transmission and distribution networks, which are composed largely of steel towers, although we also have wood and concrete overhead lines.

Twice a year on average we inspect our 10,074 miles of sub-transmission lines and our 3,104 miles of transmission lines, using helicopters, cars, motorcycles and special vehicles such as live line trucks and special motorcycles designed to reach towers otherwise inaccessible. The 53,000 sub-transmission poles and 11,400 transmission poles are recorded using the Global Positioning System GPS. Our linemen inspect most of the towers at least once a year, depending on the age and the importance of such line for our system. We also use a Gimbal Camera in the aerial inspections. CEMIG has continually introduced new predictive techniques into our maintenance program, such as corona and infrared inspections. The Gimbal Camera works with both the real image and the infrared image of the conductors. Once a year, we fly over our lines with this Gimbal Camera. In addition, CEMIG was the first energy company in Brazil to use corona inspection to detect problems in its lines, and we have used this technology to inspect our lines every five years since 1990.

As most interruptions in our system are caused by lightning, we have installed Zinc Oxide (ZnO) surge arresters on the lines that are more susceptible. CEMIG was the first energy company in South America to use this technology to protect its lines against lightning.

To support emergencies involving fallen towers, we have used modern modular aluminum structures. Most of our intervention on transmission lines is done using live line methods. Being the first company in Brazil to use bare hand live line techniques in the maintenance of transmission lines, we have accumulated, through the last almost thirty years, significant experience in this area. We have trained our staff in this area and have special vehicles and other necessary tools to support live and dead line maintenance.

We also have crews strategically located throughout the State of Minas Gerais in order to promptly attend to our transmission and distribution system needs.

Information Security Management

In November 2005 we concluded the Corporate Information Security Plan. The principal objectives of this plan are to perform a risk assessment of our information system, to prepare an action plan to reduce the risk of loss of information confidentiality, integrity and availability and to ensure compliance with legal and regulatory requirements. We created an information security committee with representatives from the major areas of the company and implemented new information security policies, including seven new corporate rules and eight new IT procedures. We informed our employees of the new rules through seminars, presentations, brochures delivered to each employee and intranet links to issues and related rules. We also developed and tested an information classification procedures based on information confidentiality, integrity and availability.

During 2005 we also concluded a business impact analysis of the critical processes and their related information systems, assets and staff required for the recovery of our system in the event of a disaster. As a result of this analysis, we began the implementation a business continuity plan for our two main IT facilities, in order to immediately reestablish the critical processes after a disaster. The overall implementation of the business continuity plan depends on investments in hardware and software that are being planned.

Management Tools

Enterprise Resource Planning

Our current Enterprise Resource Planning (SAP R/3), or ERP, was updated in 2005 and has functionalities covering accounting, cost and funds control, budgeting, investment management, treasury, cash flow management, quality control, project management, inventory management, maintenance, asset control, human resources management (including payroll, time management and personnel development), travel management, financial consolidation, sales management and a workflow functionality covering the finance and supply chains. The ERP also includes data warehouse functionality, balanced scorecard and long-term cash flow monitoring.

Quality Management Systems

In 1991, CEMIG instituted a quality control program referred to as the Total Quality Program. In 1999, as part of this program, we adopted the International Standardization Organization Project ISO, through which different parts of our operations and management have been certified according to International Standards known as ISO 9001, ISO 14001. In addition, we also certify parts of our environmental process operations according to internal criteria.

In addition to the continued implementation of the Quality and Environment Management systems in our activities and processes, we also have in progress the implementation of a Health and Safety Management System, providing control in accordance with the standards for this type of system.

Besides the International Standardization Organization Project, we have elaborated CEMIG's Management System Manual and Procedures that integrates the Quality, Environment and Health and Safety Management Systems. This is an internal document based on our experience acquired in the last few years.

CEMIG has been increasing its certification program, which ensures functionality in our activities and greater efficiency in the results. We have received ISO 9001/2000 certification for, among others, the following aspects of our business: consumer service offices, call centers, laboratories, maintenance of remote protection system equipment, data reception and billing, and the São Simão, Emborcação and Miranda hydroelectric power plants (which represented 58% of our installed capacity at December 31, 2005). Products and services certified include: new consumer connections; billing; collection; product sales and services; network expansion and improvement; network operation; public lighting maintenance and restoration; overhead lines and network maintenance and inspection; electric system planning; and substation and equipment maintenance and inspection.

In February 2000, the Nova Ponte hydroelectric power plant received ISO 14001 certification, and in 2005 it was certificated under the Integrated Management System (ISO 9001, ISO 14001 and OHSAS 18001). The certification includes Galheiro's nature reserve and the 156 square mile reservoir. Itutinga hydroelectric power plant was certificated under Integrated Management System in 2005. In March 2006, the São Simão hydroelectric power plant was also certificated under OHSAS 18001.

By 2005, The Commercial Relationship and Services Management of Montes Claros, which operates in 77 municipalities with more than 385 thousands customers, and Camargos hydroelectric power plant were certified under ISO 9001, OHSAS 18001 and Cemig EMS (Environmental Management System).

We had environmental certification to Cemig EMS standards for a total of 180 municipalities, 54 substations, approximately 621 miles of transmission lines with voltage above 138 kV, and our materials storage and logistics warehouses.

Risk Management

With the assistance of a leading consulting firm chosen through a formal selection process, we began establishment of a Corporate Risk Management System in 2003, and consolidated it in 2004 and 2005 in connection with our unbundling process. As holder of a concession in the Brazilian electricity sector, we operate in environments where factors such as corporate restructurings, regulations issued by government agencies, technological development, globalizations and changes in the consumer market generate uncertainties and threats.

The implementation of a coherent risk vision and strategy at the corporate level is a new management trend, encouraged not only by the requirements of the Sarbanes-Oxley Act and the methods recommended by the Committee of Sponsoring Organizations (COSO II), but also by the perception that management of risk is an essential part of a sustainable development philosophy which aims to create value for shareholders.

Our Corporate Risk Management System aims to achieve the following: operate as an auxiliary in achievement of the objectives set by the strategic plan; create awareness among shareholders of the possible events that could constitute a risk of loss of value; structure the company to be able to take proactive stances in relation to its risk environment; provide the company's executives with a methodology and tools for effective management of risk; and provide other areas of strategic management with input concepts and procedures, and factors that strengthen the company's organizational control infrastructure.

In 2005, the Corporate Risk Management System was revised and updated in order to adapt to the regulatory changes implemented by the New Industry Model Law. We also initiated the activities of the Corporate Risk Management Committee CGRC, which will approve the final version of the Corporate Risks Management Policy and published and implemented a Corporate Risk Management Procedures Manual.

In 2003, CEMIG's Electricity Risks Management Committee, or CGRE, was created to propose policies and procedures for approval by the executive officers, according to corporate risk policy, to minimize risks in the contracting (purchase and sale) of energy. The committee has members from numerous areas of the Company, including generation, distribution, sales, legal and financial. The CGRE gives support to the decisions of the executive officers in relation to the Company's energy commercialization to Free Consumers and participation in the CCEE auctions. Based on risk analyses, the CGRE proposes the maximum volumes that could be sold and the amounts purchased by distributors in the auctions.

Management of Financial Risks

In 2004, we continued putting in place the *Risk Control* software for management of financial risks, to monitor the risks associated with the carrying out of transactions in the financial markets. Use of this software, associated with implementation of the risk management methodology, is designed to give our managers capacity to recognize the existing and potential risks and to control them, and to operate proactively in relation to their environment of financial risks when implementing plans of action. We are now integrating the *Risk Control*

software with some financial programs of Enterprise Resource Planning (SAP R/3) and we expect the full implementation of the software to be concluded in 2006.

Property, Plant and Equipment

Our principal properties consist of the power generation plants and transmission and distribution facilities described in this Item 4. Our net book value of total property, plant and equipment, including our investment in certain consortia that operate electricity generation projects, was R\$11,971 million at December 31, 2005 (including ongoing construction projects). Generation facilities represented 51.8% of this net book value, transmission and distribution facilities represented 44.2% and other miscellaneous property and equipment, including natural gas and telecommunication facilities, represented 4.1%. The average annual depreciation rate applied to these facilities was 2.4% for hydroelectric generation facilities, 3.0% for transmission facilities, 4.7% for distribution facilities, 9% for administration facilities, and 7.9% for telecommunication facilities. Our facilities are generally adequate for our present needs and suitable for their intended purposes. Apart from our distribution network, no single one of our properties produced more than 10% of our total revenues in 2005. Our facilities are generally adequate for our present needs and suitable for their intended purposes. We have rights of way for our distribution lines, which are our assets and do not revert to the landowner upon expiration of our concessions.

Item 4A. Unresolved Staff Comments

Not Applicable

Item 5. Operating and Financial Review and Prospects

You should read the information contained in this section together with our financial statements contained elsewhere in this annual report. The following discussion is based on our financial statements, which have been prepared in accordance with U.S. GAAP and presented in reais.

General

We are a state-controlled energy company engaged, through our subsidiaries, primarily in the generation, transmission and distribution of electricity in Minas Gerais. According to ANEEL, at December 31, 2005, we were the sixth largest electric power generation concessionaire in Brazil as measured by total installed capacity, and for the year ended December 31, 2005, we were the largest electric power distribution concessionaire in Brazil, as measured by GWh of energy sold to final consumers. We supplied approximately 97% of the electricity consumed in Minas Gerais during the year ended December 31, 2005. See Item 4. Information on the Company Consumers and Billing. At December 31, 2005, we generated electricity at 49 hydroelectric plants, four thermoelectric plants and one wind farm and had a total installed generation capacity of 6,113 MW, of which the hydroelectric plants accounted for 5,928 MW. See Item 4. Information on the Company Generation and Purchase of Electric Power. The State Government as our controlling shareholder establishes our operating and long-term strategy.

The following are our subsidiaries as of December 31, 2005:

- Cemig Geração e Transmissão S.A. (100% interest). Cemig Generation and Transmission, which as of January 1, 2005 is engaged in the generation and transmission of energy.
- Cemig Distribuição S.A. (100% interest): Cemig Distribution, which as of January 1, 2005 is engaged in the distribution of energy.
- Sá Carvalho S.A. (100% interest). Sá Carvalho is engaged in the production and sale of electric energy and holds the concession to operate the Sá Carvalho hydroelectric power plant.

- Rosal S.A. (100% interest). Rosal is engaged in the production and sale of electric energy and holds the concession to operate Rosal hydroelectric power plant. See Note 10 to our consolidated financial statements.
- Usina Térmica Ipatinga S.A. (100% interest). Usina Térmica Ipatinga is an SPP engaged in the production and sale of electric energy at the Ipatinga thermoelectric and steam power plant.

55

- Empresa de Infovias S.A. (99.94% interest). In April 2006, our ownership of Empresa de Infovias S.A. became 100.00%. The principal activities of Empresa de Infovias S.A. are rendering telecommunications services and developing activities related thereto, through multiservice networks using optical fiber cable, coaxial cable and other electronic equipment. Empresa de Infovias S.A. owns 69.25% of the capital stock of Way TV Belo Horizonte S.A., a cable TV and internet services provider in certain cities of the State of Minas Gerais.
- Efficientia S.A. (100% interest). Efficientia is engaged in rendering efficiency, optimization and energy solutions services, as well as providing operating and maintenance services, to energy supply facilities. Efficientia initiated operations in the first quarter of 2003.
- Horizontes Energia S.A. (100% interest). Horizontes Energia is engaged in the production and sale of electric energy, as an independent power producer, at the Machado Mineiro and Salto do Paraopeba hydroelectric power plants, located in the State of Minas Gerais, and the Salto Voltão and Salto do Passo Velho hydroelectric power plants, located in the State of Santa Catarina. Horizontes Energia initiated operations in the first quarter of 2003.
- Central Termelétrica de Cogeração S.A. (100% interest). Central Termelétrica de Cogeração used to be engaged in the production and sale of thermoelectric energy, as an IPP, through the Barreiro thermoelectric plant, located on Vallourec & Mannesmann's premises in the State of Minas Gerais. On January 30, 2006, ANEEL approved the transfer of the authorization to produce and sell the energy of the Barreiro thermoelectric power plant from Central Termelétrica de Cogeração S.A. to Usina Termelétrica Barreiro S.A.
- Usina Termelétrica Barreiro S.A. (100% interest). Usina Termelétrica Barreiro is an IPP engaged in the production and sale of electric energy of the Barreiro thermoelectric power plant.
- Central Hidrelétrica Pai Joaquim S.A. (100% interest). Central Hidrelétrica Pai Joaquim used to be engaged in the production and sale of electric energy of Pai Joaquim small power plant as an IPP. On December 19, 2005, ANEEL approved the transfer of the authorization to produce and sell the energy of the Pai Joaquim small power plant from Central Hidrelétrica Pai Joaquim S.A. to CEMIG PCH S.A.
- CEMIG PCH S.A. (100% interest). Cemig PCH is an IPP engaged in the production and sale of electric energy of the Pai Joaquim small power plant.
- Cemig Capim Branco Energia S.A. (100% interest). Cemig Capim Branco Energia is engaged in the production and sale of electric energy of Capim Branco Power Facility.

We also have a 100% interest in CEMIG Trading S.A. which was organized to conduct specific projects in the electric energy sector and has not yet commenced operations.

Our consolidated financial statements as of and for the years ended December 31, 2005 and 2004 include the financial results of CEMIG and all of our subsidiaries (operational and pre-operational) described above, other than Central Termelétrica de Cogeração S.A. and Central Hidrelétrica Pai Joaquim S.A. which were not consolidated in 2004 because they were jointly controlled and became wholly owned in 2005. Additionally, Gasmig was not consolidated as of December 31, 2005 and 2004 due to they were jointly controlled companies. In 2004, we entered into a Shareholders' Agreement with Petrobras and Gaspetro in connection with the sale of 40% of our equity interest in Gasmig. Gasmig's revenues and expenses were included in our consolidated Statement of Income up to December 15, 2004. Gasmig's assets and liabilities are not included in our consolidated financial statements as of December 31, 2004 and December 31, 2005. See Notes 2 and 10 to our consolidated financial statements. As of December 31, 2005, we had the following unconsolidated investments:

- Companhia de Gás de Minas Gerais GASMIG (55.19% interest). Gasmig is engaged in the acquisition, transportation and distribution of natural gas. In December 2004, CEMIG sold 40% of its interest in Gasmig. See Note 9 to our consolidated financial statements.
- Companhia de Transmissão Centroeste de Minas (51% interest). Companhia de Transmissão Centroeste de Minas is engaged in building, implementing, operating and maintaining the 345 kV transmission line from the substation of the Furnas Hydroelectric Power Plant and a substation located in Pimenta.
- Companhia Transleste de Transmissão (25.0% interest). Companhia Transleste de Transmissão will be responsible for building and operating the 345 kV transmission line connecting a substation located in Montes Claros and the substation of the Irapé Hydroelectric Power Plant.
- Companhia Transudeste de Transmissão (24.0% interest). Companhia Transudeste de Transmissão will be responsible for building, implementing, operating and maintaining the 345 kV transmission line from Itutinga to Juiz de Fora.
- Companhia Transirapé de Transmissão (24.5% interest). Companhia Transirapé de Transmissão will be responsible for constructing, implanting, operating and maintaining the 230 kV transmission line LT Irapé Araçuaí.
- Transchile Charrúa Transmisión S.A. (49% interest). Transchile Charrúa Transmisión will be responsible for constructing, installing, operating and maintaining the 220 kV transmission line LT Charrúa Nueva Temuco in Chile.

Critical Accounting Estimates

The preparation of our consolidated financial statements in conformity with U.S. GAAP requires us to make estimates and assumptions that affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the financial statements, as well as the reported amounts of revenues and expenses during the reporting periods. We evaluate our estimates on an ongoing basis and base them on a combination of historical experiences and various other assumptions that we believe to be reasonable under the circumstances. Actual results could differ materially from those estimates. Our critical accounting policies that affect our more significant judgments used in the preparation of our consolidated financial statements are set forth below.

Regulatory assets

Due to changes in the electric utilities sector in Brazil in 2001 and 2002 and related acts by regulatory bodies of the Federal Government, we have concluded that because the rate-setting structure in Brazil was designed to recover certain allowable costs, we are subject to the provisions of Statement of Financial Accounting Standards No. 71 Accounting for the Effects of Certain Types of Regulation, or SFAS No. 71.

SFAS No. 71 requires rate-regulated public utilities such as CEMIG to record certain costs and credits allowed in the rate-setting process in different periods than for non-regulated entities. These costs and credits are deferred as regulatory assets and are recognized in the consolidated statement of operations at the time they are reflected in rates. Accordingly, we capitalize allowable incurred costs as deferred regulatory assets when there is a probable expectation that future revenue equal to the costs incurred will be billed and collected as a direct result of the inclusion of the costs in an increased rate set by the regulator. The deferred regulatory asset is realized when we collect the related costs through billings to consumers. ANEEL performs a rate review on an annual basis. If ANEEL excludes all or part of a cost from recovery, that portion of the deferred regulatory asset is impaired and is accordingly reduced to the extent of the excluded cost. We evaluate and revise the accounting for our regulatory assets on an ongoing basis as new regulatory orders are properly issued and account for our activities under SFAS No. 71. As we recognize regulatory assets in accordance with rulings of the regulatory authorities of the Federal

Government, future regulatory rulings may impact the carrying value and accounting treatment of our regulatory assets.

During 2001, the electricity markets in significant portions of Brazil experienced rationing, or reduced availability of electricity to consumers, due to low rainfall, reduced reservoir levels and Brazil's significant dependence on electricity generated from hydrological resources. These factors resulted in lower sales. In December 2001, electricity concessionaires in Brazil, including us, reached an industry-wide agreement with the Federal Government that provided resolution to rationing related issues as well as certain electricity rate-related issues. This agreement, known as the General Agreement of the Electricity Sector, generally allows for increased rates to be charged to electric power consumers until the amounts lost by the power generation and distribution concessionaires as a result of the rationing are recovered. The rate increases set forth in the General Agreement of the Electricity Sector intended to reimburse rationing-related losses are expected to remain in effect from January 2002 for an average of 74 months. However, no assurance can be given that the full amount of the rationing-related losses we incurred will be recovered over this period.

In addition, we are subject to the provisions of Emerging Issues Task Force Issue No. 92-07 Accounting by Rate-Regulated Utilities for the Effects of Certain Alternative Revenue Programs, or EITF 92-07, which establishes a 24-month limit for collection of regulatory assets related to billing losses. Accordingly, we were required to estimate this asset recovery based on assumptions of future billings.

We perform periodic evaluations of the recoverability of our deferred regulatory assets in order to determine whether impairment provisions are necessary based on applicable ANEEL regulations. We record loss provisions as necessary. These provisions are based on projections prepared by us, which projections may change in response to regulatory changes and other developments. See Notes 2(p) and 4 to our consolidated financial statements. If ANEEL disallows a material amount of capitalized costs to be included in future rates, the write-off of the regulatory assets may have a material adverse impact on our operating results.

Valuation of assets

We have long-lived assets, including power generation plants. Many of these assets are the result of recent capital investments and have not yet reached a mature life cycle in construction. We assess the carrying amount and potential impairment of these long-lived assets whenever events or changes in circumstances indicate that the carrying value may not be recoverable. Factors we consider in determining whether an impairment review is necessary include a significant underperformance of the assets relative to projected future operating results and significant negative industry or economic trends. We determine when an impairment review is necessary through a comparison between the expected undiscounted future cash flows and the carrying amount of the asset. If the carrying amount of the asset is the larger of the two amounts, an impairment loss is recognized by the amount that the carrying amount of the asset exceeds the fair value of the asset. The fair value is determined by quoted market prices, appraisals or the use of valuation techniques such as expected discounted future cash flows. We must make assumptions regarding these estimated future cash flows and other factors to determine the fair value of the respective assets. In determining estimated future cash flows, we consider historical experience as well as future expectations and estimated future cash flows are based on expected future rates and expected future consumer demand. A significant reduction in actual cash flows and estimated cash flows may have a material adverse impact on our operating results and financial condition.

Accrual for contingencies

We are party to certain legal proceedings in Brazil arising in the normal course of business regarding tax, labor, civil and other issues.

We account for contingencies in accordance with SFAS No. 5 Accounting for Contingencies. Such accruals are estimated based on historical experience, the nature of the claims, as well as the current status of the claims. Accounting for contingencies requires significant judgment by management concerning the estimated probabilities and ranges of exposure to potential liability. Management's assessment of our exposure to contingencies could change as new developments occur or more information becomes available. The outcome of

the contingencies could vary significantly and could materially impact our consolidated results of operations, cash flows and financial position. Management has applied its best judgment in applying SFAS No. 5 to these matters.

Employee post-retirement benefits

We sponsor a defined-benefit pension plan and defined-contribution pension plan covering substantially all of our employees. We have also established post-retirement health care plans and pay life insurance premiums. We account for these benefits in accordance with SFAS No. 87

Employers Accounting for Pensions and SFAS No. 106 Employers Accounting for Post-retirement Benefits other than Pensions. We have applied SFAS 132(R) Employers Disclosures about Pensions and Other Post-retirement Benefits to disclose information about pension plans and other post-retirement benefit plans.

The determination of the amount of our obligations for pension and other post-retirement benefits depends on certain actuarial assumptions. These assumptions are described in note 15 to our consolidated financial statements and include, among others, the expected long-term rate of return on plan assets and increases in salaries and healthcare costs. In accordance with U.S. GAAP, actual results that differ from our assumptions are accumulated and amortized over future periods and generally affect our recognized expenses and recorded obligations in such future periods. While we believe that our assumptions are appropriate, significant differences in actual results or significant changes in our assumptions may materially affect our pension and other post-retirement obligations.

Deferred taxes

We account for income taxes in accordance with SFAS No. 109 Accounting for Income Taxes, which requires an asset and liability approach to recording current and deferred taxes. Accordingly, the effects of differences between the tax basis of assets and liabilities and the amounts recognized in our consolidated financial statements have been treated as temporary differences for the purpose of recording deferred income tax.

We regularly review our deferred tax assets for recoverability and establish a valuation allowance based on historical taxable income, projected future taxable income, and the expected timing of the reversals of existing temporary differences. If we are unable to generate sufficient future taxable income, or if there is a material change in the actual effective tax rates or time period within which the underlying temporary differences become taxable or deductible, we could be required to establish a valuation allowance against all or a significant portion of our deferred tax assets resulting in a substantial increase in our effective tax rate and a material adverse impact on our operating results.

Depreciation

Depreciation is computed using the straight-line method, at annual rates based on the estimated useful lives of the assets, in accordance with ANEEL regulations and industry practice in Brazil. To the extent that the actual lives differ from these estimates, there would be an impact on the amount of depreciation accrued in our consolidated financial statements. A significant decrease in the estimated useful life of a material amount of property, plant and equipment, or in the assets of the electricity generation project consortium in which we are a partner, could have a material adverse impact on our operating results in the period in which the estimate is revised and in subsequent periods.

Allowance for doubtful accounts

We record an allowance for doubtful accounts in an amount that we estimate to be sufficient to cover presently foreseeable losses.

We continuously monitor collections and payments from consumers and review and refine our estimation process. A future change in our estimates could result in an increase in the allowance for doubtful accounts which could have a material adverse impact in our operating results and financial condition.

Recently Issued U.S. GAAP Pronouncements

In December 2004, the FASB issued SFAS 153, *Exchanges of Nonmonetary Assets*, an amendment of APB 29. This Statement amends Opinion 29 to eliminate the exception for nonmonetary exchanges of similar productive assets and replaces it with a general exception for exchanges of nonmonetary assets that do not have commercial substance. The statement specifies that a nonmonetary exchange has commercial substance if the future cash flows of the entity are expected to change significantly as a result of the exchange. This statement is effective for nonmonetary asset exchanges occurring in fiscal periods beginning after June 15, 2005. Earlier application is permitted for nonmonetary asset exchanges occurring in fiscal periods beginning after the date this statement is issued. Retroactive application is not permitted. We will apply this statement in case the exchanges of nonmonetary assets occur in fiscal years beginning after such date.

In May 2005, the FASB issued SFAS 154, *Accounting Changes and Error Corrections* which replaces APB Opinion 20, *Accounting Changes and SFAS 3, Reporting Accounting Changes in Interim Financial Statements*. This Statement applies to all voluntary changes in accounting principle and changes required by an accounting pronouncement in the unusual instance that the pronouncement does not include specific transition provisions. This Statement requires retrospective application to prior period's financial statements of change in accounting principle, unless it is impracticable to determine either the period-specific effects or the cumulative effect of the change. Requires that a change in depreciation, amortization or depletion be accounted for as change in accounting estimate effected by a change in accounting principle. This Statement carries forward without change the guidance contained in Opinion 20 for reporting the correction of an error in previously issued financial statements and a change in accounting estimate. This Statement also carries forward the guidance in Opinion 20 requiring justification of a change in accounting principle on the basis of preferability. This Statement shall be effective for accounting changes and corrections of errors made in fiscal years beginning after December 15, 2005. Early adoption is permitted for accounting changes and corrections of errors made in fiscal years beginning after the date this Statement is issued. This Statement does not change the transition provisions of any existing accounting pronouncements, including those that are in a transition phase as of the effective date of this Statement. We assessed the provisions of this statement and will apply them as circumstances arise.

In July 2005, the FASB issued FSP No. APB 18-1, *Accounting By an Investor for Its Proportionate Share of Accumulated Other Comprehensive Income of an Investee Accounted for Under The Equity Method in Accordance with APB Opinion No. 18 Upon a Loss of Significant Influence*, which requires that when equity method accounting ceases upon the loss of significant influence of an investee, the investor's proportionate share of the investee's other comprehensive income should be offset against the carrying value of the investment. To the extent this results in a negative carrying value, the investor should adjust the carrying value to zero and record the residual balance through earnings. We will apply this Statement in the fiscal period beginning January 1, 2006 as the need arises.

Analysis of Electricity Sales and Cost of Electricity Purchased

Electricity rates in Brazil are set by ANEEL, which has the authority to readjust and review rates in accordance with the applicable provisions of the concession contracts. See Annex A *The Brazilian Power Industry Rates for the Use of the Distribution and Transmission Systems*.

We charge captive consumers for their actual electricity consumption during each 30-day billing period at specified rates. Certain large industrial consumers are charged according to the electricity capacity contractually made available to them by us, with adjustments to those rates according to consumption during peak demand time as well as capacity requirements that exceed the contracted amount.

In general, rates on electricity that we purchase are determined by reference to the capacity contracted for as well as the volumes actually used. In the case of Itaipu, we are committed to purchase 17.3% of the amount of its capacity that Brazil is required to purchase at a fixed price denominated in dollars paid three times a month at exchange rates determined at the time of each payment.

The following table sets forth the average rate (in *reais* per MWh) and volume (by GWh) components of electricity sales and purchases for the periods indicated. The term average rate refers to revenues for the relevant class of consumers divided by the MWh used by such class and does not necessarily reflect actual rates and usage by a specific class of end-users during any particular period.

	Year ended December 31,		
	2005	2004	2003
Electricity Sales:			
Average rate to final consumers (R\$/MWh)			
Industrial rate	121.42	154.51	132.07
Residential rate	463.04	405.00	356.10
Commercial rate	401.17	355.10	305.41
Rural rate	243.69	213.98	186.20
Public services rate and others	270.01	236.99	200.97
Total sales to final consumers (GWh)			
Industrial consumers	23,472	22,969	21,715
Residential consumers	6,589	6,526	6,529
Commercial consumers	3,754	3,537	3,402
Rural consumers	1,941	1,846	1,783
Public services and other consumers	2,574	2,498	2,478
Average rate (R\$/MWh)	223.72	225.68	196.67
Total revenues (millions of R\$)	8,708	8,541	7,163
Sales to distributors:			
Volume (GWh)	1,255	364	621
Average rate (R\$/MWh)	90.84	68.68	51.53
Total revenues (millions of R\$)(1)	114	24	32
Electricity Purchases from Itaipu:			
Volume (GWh)	12,144	11,936	12,220
Average cost (R\$/MWh)	67.93	93.50	96.15
Total cost (millions of R\$)	825	1,116	1,175

(1) Does not include R\$123 million, R\$12 million and R\$24 million relating to energy transactions on the CCEE during 2005, 2004 and 2003, respectively.

Rates

Our results of operations in the past have been significantly affected by fluctuations in the levels of rates that we are permitted to charge for the generation and distribution of electricity. The rate-setting process in Brazil has historically been influenced by government attempts to control inflation. With the restructuring of the electric power sector in Brazil that commenced in 1995 and under the terms of the renewal of the concession agreement that we signed with ANEEL in 1997, the process by which rates are set has changed to a significant degree. Electricity that we distribute to captive consumers (those consumers that have demand lower than 3 MW and connected at voltage levels lower than 69 kV, including residential, commercial and some industrial consumers) is provided at rates that are adjusted and revised by ANEEL in accordance with the provisions of our concession contract. We have entered into electricity supply contracts at freely negotiated rates with our Free Consumers (those consumers that have a demand of 3 MW or more of electricity at voltage levels of 69 kV or more that have chosen to become Free Consumers) that elected not to be subject to ANEEL's rate-setting structure. Under Law No. 10,848, distribution companies are no longer allowed to enter in new contracts for sale of electricity to Free Consumers at

non-regulated prices. See *The Brazilian Power Industry Rates for the Use of the Distribution and Transmission Systems* in Annex A.

ANEEL has approved extraordinary rate increases designed to compensate generation and distribution companies for losses incurred as a result of the Electricity Rationing Plan. See *Power Rationing and Government Measures to Compensate Electric Utilities*.

ANEEL, through Resolution No. 71, dated as of April 4, 2005, established our first periodic rate revision, allowing for recovery of operating costs and an appropriate return on investments.

The average rate adjustment applied to our rates on April 8, 2003 as part of our periodic rate review was 31.53%. However, according to Resolution No. 71, such rate adjustment was entitled to be 44.41%. ANEEL has indicated that the rate adjustments expected for the years from 2004 to 2007 will be adjusted in order to recover the differences between the 44.41% rate adjustment we were entitled to and the 31.53% rate adjustment that was authorized. For more information see *Item 8. Financial Information Legal Proceedings Regulatory Matters*.

The difference between the revenue under the 31.53% rate adjustment and the revenue that would have been earned based on the 44.41% rate adjustment was recorded by CEMIG as a deferred regulatory asset of R\$1,175 million as of December 31, 2005, including monetary variation and accrued interest at a rate of 11.26%, to be recovered through the annual readjustments until 2007. See Note 4 to our consolidated financial statements.

ANEEL issued Resolution No. 310 on April 6, 2006, which established our average annual rate adjustment of 16.19%. CEMIG's distribution concession contract provides for an annual readjustment which becomes effective on every April 8. The last three average annual readjustments with their respective components were as follows:

	2006		2005		2004	
Average annual rate adjustment	16.19	%	23.88	%	19.13	%
Components						
Rate adjustment index	5.31	%	6.68	%	7.59	%
Deferred regulatory asset	5.82	%	5.72	%	2.53	%
Intra-annual variation of fixed costs (CVA)	1.24	%	7.35	%	8.88	%
Increases in the Programa de Formação do Patrimônio do Servidor (a fund for the benefit of public employees), or PASEP, and the Contribuição para Seguridade Social (a federal social security contribution), or COFINS, taxes	1.81	%	2.49	%		
Revenue we did not achieve in 2004 as a result of the re-issuing of Resolution No. 83 on May 24, 2004, which reduced our rates	1.45	%	1.60	%		
Other financial adjustments	0.56	%	0.05	%	0.14	%

Power Rationing and Government Measures to Compensate Electric Utilities

Low amounts of rainfall in 2000 and early 2001, vigorous growth in demand for energy and Brazil's significant dependence on electricity generated from hydrological resources resulted in abnormally low water levels in many reservoirs that are used to power Brazil's major hydroelectric generation facilities. In May 2001, the Federal Government announced several measures in response to these conditions. First, the President of Brazil passed Provisional Measure No. 2,147 on May 15, 2001 (as updated by Provisional Measure No. 2,152-2 on June 1, 2001), creating the *Câmara de Gestão da Crise de Energia Elétrica*, or Energy Crisis Committee. The Energy Crisis Committee resolved on May 16, 2001 to require certain electricity distributors, including us, to suspend distribution of electricity to new consumers (except residential and rural consumers) and for certain non-essential purposes such as nighttime sporting events and advertising use, and to reduce distribution for the illumination of

public areas by 35%. Second, the President passed Decree No. 3,818, on May 15, 2001, requiring the Federal Government to reduce its electricity consumption by 35% beginning July 1, 2001. Third, on May 18, 2001, the Federal Government announced additional power rationing measures to be imposed on industrial, commercial and residential consumers in the most industrialized and heavily populated areas of Brazil beginning on June 1, 2001. These measures required most residential consumers to reduce their electricity consumption by 20% of the average consumption in May, June and July 2000. Industrial and commercial consumers also had to reduce their consumption by 15% to 25% of the average consumption during the same period. Further measures provided that bonuses would be paid to residential consumers whose energy consumption was lower than the requisite target and that power cuts and surcharges would be imposed on consumers whose energy consumption exceeded the requisite target. ANEEL established specific accounts and controls to record the effect of the rationing measures relating to the bonus, surcharge and other related costs. The power rationing measures ultimately ceased on February 28, 2002.

On October 17, 2001, the Federal Government, through Provisional Measure No. 4, approved by Law No. 10,310 of November 22, 2001, stated that electric utilities, including us, would be reimbursed for expenses associated with payment of bonuses to consumers and other related costs that exceeded the aforementioned surcharges. In 2002, we received approximately R\$132 million as reimbursement for a portion of the expenses we incurred in connection with payment of bonuses to consumers. In addition, we are currently negotiating with ANEEL our reimbursement of approximately R\$23 million relating to surcharges that were not paid by certain consumers because their surcharges are under dispute. There is no assurance that ANEEL will reimburse us, and therefore the total estimated exposure to the Company for this matter is fully reserved. In accordance with ANEEL Resolution No. 600, dated October 31, 2002, we have been reimbursed for operating costs of approximately R\$28 million that relate to the adoption of the Electricity Rationing Plan and that exceed amounts received from surcharges on consumer rates. Reimbursement of these operating costs was made through rate increases in force since April 8, 2003, April 8, 2004 and April 8, 2005.

On December 12, 2001, through Provisional Measure No. 14, approved on April 26, 2002 by Law No. 10,438, the Federal Government authorized the creation of the General Agreement of the Electricity Sector. The General Agreement of the Electricity Sector provides that electric power distribution and generation companies in Brazil, such as us, will be compensated for revenue losses caused by the reduction in amounts of energy sold and the purchase of energy on the CCEE, as applicable, due to the Federal Government-mandated rationing measures. Compensation is made by means of an extraordinary increase in the energy rate applicable to future power sales and companies are entitled to use this increased rate for an average period of 74 months, beginning January 2002. See Note 4 to our consolidated financial statements.

Impact of Our Account Receivable from the State Government

As described further in *Additional Information Material Contracts*, we have an account receivable from the State Government, referred to as the CRC Account, that totaled R\$2,942 million as of December 31, 2004. Our liquidity and net income are affected by payments made by the State Government in connection with the CRC Account. The agreement between CEMIG and the State Government that governs the CRC Account receivable is referred to as the CRC Account Agreement. The CRC Account Agreement has been amended four times, as described below.

On January 24, 2001, the First Amendment to the CRC Account Agreement replaced the monetary adjustment index of UFIR with the IGP-DI, retroactive to November 2000, since the UFIR was eliminated in October 2000.

The State Government did not make any payments to us under the CRC Account Agreement in 2001 or 2002 and therefore, in October 2002, the Second and Third Amendments to the CRC Agreement were signed, which separated the debt into two amounts and established new payment terms. In 2003 and 2004, we offset a portion of these overdue amounts from 2001 and 2002 against payments of interest on capital that we are required to make to the State Government as our shareholder. We had recorded a provision for losses as of December 31, 2004 for the total amount of the Second Amendment, since the State Government had not made payments on this balance since January 2003 and the Second Amendment did not provide for any guarantees. The Third Amendment stipulated that the guarantee relating to the dividends payable to the State Government would remain in force even after the original term of the Third Amendment. Our long-term estimates of future net income indicated that the dividends

payable to the State Government would be sufficient to recover the amounts due under the Third Amendment and, consequently, no provision for losses was recorded.

Given the prior default by the State Government in the payment of amounts due under the CRC Account Agreement since 2001, and in order to ensure the full payment to us of the installments due by the State Government under the CRC Account balance, the Fourth Amendment to the CRC Account Agreement was signed on January 23, 2006. Under the Fourth Amendment, the State Government irrevocably agreed to pay the outstanding CRC Account balance, corresponding to R\$2,942 million at December 31, 2004, plus interest, by authorizing CEMIG to retain 65% of the ordinary dividends and interest on capital due to the State Government. The outstanding balance is subject to monetary correction for inflation by the variation in the IGP-DI inflation index and will bear interest at 8.18% per year, compounded semi-annually.

Under the Fourth Amendment, the State is required to make 61 semi-annual payments due on June 30 and December 31 of each year. The Fourth Amendment applies retroactively to December 31, 2004, with the first payment date being June 30, 2005 and the final payment being due on June 30, 2035. The semi-annual payments will be adjusted for inflation by the IGP-DI inflation index. The 65% of dividends and interest on capital retained by CEMIG are to be applied in the following order: (i) the settlement of any past due installments, (ii) the settlement of the installment relating to the half-year in which dividend or interest on capital takes place, (iii) pre-payment of up to two installments and (iv) amortization of the outstanding balance due under the CRC Account.

If the retention of ordinary dividends and interest on capital is not sufficient to cover the applicable installment, beginning on January 1, 2008, CEMIG is entitled to retain up to 65% of any extraordinary dividends or interest on equity due to the State Government for the payment of that installment. Furthermore, if the sum of 65% of the ordinary dividends and interest and capital and extraordinary dividends on interest and capital is not sufficient to cover an installment due, CEMIG is entitled to retain 100% of such dividends and interest on capital, beginning in the six-month period immediately following that of the past due date of the past due installment. In addition, if there is a reduction in the ownership of CEMIG by the State Government, the retention percentage will be automatically adjusted upward such that the amount of the dividend retained will remain the same as the amount equal to 65% of dividends based on the current ownership of CEMIG by the State Government.

The Company has recorded a provision for losses on the CRC Account receivable under the Fourth Amendment of the CRC Account Agreement in the amount of R\$1,622 million as of December 31, 2005 based on its estimate of future net income for the period up to 2035, the end of the respective concession term. This estimate resulted in the partial reversal of the provision recorded at December 31, 2004 of R\$223 million. Our estimate of future net income to calculate such provision did not take into account the new asset acquisitions foreseen in our long-term strategic plan.

In January 2006 we created the Cemig CRC Account Securitization Fund (*Cemig Fundo de Investimento em Direitos Creditorios Conta CRC*), or the FIDC. We assigned all our receivables under the CRC Account Agreement to the FIDC. The present value of the CRC Account receivables transferred to the FIDC is R\$1,659 million, as of January 27, 2006 and the capital structure of the FIDC is composed of R\$900 million of senior quotas held by third parties and approximately R\$759 million of subordinated quotas held by us.

For additional information regarding the FIDC, see [Additional Information Material Contracts](#) .

Exchange Rates

Substantially all of our revenues and operating expenses are denominated in *reais*. Although our electricity purchases from Itaipu are denominated in U.S. dollars, the related foreign exchange risk is no longer reflected in our operating revenues and operating expenses due to rate legislation changes in 2001 which allow electricity utilities such as us to record exchange rate losses related to Itaipu purchases as deferred regulatory assets. However, we have foreign currency-denominated debt. As a result, in reporting periods when the *real* declines against the dollar or other foreign currencies in which our debt is denominated, our operating results and financial position are adversely affected. Foreign exchange gain or loss and monetary variation gain or loss may impact our results of operations in periods in which there are wide swings in the value of the *real* relative to the dollar or high inflation.

We have a number of financial and other contracts under which we owe, or are entitled to, amounts in respect of monetary variation as measured by an index of price inflation in Brazil. In 2005, we used financial instruments such as interest rate swaps in order to reduce the risk from exchange rate fluctuations. As of December 31, 2005, we had entered into swap agreements in the notional amount of US\$102.9 million and, with respect to the Japanese yen, in the amount of ¥3,879 million (equivalent to US\$32.8 million), in order to change the original interest rate of certain financing from an interest rate calculated based on the U.S. dollar and Japanese yen variations to an interest rate calculated based on the *Certificado de Depósito Interbancário* CDI (Interbank Certificates of Deposit) rate, or CDI. See Notes 2(d), 13, 20, 22 and 23 to our consolidated financial statements.

Unbundling

In 2004, we undertook a reorganization of our corporate structure to comply with Law 10,848/04, which establishes that a distribution company may not exercise other activities such as the generation and transmission of electric energy. Two wholly-owned subsidiaries were created, Cemig Generation and Transmission and Cemig Distribution, which carry out the activities of electricity generation and transmission and electricity distribution, respectively. This process was finalized by ANEEL with respect to our distribution and transmission concessions through amendments to the existing concession contracts, and will be finalized with respect to the generation concession upon ANEEL's convocation to sign amendments to the existing generation contracts.

Financial Reporting and Tax Considerations

The unbundling has not resulted in material differences in the presentation of our reporting for financial purposes in accordance with U.S. GAAP or Brazilian GAAP since the financial results of the new generation, transmission and distribution subsidiaries are consolidated with ours. Our marginal tax rate, on a consolidated basis, has not changed materially as a result of the unbundling. However, our operating results were adversely affected as a consequence of the application of certain Brazilian revenue taxes. The revenue taxes which caused the adverse effect on operating results include the *Contribuição para Seguridade Social* (a federal social security contribution), or COFINS, and the *Programa de Formação do Patrimônio do Servidor* (a fund for the benefit of public employees), or PASEP, and were assessed against our consolidated revenues at a combined rate of approximately 4.65% from December 2002 to January 2004 and 3.65% from January through November 2002. Since February 2004, the combined tax rate for these contributions is 9.25% of a tax base equal to the gross revenue less certain deductions. Due to the unbundling, the revenue taxes were assessed at the subsidiary level with respect to revenues of the generation subsidiary and, separately, revenues of the distribution subsidiary.

Year Ended December 31, 2005 Compared to Year Ended December 31, 2004

Net operating revenues

Net operating revenues increased 0.5% from R\$7,479 in 2004 to R\$7,513 in 2005.

	2005	% of net operating revenues	2004	% of net operating revenues	2005 versus 2004 - %
Electricity sales to final consumers	8,708	115.8	8,541	114.2	2.0
Regulatory extraordinary rate adjustment	8	0.1	89	1.2	(91.0)
Deferred rate adjustment	110	1.5	640	8.5	(82.8)
Electricity sales to the interconnected power system	237	3.2	36	0.5	558.3
Use of basic transmission network	1,523	20.3	245	3.3	521.6
Other operating revenues	168	2.2	536	7.2	(68.7)
Tax on revenues	(3,241)	(43.1)	(2,608)	(34.9)	24.3
Total net operating revenues	7,513	100.0	7,479	100.0	0.5

Although there were rate adjustments of 14.0% in April 2004 (full effect in 2005) and 23.9% in April 2005 and a 2.6% increase in the volume of our electricity sales to final consumers in 2005, revenues from electricity sales to final consumers increased only 2.0%. A significant number of industrial consumers were moved to the category of Free Consumers beginning in January 2005. As a result, the TUSD charges related to the use of the local distribution network of the Free Consumers began to be charged separately and recorded under the item Use of Basic Transmission Network in the amount of R\$1,201 million in 2005. In 2004, TUSD was included in the total revenues from electricity sales to final customers. Based on the total of the TUSD revenues and the revenues from the electricity sales to final customers, total revenues increased 16.0% in 2005 compared to 2004.

We recorded revenue relating to the regulatory extraordinary rate adjustment in accordance with the terms of the General Agreement of the Electricity Sector, which provides for reimbursement of revenue losses incurred during the period of the Electricity Rationing Plan and related spot market transactions through special rate increases to be billed to final consumers, and in accordance with EITF Issue No. 92-07, Accounting by Rate-Regulated Utilities for the Effects of Certain Alternative Revenue Programs, which establishes a 24-month limit for the recovery of revenue losses incurred during the Energy Rationing Plan. See Note 4 to our consolidated financial statements.

Revenues related to the deferred rate adjustment were R\$110 and R\$640 million in 2005 and 2004, respectively. ANEEL Resolution No. 71, dated April 4, 2005, disclosed the results of CEMIG's periodic rate review. According to this resolution, the rate adjustment to be applied to CEMIG's rates beginning on April 8, 2003 was 44.4%, instead of the 31.5% previously applied. The difference will be included by ANEEL in future rate adjustments. The amounts recorded represent the difference between the tariff adjustment that CEMIG is entitled to and the rate previously applied. The higher amount recorded in 2004 represents the difference that occurred in the period between April 2003 to December 2004. See Note 4 to our consolidated financial statements.

Electricity sales to the interconnected power system were R\$237 million in 2005, a 558.3% increase compared to R\$36 million in 2004. This increase resulted primarily from the sale of power surplus by Cemig Distribution on the spot market in 2005.

Income from the use of the basic transmission network increased R\$1,278 million, or 521.6%, from R\$245 million in 2004 to R\$1,523 million in 2005. This increase was primarily due to the TUSD revenues of Cemig Distribution, which totaled R\$1,201 million in 2005, resulting from the charges paid by Free Consumers for the power sold by Cemig Generation and Transmission. As noted above, the TUSD had been included in the power supply tariff of Final Consumers until 2004. The balance of this item also includes income from the use of the facilities that are part of CEMIG's basic transmission network by electric power generators and distributors that comprise the national grid, in the amount of R\$313 million in 2005 compared to R\$243 million in 2004.

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

Other operating revenues decreased 68.7%, from R\$536 million in 2004 to R\$168 million in 2005. The variation in our other operating revenues in 2005 is due in part to our consolidation of Gasmig's revenues for the period from January 1, 2004 to December 15, 2004, the date of our sale of a 40.00% equity interest in Gasmig to Petrobras. In 2005, we reported our investment in Gasmig under the equity method. The Gasmig revenues consolidated in 2004 were R\$420 million. See Notes 9 and 18 to our consolidated financial statements.

Taxes on revenues increased 24.3% to R\$3,241 million in 2005, compared to R\$2,608 million in 2004, as a result of the increase in our electricity sales to final consumers (including TUSD revenue) in 2005 as compared to 2004. Taxes on revenues consist of: (i) VAT, assessed at an average rate of 21% on electricity sales to final consumers, and VAT billed to consumers related to the deferred regulatory assets; (ii) COFINS, assessed at a rate of 7.6%; (iii) PASEP, assessed at a rate of 1.65%; and (iv) the *Encargo de Capacidade Emergencial* (Emergency Capacity Charge), a charge established in 2002 that is prorated among final consumers of electric energy and relates to the *Comercializadora Brasileira de Energia Elétrica* - CBEE, or CBEE, a Federal Government agency set up to supply energy to utilities in the event of future shortages. See Notes 4 and 18 to our consolidated financial statements.

Operating costs and expenses

Operating costs and expenses increased 13.2% to R\$6,189 million in 2005 from R\$5,466 million in 2004. This increase was principally due to an increase in regulatory charges in 2005, increased use of the basic transmission network and a provision for a loss on deferred regulatory assets.

	2005	% of net operating revenues	2004	% of net operating revenues	2005 versus 2004 - %
Electricity purchased for resale	(1,455)	(19.4)	(1,370)	(18.3)	6.2
Natural gas purchased for resale			(268)	(3.6)	
Use of basic transmission network	(709)	(9.4)	(538)	(7.2)	31.8
Depreciation and amortization	(669)	(8.9)	(677)	(9.0)	(1.3)
Personnel	(779)	(10.4)	(788)	(10.5)	(1.1)
Regulatory charges	(983)	(13.1)	(861)	(11.5)	14.2
Third-party services	(420)	(5.6)	(329)	(4.5)	27.7
Employee post-retirement benefits	(257)	(3.4)	(153)	(2.0)	68.0
Materials and supplies	(95)	(1.3)	(83)	(1.2)	14.4
Provision for loss on deferred regulatory assets	(183)	(2.4)	(9)	(0.1)	1,933.3
Employees profit sharing	(260)	(3.5)	(110)	(1.5)	136.4
Other	(379)	(5.0)	(280)	(3.7)	35.4
Total operating costs and expenses	(6,189)	(82.4)	(5,466)	(73.1)	13.2

Electricity purchased for resale consists primarily of purchases from Itaipu through *Eletrobrás*. We are required under applicable regulations to purchase 17.0% of Itaipu's capacity at U.S. dollar-denominated prices. We also purchase electricity from the CCEE, Furnas and through competitive biddings. Electricity purchased for resale increased 6.2% to R\$1,455 million in 2005 from R\$1,370 million in 2004. The amounts of electricity purchased for resale reported in the income statement refer to the amounts that were in fact included in the calculation of the tariff to be applied. See Note 19 to our consolidated financial statements.

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

Natural gas purchased for resale was R\$268 million in 2004. We consolidated Gasmig's revenues for the period from January 1, 2004 to December 15, 2004, the date of our sale of a 40.00% equity interest in Gasmig to

67

Petrobras. In 2005, we accounted for our investment in Gasmig using the equity method and therefore we did not consolidate its revenues and expenses in 2005.

Charges for use of the basic transmission network mainly correspond to the cost of transporting electricity in the Brazilian basic transmission network which is prorated among the Brazilian distribution companies. Charges for use of the basic transmission network are fixed costs that represented a 31.8% increase from R\$538 million in 2004 to R\$709 million in 2005. The amount reported in the income statement refers to the amounts that were in fact included in the calculation of the tariff to be applied.

Depreciation and amortization expense did not vary significantly, decreasing 1.2% from R\$677 million in 2004 to R\$669 million in 2005. This reduction is due to the certain items that became fully depreciated in 2004. See Note 10 to our consolidated financial statements.

Personnel expense decreased from R\$788 million in 2004 to R\$779 million in 2005. Although there was a 7.00% salary increase granted to CEMIG's employees in November 2004 (full effect in 2005), and a 7.6% salary increase granted in November 2005, we recorded a R\$27 million provision in 2004 in connection with the implementation of our voluntary termination program and no such provision was recorded in 2005.

Regulatory charges increased 14.2% from R\$861 million in 2004 to R\$983 million in 2005, primarily due to the increase of R\$124 million in the fuel usage quota. The fuel usage quota represents contributions made by the electricity company concessionaires to subsidize the cost of fuel used in the thermoelectric energy generating process in the Brazilian energy system. The amounts reported in the income statement related to regulatory charges refer to the amounts that were in fact included in the calculation of the tariff to be applied.

Third-party services expense increased 27.7% from R\$329 million in 2004 to R\$420 million in 2005. The increase was due to higher costs in 2005 related to meter reading, delivery of bills to consumers, collection services and maintenance of distribution and transmission lines and buildings.

Employee post-retirement benefits increased 68.0% from R\$153 million in 2004 to R\$257 million in 2005, due to a higher projected net periodic cost in 2005 as a result of a higher expected interest expense compared to the expected return on plan assets. See Note 15 to our consolidated financial statements.

We recorded a provision for losses of R\$183 million in 2005 compared to a provision for losses on deferred regulatory assets of R\$9 million in 2004. The provision recorded in 2005 is related to the amounts that CEMIG receives from other distribution companies in connection with energy transactions on the CCEE/MAE during the rationing plan. These distribution companies have a limited time, as stipulated by ANEEL, to transfer the amounts owed to us. The provision recorded in 2005 is based on a study we prepared to determine whether the time stipulated for the distribution companies to carry out the transfer would be enough time for the recovery of the amounts due. See Note 4 to our consolidated financial statements.

Employees profit sharing increased 136.4% from R\$110 million in 2004 to R\$260 million in 2005. This variation due to the collective labor agreements entered into by CEMIG and the labor unions in November 2005.

Other expenses increased 35.4% from R\$280 million in 2004 to R\$379 million in 2005. The main variation in other expenses between 2004 and 2005 was an increase of R\$31 million in provision for contingencies from R\$34 million in 2004 to R\$65 million in 2005. See Note 19 to our consolidated financial statements.

Operating income

As a result of the foregoing, we had operating income of R\$1,324 million in 2005, compared to operating income of R\$2,013 million in 2004.

Financial income, net

Financial income, net, includes (i) financial income, which is mainly comprised of interest and a monetary restatement of our account receivable from the State Government, investment income earned, late charges on overdue electricity bills, foreign exchange gains, monetary restatement on deferred regulatory assets and (ii) financial expenses, which are mainly comprised of interest expense on loans and financing, the *Contribuição Provisória sobre a Movimentação ou Transmissão de Valores e de Créditos e Direitos de Natureza Financeira* (a financial transaction tax), or CPMF, foreign exchange losses, monetary restatement losses, monetary restatement of deferred regulatory liabilities and other expenses. We had net financial income of R\$754 million in 2005 compared to net financial income of R\$350 million in 2004, principally due to a R\$233 million reversal provision for losses on accrued interest on our account receivable from the State Government in 2005 compared to a provision of R\$326 million in 2004 which was recorded on accrued interest on this receivable due to the execution of the Fourth Amendment to the CRC Account Agreement mentioned in Note 3 to our consolidated financial statements.

Non-Operating income

We had non-operating income of R\$29 million in 2005 compared to a non-operating income of R\$105 million in 2004. The non-operating income recorded in 2005 is related to Equity on investment on Gasmig. In 2004, CEMIG sold part of its shares in Gasmig, corresponding to 40% of the registered capital for R\$154 million, resulting in a income of R\$102 million.

Income taxes

Income taxes were an expense of R\$300 million on pre-tax income of R\$2,107 million in 2005, compared to an expense of R\$731 million on pre-tax income of R\$2,468 million in 2004. The main difference between income tax calculated at the statutory rate and the income tax expense recorded is the tax benefit of R\$216 million and R\$173 million in 2005 and 2004, respectively, with respect to interest on capital. See Note 5 to our consolidated financial statements.

Minority interests

The minority interest represented income of R\$2 million in 2005, and was related to Empresa de Infovias S.A.

Net income

As a result of the foregoing, we had a net income of R\$1,809 million in 2005 compared to net income of R\$1,739 million in 2004.

Other comprehensive income (loss)

Other comprehensive income was R\$25 million in 2005 compared to other comprehensive loss of R\$474 million in 2004. In the prior year, CEMIG made a change in some actuarial assumptions related to annual discount rate and the mortality rate. The effect of these changes was a significant increase in our retirement benefit obligation, which was recorded as an other comprehensive loss in 2004.

Comprehensive income

As a result of the factors stated above, comprehensive income was R\$1,834 million in 2005 compared to R\$1,265 million in 2004.

Year Ended December 31, 2004 Compared to Year Ended December 31, 2003*Net operating revenues*

Net operating revenues increased 24.4% to R\$7,479 million in 2004 from R\$6,016 million in 2003 due primarily due to higher electricity sales to final consumers.

	2004	% of net operating revenues	2003	% of net operating revenues	2004 versus 2003 - %
Electricity sales to final consumers	8,541	114.2	7,163	119.1	19.2
Regulatory extraordinary rate adjustment	89	1.2	63	1.0	41.3
Deferred rate adjustment	640	8.5	199	3.3	221.6
Electricity sales to the interconnected power system	36	0.5	56	0.9	(35.7)
Use of basic transmission network	245	3.3	257	4.3	(4.7)
Other operating revenues	536	7.2	468	7.8	14.5
Tax on revenues	(2,608)	(34.9)	(2,190)	(36.4)	19.1
Total net operating revenues	7,479	100.0	6,016	100.00	24.4

The increase in revenues from electricity sales to final consumers is primarily due to increases in the average rate and in the volume of electricity sales to final consumers. There was a 14.8% increase in the average energy rate in 2004 to R\$225.68 per MWh compared to R\$196.67 per MWh in 2003 as a result of rate increases of 31.5% in April 2003 (full effect in 2004) and 14.0% in April 2004. In addition, there was a 4.1% increase in the volume of our electricity sales to final consumers. In 2004, we recorded R\$89 million in revenue relating to the regulatory extraordinary rate adjustment, a 41.3% increase compared to the R\$63 million that we recorded in 2003. We recorded revenue relating to the regulatory extraordinary rate adjustment in accordance with the terms of the General Agreement of the Electricity Sector, which provides for reimbursement of revenue losses incurred during the period of the Electricity Rationing Plan and related spot market transactions through special rate increases to be billed to final consumers, and in accordance with consensus described in EITF Issue No. 92-07, Accounting by Rate-Regulated Utilities for the Effects of Certain Alternative Revenue Programs, which establishes a 24-month limit for the recovery of revenue losses incurred during the Energy Rationing Plan. See Note 4 to our consolidated financial statements.

Revenues related to the deferred rate adjustment were R\$640 and R\$199 million in 2004 and 2003, respectively. ANEEL Resolution No. 71, dated April 4, 2004, disclosed the results of CEMIG's periodic rate review. According to this resolution, the rate adjustment that would have to be applied on CEMIG's rates starting April 8, 2003 was 44.4%, instead of the 31.5% applied. The difference will be included by ANEEL in future rate adjustments. See Note 4 to our consolidated financial statements.

Electricity sales to the interconnected power system were R\$36 million in 2004, a 35.7% decrease compared to R\$56 million in 2003. This decrease resulted primarily from lower sales of energy on the spot market in 2004.

Other operating revenues increased 14.5% to R\$536 million in 2004 from R\$468 million in 2003. The variation in our other operating revenues in 2004 is mainly due to a R\$53 million increase in revenues from Gasmig, our subsidiary. We consolidated Gasmig's revenues and expenses for the period from January 1, 2004 to December 15, 2004, the date of our sale of a 40% equity interest in Gasmig to Petrobras. See Notes 9 and 18 to our consolidated financial statements

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

Taxes on revenues increased 19.1% to R\$2,608 million in 2004 from R\$2,190 million in 2003 as a result of the increase in our electricity sales to final consumers in 2004 as compared to 2003 and as a result of the VAT billed to consumers in connection with the extraordinary rate adjustment. Taxes on revenues consist of: (i) VAT, assessed at an average rate of 21% on electricity sales to final consumers, and VAT billed to consumers related to the deferred regulatory assets; (ii) COFINS, assessed at a rate of 7.6%; (iii) PASEP, assessed at a rate of 1.65%; and (iv) the *Encargo de Capacidade Emergencial* (Emergency Capacity Charge), a charge established in 2002 that is prorated among final consumers of electric energy and relates to the *Comercializadora Brasileira de Energia Elétrica* CBEE, or CBEE, a Federal Government agency set up to supply energy to utilities in the event of future shortages. See Notes 4 and 19 to our consolidated financial statements.

Operating costs and expenses

Operating costs and expenses increased 16.6% to R\$5,466 million in 2004 from R\$4,687 million in 2003, principally as a result of an increase in 2004 of regulatory charges, use of basic transmission network, electricity purchased for resale and higher personnel costs.

	2004	% of net operating revenues	2003	% of net operating revenues	2004 versus 2003 - %
Electricity purchased for resale	(1,370)	(18.3)	(1,396)	(23.2)	(1.9)
Natural gas purchased for resale	(268)	(3.6)	(246)	(4.1)	8.9
Use of basic transmission network	(538)	(7.2)	(310)	(5.2)	73.5
Depreciation and amortization	(677)	(9.0)	(686)	(11.4)	(1.3)
Personnel	(788)	(10.5)	(710)	(11.8)	11.0
Regulatory charges	(861)	(11.5)	(585)	(9.7)	47.2
Third-party services	(329)	(4.5)	(325)	(5.4)	1.2
Employee post-retirement benefits	(153)	(2.0)	(109)	(1.8)	40.4
Materials and supplies	(83)	(1.2)	(88)	(1.5)	(5.7)
Employees profit sharing	(110)	(1.5)	(93)	(1.5)	18.3
Other	(280)	(3.7)	(313)	(5.2)	(10.5)
Reversal (Provision) for loss on deferred regulatory assets	(9)	(0.1)	174	2.9	
Total operating costs and expenses	(5,466)	(73.1)	(4,687)	(77.9)	16.6

Electricity purchased for resale consists primarily of purchases from Itaipu through *Centrais Elétricas Brasileiras S.A. Eletrobrás*. We are required under applicable regulations to purchase 17.0% of Itaipu's capacity at U.S. dollar-denominated prices. We also purchase electricity from the CCEE and Furnas. Electricity purchased for resale decreased 1.9% to R\$1,370 million in 2004 from R\$1,396 million in 2003. The amounts of electricity purchased for resale reported in the income statement refer to the amounts that were in fact included in the calculation of the tariff to be applied. See Note 19 to

our consolidated financial statements.

Natural gas purchased for resale increased 8.9% to R\$268 million in 2004 compared to R\$246 million in 2003 and consists of purchases made by our subsidiary, Gasmig.

Charges for use of the basic transmission network mainly correspond to the cost of transporting electricity in the Brazilian basic transmission network that are prorated among the Brazilian distribution companies. Charges for use of the basic transmission network are fixed costs that represented a 73.5% increase to R\$538 million in 2004

71

compared to R\$310 million in 2003 primarily due to increases in the operating costs of new transmission lines of the Brazilian electric system.

Depreciation and amortization expense did not vary significantly, decreasing 1.3% to R\$677 million in 2004 compared to R\$686 million in 2003.

Personnel expense increased to R\$788 million in 2004 compared to R\$710 million in 2003 primarily as a result of wage increases of 7.0% and 16.2% in November 2004 and 2003, respectively, and the implementation of our Careers and Remuneration Plan in 2004. Additionally, there were provisions related to our Termination Resignation Program in the amount of R\$25 and R\$78 million in 2004 and 2003, respectively.

Regulatory charges increased 47.2% to R\$861 million in 2004 from R\$585 million in 2003 due primarily to the increases of R\$120 and R\$118 million in the Energy Development Account (*Conta de Desenvolvimento Energético*), or CDE, a new charge created to foster energy development in the states and to promote competition regarding energy produced through wind farms, small hydroelectric power plants, biomass, natural gas and coal, and charges for use of water resources, respectively. These expenses are fixed costs. See Note 4 to our consolidated financial statements.

Third-party services expense was R\$329 million in 2004 compared to R\$325 million in 2003. Third-party services expenses consists primarily of contracts related to meter reading, delivery of bills to consumers, collection services and maintenance of distribution and transmission lines.

Employee post-retirement benefits increased 40.4% to R\$153 million in 2004 compared to R\$109 million in 2003 due to a higher projected net periodic cost for 2004 as a result of a higher expected interest expense compared to the expected return on plan assets. See Note 15 to our consolidated financial statements.

We recorded a provision for losses of R\$9 million in 2004 compared to a reversion provision for loss on deferred regulatory assets of R\$174 million in 2003 to reflect our estimation of the recoverability of our deferred regulatory assets. The extraordinary rate adjustment regulatory asset had an initial maximum recovery period of 82 months, which was reduced to 74 months, from January 2002 to February 2008, pursuant to ANEEL's Resolution No. 1 dated January 12, 2004. We made studies to verify if the 74-month recovery period would be sufficient to recover the amounts approved by ANEEL. Based on those studies, we recorded an allowance for losses in the amount of R\$13 million as of December 31, 2004. Therefore, there was an additional allowance, in the amount of R\$9 million, since the original amount recorded, as of December 31, 2003, was R\$4 million. See Notes 2(q) and 4 to our consolidated financial statements.

Employees profit sharing increased 18.3% from R\$93 million in 2003 to R\$110 million in 2004. This variation due to the collective labor agreements entered into by CEMIG and the labor unions in November 2004

Other expenses decreased 10.5% to R\$280 million in 2004 from R\$313 million in 2003. The main variations in other expenses in 2004 compared to 2003 were a decrease of R\$25 million in losses on disposal of fixed assets and a decrease of R\$50 million in other provisions for contingencies and doubtful accounts, offset by a provision in 2004 of R\$24 million related to bonuses paid during the rationing period which were not reimbursed from the Federal Government and an increase of R\$9 million in rental expenses. See Note 19 to our consolidated financial statements.

Operating income

As a result of the foregoing, we had operating income of R\$2,013 million in 2004 compared to operating income of R\$1,329 million in 2003.

Financial income, net

Financial income, net, includes (i) financial income, which is mainly comprised of interest and monetary restatement of our account receivable from the State Government, investment income earned, late charges on

overdue electricity bills, foreign exchange gains, monetary restatement on deferred regulatory assets, and (ii) financial expense, which is mainly comprised of interest expense on loans and financing, the *Contribuição Provisória sobre a Movimentação ou Transmissão de Valores e de Créditos e Direitos de Natureza Financeira* (a financial transaction tax), or CPMF, foreign exchange losses, monetary restatement losses, monetary restatement of deferred regulatory liabilities and other expenses. We had financial income, net of R\$350 million in 2004 compared to financial income, net of R\$674 million in 2003, principally due to a R\$242 million decrease in foreign exchange revenues resulting from the 8.7% appreciation of the *real* against the U.S. dollar in 2004 compared to an 18.2% appreciation of the *real* against the U.S. dollar in 2003. Additionally, there was a R\$122 million increase in losses from financial instruments due to the swap operations made in 2004 to reduce our exchange rate risk. See Notes 3, 4, 13, 20, 22 and 23 to our consolidated financial statements.

Non-Operating income

On December 15, 2004, CEMIG sold part of its shares in Gasmig, corresponding to 40% of the registered capital, 0.5% to Gaspetro and 39.5% to its subsidiary, TSS Participações S.A for R\$154 million, resulting in a gain of R\$102 million.

Income taxes

Income taxes were an expense of R\$731 million on pre-tax income of R\$2,468 million in 2004 compared to expenses of R\$607 million on pre-tax income of R\$2,003 million in 2003. Deductions of R\$173 million and R\$85 million in 2004 and 2003, respectively, with respect to interest on capital reduced the amount provisioned for income taxes in 2004 and 2003. See Note 5 to our consolidated financial statements.

Minority interests

We had income from minority interests of R\$2 million in 2004, related to our interest in Gasmig.

Net income

As a result of the foregoing, we had net income of R\$1,739 million in 2004 compared to net income of R\$1,396 million in 2003.

Other comprehensive loss

Other comprehensive loss was R\$474 million in 2004 compared to other comprehensive loss of R\$64 million in 2003 as a result of the higher additional minimum liability recorded in 2004. In 2004, CEMIG made a change in some actuarial assumptions in the annual discount rate and in the mortality rate. The effect of these changes was an increase in our retirement benefit obligation, which was recorded as an other comprehensive loss in 2004.

Comprehensive income

As a result of the factors stated above, comprehensive income was R\$1,265 million in 2004 compared to R\$1,332 million in 2003.

Liquidity and Capital Resources

Our business is capital intensive. Historically, we have required capital to finance the construction of new generation facilities and the expansion and modernization of existing generation, transmission and distribution facilities. Our liquidity requirements are also affected by our dividend policy. See Item 8. Financial Information Dividend Policy and Payments. We have funded our liquidity and capital requirements primarily with cash provided by operations and, to a lesser extent, with proceeds of financings. We believe that our current cash reserves, cash provided by operations and anticipated proceeds from financings will be sufficient during the next 12 months to meet our liquidity requirements.

Cash and cash equivalents

Cash and cash equivalents as of December 31, 2005 were R\$1,349 million compared to R\$916 million as of December 31, 2004 and R\$466 million as of December 31, 2003. None of our cash or cash equivalents was held in currencies other than *reais* as of December 31, 2005.

Cash flow from operating activities

Net cash provided by operating activities in 2005, 2004 and 2003 totaled R\$1,770 million, R\$1,505 million and R\$609 million, respectively. The increase in cash provided by operating activities in 2005 compared to 2004 was due primarily to higher amounts received related to deferred regulatory assets and the increase in 2004 compared to 2003 was due primarily to the financial settlement of the CCEE transactions in 2003. Significant non-cash items affecting earnings included depreciation and amortization expense as a result of our on-going capital improvements projects, recognition of deferred regulatory assets, the effects of monetary variation and exchange rate variations and a partial reversal of the provision for loss on the receivable under the CRC Account Agreement.

Cash flow from investing activities

Net cash used in investing activities during 2005, 2004 and 2003 amounted to R\$1,543 million, R\$917 million and R\$852 million, respectively, principally relating to the acquisition of property, plant and equipment and the modernization of existing generation, transmission and distribution facilities. Capital expenditures from the acquisition of property, plant and equipment amounted to R\$1,511 million, R\$1,061 million and R\$1,029 million in 2005, 2004 and 2003, respectively. New investments in other affiliates also impacted net cash used in investing activities. Such investments amounted to R\$32 million, R\$10 million and R\$4 million in 2005, 2004 and 2003, respectively. See Item 4. Information on the Company Capital Expenditures for more detail regarding how these capital expenditures were applied by us.

Cash flow from financing activities

Net cash provided by financing activities during 2005 was R\$206 million, comprised of R\$1,515 million in proceeds from long-term financing, offset by the repayment of R\$818 million of real- and foreign currency-denominated long-term financing and the payment of R\$491 million in dividends and interest on capital.

Net cash used for financing activities during 2004 was R\$138 million, comprised of R\$1,207 million and R\$316 million in proceeds from long-term financing and short-term loans, respectively, offset by the repayment of R\$1,424 million of real- and foreign currency-denominated long-term financing and the payment of R\$237 million in dividends and interest on capital.

Net cash provided by financing activities during 2003 was R\$539 million, comprised of R\$694 million and R\$820 million in proceeds from long-term financing and short-term loans, respectively, offset by the repayment of R\$826 million of real- and foreign currency-denominated long-term financing and the payment of R\$149 million in dividends and interest on capital.

Our indebtedness as of December 31, 2005 was R\$4,826 million, composed of R\$3,841 million of long-term debt and R\$985 million of the current portion of long-term debt. This compares with indebtedness as of December 31, 2004 of R\$4,167 million, composed of R\$2,750 million of long-term debt and R\$1,417 million of the current portion of long-term debt. Of our long-term debt (including the current portion) at December 31, 2005, R\$779 million was denominated in foreign currencies (R\$653 million of which was U.S. dollar-denominated) and R\$4,047 million was denominated in *reais*. Of our total indebtedness of R\$4,826 million as of December 31, 2005, R\$4,225 million is subject to variable interest rates. See Notes 13 and 22 to our consolidated financial statements.

We are subject to financial covenants contained in some of our debt agreements that require us to maintain certain financial ratios, some of which have been by the relevant creditors. These ratios are computed based on our financial statements prepared in accordance with accounting practices adopted in Brazil. These and other covenants

could limit our ability to support our liquidity and capital requirements. See Item 13 Defaults, Dividend Arrearages and Delinquencies Restrictive Covenants .

On December 31, 2005, our total debt was R\$4,826 million, of which R\$985 million matures in 2006. Due to these maturities in 2006, we need funds in the short term to pay and refinance these obligations. For this reason, we are refinancing our debt in 2006 to lengthen maturities. We plan to raise approximately R\$2.3 billion in 2006, which will be used not only to repay debt but also to finance the capital expenditure. We cannot assure you that we will successfully consummate this refinancing.

On July 19, 2004, we set up a Local Note Program, or the Program, according to Instrução CVM No. 400 , dated December 29, 2003. Under the Program we were permitted to issue debentures in an amount of up to R\$1.5 billion, and issued debentures in July 2004. As a result of the unbundling, we are unable to issue additional debentures under the Program. We may in the future establish other local note programs directly or through our subsidiaries.

As a state-controlled company, we are subject to restrictions under current financing laws and regulations in Brazil on our ability to obtain financing in certain situations. For example, we must obtain approval from the Brazilian Ministry of Finance and the Central Bank prior to certain international financial transactions and such approval is typically granted only if the purpose of the transaction is to finance the import of goods or to roll over our external debt. In addition, financial institutions in Brazil are subject to risk exposure restrictions with regard to state governments, governmental agencies and state-controlled companies such as us. The restrictions mentioned in this paragraph have not prevented us from obtaining financing, although there is no assurance that our ability to obtain financing will not be hindered in the future. See Item 3. Key Information Risk Factors Risks Relating to Brazil We currently face limitations on our ability to obtain financing.

We currently plan to make capital expenditures aggregating approximately R\$1,555 million in 2006. The principal uses of these expenditures are expected to be for expansion of our distribution infrastructure and increases in our generation capacity. In 2005, we funded our capital expenditures and met our liquidity requirements through a combination of cash flow from operations and financings. We expect that we will fund our proposed capital expenditures and meet our other liquidity requirements in 2006 through a combination of cash flow from operations and financings. Because we rely primarily on cash generated from operations to fund our liquidity and capital requirements, factors that cause our revenues and net income to increase or decrease could have a corresponding effect on our access to sources of liquidity.

Over the long term, we anticipate that it will be necessary to make significant capital expenditures in connection with the maintenance and upgrading of our generation, transmission and distribution facilities, and we expect to employ a variety of liquidity sources, such as cash flow from operations and financings, in connection with such requirements. See Item 3. Key Information Risk Factors for a discussion of certain matters that might adversely affect our liquidity position.

In January 2006, we sold the senior quotas of Cemig CRC Account Securitization Fund (FIDC) in the amount of R\$900 million which increased our liabilities in this same amount. For additional information regarding the FIDC, see Additional Information - Material Contracts .

Off-Balance Sheet Arrangements

We do not have any off-balance sheet arrangements.

Tabular Disclosure of Contractual Obligations

We have outstanding contractual obligations and commitments which include principal debt payment provisions, the obligation to purchase electricity for resale from Itaipu, the obligation to transfer and transport electric power from Itaipu as well as construction commitments. The following table provides information, as of December 31, 2005, about our contractual obligations and commitments in millions of *reais*.

	2006	2007	2008	2009	2010	2011 and beyond	Total
Long-Term debt (1)	985	419	437	774	551	1,660	4,826
Purchase of Electricity from Itaipu for resale (2)	1,082	1,082	1,082	1,082	1,082	2,619	8,029
Transportation of Electric Power from Itaipu (2)	74	74	74	74	74	181	551
Queimado hydroelectric power plant(3)	8						8
Aimorés hydroelectric power plant (3)	20						20
Irapé hydroelectric power plant (3)	9	26					35
Luz para todos (Light for All) Program	846	397					1,243
PCH Pai Joaquim (3)	7						7
Capim Branco I hydroelectric power plant (3)	7						7
Capim Branco II hydroelectric power plant (3)	16	2					18
Capital Contribution to Empresa de Infovias S.A.	11	26					37
Capital Contribution to Gasmig	25	53					78
Pension Plan Debt - Forluz	126	125	95	101	104	973	1,524
Purchase of Energy Spot Market	776	776	900	968	1,148	8,084	12,652
Total	3,992	2,980	2,588	2,999	2,959	13,517	29,035

(1) In the event of our non-compliance with certain covenants in our loan agreements, the total principal, future interest and any penalties due under these agreements may become immediately due and payable. These amounts do not include interest payments on debt or payments under interest rate swap agreements. We expect to pay approximately R\$663 million in interest payments on debt in 2006. Interest payments on debt for years following 2006 have not been estimated since they are subject to future variations in variable interest rates and foreign currency exchange rates. We do not believe projections of interest payments and payments under interest rate swap agreements would be meaningful.

(2) Contract with Furnas, denominated in U.S. dollars, to supply electric power purchased from Itaipu until May 2013. Amounts are calculated based on the U.S. dollar exchange rate as of December 31, 2005.

(3) Contractual obligations with contractors.

Research and Development

We are engaged in projects that explore technological advances not only in electric power systems but in all energy-related fields such as the development of the usage of alternative energy sources, environmental control and power system performance and safety optimization.

In 2005, we spent approximately R\$30 million on research and development, including transfers to *Fundo Nacional de Desenvolvimento Científico e Tecnológico* FNDCT (a federal research and development fund). During the years ended December 31, 2005, 2004 and 2003, we spent an aggregate of approximately R\$55 million on research and development, and we transferred the same amount to FNDCT during that time. We expect to spend a total of approximately R\$55 million on research and development in 2006. We conduct these efforts in accordance with Federal Law No. 9,991, which requires Brazilian power utilities to spend around 1% of their net

income on research and development projects (including transfers to FNDCT), as well as in accordance with our strategic corporate plans.

Some of the research and development programs as well as energy efficiency programs, related to previous fiscal years have not yet been concluded by us. These delays have been caused by the time spent by ANEEL on the approval of the programs and for establishment of partnerships and development of the projects by the partners. In accordance with ANEEL instructions Cemig recorded a liability in 2005 for future expenditures in the amount of R\$185 million relating to amounts that had already been included in the determination of our tariffs in the previous years.

We have dedicated a substantial portion of our research and development activities to the development of the usage of alternative energy sources, including wind, solar and biomass power generation. For example, our experimental Morro do Camelinho wind farm, with an installed capacity of 1 MW, began operating in 1994. See Item 4. Information on the Company Generation and Purchase of Electric Power Wind Farm. We are currently involved in alternative energy research and development through projects that involve:

- the development of the first Latin American 500W and 1,000W prototypes of hydrogen fuel cells (Direct Hydrogen Proton Exchange Membrane Fuel Cells) and research regarding the development of cells fueled directly by ethanol without external reform (Direct Ethanol Proton Exchange Membrane Fuel Cell);
- the use of low cost technologies for electricity generation such as Elsbeth and Stirling motors, internal combustion engines, photovoltaic panels, micro turbines, high temperature fuel cells, biomass gasification, and bio-gas from animal biomass;
- the creation of an experimental laboratory for the production of hydrogen as an energy source;
- a joint research program with *Universidade Federal de Itajubá* relating to small hydroelectric plants, thermal generation and distributed energy resources;
- a joint research program with *Centro Tecnológico de Minas Gerais* focusing on the development of a low-cost photovoltaic cell;
- a joint research program with *Universidade Federal de Viçosa* relating to planted biomass for electricity generation; and
- a joint research program with *Centro Federal de Educação Tecnológica* focusing on the development of small solar thermal power plants using low-cost materials.

Our research and development projects in areas other than alternative energy sources include:

- projects regarding the minimization of the environmental impact in areas like fish safety, limnology, aquifers recharge, geology-related researches, riparian vegetation and environmental problems caused by turbines;
- projects for monitoring and optimizing of thermal and hydroelectric plants;
- meteorology projects, especially related to flood and lightning forecasts, the major causes of power outages;
- projects for the optimization and improvement of the performance of transmission and distribution systems, like the development of new computer tools, equipment and materials;

- projects for the development of new equipment for energy efficiency; and

77

- projects for the optimization of supervision, control and protection systems of the transmission and distribution control centers.

We have also been instrumental in developing programs relating to the generation of electricity in remote areas and for low-income consumers, such as our Lumiar and Luz Solar programs.

In view of the importance of technology with respect to our business strategy, the annual increase in funds allocated by CEMIG to technological research and development, and the need to maximize results achieved through these initiatives, we created the Strategic Technology Management Center (*Centro de Gestão Estratégica de Tecnologia* - CGET), an independent nonprofit entity whose partners are subsidiaries of CEMIG. Its mission is to promote research and development on technological innovations, with a goal of increasing the competitiveness in the power industry in the state of Minas Gerais, fostering sustainable regional development.

Trends

The purchase of energy from the Itaipu power plant and our generation resources were sufficient to meet almost 85% of our own load and our sale contracts in 2005. To complement our energy needs in 2005, we bought energy from Initial Contracts (1%), several generating companies through the existing energy and new energy auctions held in December 2004 and April and December 2005 (9%) and direct contract with generating companies (5%). The Initial Contracts expired in 2005 and under the New Industry Model Law are no longer permitted. We have replaced the Initial Contracts by purchasing energy in the federal energy auctions. At those auctions we also participated as vendors and sold energy to 35 distribution companies. For more details, see Item 10. Additional Information - Material Contracts - Electricity Sale Contracts in the Regulated Environment (CCEARs).

As a public service utility, we are subject to regulations issued by the Federal Government as described in Item 4. Information on the Company Brazil's Energy Market Regulation. Therefore, any change in the regulatory framework may affect us significantly either with respect to our revenue if the change relates to prices or with respect to our operating expenses if the change relates to costs incurred to provide service to consumers.

We do not anticipate any significant change in revenues in respect of the transmission and distribution businesses since the regulation in place meets the plans of the Federal Government administration.

The rate readjustment was applied differently to different client categories with industrial clients having higher readjustments than residential clients. For more information, see Item 4. Information on the Company Brazil's Energy Market Rates and Annex A The Brazilian Power Industry Rates for the Use of the Distribution and Transmission Systems. This difference in application may have an impact on sales volume growth in the future since large industrial clients tend to develop co-generation projects to supply energy to themselves at a lower cost. We are taking steps to mitigate this impact through the connection of new clients of different categories as well as clients based in other states. In the coming years, we expect electricity consumption to grow toward the pre-rationing level based on an assumption that economic activity in Brazil will return to the levels it reached prior to the Federal Government-imposed rationing in 2001. However, there can be no assurance that this will occur.

We expect that our Parcel A costs will increase at a rate well above inflation, which will require further rate increases. We expect our Parcel B costs to rise more or less at the rate of inflation since most of these cost items are adjusted for inflation according to contractual terms. We have taken measures to cut operating costs so as to meet benchmarks proposed by ANEEL in the periodic rate review process.

With respect to expansion, the most significant trend relates to universalization of client service. Utilities are currently required to provide service to all clients according to a schedule settled by ANEEL. The legislation establishes that financing for universalization of the services will come from the funds of the Energy Development Account (Conta de Desenvolvimento Energético), or CDE, and the Global Reversion Fund (Reserva Global de Reversão), or RGR. According to the Luz Para Todos Program launched by Ministério de Minas e Energia - MME and Eletrobrás for the universalization of electric services in rural areas, 21% of the necessary funds will come from CDE, 18% from RGR, 10% from the State Government and the remaining 51% will come from CEMIG.

Another highlight in new investment in distribution is the *Cresce Minas* program. This program will run from 2006 to December 2008 and will provide infrastructure and improvements to the electricity distribution system throughout Minas Gerais to improve the quality of electricity supply and adapt it to the new conditions of the market.

With respect to energy supply, we expect the current overcapacity and favorable reservoir levels to prevail in the near term, allowing large free market consumers to consume electricity at lower prices and discouraging investment in new power projects. Investment in new generating capacity is one of the major concerns of the Federal Government to be addressed through regulatory framework reform. It is expected that the new regulatory framework will encourage investment in new generation capacity.

Item 6. Directors, Senior Management and Employees

Directors and Senior Management

We are managed by our Board of Directors (*Conselho de Administração*), which consists of 14 directors, with each director having a corresponding alternate, and our Board of Executive Officers (*Diretoria*), which consists of seven executive officers. As our majority shareholder, the State Government has the right to elect the majority of our Board of Directors and, therefore, can control the outcome of Board of Director meetings. Each holder of our common shares is entitled to vote to elect members of our Board of Directors. Pursuant to the Brazilian Corporate Law, any shareholder holding at least 10% of our outstanding common shares may request that a cumulative voting procedure be adopted that would entitle each share to a number of votes equal to the current number of members of our Board of Directors and giving each shareholder the right to either vote cumulatively for a candidate or to distribute its votes among several candidates.

Pursuant to the Brazilian Corporate Law, holders of preferred shares representing at least 10% of our share capital or holders of common shares representing at least 15% of our voting capital (other than our controlling shareholder) have the right to appoint one member and an alternate to the Board of Directors. If none of the holders of common shares or preferred shares meets the respective thresholds described above, shareholders representing in the aggregate at least 10% of our share capital will be able to combine their holdings to appoint one member and an alternate to the Board of Directors.

CEMIG and its wholly-owned subsidiaries, Cemig Generation and Transmission and Cemig Distribution, all have the same Board of Directors, Board of Executive Officers and Fiscal Council.

Board of Directors

Our Board of Directors ordinarily meets once every two months. Its responsibilities include the establishment of corporate strategy, the general direction of our business and the election, dismissal and supervision of our executive officers.

Each regular member of the Board of Directors has an alternate member, who is elected at general shareholder meetings in the same manner as a regular member. Alternate directors act as substitutes for their respective directors from time to time when the directors are not available to perform normal director functions, or, in the case of a vacancy on the Board of Directors, until a replacement director is appointed to fill such vacancy. No member or alternate member of our Board of Directors has a service contract with us or any subsidiary that provides for benefits upon termination of employment.

The members of our Board of Directors are elected to serve three-year terms and may be reelected. Our full Board of Directors is elected every three years. Of the current 14 members of our Board of Directors, eight were elected by the State Government, five were elected by Southern and one was elected by our preferred shareholders. The terms of the current members of our Board of Directors expire in April 2009. The names, positions and dates of initial appointment of our directors and their respective alternates are as follows:

Name	Position	Date of Initial Appointment
Wilson Nélio Brumer(1)	Director	February 27, 2003
Fernando Lage de Melo	Alternate	February 27, 2003
Djalma Bastos de Moraes	Director	January 14, 1999
Luiz Antônio Athayde Vasconcelos	Alternate	February 27, 2003
Francelino Pereira dos Santos	Director	February 27, 2003
Marco Antônio Rodrigues da Cunha	Alternate	February 27, 2003
Antônio Adriano Silva	Director	January 14, 1999
Lauro Sérgio Vasconcelos David	Alternate	April 28, 2006
Nilo Barroso Neto	Director	November 24, 2003
Guilherme Horta Gonçalves Júnior	Alternate	February 27, 2003
Haroldo Guimarães Brasil(2)	Director	December 30, 2004
Antônio Renato do Nascimento (2)	Alternate	December 30, 2004
Carlos Augusto Leite Brandão(2)	Director	May 07, 2004
Eduardo Leite Hoffmann(2)	Alternate	April 28, 2006
Andréa Paula Fernandes Pansa(2)	Director	May 07, 2004
Maria Amália Delfim de Melo Coutrim(2)	Alternate	April 28, 2006
Evandro Veiga Negrão de Lima(2)	Director	April 28, 2006
Andréa Leandro Silva(2)	Alternate	May 07, 2004
José Augusto Pimentel Pessôa(2)	Director	May 07, 2004
Eduardo Castilho Vasconcellos Costa(2)	Alternate	April 28, 2006
Aécio Ferreira da Cunha	Director	May 28, 2003
Eduardo Lery Vieira	Alternate	May 28, 2003
Maria Estela Kubitschek Lopes	Director	February 27, 2003
Luiz Henrique de Castro Carvalho	Alternate	August 20, 2004
Alexandre Heringer Lisboa	Director	February 27, 2003
Franklin Moreira Gonçalves	Alternate	February 27, 2003
Wilton de Medeiros Daher(3)	Director	April 28, 2006
Luiz Aníbal de Lima Fernandes(3)	Alternate	April 28, 2006

(1) Chairman of the Board of Directors.

(2) Elected by Southern.

(3) Elected by our preferred shareholders.

Set forth below is brief biographical information for each member of our Board of Directors.

Wilson Nélio Brumer Mr. Brumer earned a degree in business administration from the Economics, Administration and Accounting College FUMEC-BH in 1975 and has completed several financial management, planning and managerial development courses in Brazil and abroad. He has been the Minas Gerais State Secretary of Economic Development since January 2003 and a director of Valepar S.A. since January 2001. He is the former chairman of the following companies: BHP Billiton Brasil from November 1998 to December 2002; Grupo Parapanema from February 1996 to October 1998; Aço Minas Gerais Açominas from May 1995 to June 1997; Eletrometal Metais Especiais S.A. from 1994 to 1996; Brasifco S.A. from 1993 to 1996; Rio Doce Finance Ltd. RDF from 1990 to 1992; Itabira International Company Ltd. ITACO from 1990 to 1992 and Navegação Rio Doce S.A. DOCENAVE from 1990 to 1991. Mr. Brumer is a former vice president of the board of directors of the following companies: Acesita from November 1992 to October 1998; Acesita Energética S.A. from 1992 to 1996; Forjas Acesita S.A. from 1992 to 1996; CVRD from 1990 to 1992 and the Villares Group consisting of Indústrias Villares, Aços Villares S.A. and Elevadores Atlas S.A. from February 1995 to October 1998. He is a former director of: Companhia Siderúrgica de Tubarão CST from July 1996 to April 1999; Varig from November 1994 to February 1996; Usiminas from October 1991 to November 1992; Companhia Siderúrgica Tubarão from August 1992 to November 1992; Rio Doce Geologia e Mineração S.A. DOCEGEO from 1988 to 1990; Florestas Rio Doce S.A. from 1988 to 1990 and Ferritas Magnéticas S.A. FERMAG from 1984 to 1986. Mr. Brumer is also the former chief executive officer of: Acesita from November 1992 to October 1998; Companhia Siderúrgica de Tubarão from July 1996 to April 1999; CVRD from April 1990 to November 1992, Acesita Energética S.A. from 1992 to 1993 and Forjas Acesita S.A. from 1992 to 1993. He served as the chief financial officer of CVRD from February 1988 to April 1990. Mr. Brumer has also served as a member of the fiscal councils of: Navegação Rio Doce S.A. DOCENAVE from 1983 to 1987 (president); Urucum Mineração S.A. from 1983 to 1984 and

Fundação Vale do Rio Doce de Seguridade Social VALIA from 1982 to 1983. Mr. Brumer has also served as the president of the Brazilian Steel Company Institute from August 1997 to May 1999, president of the Industrial Policy Council of the Industry Federation of Minas Gerais from 1994 to 1999, president of the finance committee of Valesul Alumínio S.A. from 1984 to 1988, executive director of the Brazilian Foreign Trade Association AEB from 1994 to 1997, and a member of several councils and committees.

Djalma Bastos de Moraes Mr. Moraes holds a bachelor's degree in engineering from the Military Institute of Engineering and has completed additional post-graduate studies in telephony and computers at the same institute. Since January 1999 he has been our Chief Executive Officer, and since July 2002 he has been the Chief Executive Officer of Empresa de Infovias S.A. From January 1999 to December 2004 he was the Chief Executive Officer of Gasmig. From May 1999 to August 2001 he was the Chief Executive Officer of Empresa de Infovias S.A. From 1995 to 1998, he was Vice-President of Petrobrás Distribuidora S.A., the Brazilian oil company. From 1993 to 1994, Mr. Moraes served as Brazilian Minister of Communications. He has also held various other positions, such as chief executive officer of Telecomunicações de Minas Gerais S.A. Telemig; manager of Telecomunicações Brasileiras S.A. Telebrás; chief operating officer of Telecomunicações de Mato Grosso Telemat; chief operating officer of Telecomunicações do Amazonas Telemazon; and manager of Telefônica Municipal S.A. Telemusa.

Francelino Pereira dos Santos Mr. Santos earned a law degree from the Law School of the Federal University of Minas Gerais in 1949. Mr. Santos was a Minas Gerais state senator from 1995 to 2002 and the Governor of Minas Gerais from 1979 to 1983. He also was a congressional representative for four successive terms from 1963 to 1979 and alderman for the city of Belo Horizonte from 1951 to 1954. From 1961 to 1966 he was Chief of Cabinet of the Minas Gerais State Secretary of Internal Affairs and Justice, Chief of the Minas Gerais State General Management Department and Chief Counselor for Municipalities Affairs of the Cabinet of the Governor. From 1985 to 1990, he was vice-president of management of Banco do Brasil S.A. and the chief executive officer of Acesita from October 1983 to August 1984. Mr. Santos was also a professor and director of the Municipal Accounting High School in Belo Horizonte from 1955 to 1959.

Antônio Adriano Silva Mr. Silva holds a business administration degree with a specialization in marketing. He has worked for several private entities, including Mesbla S.A., Empresa Brasileira de Varejo S.A. Embrava, Agência Jornalística Imagem, Associação Comercial de Minas, Asa Criação de Publicidade, and Coteminas.

Nilo Barroso Neto Mr. Barroso graduated in economics from the University of Brasília in 1979. He began the training course for a diplomatic career in 1977, completing it in 1982. In 1991 he completed the Master's course in liberal studies at Georgetown University, Washington, specializing in political philosophy. In 1983 and 1984 he was Assistant Head of the Consular Division, and in subsequent years held the posts of Assistant Head of the Division for Market Studies and Research, and Assistant to the Secretary for Relations with Congress. In 1993 he was an official of the General Secretariat of the Presidency of the Republic. From 1991 to 1993 he was Assistant Counsel in Houston, USA. He advised the annual conferences of the Interparliamentary Union in Bangkok (1987) and Mexico (1986), and participated as an Advisor in the meetings with the International Monetary Fund and the World Bank in the period from 1989 through 1991. He was a member of the Brazilian Congressmen's Delegation to the Convention of the Republican Party of the United States, in Houston, in 1992. He has been a member of the presidential summit group for the political concentration and consultation mechanisms in Santiago, Chile, since 1993.

Haroldo Guimarães Brasil Mr. Guimarães was born on July 13, 1962. He graduated with a degree in electrical engineering from PUC University of Minas Gerais, and earned a doctorate in economics from Rio de Janeiro Federal University in 1997. He was awarded a Master's Degree in Business Administration by Minas Gerais Federal University in 1991, and completed the Central Bank Technical Graduation Course (Sao Paulo, 1994), as well as post-graduation studies in Public Policies from ENAP of Brasília (1990), and a specialization in economic engineering from the Dom Cabral Foundation in 1986. He is a Director of Strategor Ltda Consultoria e Treinamento, a Consultant

of the Management Development Foundation, a Lecturer in the Master's Degree Course in Business Administration of the Pedro Leopoldo Foundation, Lecturer at IBMEC Educacional S.A., and a visiting professor in the Business Administration Master's Degree Program of Minas Gerais Federal University.

81

Carlos Augusto Leite Brandão Mr. Brandão was born on January 3, 1956. He obtained a degree in electrical engineering from Minas Gerais Federal University in 1978, and subsequently completed post-graduate studies in economic engineering at the Dom Cabral Foundation in 1980. In 2000 he attended the MBA course in finance at IBMEC (the Brazilian Capital Markets Institute). He is currently the Business Coordination Director for AES Eletropaulo, where he is responsible for regulatory and institutional action, and management coordination of the group's companies in Brazil. He is also chairman of the Audit Committee of the CCEE (*Câmara de Comercialização de Energia Elétrica*), was a member of the Market Executive Committee of that organization, and is a member of the Board, and Director, of ASMAE. He has been a member of IEEE – The Institute of Electrical Engineers, Inc. since 1980, and a Senior Member since 1990. He was head of the Rio de Janeiro section of the IEEE from 1990 to 1992, and the Minas Gerais section (which he founded) from 1993 to 1996. He was chairman of *Conselho Brasil* from 1999 to 2001. He is a member of the Editorial Council of the Power Computer Society, has held several posts in the Power Engineering Society, and is the only foreign representative holding a position in the United States Activities Board, headquartered in Washington, D.C. He has been a lecturer in the Computer Science Center of Minas Gerais Federal University, various courses held by Eletrobrás and at the PUC University of Minas Gerais, and the Instituto Brasil-Estados-Unidos. He has more than 50 publications in and outside Brazil, and published a book and CD-ROM jointly with the João Pinheiro Foundation, on Models for the Electricity Sector, in 1995. He coordinated the course in Regulation of the Electricity Sector held by the João Pinheiro Foundation in 1997, the first course of its type in Brazil. He began his career at CEMIG on March 15, 1979, and has held the positions of Engineer, Manager of the Operation and Maintenance Engineering Division, Manager of the Operation and Maintenance Department, Manager of the Planning and Automation Department, Consultant for Sales to Large Clients, and Manager of the Transmission Department. Mr. Brandão currently serves as CEMIG's advisor to the Vice-Presidency and Consultant to the Financial Director.

Andréa Paula Fernandes Pansa Ms. Fernandes was born on October 19, 1969. In 1992 she obtained a degree in business administration from FIRP (Faculdades Integradas Rio-Preteense), and completed postgraduate studies at the Getúlio Vargas Foundation (FGV) in 1995. She attended the Extension Business Course of the University of California at Berkeley in 1996, and the Banking Extension Course (GVPEC) of the Getúlio Vargas Foundation in 1998. In 2001 she obtained an MBA in Finance from IBMEC (the Brazilian Capital Markets Institute). She is an advisor to the Business Coordination Directorate of the AES Brasil group companies. Previously she worked at Eletropaulo Metropolitana Eletricidade de São Paulo S.A. as a financial analyst and Investor Relations analyst from 2000 to 2003. She was a portfolio analyst at Banco Santander Brasil S.A. from 1998 to 2000, worked in the marketing department of Tyson Foods in the United States in 1996, and worked at Citibank N.A in 1990 and 1991.

Evandro Veiga Negrão de Lima Mr. Negrão de Lima graduated with a degree in medicine with a specialization in psychiatry from the medical faculty of Minas Gerais Federal University in 1964, where, after hospital and university experience in Colorado, USA, he later became a lecturer and subsequently Monitor in Forensic Medicine. He was a clinical psychiatrist for the private social security institute of the employees of Minas Gerais state, retiring as head of medical services for the interior of the state. He has been Director of the Minas Gerais Commercial Association, Vice-president of the Real Estate Company Managers' Club, Vice-president of América Football Club, director of the two steel trading companies, Cobraço and Cobrafer, and a licensed aircraft pilot since 1968. He is currently chairman of the planning and engineering company Sancruza, president of the Pampulha yacht club in Belo Horizonte, and chairman of the construction and development company, NL, and two real estate management companies.

José Augusto Pimentel Pessôa Mr. Pimentel was born on May 27, 1937, and obtained a degree in Civil Engineering from Minas Gerais Federal University (UFMG) in 1961, with additional specialization in water engineering and services. He worked for Tenenge as chief of the works office at Reduc, as a self-employed engineer (1963-1964), and as an engineer at CEMIG (1974-1974), where he worked in construction of transmission lines and as a field reconnaissance engineer for dam locations. In such capacity he was responsible for the structures sector of the Jaguará power plant. He was head of the Studies and Projects Department of Eletronorte (Centrais Elétricas do Norte do Brasil S.A.) from

1974 to 1978, and a director of Engevix from 1978 to 1994. Since 1994 he has been an independent consultant for Engevix. He was director of the National Union of Architecture and Engineering Companies (in 1994), Administrative Director and Director of the energy area of Amec, the Minas Gerais Association of Consulting and Engineering Companies (in 1992), and currently he is a consulting engineer for

82

Amec. He was a Member and Council Member of the Brazilian Large Dams Committee from 1977 to 1996, and in 1977 was Coordinator of the GTCN – the Northern Costs Working Group.

Aécio Ferreira da Cunha Mr. Cunha earned his law degree from the National Law Faculty of the University of Brazil, in Rio de Janeiro, in 1951. He was certified by the Brazilian Superior School of War in 1973. Presently, Mr. Cunha is an agribusiness entrepreneur in northern Minas Gerais. Since 1993, he has been a director of Furnas. In 1993 he was the chairman of BNDES. He was the congressional representative for six terms from 1963 to 1987, and representative of the Minas Gerais House of Representatives for two terms from 1955 to 1962. Prior to that, Mr. Cunha was the Chief of the Cabinet of the Minas Gerais State Secretary of Agriculture, Commerce and Labor. In 1988 Mr. Cunha was nominated Minister of the Brazilian Court of Audit, having his name approved by the Brazilian Congress, but for personal reasons, he declined before taking office.

Maria Estela Kubitschek Lopes Mrs. Lopes holds a degree in architecture and is an interior designer and entrepreneur. She is a managing partner of DF Consultores Ltda. and of Santa Júlia Importação, Exportação e Participações. Mrs. Lopes is also the adviser to the president of the Municipal Theater Foundation of the City of Rio de Janeiro, to the president of the Friends of the State of Rio de Janeiro – AME-RIO and to the president of the board of Casa Santa Iñez (a philanthropic association responsible for the nourishment and education of children and aid to low-income families in the Rocinha neighborhood in Rio de Janeiro). She was one of the founders of Memorial JK, an organization founded in the memory of Juscelino Kubitschek de Oliveira (former President of Brazil), and served as its vice-president from September 1981 to May 2000 and as acting president since October 2000. Mrs. Lopes has also served as president of the council of the Cultural Institute Cesgranrio, vice-president of the council of the Women's Bank, president of the Beneficent Institutions of the State of Rio de Janeiro and a member of the council of Casa das Palmeiras, a cultural institution. Mrs. Lopes has received several cultural and social merit awards.

Alexandre Heringer Lisboa Mr. Lisboa holds a degree in electrical engineering from the Polytechnic Institute of the Pontifical Catholic University of Minas Gerais and a master's degree in mechanical engineering with an emphasis in solar energy from the Federal University of Paraíba, in the city of João Pessoa (State of Paraíba). He also has received specialized wind energy training from the Deutsches Windenergie-Institut and from the Summer School on Wind Energy Technology at the University of Oldenburg in Germany. Mr. Lisboa has worked as an engineer for CEMIG since May 1985 and he is a director of SENGE as well as a counselor of the Regional Council of Engineering and Architecture. Mr. Lisboa served as an alternate member of the board of directors of CEMIG from January 1999 to December 2000. He was a researcher for and a consultant to the Technological Foundation Center of Minas Gerais – CETEC from November 1983 to April 1985. From January 1977 to May 1979, he was a trainee at Usiminas, Companhia Siderúrgica Belgo-Mineira and Delle-Alstom S.A. – DASA.

Wilton de Medeiros Daher Mr. Daher graduated with a degree in economics in 1972 and a degree in business management in 1975, from the University of Rio Grande do Norte, followed by post-graduation studies in foreign trade at the University of Brasília in 1984. He earned an MBA from the Economics Faculty of São Paulo University in 1994 and a master's degree in administration (specializing in international trade) from the University of Fortaleza in 2005. At Banco de Brasil, he served as International Business Advisor to the President's Office (from 1979-85), joint manager of the bank's branches in Lisbon and Porto (1986-7), and Joint Managing Director and Managing Director for the state of Ceará (1988-1995). In the private sector, he has served as Executive Director of Intercredit Fomento Mercantil Ltda., has been a member of the Audit Board of Neoenergia S.A. (formerly Guarani S.A.), which is a company controlling six electricity utilities in the states of Rio Grande do Norte, Pernambuco and Bahia, has been a representative of Previ, the Banco do Brasil pension fund (2003), has been a member of the Audit Board of Duratex S.A., of the Itaúsa group, representing Previ (2004-2006), has been a member of the Brazilian Corporate Governance Institute (IBGC) in São Paulo, and has served as Vice-president of the Ceará State Federation of Trade, Industry,

Services and Farming Associations (Facic) for the period 2006-2009.

Board of Executive Officers

Our Board of Executive Officers is responsible for the execution of decisions made by our Board of Directors and for our day-to-day management. Our executive officers have individual responsibilities established by our by-laws and serve for three-year terms. The terms of the current executive officers expire in April 2009. They are elected by our Board of Directors. Generally, ordinary meetings are held at least twice monthly and

83

extraordinary meetings are held whenever called by the Chief Executive Officer or by two executive officers other than the Chief Executive Officer.

The names, positions and dates of initial appointment of our executive officers are as follows:

Name	Position	Date of Initial Appointment
Djalma Bastos de Moraes	Chief Executive Officer	January 14, 1999
Djalma Bastos de Moraes(1)	Executive Vice-President	May 25, 2006
Celso Ferreira	Chief Planning, Projects and Construction Officer	February 11, 2003
Elmar de Oliveira Santana	Chief Energy Generation and Transmission Officer	February 11, 2003
José Maria de Macedo	Chief Energy Distribution and Commercialization Officer	February 11, 2003
Flávio Decat de Moura	Chief Financial and Investor Relations Officer	February 11, 2003
Heleni de Mello Fonseca	Chief Corporate Management Officer	February 11, 2003

(1)Temporarily and cumulatively

Set forth below is brief biographical information for each member of the Board of Executive Officers.

Djalma Bastos de Moraes For biographical information regarding Mr. Moraes, see Board of Directors.

Celso Ferreira Mr. Ferreira holds a degree in electrical and mechanical engineering from the Federal Engineering School of Itajubá in the State of Minas Gerais and a master's degree in electric system engineering from the Rensselaer Polytechnic Institute and has completed coursework in electrical system operation and energy trading in Brazil and abroad, including courses at the International Agency for Nuclear Energy in Paris and Commonwealth Edison Co. in Chicago. Since March 2003, he has been the Chief Executive Officer of the following companies: Usina Térmica Ipatinga S.A., Cemig Capim Branco S.A. and Usina Termelétrica Barreiro S.A. He is the Chief Technical Officer of Efficientia S.A and Executive Officer of Central Termelétrica de Cogeração S.A. Mr. Ferreira was the chief generation and commercialization executive officer of Furnas from 1991 to 2003, chairman of that company for four months in 1999 and a member of the board of directors several times from 1991 to 2003. He also served as a director of the ONS, serving as chairman from its foundation in 1998 to the beginning of 2003. He was a representative of Furnas on the Wholesale Energy Market, participating in discussions regarding certain Wholesale Energy Market rulings and the General Agreement of the Electricity Sector. Mr. Ferreira was a professor of the Engineering School of the University of Rio de Janeiro from 1970 to 1980. From 1966 to 1970, he worked as an engineer for Cia. Auxiliar de Empresas Elétricas CAEEB. He was one of the founders of Associação Brasileira das Empresas Geradoras de Energia Elétrica ABRAGE (Brazilian Electricity Generation Company Association) and of Associação Brasileira das Grandes Empresas de Transmissão ABRATE (Brazilian Transmission Company Association). Mr. Ferreira has also served as a member of several associations, including the energy commission of the Commercial Association of Rio de Janeiro from 1999 to 2000 and of the fiscal council of Companhia Paranaense de Energia Copel.

Elmar de Oliveira Santana Mr. Santana holds a degree in electrical engineering from the Pontifical Catholic University of Minas Gerais and a master's degree in business administration from IBMEC (the Brazilian Capital Markets Institute). He has been the Chief Executive Officer of Efficientia S.A. and Cemig PCH S.A. since March 2003 and of Central Termelétrica de Cogeração since December 2005. He is the Executive Officer of Usina Térmica Ipatinga S.A., Sá Carvalho S.A., Horizontes Energia S.A., Cemig Trading S.A. and Central Hidrelétrica Pai Joaquim S.A. He worked from 1977 to 1983 at DAE/MG (a water and electricity utility owned by the State of Minas Gerais) as the rural electrification coordinator and as an operations and distribution superintendent. From 1983 to 2001, he worked at CEMIG as an engineer, as sales and distribution superintendent and as assistant to the head of sales and distribution. From December 2001 to April 2002, he was the Secretary of Mines and Energy for the State of Minas Gerais.

José Maria de Macedo Mr. Macedo earned a degree in electrical engineering from the Federal University of Minas Gerais in 1967 and has completed several specialization courses on electricity and management. He was a trainee at the Bonneville Power Administration in Portland, Texas, at the Tennessee Valley Authority, at the Bureau of Reclamation in Denver, Colorado and Southern California Edison in California. Since March 2003, he has been the Executive Officer of Cemig Trading S.A. and since December 2005 he has been the Executive Officer of Central Hidrelétrica Pai Joaquim S.A. Mr. Macedo worked at CEMIG from September 1969 to May 1994, when he retired as superintendent of electricity transmission. After his retirement from CEMIG, Mr. Macedo was an organizer of Cooperativa de Prestação de Serviços de Engenharia Ltda., where he currently serves as president. Prior to joining CEMIG, Mr. Macedo served as an engineer at Sociedade Instalações Técnicas SIT. Mr. Macedo has conducted several studies and seminars on the electricity field in Brazil.

Flávio Decat de Moura Mr. Moura holds a degree in electronic and electrical engineering from the Federal University of Minas Gerais. He has been the Chief Executive Officer of Central Hidrelétrica Pai Joaquim S.A. since January 2005, of Gasmig since December 2004, and of Cemig Trading S.A. and Empresa de Infovias S.A. since March 2003. He has been the Executive Officer of Cemig PCH S.A., Usina Termelétrica Barreiro S.A, Cemig Capim Branco Energia S.A. and Horizontes Energia S.A since April 2004, of Central Termelétrica de Cogeração S.A., Sá Carvalho S.A. and Usina Térmica Ipatinga S.A. since April 2003, and of Efficientia S.A. since March 2003. He served as a director and chief executive officer of Electronuclear, the Federal Government's nuclear power agency, from May 2001 to January 2003 and as chief development officer of Sithe Energies, Inc. from 1998 to 2000. From 1996 to 1997 he was vice-president and chief electricity distribution officer of Empresa Energética de Mato Grosso do Sul S.A. Enersul. In 1993, Mr. Moura was the chief technical and engineering officer of Itaipu. He served as the chief electricity production officer of Empresa Transmissora de Energia Elétrica do Sul do Brasil S.A. Electrosul from 1992 to 1993 and the superintendent of engineering of Itaipu from 1983 to 1992. Mr. Moura was also the assistant to the chief executive officer of Itaipu and engineer and manager of several divisions of Furnas from 1970 to 1982.

Heleni de Mello Fonseca Mrs. Fonseca graduated with a degree in electrical engineering with a specialization in electronics and telecommunications from the National Telecommunications Institute INATEL and completed post-graduate studies in marketing and business development at Fundação Getúlio Vargas FGV. Since April 2003 she has been the Executive Officer of Central Termelétrica de Cogeração S.A. and since March 2003 she has been the Chief Executive Officer of Sá Carvalho S.A., of Empresa de Infovias S.A. and Horizontes Energia S.A. and the Executive Officer of Cemig PCH S.A., Cemig Capim Branco Energia S.A. and Usina Termelétrica Barreiro S.A. She was the chief officer of entrepreneurial business of Telemar, the phone company of the State of Bahia, Brazil, from August 2000 to November 2001, the chief officer of corporate and retail business of Telemar from August 1998 to August 2000, the chief of services of Telemig, a phone company in the State of Minas Gerais, from January 1996 to August 1998 and the chief operation officer of Telemig and Telemar from July 1995 to December 1995. Mrs. Fonseca also served as a director of the Telecommunications Department of the State of Minas Gerais DETEL/MG, or DETEL/MG, from June 1991 to July 1995 and the manager of the implementation of data communication services of Empresa Brasileira de Telecomunicações Embratel in Minas Gerais from 1988 to 1991. From 1976 to 1987, she worked at the Telecommunications Department of DETEL/MG as an engineer, technical officer and engineering superintendent.

Compensation of Directors and Executive Officers

For the year ended December 31, 2005, the aggregate amount of compensation, including pension and other retirement benefits, that we paid to all directors and executive officers was approximately R\$5.6 million.

Fiscal Council

Our Fiscal Council, which generally meets once every three months, consists of three to five members and their respective alternates elected by our shareholders at the annual meeting for a one-year term. Holders of the preferred shares as a group are entitled to elect one member of the Fiscal Council and a corresponding alternate. Holders of common shares representing at least 10%, individually or in the aggregate, are entitled to elect one member of the Fiscal Council and a corresponding alternate. The primary responsibility of the Fiscal Council, which is independent from management and from the independent public accountants appointed by the Board of Directors, is to review our financial statements and report on them to our shareholders. The Fiscal Council is also

85

entitled to give opinions on any proposals from our management to be submitted to the shareholders meeting related to (i) changes in our share capital, (ii) issuances of debentures or rights offerings entitling the holder to subscribe for equity (bonus de subscrição), (iii) investment plans and capital expenditures budgets, (iv) distribution of dividends, (v) changes to our corporate form and (vi) corporate restructurings such as mergers, consolidations and spin-offs. The Fiscal Council also examines the activities of management and reports these activities to the shareholders.

The current members of the Fiscal Council and their alternates, all of whose terms expire on April 30, 2007, are as follows:

Name	Position	Date of Initial Appointment
Luiz Guaritá Neto	Member	February 27, 2003
Aristóteles Luiz Menezes Vasconcellos Drummond	Member	April 27, 1999
Luiz Otávio Nunes West(1)	Member	April 27, 1999
Thales de Souza Ramos Filho	Member	February 27, 2003
Ari Barcelos da Silva(2)	Member	April 28, 2006
Ronald Gastão Andrade Reis	Alternate	April 30, 1998
Marcus Eolo de Lamounier Bicalho	Alternate	February 27, 2003
Augusto Cesar Calazans Lopes(1)	Alternate	April 30, 2003
Carlos Volpe de Paiva(2)	Alternate	April 28, 2006
Aliomar Silva Lima	Alternate	February 27, 2003

(1) Elected by Southern.

(2) Elected by shareholders holding our preferred shares.

Consumer Council

We have established a Consumer Council pursuant to Brazilian law, which is comprised of representatives of consumer groups and advocacy organizations, but not members of our Board of Directors. The Consumer Council advises us as to service and other concerns of our consumers.

Audit Committee

Our Fiscal Council acts as our audit committee for purposes of the Sarbanes-Oxley Act of 2002 and the related regulations. The financial experts are Luiz Otávio Nunes West and Ari Barcelos da Silva.

Employees

As of December 31, 2005, we had 10,271 employees, of which 176 were at the management level. During the year ended on that date we had an average of 168 temporary employees. As of December 31, 2004, we had 10,668 employees, of which 161 were at the management level, with an average of 327 temporary employees during the period then ended. As of December 31, 2003, we had 11,302 employees, of which 156 were at the management level, with an average of 390 temporary employees during the period then ended. This table shows the breakdown of our employees by type on those dates:

	Number of Employees at		
	December 31, 2005	December 31, 2004	December 31, 2003
Managers	176	161	156
Professional staff	1,191	1,285	1,409
Operational technical staff	(*)	(*)	7,880
Office employees	(*)	(*)	1,857
Operational technical staff and Office employees	8,904	9,222	(*)
Total	10,271	10,668	11,302

(*) In 2004, we put in place the new Career and Remuneration Plan, bringing together into a single category the previous career plans for operational, technical and administrative staff.

In 2005, we hired 95 new employees, and 492 people left the company, the majority of them through acceptance of the voluntary employee termination program which was put in place in 2003.

Once a year we hold collective negotiation meetings with the unions that represent our employees. The resulting contract remains in effect for the subsequent 12 month period beginning on November 1. About 11 years ago CEMIG ceased to follow the previous market practice in Brazil of automatically adjusting salaries based on inflation.

In November 2005 we completed negotiation of the annual collective wage agreement for the period from November 1, 2005 to October 31, 2006, after wide-ranging discussions of all the terms and conditions with the unions that represent our employees. The resulting agreement set an increase of 7.57% for all salaries, effective November 1, 2005, and an extraordinary bonus under the profit-sharing program equivalent to four times the amount of each employee's basic monthly salary, of which 75% was payable in November 2005 and the remaining 25% was payable in December 2005.

In 1995, we established a profit-sharing program for the employees in conformity with the applicable Brazilian labor legislation. Under this program, we may not contribute an amount to the employee profit sharing plan that is in excess of 25% of the total dividends proposed for that year.

As of January 1, 2003, we implemented changes to our existing employee health care plans. The changes are a result of an agreement we reached with our employees' labor unions, most of which are represented by Sindieletró. The changes altered the contribution criteria that we, our employees and our retirees are responsible for and the types of benefits covered in each plan.

In the last 5 years there has been no stoppage of work by our employees. We are unable to predict what effect, if any, future labor litigation could or may have on our results of our operations or our financial condition. Similarly, we are unable to predict what effect any changes in the Brazilian labor-law regulations may have on the Company, if any.

In December 2003, in order to effectively manage our employment relations while following our strategic guidelines for growth and the addition of value, we implemented a voluntary employee termination program.

In 2004 a total of 1,101 employees accepted the terms of the company's voluntary employee termination program. Of these, 656 left the company during 2004 and an additional 318 completed the procedures and left in 2005. Of the remaining 127 employees, 1 retired in 2006 and 7 will retire in 2007, 5 lost the right to join this program because they were on medical leave, and 114 have been withdrawn from the program in accordance with the terms of the contracts between the company and each employee because the Government Social Security Organization did not accept them for early retirement.

In 2003, the Careers and Remuneration Plan was approved. The goal of this plan is to provide us with the remuneration tools necessary to maintain an equitable and competitive pay structure and establish criteria for promotions. The plan was implemented in January 2004 for professional staff, and in March 2004 for the administrative and operational employees. An internal committee, with representatives of both the company and the labor unions, was created for maintenance of the plan.

The total number of work accidents, with respect to our own employees and those of contracting companies, was lower in 2005 than in 2004, continuing a downtrend over the last 5 years.

On April 27, 2006, we presented a proposal to the employees to pay them an indemnity in exchange for certain of their future rights to an annual percentage increase of 1.00% annually. The amount of the indemnity will correspond to an estimate of the future values of this right of the employees until they complete 35 years of contribution to the National Social Security System (INSS), discounted at a rate of 12.00%, plus application of a

variable percentage reduction factor established by the company. The estimated total value to be paid to the employees as a result of this indemnity is approximately R\$175 million. As this proposal was not yet accepted by the employees and negotiations are in progress, we cannot assure that we will reach an agreement under these terms.

Share Ownership

Each of our directors and executive officers beneficially owns less than 1% of our preferred shares.

Item 7. Major Shareholders and Related Party Transactions

Principal Shareholders

As of December 31, 2005, the State Government owned 36,125,656,294 common shares, or 50.97% of our outstanding voting stock, and 1,816,665,343 preferred shares, or approximately 1.99% of those outstanding. As of the same date, Southern, our second largest shareholder, owned 23,362,956,173 common shares, or approximately 32.96% of those outstanding. Southern is a joint venture formed in 1994. We believe that a principal participant in Southern is Cayman Energy Traders, a subsidiary of Mirant Corporation (formerly Southern Energy Inc.), a large United States-based power company. We believe that the other significant member of Southern is, as of December 31, 2005, AES Corporation, a global power company based in Arlington, Virginia that is engaged in the energy generation, distribution and retail supply businesses. We believe that the Opportunity Fund, a Brazilian investment fund, has a minority interest in Southern through 524 Participações S.A. Our principal shareholders do not have different voting rights with respect to the shares they own.

The following table sets forth certain information regarding the ownership of our outstanding common shares and preferred shares at December 31, 2005.

Shareholder	Common Shares	% of Class	Preferred Shares	% of Class
State Government (1)	36,125,656,294	50.97	1,816,665,343	1.99
Southern	23,362,956,173	32.96		
All directors and executive officers as a group	1,945,666	128,128		
Other	11,383,609,790	16.07	89,393,729,228	97.93
Total of outstanding shares	70,874,167,923	100.00	91,210,522,699	99.92
Treasury shares			69,128,403	0.08
Total of authorized and issued shares	70,874,167,923	100.00	91,279,651,102	100.00

(1) The shares in this line item attributed to the State Government include shares held by MGI and other State Government agencies.

Since our incorporation, our operations have been influenced by the fact that the State Government controls us. Our operations have had and will continue to have an important impact on the development of business and industry in Minas Gerais and on social conditions in the state. The State Government has from time to time in the past directed us to engage in certain activities and make certain expenditures designed primarily to promote the social, political or economic goals of the State Government and not necessarily designed with a view to our profitability, and it may direct us to do so in the future. See, Item 3. Key Information Risk Factors Risks Relating to CEMIG We are controlled by the State Government.

As of December 31, 2005, we had 16 common shareholders in the United States, holding a total of 2,073,094,567 common shares. We also had 195 preferred shareholders in the United States, holding a total of 19,230,404,884 preferred shares. These numbers do not include the 18,172,265,788 preferred shares converted into ADRs.

We are not aware of any significant changes in the percentage ownership of any shareholders that held 5% or more of our outstanding voting shares during the past three years.

88

Based on publicly available filings with the SEC, we are aware of the following changes in ownership of our outstanding preferred shares. On March 8, 2005, Capital Group International, Inc., or CGII, a foreign investment management company, acquired, on behalf of its clients, ADRs that increased its holdings of preferred shares of CEMIG to 4,598,610,000, corresponding to 5.03% of CEMIG's preferred shares. In addition, Capital Research and Management Company, also a foreign investment management company and an affiliate of CGII, holds ADRs representing 2,702,900,000 preferred shares in CEMIG, corresponding to 2.96% of the preferred shares. On April 12, 2005, the aggregate proprietary position of the UBS Group in preferred shares of CEMIG increased to 6,098,366,579 preferred shares, representing 6.68% of the Company's total preferred shares. On September 21, 2005 the position of Morgan Stanley Uruguay Ltda., a foreign investor under Resolution 2,689/00 of the Brazilian National Monetary Council, increased to 5.03% of CEMIG's total preferred shares. This position included both 2,603,500,952 nominal preferred shares and 1,983,984 ADRs (corresponding to 1,983,984,000 nominal preferred shares).

Although our by-laws do not provide any restrictions concerning a change in our control, a state law authorizing a change of control would be required for a change of control to take place. Because we are a state-controlled company, the sale of more than 50% of the voting stock of CEMIG by the State Government requires the passage of specific authorizing legislation by the legislature of Minas Gerais.

Related Party Transactions

We are party to the following related-party transactions:

- Our agreement with the State Government with respect to the CRC Account and related financial income and provision for loss and VAT advance payments, expenses, assets and liabilities;
- Our agreement with FORLUZ, the entity responsible for managing our employee pension fund, pertaining to the fund and related balances; and
- Our agreement with COPASA, a Minas Gerais state-controlled company, related to accounts receivable from energy sales.

For a more detailed discussion of related party transactions, see Notes 3, 7, 8, 12, 13, 15, 18 and 20 to our consolidated financial statements.

Item 8. Financial Information

Consolidated Financial Statements and Other Financial Information

Please refer to our financial statements that appear beginning on page F-1 of this document as well as Item 3. Key Information Selected Consolidated Financial Data.

Legal Proceedings

We are affected by an ongoing dispute between our shareholders. We are also defending several judicial proceedings involving rate increases, taxes and contributions, labor and pension fund obligations and civil liabilities, as well as several administrative proceedings regarding tax obligations, environmental penalties and other charges imposed by governmental agencies, including ANEEL. We recognize contingencies only when a loss is probable and estimable. The most relevant proceedings in which we are involved are summarized below. See also note 16 to our consolidated financial statements.

Shareholders Agreement

In connection with the sale in 1997 of approximately 33% of our shares to Southern as described in Item 7. Major Shareholders and Related Party Transactions Principal Shareholders, Southern and the State Government entered into a shareholders' agreement that contained special quorum and veto provisions granting

Southern expanded control over certain decisions. In 1999, after a new State Government administration took office, the State Government filed a lawsuit seeking to nullify the shareholders' agreement on the grounds that these special provisions constituted an unlawful transfer of control from us to Southern under principles of Brazilian constitutional law, and claiming in particular that the State Government may only cede control of us pursuant to specific state legislation providing for the same.

On March 21, 2000, the First Court of Fazenda Pública e Autarquias in Belo Horizonte rendered a decision declaring the shareholders' agreement null and void, and this decision was ratified on August 7, 2001 by the Minas Gerais State Court of Appeals. At present, the State Government has been restored to its position as our sole controlling shareholder and none of the special quorum or veto provisions are in effect. This decision was appealed to the Superior Tribunal de Justiça (Superior Court of Justice), which upheld the decision of the Minas Gerais State Court of Appeals in December 2003. The decision of the Superior Tribunal de Justiça is subject to a request for amendment and therefore the effectiveness of the shareholders' agreement and control of CEMIG remain subject to further judicial challenge in the Supreme Court (*Supremo Tribunal Federal*).

Rate Increases

We are the defendant in several lawsuits brought by industrial consumers alleging that increases in electricity rates during a price freeze imposed by the Federal Government from March through November 1986, known as the Cruzado Plan, were illegal. The plaintiffs further allege that all our rates after the Cruzado Plan period were illegal in part because they included the Cruzado Plan period increases in the amounts that served as the basis for calculating the further increases. Some of these claims have been decided at the trial court level in our favor, whereas others have been decided in favor of our consumers. All of the cases that have been decided at the trial court level have been appealed to the Superior Tribunal de Justiça (Superior Court of Justice), which ruled that the plaintiffs were entitled only to reimbursement for rate increases introduced during the Cruzado Plan. We are actively contesting all of the aforementioned rate increase claims. In the aggregate, these rate increase claims brought against us amounted to R\$493.6 million as of December 31, 2005, and at that date we had accrued a liability of R\$132.1 million with respect to these claims.

We are also a defendant in lawsuits and class actions brought by consumers, consumer rights groups and the office of the public prosecutor of Minas Gerais contesting the rates we charge our consumers, the application of the rate increases determined by ANEEL, the inflationary index used to increase our rates and the rate subsidies granted to low income consumers. These lawsuits involve claims for the suspension of the rate increases and for the reimbursement to our consumers of twice the amount of any additional rates we collected. All our rate increases are granted based on ANEEL's prior authorization and we believe we have a meritorious defense to each of these lawsuits. It is not possible at the present time to estimate the amounts involved in these claims. We have not accrued any liability related to these claims. The Associação Brasileira de Consumidores - ABC (Brazilian Association of Consumers) has filed a class action lawsuit against us, seeking to prevent us from suspending the energy supply in cases of consumer default. We received a favorable decision at the trial court level that is subject to appeal. We have not accrued any liability related to this lawsuit.

We are a defendant, together with *Comercializadora Brasileira de Energia Elétrica* - CBEE, in several lawsuits filed between February 2002 and March 2004 contesting the Encargo de Capacidade Emergencial (Emergency Capacity Charge) which we collect from our consumers on behalf of the CBEE. It is not possible at the present time to estimate the amounts involved in these claims. However, we have not accrued any liability related to these claims because we believe we have a meritorious defense since we merely act as the agent for raising these funds. However, there is a remote risk that we might at some time be made jointly responsible for their return by a court judgment.

In addition, the Federal Public Auditing Court is challenging the criteria used by ANEEL to calculate the adjustments we applied to our rates in 2003 and in connection with the energy reduction emergency program. See Regulatory Matters.

Taxes and Other Contributions

We are party to a number of proceedings and claims involving the Federal Government as well as other proceedings and claims arising in the ordinary course of business. These proceedings and claims include judicial disputes regarding the payment of taxes and contributions, including three disputes regarding corporate income tax and social contribution tax, for which we have accrued a total liability of R\$38 million as of December 31, 2005. We also are involved in disputes regarding the ISS tax (R\$11.5 million), the Imposto de Transmissão Causa Mortis e Doação ITCMD (inheritance and donation tax) involving R\$105.4 million, the Imposto Predial Territorial Urbano IPTU (real state tax) involving R\$12.8 million, the COFINS revenue tax involving R\$218.4 million, and the CPMF (banking tax) involving R\$5.3 million only for which we have not recorded any reserve. Our defense is based primarily on the fact that we timely joined a tax amnesty program that granted tax payers relief from any outstanding interest and penalties provided that the outstanding principal amount of tax debt was paid.

In addition, we are a party to two Finsocial contribution disputes. In connection with one of these disputes, which was initiated in 1990, we have made a judicial deposit and have recorded a loss provision, each equivalent to the historical litigated amount of R\$983 thousand and that currently involves R\$166.5 million. In case we do not succeed in this lawsuit, we will have a loss equivalent to the difference between the loss provision recorded and the actual loss incurred. At the same time, we will have a financial revenue equal to the difference between the restated balance in the judicial deposit account and the amount originally deposited, substantially off-setting the increase in the loss provision. We have also accrued a reserve of R\$21 million for the full amount of the other dispute.

We have also contested a number of administrative proceedings asserted by federal tax authorities with respect to an income tax set-off resulting from an adjustment made in 2001 to our consolidated financial statements prepared in accordance with accounting practices adopted in Brazil for the years ended December 31, 1997, 1998 and 1999. The adjustment related to new accounting rules for pension fund obligations was established by CVM Instruction No. 371 of December 13, 2000. We received a partially favorable decision relative to the years 1997 and 1998, however an administrative ruling issued by the Office of the Attorney General of the National Treasury in 2004 may allow for additional judicial consideration of these issues. With respect to the year 1999, for which we received an unfavorable decision, we filed an injunction. No reserve has been recorded for this claim. We estimate the amount involved in these claims to be R\$521 million as of December 31, 2005.

In 2003, as a consequence of the change in our accounting practice discussed in the above paragraph, the federal tax authorities, after performing an inspection of our tax returns for the years 1997-2001, issued an assessment notice in the amount of R\$1,400.7 million, claiming that we did not pay all our tax liabilities related to those tax years. We submitted an administrative defense requesting that such assessment notice be canceled, since the tax authorities did not consider our amended tax returns which have been filed. We believe such amended tax returns show that we have properly settled the tax liabilities challenged, reason why no reserve has been recorded for this claim.

Several Municipalities of the State of Minas Gerais have assessed us for the payment of the tax named *Taxa de Ocupação do Solo*. There are several administrative proceedings and lawsuits related to this matter, in the total amount of approximately R\$15.9 million. We have not accrued any reserves for this amount.

The State of Minas Gerais filed several administrative proceedings against us, alleging that the added-value tax (*Imposto sobre Circulação de Mercadorias* ICMS) has not been collected by some sellers of energy distributed through Cemig, and that Cemig would be a co-obligor with respect to the payment of such tax, in the total amount of approximately R\$89.8 million. We have not accrued reserves in connection with these administrative proceedings since we believe our chances of success in these disputes are possible. We have also contested six administrative proceedings asserted by federal tax authorities regarding the alleged absence of payment of the rural real estate tax (*Imposto Territorial Rural* ITR), which involve a total amount of approximately R\$118.1 million. We have not accrued reserves in connection with these administrative proceedings.

Since 2002, we have been receiving a subsidy from Eletrobrás to reimburse us for losses incurred as a result of the discount we were required to provide to low income consumers under Federal Law No. 10,604/02. In 2005, the State of Minas Gerais issued Decree No. 43,999/05 charging the ICMS on this subsidy. We believe the

subsidy is not taxable and we are therefore not collecting the ICMS on the subsidy. We may be assessed by the State of Minas Gerais with regard to this matter. We estimate the contingency to be approximately R\$21 million.

Labor Obligations

We are defending a number of labor-related claims brought by our employees and by third parties, for which we are secondarily liable. These claims generally refer to overtime and hazardous occupation compensation. Employees must file a claim for these payments within two years of the termination of their employment agreement. As of December 31, 2005, these employees were seeking, in the aggregate, approximately R\$141.9 million in compensation, and at that date we had accrued a liability of R\$113.5 million with respect to these claims.

Claims in the Ordinary Course of Business

We are a party to several civil claims brought by people who have suffered damages arising mainly from accidents that occurred during the ordinary course of our business and damages suffered as a result of the interruption of the supply of energy to them. We are also a party to claims under contractual and other commercial obligations. These claims totaled an estimated R\$170.1 million as of December 31, 2005. As of that date, we had accrued a liability of R\$45.1 million with respect to these claims. .

We have contested a lawsuit brought by a Brazilian company, referring to alleged damages estimated at R\$118.3 million arising from a services agreement that was affected by economic distress caused by the real devaluation in 1999. We have not accrued any liability related to this claim.

Legal Proceedings Related to Environmental Matters

We are party to a number of proceedings and claims involving environmental matters. These proceedings and claims include judicial and administrative disputes regarding certain environmental matters, including fauna and flora issues, residuals disposal and protected areas. These claims totaled an estimated R\$9 million as of December 31, 2005. We have not accrued any liability related to these claims.

We are a defendant, along with CVRD, Comercial e Agrícola Paineiras and Companhia Mineira de Metais, in two lawsuits brought by the Federal Prosecutor, and by a citizen, respectively concerning the environmental licensing of the Capim Branco I and Capim Branco II hydroelectric power plants. The plaintiffs allege that we did not obtain proper licensing for these projects and seeks to nullify the environmental licenses relating to these power plants. **We have not accrued any liability related to this claim.**

We are also a defendant, along with CVRD, in a class action lawsuit brought by the Federal Prosecutor, concerning the Aimorés hydroelectric power plant. The plaintiffs allege that we did not obtain proper licensing for this project and seek to recover damages and to nullify the environmental licenses relating to this plant as well as the related concessions. **We have not accrued any liability related to this claim.** We have also contested a lawsuit related to this power plant brought by a Municipality that alleges that the project authorizations have not been duly approved and seeks to stop the construction of the power plant.

The Federal Attorneys Office filed suit against CEMIG alleging irregularities in the installation of the Irapé hydroelectric power plant that would result in material adverse impacts on the environment and the local population. The action was settled after CEMIG signed an undertaking and committed to implement social and environmental measures. Recently, the Federal Attorneys Office filed another action alleging non-compliance with the obligations assumed and claiming foreclosure on the guarantee that CEMIG gave. The first instance judgment allowed us to continue with implementation and maintenance measures, but commercial operation will be allowed only on additional proof of compliance with the undertaking. CEMIG has obtained a license to operate from the environmental authority of the State of Minas Gerais, conditional upon compliance with a deposit undertaking of R\$ 5,0 million, and the implementation of these conditions is in its final stages.

In view of the Brazilian environmental legislation, we are carrying out environmental works in our facilities to avoid contamination of the soil by insulating mineral oil. On October 20, 2005 we received a notice of

infringement from the Minas Gerais State Environmental Foundation (FEAM), the environmental body of the government of Minas Gerais, in which that agency alleged inappropriate storage of high-voltage transformers with direct leaks into the soil of insulating mineral oil at one of our facilities, named the Materials Distribution Center, in the municipality of Juatuba. We are appealing this notice of infringement because the equipment referred to consists of powerful transformers which are in our reserve inventory, in perfect technical condition, for replacement of similar transformers to avoid electricity supply outages in the event of an emergency situation in substations throughout Minas Gerais. Also, these transformers were built with high-technology seals to avoid oil leaks, which also provide more effective control of any leaks that do happen.

Regulatory Matters

Prior to 1993, electric utilities in Brazil were guaranteed a rate of return on investments in assets used to provide electric service to consumers, the rates charged to consumers were uniform throughout the country, and profits from more profitable utilities were reallocated to less profitable ones so that the rate of return for all companies would equal the national average. Shortfalls experienced by most electric utilities in Brazil were accounted for in each company's CRC Account. When the CRC Account and the guaranteed return concept were abolished, we used our positive balances in the CRC Account to offset our liabilities to the Federal Government.

ANEEL has brought an administrative proceeding against us, contesting a R\$626 million credit related to such positive balance. On October 31, 2002 ANEEL issued a final administrative decision against us. On January 9, 2004, the Brazilian Treasury Authority (Secretaria do Tesouro Nacional) issued an Official Collection Letter to us in the amount of R\$516.2 million to be paid by January 30, 2004. We filed a writ of mandamus to suspend our inclusion in the national non-payers registry (CADIN). Although the relief was denied by the lower court, we appealed to the Federal Court of the First Circuit which granted us a temporary injunction to suspend the inclusion in the CADIN. Therefore, we have not accrued any liability related to this claim.

We are a defendant in an administrative proceeding brought by ANEEL because we did not meet the September 21, 2002 deadline for completion of the unbundling process. On November 11, 2002, ANEEL imposed a fine of R\$5.5 million upon us. However we believe we should not be responsible for any non-compliance with the restructuring requirements and, for this reason, on November 28, 2002, we appealed ANEEL's fine. On February 23, 2005 ANEEL issued a ruling reducing the fine to R\$2.7 million. On March 7, 2005 we filed an appeal requesting the cancellation of the fine and the infraction notice. We also presented arguments before ANEEL on August 8, 2005. We continue to contest this fine. We have not recorded any reserve.

On June 12, 2003, ANEEL imposed a R\$6 million fine on us for our alleged failure to comply with certain electric power supply quality standards with respect to our consumers. We have recorded a full provision for this fine and have filed a suit to suspend the fine and our inclusion in CADIN and in the active list of debts of the Federal Government (Dívida Ativa da União). In December 2002 we filed a *writ of mandamus* against ANEEL and the CCEE contesting the calculation of the amounts due under the settlement process held by the CCEE between December 2002 and January 2003 in connection with purchases of electricity during the rationing in period of 2001–2002. We believe that, based on the classification of CEMIG under ANEEL's Resolution No. 447, the CCEE incorrectly calculated the amount of debt that we had accrued in respect of our CCEE purchases during the rationing period. This debt, which we believe to be in the amount of approximately R\$143 million, was due from CEMIG to the other participants of the CCEE. A condition to receipt of the extraordinary rate adjustments (*Recomposição Tarifária Extraordinária*), or RTE, is that the recipient must not be involved in any lawsuit with ANEEL that questions the RTE or any related regulation. As CEMIG has contested the settlement process conducted by the CCEE, ANEEL issued an order to suspend the payment of the RTE to CEMIG. As a result of this decision, the payment of approximately R\$143 million due to CEMIG was also suspended. In January 2003, we filed a lawsuit seeking to reverse ANEEL's ruling regarding the suspension of the RTE payments to us. The Federal Court of Appeals of the First Circuit issued a preliminary injunction in our favor and suspended ANEEL's ruling. In December 2004, we withdrew our claim against ANEEL and the CCEE and entered into agreement with ANEEL and the other participants in the CCEE. As a result of this agreement, ANEEL revoked the order that suspended the payment of the RTE to our distribution subsidiary, which will result in a payment of approximately R\$219 million to CEMIG. CEMIG agreed to repay the other CCEE participants the outstanding amounts that ANEEL calculated as being due by CEMIG during the settlement process held by the CCEE between September 2002 and January 2003.

The calculation of the exact amount due to the participants of the CCEE was determined by the CCEE to be a total of R\$171 million, and such amount is being paid in 50 installments, depending on the total amount due to each creditor and are indexed to the SELIC interest rate plus a spread of 1%. We had fully accrued a liability related to this matter. See Item 10. Additional Information Material Contracts Agreement between CEMIG and companies in the New Agreement of the Electric Sector.

On November 14, 2003, the Federal Public Auditing Court, which has the authority to audit any decision by ANEEL that may impact public finance, initiated an administrative proceeding against ANEEL to evaluate the criterion adopted by ANEEL in the Energy Consumption Reduction Emergency Program (*Programa Emergencial de Redução de Consumo de Energia Elétrica*), or PERCEE. The Federal Public Auditing Court has asked us to provide certain information with respect to our rates, which, according to the Federal Public Auditing Court, were mistakenly approved by ANEEL. If we cannot provide support for these rates and ANEEL fails to confirm the legality of the criterion adopted, we may incur losses in the amount of R\$105.5 million. No reserve has been recognized in connection with this proceeding, as we believe we can provide the necessary support and that ANEEL can confirm the legality of the rates. In addition, the Federal Public Auditing Court contested the index and the X Factor applied by ANEEL in our rate revision of 2003. We have filed an administrative proceeding before the Federal Public Auditing Court to challenge its decision. Currently this administrative proceeding is still under review of the Attorney General of Minas Gerais.

We are the defendant in a suit challenging the charging of tax on public lighting. We believe we have sound arguments in defense of this claim, and therefore have made no provisions for this suit.

We filed an Administrative Appeal against ANEEL on July 25, 2005, seeking reconsideration of ANEEL's Ruling No. 787, dated June 30, 2005, which declared null and void the registries before ANEEL and the CCEE of some supply agreements entered into by and between consumers connected in 13,8 kV. We continue to contest this Ruling. Such contracts under discussion before ANEEL amount to R\$14 million. We have not recorded any reserve since we believe we have a meritorious defense. On January 25, 2006, Companhia Força e Luz Cataguazes Leopoldina - CFLCL alleged that Horizontes Energia S.A. was commercializing energy with prices below market values with Companhia Industrial Cataguazes - CIC (a company located in the CFLCL's concession area) and filed an administrative appeal before ANEEL, alleging anti-competitive conduct. We were mistakenly included in the appeal as the energy supplier of CIC. With a view to clarifying this misunderstanding, we filed our counter-arguments before ANEEL on November 28, 2005. The value of such contingency is estimated in R\$7.7 million. We have not recorded any reserve.

We are currently contesting a Class Action (*Ação Popular*) lawsuit in which our procedures related to a public bid are being challenged. Due to the lack of legal requirements with respect to some items of the bidding notice, we declared it null and void. The class action seeks to have the bidding notice altered and the public bid procedures restarted. A request for summary judgment was denied and therefore we presented our pleadings. We have not recorded any reserve.

Dividend Policy and Payments

Obligatory dividend; priority and amount of dividends

Under our bylaws, we are required to pay to our shareholders, as obligatory dividends, 50% of the net income of the fiscal year ending December 31. Our preferred shares have priority in the allocation of the obligatory dividend for the period in question. The order of priority of the distribution of dividends is as follows:

- *The annual minimum dividend for the preferred shares:* These have preference in the event of reimbursement of shares, and have an annual minimum dividend equal to the greater of the following:
- 10% of their par value; or
- 3% of the shareholders' equity associated with it.

- *The dividends on the common shares*, up to the minimum percentage for the preferred shares.

If a portion of the obligatory dividend remains after the payment of the common dividend, the remaining funds are to be distributed on an equal, pro rata basis with respect to all preferred shares and common shares.

Without prejudice to the obligatory dividend, beginning in fiscal year 2005, every two years, or shorter period if the company's cash position permits, we will distribute extraordinary dividends, up to the limit of the cash available, as determined by the Board of Directors, under the Company's Strategic Guidelines Plan and the dividend policy specified in that plan.

The dividends declared, whether obligatory shall be paid in two equal installments, the first by June 30 and the second by December 30 of each year. The extraordinary dividends shall be paid according to the board of directors decision.

Under the Brazilian Corporate Law, the Board of Directors may declare interim dividends, in the form of interest on capital, to be paid from retained earnings, income reserves or income ascertained in semi-annual or quarterly financial statements. Any interim dividends paid shall be calculated based on the dividend to be paid in the fiscal year in which the interim dividend was declared. Our bylaws authorize our Board of Directors to declare interim dividends. Any interim dividend paid may be set off against the amount of the obligatory dividend payable for the fiscal year in which the interim dividend was paid.

In the fiscal years in which we do not have sufficient income to pay dividends to our preferred and common shareholders, the State of Minas Gerais guarantees a minimum dividend of 6% of the per value of the preferred or common shares, respectively, per year to all shares in the company issued up to August 5, 2004 and held by individuals.

Amounts available for distribution

The amount available for distribution is calculated on the basis of the financial statements prepared in accordance with accounting practices adopted in Brazil and the procedures described below.

The obligatory dividend is calculated on the basis of *adjusted net income*, defined as net income after addition or subtraction of: (a) amounts allocated to the legal reserve, (b) amounts destined to the formation of the contingency reserves and reversal of these reserves formed in previous fiscal years, and (c) any unrealized income transferred to the unrealized income reserve account, and any amounts previously posted to this reserve account which have been realized in the fiscal year and used to offset losses.

We are obliged to maintain a legal reserve, to which 5% of the net income of each fiscal year must be allocated until the reserve's total value is equal to 20% of the company's total paid-in capital. However, we are not obliged to make any allocation to the legal reserve in relation to any fiscal year in which the sum of the legal reserve and the other established capital reserves exceeds 30% of the company's total paid-in capital. Any net losses may be charged against the legal reserve.

Under the Brazilian Corporate Law, income in subsidiaries or affiliated companies reported by the equity method, and income on term sales, realizable after the end of the next fiscal year, are also considered to be unrealized income.

The total of income reserves (with the exception of the reserve for contingencies relating to expected losses and the unrealized income reserve), the legal reserve, the special reserves, the reserve for investment projects, and retained earnings may not be greater than the company's registered capital. The amount in excess of our registered capital must be used to increase our registered capital or be distributed as cash dividends.

Under the Brazilian Corporate Law and our bylaws, dividends not claimed within three years from the date on which they are distributed revert to us.

Interest on capital

Under Brazilian law we may pay interest on capital as an alternative for the distribution of funds to shareholders. Funds distributed as interest on capital qualify within the calculation of minimum dividend established in the bylaws. These amounts may be paid in cash; and the company may treat them as an expense for purposes of the calculation of the income tax and the social contribution tax. The total amount paid in interest on capital is limited to the result of application to the company's shareholders' equity of the Long Term Interest Rate (TJLP), published by the Brazilian Development Bank (BNDES) and may not exceed the greater of (i) 50% of the net income (before taxes for social contribution on net profits, income tax, and the deduction of the interest attributable to shareholders' equity) for the period in respect to which the payment is made or (ii) 50% of retained earnings as of the date of the beginning of the period in respect of which the payment is made. Shareholders who are not resident in Brazil must register with the Brazilian Central Bank so that the foreign currency proceeds of their dividend payments, or of sale or other amounts relating to their shares, may be remitted to them outside Brazil. The preferred shares underlying the company's ADRs are held in Brazil by the custodian bank, as agent for the depositary bank, which is the registered owner of the shares.

Currency Exchange

Payments of cash dividends and distributions, if any, will be made in *reais* to the custodian on behalf of the depositary bank, which will then convert such proceeds into U.S. dollars and will cause such U.S. dollars to be delivered to the depositary bank for distribution to holders of ADRs. In the event that the custodian is unable to immediately convert the *reais* received as dividends into U.S. dollars, the amount of U.S. dollars payable to holders of ADRs may be adversely affected by devaluations of the *real* that occur before such dividends are converted and remitted. The *real* appreciated approximately 12.1% relative to the U.S. dollar in 2005. See Item 3. Key Information Risk Factors Risks Relating to Brazil The Brazilian government exercises a significant influence on the Brazilian economy. Political and economic conditions can have a direct impact on our business.

Dividends in respect of the preferred shares paid to holders who are not Brazilian residents, including holders of ADRs, are generally not subject to Brazilian withholding tax, although in general payments of interest on capital are subject to withholding tax. See Item 10. Additional Information Taxation Brazilian Tax Considerations Taxation of Dividends and U.S. Tax Considerations Taxation of Distributions. There is no specific record date upon which the depositary bank will determine the exchange rate to be used in connection with converting cash dividends or other cash distributions. Pursuant to the Second Amended and Restated Deposit Agreement, the depositary bank will arrange for the funds to be converted into U.S. dollars upon receipt of notice of cash dividends or other cash distributions.

History of Dividend Payments

The following table sets forth the recent history of declarations of dividends and interest on capital on our common shares and preferred shares. For each year in the table, the payment of the dividends occurred during the year following declaration. For the periods indicated, the dividends paid per 1,000 common shares and per 1,000 preferred shares were the same. See Item 3. Key Information Selected Consolidated Financial Data.

Declaration History of Dividends and Interest on Capital(1)

Dividend Year	Common Shares		Preferred Shares	
	(R\$)(2)	(US\$)(3)	(R\$)(2)	(US\$)(3)
2001	93,858,914	40,099,762	120,790,421	51,605,830
2002	96,198,579	33,846,035	123,801,421	43,557,683
2003	140,081,485	47,630,144	180,412,546	61,343,408
2004	302,634,209	119,476,593	389,766,059	153,875,270
2005(4)	904,951,727	432,991,257	1,165,497,675	557,654,390

(1) In accordance with the accounting practices adopted in Brazil, dividends and interest on capital are accounted for as having been paid in the dividend year in which they are proposed, even if such dividends or interest on capital were formally approved by a shareholders' meeting in the following year.

(2) Real amounts are expressed in nominal *reais*.

(3) U.S. dollar amounts are calculated by dividing the amount of dividends paid, expressed in nominal *reais*, by the noon buying rate on the respective dates when we first paid the indicated dividends.

(4) The 2005 dividends were approved at the annual and extraordinary general shareholders meetings held on April 28, 2006. On January 27, 2006, R\$897 million was paid related to the extraordinary dividends.. The 2005 dividends are expected to be paid on June 30, 2006 and December 29, 2006. See note 17 to our consolidated financial statements.

Significant Changes

The most significant change in our financial condition since the date of our financial statements that are included in this annual report on Form 20-F is a 16.19% rate increase implemented in 2006, which has had a positive effect on our electricity sales revenues. In January 2006, we sold the senior quotas of Cemig CRC Account Securitization Fund (FIDC) in the amount of R\$900 million. For additional information regarding the FIDC, see Additional Information - Material Contracts .

Item 9. The Offer and Listing

Trading Market

The principal trading market for our preferred shares is the São Paulo Stock Exchange. Our ADSs, each representing 1,000 preferred shares, have traded on the NYSE under the symbol CIG since September 18, 2001. Prior to that date, our ADSs were traded in the over-the-counter, or OTC, market in the United States. The ADSs are evidenced by ADRs issued by Citibank, N.A., as depository, pursuant to a Second Amended and Restated Deposit Agreement by and among us, the depository and the holders and beneficial owners of ADSs evidenced by ADRs issued thereunder. As of December 31, 2005, there were approximately 18,172,265 ADSs outstanding, representing approximately 18,172 billion preferred shares or approximately 20.3% of our 89,393 billion outstanding preferred shares. Such ADSs were held by 10 record holders as of that date. Our common shares are also listed and traded on the São Paulo Stock Exchange.

The following table sets forth the reported high and low closing sale prices for the preferred shares on the São Paulo Stock Exchange (per lot of 1,000 preferred shares) and the ADSs on the NYSE for the periods indicated.

Period	Preferred Shares(1) Price in Nominal R\$		ADSs Price in US\$	
	High	Low	High	Low
2001(2)	36.70	21.00	18.62	8.40
2002	39.70	18.90	16.73	4.85
2003	52.75	20.74	18.46	6.00
2004	68.00	36.80	25.10	11.42
2005	95.00	53.49	41.07	19.71
2004				
First quarter	56.00	46.95	19.99	16.55
Second quarter	54.10	36.80	18.72	11.42
Third quarter	60.20	46.10	21.25	15.30
Fourth quarter	68.00	60.40	25.10	21.07
2005				
First quarter	68.20	53.49	26.10	19.71
Second quarter	77.09	61.71	31.85	23.40
Third quarter	88.75	70.50	39.15	29.41
Fourth quarter	95.00	76.70	41.10	33.55
2006				

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

---------------	--------	-------	-------	-------

97

Period	Preferred Shares ⁽¹⁾ Price in Nominal R\$		ADSs Price in US\$	
	High	Low	High	Low
December 2005	95.00	87.11	41.10	36.74
January 2006	114.01	95.10	48.94	39.37
February 2006	111.50	102.50	52.40	46.27
March 2006	111.00	93.50	52.65	42.05
April 2006	103.31	95.60	48.57	44.59
May 2006	105.85	86.25	51.45	35.83
June 2006 ⁽³⁾	92.00	80.00	40.53	34.58

- (1) Preferred share prices and volumes per 1,000 preferred shares.
- (2) From the listing on the NYSE on September 18, 2001 until the end of the period.
- (3) Through June 28, 2006.

On June 28, 2006, the closing price per 1,000 of the preferred shares on the São Paulo Stock Exchange was R\$88.79 and the closing price per ADS on the NYSE was US\$40.00.

Since July 12, 2002, our depositary receipts, each representing 1,000 of our preferred shares, have traded on the LATIBEX, under the ticker symbol XCMIG. The LATIBEX is an electronic trading market created in 1999 by the Madrid Stock Exchange in order to facilitate the trading market of Latin American Securities in Euros.

Trading on the São Paulo Stock Exchange

The preferred shares are traded on the São Paulo Stock Exchange, the only Brazilian stock exchange that trades shares. Trading on the São Paulo Stock Exchange is limited to member brokerage firms and a limited number of authorized non-members. The CVM and São Paulo Stock Exchange have discretionary authority to suspend trading in shares of a particular issuer under certain circumstances.

If you were to trade in the preferred shares on the São Paulo Stock Exchange, your trade would settle in three business days after the trade date. Delivery of and payment for shares is made through the facilities of separate clearinghouses for each exchange, which maintain accounts for member brokerage firms. The seller is ordinarily required to deliver the shares to the exchange on the second business day following the trade date. The clearinghouse for the São Paulo Stock Exchange is Companhia Brasileira de Liquidação e Custódia.

In order to better control volatility, the São Paulo Stock Exchange has adopted a circuit breaker system pursuant to which trading sessions may be suspended for a period of 30 minutes or one hour whenever the index of this stock exchange falls more than 10% from the index registered for the previous trading session.

The São Paulo Stock Exchange is less liquid than the NYSE and other major exchanges in the world. As of December 31, 2005, the aggregate market capitalization of the 343 companies listed on the São Paulo Stock Exchange was equivalent to approximately US\$482 billion and the 10 largest companies listed on the São Paulo Stock Exchange represented approximately 51.5% of the total market capitalization of all listed companies. Although any of the outstanding shares of a listed company may trade on a Brazilian stock exchange, in most cases fewer than half of the listed shares are actually available for trading by the public. The remainder of these shares is held by small groups of controlling persons, governmental entities or one principal shareholder. As of December 31, 2005, we accounted for approximately 1.27% of the total market capitalization of all listed companies on the São Paulo Stock Exchange.

Our preferred shares and common shares have daily liquidity on the São Paulo Stock Exchange and have had no suspension of trading in the past five years

Edgar Filing: ENERGY CO OF MINAS GERAIS - Form 20-F

We have been a member of Special Corporate Governance Level 1 of the São Paulo Stock Exchange since October 2001. As a result, we have agreed to do the following:

98

- maintain a free float of shares representing at least 25% of our capital stock;
- provide a minimum notice period of 15 days after calling any general shareholders meeting;
- improve the scope of our quarterly financial information, by obligating ourselves to include consolidated financial statements and cash-flow statements with this information;
- comply with information disclosure rules for transactions involving securities that we issue on behalf of our controlling shareholder or management;
- disclose any shareholder agreements, stock option programs and contracts with related parties;
- hold an annual meeting with analysts and any other interested parties;
- make available an annual calendar of corporate events; and
- adopt mechanisms that favor capital dispersion in public share offerings.

Trading on Brazilian stock exchanges by non-residents of Brazil is subject to limitations under Brazilian foreign investment legislation. See Item 10. Additional Information Exchange Controls.

Regulation of Brazilian Securities Markets

The Brazilian securities markets are principally governed by Law No. 6,385, dated December 7, 1976, and the Brazilian Corporate Law, each as amended and supplemented, and by regulations issued by the CVM, the National Monetary Council and the Central Bank, which has, among other powers, licensing authority over brokerage firms and which regulates foreign investments and foreign exchange transactions.

Under the Brazilian Corporate Law, a corporation is either publicly owned (*companhia aberta*), such as we are, or closely held (*companhia fechada*). All publicly owned companies, including us, are registered with the CVM and are subject to reporting requirements. Our shares are traded on the São Paulo Stock Exchange, but may be traded privately subject to certain limitations. The Brazilian OTC market consists of direct trades and trades between individuals in which a financial institution registered with the CVM serves as intermediary.

We have the option to ask that trading in our securities on the São Paulo Stock Exchange be suspended in anticipation of a material announcement. Trading may also be suspended on the initiative of the São Paulo Stock Exchange or the CVM based on or due to, among other reasons, a belief that a company has provided inadequate information regarding a material event or has provided inadequate responses to inquiries by the CVM or the stock exchange.

Brazilian law provides general restrictions on unfair trading practices and market manipulation, although in Brazil there may be fewer instances of enforcement actions and judicial precedent is less well defined than in certain other countries. The Brazilian Corporate Law provides that the controlling shareholders, any shareholder that appoints members to the board of directors and to the fiscal council, members of the board of directors, members of the fiscal council and executive officers will be required to disclose any purchase or sale of shares to the CVM and the São Paulo Stock Exchange.

Trading on the São Paulo Stock Exchange by non-residents of Brazil is subject to limitations under Brazilian foreign investment and tax legislation. The Brazilian custodian for the preferred shares and the depositary bank must obtain a certificate of registration from the Central Bank of Brazil to be eligible to remit U.S. dollars abroad for payments of dividends, any other cash disbursements, or upon the disposition of the shares and sales proceeds thereof. In the event that a holder of ADSs exchanges its ADSs for preferred shares, the holder will be entitled to continue to rely on the depositary bank's certificate of registration for five business days after the exchange. Thereafter, the holder may not be able to obtain and remit U.S. dollars abroad upon the disposition of the

preferred shares, or distributions relating to the preferred shares, unless the holder qualifies for and obtains a new certificate of registration. See Item 10. Additional Information Exchange Controls.

Item 10. Additional Information

Corporate Governance Differences from NYSE Practices

On November 4, 2003, the New York Stock Exchange (NYSE) established new corporate governance rules. Under the rules, foreign private issuers are subject to a more limited set of corporate governance requirements than U.S. domestic issuers. Under these rules, we are required to set forth in our annual report to shareholders a description of the significant differences between CEMIG's corporate governance practices and those that would apply to a U.S. domestic issuer under the NYSE corporate governance rules. The following table summarizes these differences.

Section	NYSE Corporate Governance Rule for U.S. Domestic Issuers	Our Approach
303A.01	A listed company must have a majority of independent directors. Controlled companies are not required to comply with this requirement.	CEMIG is a controlled company because more than a majority of its voting power is controlled by the government of the State of Minas Gerais. As a controlled company, CEMIG would not be required to comply with the majority of independent directors requirements if it were a U.S. domestic issuer. There is no legal provision that requires CEMIG to have independent directors.
303A.03	The non-management directors of a listed company must meet at regularly scheduled executive sessions without management.	The non-management directors of CEMIG do not meet at regularly scheduled executive sessions without management.
303A.04	A listed company must have a nominating/corporate governance committee composed entirely of independent directors, with a written charter that covers certain minimum specified duties. Controlled companies are not required to comply with this requirement.	As a controlled company, CEMIG would not be required to comply with the nominating/corporate governance committee requirements if it were a U.S. domestic issuer. CEMIG does not have a nominating/corporate governance committee.
303A.05	A listed company must have a compensation committee composed entirely of independent directors, with a written charter that covers certain minimum specified duties. Controlled companies are not required to comply with this requirement.	As a controlled company, CEMIG would not be required to comply with the compensation committee requirements if it were a U.S. domestic issuer. CEMIG does not have a compensation committee.
303A.06 and 303A.07	A listed company must have an audit committee with a minimum of three independent directors that satisfy the independence requirements of Rule 10A-3 under the Exchange Act, with a written charter that covers certain minimum specified duties.	CEMIG has a permanent conselho fiscal, or fiscal council in accordance with the applicable provisions of Brazilian Corporate Law. As required by Brazilian Corporate Law, our fiscal council is independent of our management and external auditors. The primary responsibility of the fiscal council is to review management's activities and the financial statements, and to report its findings to the shareholders. The Fiscal

		Council is acting as our audit committee, as defined in the Sarbanes-Oxley Act of 2002.
303A.08	Shareholders must be given the opportunity to vote on all equity-compensation plans and material revisions thereto, with limited exemptions set forth in the NYSE rules.	Under Brazilian Corporate Law, shareholder preapproval is required for the adoption of equity compensation plans.
303A.09	A listed company must adopt and disclose corporate governance guidelines that cover certain minimum specified subjects.	CEMIG does not have formal corporate governance guidelines.
303A.12	Each listed company Chief Executive Officer must certify to the NYSE each year that he or she is not aware of any violation by the company of NYSE corporate governance listing standards.	CEMIG's Chief Executive Officer will promptly notify the NYSE in writing after any executive officer of CEMIG becomes aware of any material non-compliance with any applicable provisions of the NYSE corporate governance rules.

By-laws

We are a state-controlled company registered under the laws of Brazil. The registration number given to us by Junta Comercial do Estado de Minas Gerais, or the Board of Trade of Minas Gerais, is 3130004012. Set forth below is a brief summary of certain significant provisions of (i) our by-laws, as amended by our extraordinary shareholders' meeting on December 13, 2005, and (ii) Brazilian Corporate Law. The description of our by-laws contained herein does not purport to be complete and is qualified by reference to our by-laws, which have been filed as an exhibit to this annual report.

Object and Purpose

As described in Article 1 of our by-laws, we have four main purposes: (i) to construct and operate electric power generation, transformation, transmission and distribution systems and to trade electric power and related services; (ii) to develop commercial activities in the energy field; (iii) to render consulting services to companies in Brazil and abroad; and (iv) to perform activities directly or indirectly relating to our corporate purposes.

Preferred Shares

Holders of preferred shares have the right to receive annual minimum dividends in an amount equal to the greater of 10% of the par value of each preferred share or 3% of the shareholders' equity associated with each preferred share. Holders of our preferred shares also will have priority over any other class of shares if we decide to redeem shares. A preferred share does not entitle its owner to vote at the general shareholders' meetings.

Share Subscription

Shares purchased by the State Government, which must constitute at all times the majority of our voting shares, are paid for in accordance with the Brazilian Corporate Law. Shares purchased by other shareholders (whether natural persons or companies) shall be paid for in accordance with the decision resulting from the general meeting of shareholders that addresses the matter.

Article 171 of the Brazilian Corporate Law provides that each shareholder has a general preemptive right to subscribe for new shares or convertible securities issued in any capital increase, in proportion to that shareholder's shareholding, except in the event of the exercise of any option to acquire shares of our capital stock. Shareholders must exercise their preemptive rights within 30 days after the publication of the notice of capital increase.

In the event of a capital increase, holders of ADSs, which represent preferred shares, would have preemptive rights to subscribe only to newly issued preferred shares, in proportion to their shareholdings but may not be able to exercise these rights because of U.S. securities law limitations. See Item 3. Risk Factors Risks Relating to the Preferred Shares and ADSs You may not be able to exercise preemptive rights with respect to the preferred shares.

Minority Shareholders

Our by-laws provide that the preferred and minority common shareholders are entitled to elect one member and an alternate to the Board of Directors, as more fully described in Rights of Shareholders Rights of Minority Shareholders.

Dividends

For a discussion of our dividend policy, see Item 8. Financial Information Dividend Policy and Payments.

General Meetings

General meetings of shareholders are held for any legal purpose, as provided by the Brazilian Corporate Law. Ordinary general meetings of shareholders are held within the first four months of the fiscal year and are called upon 15 days prior notice. The Brazilian Corporate Law also provides that the following actions may be taken only at extraordinary general meetings of shareholders held for the following purposes:

- to amend our by-laws;
- to increase or decrease our issued capital stock or to subscribe new shares;
- to elect the members of the Board of Directors and of the Fiscal Council;
- to issue debentures or any convertible securities;
- to suspend the rights of a shareholder who has violated the Brazilian Corporation Law or our by-laws;
- to merge us with another company in a case in which we are not the surviving company (*incorporação* and *fusão*) or a spin-off (*cisão*);
- to accept or reject the valuation of in-kind contributions offered by a shareholder in consideration for the issuance of shares of our capital stock;
- to transform us into a limited liability company (*sociedade por quotas de responsabilidade limitada*) or any other corporate form;
- to take any action regarding our dissolution or liquidation, and the appointment and dismissal of the respective liquidator and review of the reports prepared by him or her;
- to take any action regarding an application for bankruptcy or compulsory rescheduling of our debts; and
- to receive annually the financial statements from management and to approve the financial statements.

As a general rule, the affirmative vote of shareholders representing at least the majority of our issued and outstanding common shares present in person or represented by proxy at a shareholders meeting is required to

approve or ratify any proposed action, and abstentions are not taken into account. However, the affirmative vote of shareholders representing one half of our issued and outstanding voting capital is required to:

- create preferred shares or to increase disproportionately an existing class of preferred shares relative to the other classes of shares, unless such action is provided for or authorized by our by-laws;
- modify a preference, privilege or condition of redemption or amortization conferred on one or more classes of preferred shares, or to create a new class with greater privileges than the existing classes of preferred shares;
- reduce the percentage of mandatory dividends;
- change our corporate purpose;
- merge us with another company if we are not the surviving company or consolidate us with another company;
- spin off a portion of our assets or liabilities;
- approve our participation in a group of companies;
- apply for cancellation of our voluntary liquidation;
- approve our dissolution; and
- approve the compulsory transfer of all of our shares to another company in order to make us a wholly-owned subsidiary of that other company (*incorporação de ações*).

Shareholders may be represented at a shareholders meeting by an attorney-in-fact appointed no later than one year prior to the meeting date. To be eligible to represent a shareholder in a shareholders meeting, the attorney-in-fact must be a shareholder, one of our executive officers or directors or an attorney-at-law. In a publicly held corporation, such as ours, the attorney-in-fact may also be a financial institution.

Subject to the provisions of the Brazilian Corporate Law and our by-laws, our Board of Directors may ordinarily call our shareholders meetings. These meetings may also be called by:

- the Fiscal Council, if the Board of Directors fails to call a general shareholders meeting within one calendar month after the date it was required to do so under applicable laws or a special shareholders meeting in the case of serious and urgent matters affecting us; any shareholder, whenever the executive officers fail to call the meeting of shareholders within 60 days of being required to do so by the Brazilian Corporate Law or by our by-laws; and
- shareholders holding at least five percent of our capital stock, if our Board of Directors fails to call a meeting within eight days after receipt of a request from that shareholder to call the meeting that indicates the issues to be discussed or calls for the creation of the Fiscal Council.

Board of Directors

Our by-laws mandate that our Board of Directors shall be comprised of 14 directors and 14 alternates. One director is designated a chairman and another director is designated the vice-chairman.

Our Board of Directors is responsible for:

- establishing the general direction of our business;

103

- electing and dismissing executive officers;
- approving the execution contracts between us and our shareholders or any entity that controls, is controlled by or is under joint control with our shareholders;
- approving the sale or pledge of our fixed assets, or the granting of guarantees to third parties, with a value of at least R\$5 million;
- approving, upon proposal by the Board of Executive Officers, the sale or the creation of any in rem guarantees with respect to our permanent assets and the granting by us of any personal guarantee to any third party in an amount exceeding R\$5 million;
- approving, upon a proposal by the Board of Executive Officers, loans, financings, agreements and any actions which would bind us in an amount exceeding R\$5 million;
- calling the general meetings of shareholders;
- supervising the management of the Board of Executive Officers, reviewing our books and documents and requesting information regarding executed and soon-to-be executed contracts, as well as other items of interest;
- approving our annual and interim financial statements;
- appointing and dismissing independent auditors annually;
- approving, upon proposal by the Board of Executive Officers, the commencement or waiver of bidding proceedings for the purchase of goods or services with a value of at least R\$5 million;
- authorizing, upon proposal by the Board of Executive Officers, legal and administrative action to be taken on our behalf and the settlement of judicial and extra judicial matters in which we are involved with a value of at least R\$5 million;
- approving the issuance of securities (debentures, commercial papers, *notas promissórias*, among others) in the local and international capital markets; and
- delegating to Board of Executive Officers the power to authorize signature contracts of commercialization of electric energy or rendering distribution and transmission services, in terms of legislation.

Under the Brazilian Corporate Law, directors of a corporation generally have certain duties equivalent to those imposed under the laws of most states of the United States, including a duty of loyalty to the corporation, a duty to refrain from self-dealing and a duty to use reasonable care in the management of the corporation's affairs. Our directors and officers may be held liable for breaches of duty to us and our shareholders and may be subject to judicial actions in proceedings brought by government agencies or our shareholders.

There are no provisions in our bylaws with respect to (i) a director's power to vote on proposals or contracts in which such director is materially interested, (ii) borrowing powers exercisable by the directors, (iii) age limits for retirement of board members, and (iv) number of shares required for director qualification.

The chairman and vice-chairman of our Board of Directors are chosen by our Board of Directors at its first meeting following the election of the board members. The vice-chairman of our Board of Directors will act as a temporary replacement for our chairman when the chairman is absent from board meetings.

Our shareholders determine the remuneration of our directors during the general meeting of shareholders at which our directors are elected to office.

104

Rights of Shareholders

We extend to our shareholders all of the rights that are provided under Brazilian law. Our by-laws are in compliance with the Brazilian Corporate Law.

Essential Rights

Article 109 of the Brazilian Corporate Law provides that a corporation may not deny certain rights to its shareholders under any circumstances. These shareholders' rights include:

- the right to have a share of the corporation's earnings;
- the right to have a share of the corporation's assets, in the event of liquidation thereof;
- the right to supervise our management according to the Brazilian Corporate Law;
- preemptive rights to subscribe new shares or securities convertible into shares, except for exceptions provided by the Brazilian Corporate Law and our by-laws; and
- the right to withdraw from the company under certain circumstances provided in the Brazilian Corporate Law.

Voting Rights

As a general rule, only our common shares are entitled to vote and each common share corresponds to one vote. Holders of preferred shares acquire voting rights if, during three consecutive fiscal years, we fail to pay a fixed or minimum dividend to which the preferred shares are entitled. If a holder of preferred shares acquires voting rights in this manner, such rights will be identical to the voting rights of a holder of common shares and will continue until the dividend is paid. No restrictions exist on the right of a holder of common shares or preferred shares to exercise voting rights with respect to such shares by virtue of such holder being a non-resident of Brazil or a citizen of a country other than Brazil. However, holders of ADSs may only vote the underlying preferred shares through the depositary according to the terms of the Second Amended and Restated Deposit Agreement. In any circumstance in which holders of preferred shares are entitled to vote, each preferred share will entitle its holder to one vote.

Redemption rights

Our common shares and preferred shares are not redeemable, except that a dissenting shareholder is entitled under Brazilian corporate law to obtain redemption upon a decision made at a shareholders' meeting by shareholders representing at least 50% of the voting shares:

- (1) to create a new class of preferred shares or to disproportionately increase an existing class of preferred shares relative to the other classes of shares (unless such actions are provided for or authorized by the by-laws);
- (2) to modify a preference, privilege or condition of redemption or amortization conferred on one or more classes of preferred shares, or to create a new class with greater privileges than the existing classes of preferred shares;
- (3) to reduce the mandatory distribution of dividends;
- (4) to change our corporate purposes;
- (5) to merge us with another company or consolidate us;

- (6) to transfer all of our shares to another company in order to make us a wholly-owned subsidiary of such company;
- (7) to approve the acquisition of control of another company at a price that exceeds certain limits set forth in Brazilian corporate law;
- (8) to approve our participation in a centralized group of companies as defined under Brazilian corporate law; or
- (9) in the event that the entity resulting from (a) a merger, (b) a transfer of shares as described in clause (6) above or (c) a spin-off that we conduct fails to become a listed company within 120 days of the general shareholders' meeting at which such decision was taken.

Only holders of shares adversely affected by the changes mentioned in items (1) and (2) above may require us to redeem their shares. The right of redemption mentioned in items (5), (6) and (8) above may only be exercised if our shares do not satisfy certain tests of liquidity at the time of the shareholder resolution. The right of redemption lapses 30 days after publication of the minutes of the relevant general shareholders' meeting, unless, in the case of items (1) and (2) above, the resolution is subject to confirmation by the preferred shareholders (which must be made at a special meeting to be held within one year), in which case the 30-day term is counted from the publication of the minutes of the special meeting.

We would be entitled to reconsider any action giving rise to redemption rights within 10 days following the expiration of such rights if the redemption of shares of dissenting shareholders would jeopardize our financial stability. Law No. 9,457 dated May 5, 1997, which amended Brazilian corporate law, contains provisions which, among other provisions, restrict redemption rights in certain cases and allow companies to redeem their shares at their economic value, subject to certain requirements. Our by-laws currently do not provide that our capital stock will be redeemable at its economic value and, consequently, any redemption pursuant to Brazilian corporate law would be made at no less than the book value per share, determined on the basis of the last balance sheet approved by the shareholders; provided that if the general shareholders' meeting giving rise to redemption rights occurred more than 60 days after the date of the last approved balance sheet, a shareholder would be entitled to demand that his or her shares be valued on the basis of a new balance sheet dated within 60 days of such general shareholders' meeting.

Rights of Minority Shareholders

The Brazilian Corporate Law provides that shareholders who own at least 5% of the capital stock of a corporation are afforded the following rights, among others:

- the right to require that the books of the corporation be made available for review, whenever these shareholders become suspicious that Brazilian law or the corporation's by-laws have been violated, or that irregularities have been committed by the management of the corporation;
- the right to call a general meeting of shareholders, under certain circumstances, whenever the corporation's directors or officers, as the case may be, fail to do so; and
- the right to file an action for indemnification by directors or officers, as the case may be, for damages caused to the assets of the corporation, whenever it is determined at the general meeting of shareholders that such a claim shall not be filed.

Whenever the Fiscal Council is not permanently active, it shall be activated at a general meeting of shareholders at the request of shareholders who own at least 10% of the voting shares or 5% of the non-voting shares. Minority shareholders have the right to appoint one member of the Fiscal Council. All shareholders have the right to attend general meetings of shareholders.

The Brazilian Corporate Law also provides that minority shareholders that hold either (i) preferred shares representing at least 10% of the total share capital of a company or (ii) common shares representing at least 15% of the voting capital of a company, have the right to appoint one member and an alternate to the board of directors. If no common or preferred shareholder meets these thresholds, shareholders holding preferred shares or common shares representing at least 10% of the total share capital of the company are entitled to combine their holdings to appoint one member and an alternate to the board of directors. Through 2005, a director appointed by the preferred shareholders as a group, or collectively with the common shareholders, is to be chosen from a list of three names provided by the controlling shareholder. Beginning with the annual general meeting of 2006, this member of the Board of Directors will be elected in accordance with the terms of the law, independently of the period of office of the board member to be substituted.

Changes in Rights of Shareholders

Any change with respect to the rights of holders of our common shares or preferred shares requires a shareholders' meeting. Under the Brazilian Corporate Law, the proposed changes must be approved by a majority of the affected class. Certain changes with respect to the rights of non-voting shares, including preferred shares, such as a change in payment or voting rights, may give rise to the exercise of redemption rights by the holders of the affected shares.

Going Private Transactions and Delisting from the São Paulo Stock Exchange

Our delisting, as a public company, must be preceded by a tender offer by our controlling shareholders or ourselves for the acquisition of all our then outstanding shares, subject to the conditions below:

- the price offered for the shares under the public offering must be the fair value of those shares, as established in Brazilian Corporate Law; and
- shareholders holding more than two thirds of our float shares shall have expressly agreed to our decision to become a private company or accepted the offer.

According to Brazilian corporate law, a fair price shall be at least be equal to our valuation, as determined by one or more of the following valuation methods: book value, net book value assessed by market price, discounted cash flow, multiples, price of our shares in the market or any other valuation method accepted by the CVM. This price of the offer may be revised if challenged within 15 days of its publication by holders of at least 10% of our outstanding shares, by means of a request sent to our management that a extraordinary shareholders' meeting be called to decide on whether to request a new valuations under the same or different valuation method. Our shareholders that request a new valuation and those who approve such request shall reimburse us for incurred costs if the new valuation is lower than the challenged valuation. However, if the second valuation is higher, the offeror will have the option to continue the offer with the new price or quit the offer.

Arbitration

Pursuant to the Brazilian Corporate Law and related regulations, if provided for in a company's by-laws, disputes among shareholders will be subject to arbitration. Our by-laws currently do not provide for arbitration.

Material Contracts

CRC Account Agreement - Contract for Assignment of Credit of the Remaining Balance of the Revenue Compensating Account, dated May 31, 1995, between the State Government and CEMIG, and Amendments thereto

Prior to 1993, electric utilities in Brazil were guaranteed a rate of return on investments in assets used to provide electric service to consumers, the rates charged to consumers were uniform throughout the country, and profits from more profitable utilities were reallocated to less profitable ones so that the rate of return for all companies would equal the national average. Shortfalls experienced by most electric utilities in Brazil were

accounted for in each company's CRC Account. When the CRC Account and the guaranteed return concept were abolished, concessionaires with positive balances were permitted to offset such balances against their liabilities to the Federal Government.

After all of our eligible payables and debt to the Federal Government had been offset against our CRC Account balance, we entered into an agreement with the State Government in May 1995 to transfer the right to receive the balance of our CRC Account from the Federal Government to the State Government in return for a promissory note from the State Government payable in monthly installments plus interest. This account receivable had a balance of approximately R\$2,942 million as of December 31, 2004, which included a significant amount of overdue installments. The agreement relating to this transfer, the CRC Account Agreement, originally required the State Government to make monthly payments to us over twenty years with an initial three-year grace period for interest and principal payments. Interest on the amount receivable under the CRC Account Agreement accrues at a rate of 6% per year plus inflation adjustments. Interest began to accrue on May 2, 1995, and deferred interest during the initial three-year grace period was capitalized.

Since May 1995, the CRC Account Agreement has been amended as follows:

- (a) The CRC Account Agreement was first amended in February 2001 to replace the monetary restatement index originally applicable to the outstanding balance with the IGP-DI.
- (b) The CRC Account Agreement was next amended by the Second Amendment to the CRC Account Agreement, signed on October 14, 2002, which refers to 149 monthly installment payments, with maturities from January 1, 2003 through May 1, 2015, representing the total amount of R\$1,845 million of December 31, 2004, bearing interest at 6% per year, with restatement based on the IGP-DI. We entered into this Second Amendment with the State Government in order to preserve the terms and conditions of the original CRC Account Agreement with respect to the above-referenced installments. We did not receive any scheduled payments from the State Government with respect to this Second Amendment. In 2001, we recorded a full loss provision with respect to the entire outstanding balance of the Second Amendment. See Note 3 to our consolidated financial statements.
- (c) The CRC Account Agreement was next amended by the Third Amendment to the CRC Account Agreement, signed on October 24, 2002, which refers to outstanding installments originally due under the CRC Account Agreement from April 1, 1999 through December 1, 1999 and from March 1, 2000 through December 1, 2002. These installments, which totaled R\$1,097 million as of December 31, 2004, bear interest at an annual rate of 12%, with restatement based on the IGP-DI. We were permitted to retain payments of dividends and interest on capital due to the State Government as our shareholder as a set-off against amounts that the State Government owes us under this Third Amendment. For this reason, did not record a loss provision for amounts due thereunder. We paid interest on capital in lieu of dividends in December 2004, of which R\$72 million was due to the State Government. Part of this interest on capital, amounting to R\$49 million, was used by the State Government to settle part of the CRC overdue credits and the remainder, in the amount of R\$23 million, to acquire debentures issued by CEMIG for the Irapé power plant construction. See Note 3 to our consolidated financial statements.
- (d) Given the prior default by the State Government in the payment of amounts due under the CRC Account Agreement and in order to ensure the full payment to CEMIG of the installments due from the State Government under the CRC Account balance, a Fourth Amendment to the CRC Account Agreement was signed on January 23, 2006. Under the Fourth Amendment, the State Government irrevocably agreed to pay the outstanding CRC Account balance, corresponding to R\$2,942 million at December 31, 2004, plus interest, by authorizing CEMIG to retain 65% of the dividends and interest on capital due to the State Government. The outstanding balance is subject to monetary correction for inflation by the variation in the IGP-DI inflation index and will bear interest at 8.18% per year, compounded semi-annually.

Under the Fourth Amendment, the State is required to make 61 semi-annual payments due on June 30 and December 31 of each year. The Fourth Amendment applies retroactively to December 31, 2004, with the first payment date being June 30, 2005 and the final payment being due on June 30, 2035. The semi-annual payments are adjusted for inflation by the IGP-DI inflation index and range from approximately R\$29.4 million for the first five installments and approximately R\$76.5 million for the last installment. The 65% of dividends and interest on capital retained by CEMIG are to be applied in the following order: (i) the settlement of any past due installments,

(ii) the settlement of the installment relating to the half-year in which dividend or interest on capital takes place, (iii) pre-payment of up to two installments and (iv) amortization of the outstanding balance due under the CRC Account.

If the retention of ordinary dividends and interest on capital is not sufficient to cover the applicable installment, beginning on January 1, 2008, CEMIG is entitled to retain up to 65% of any extraordinary dividends or interest on equity due to the State Government for the payment of that installment. Furthermore, if the sum of 65% of the ordinary dividends and interest and capital and extraordinary dividends on interest and capital is not sufficient to cover an installment due, CEMIG is entitled to retain 100% of such dividends and interest on capital, beginning in the six-month period immediately following that of the past due date of the past due installment. In addition, if there is a reduction in the ownership of CEMIG by the State Government, the retention percentage will be automatically adjusted upward such that the total dividend amount retained will remain the same.

Contract on Concessions for Generating Electric Energy, dated July 10, 1997, between the Federal Government and CEMIG

In order to provide electric energy generation services to the public, we entered into a contract with the Federal Government. This concession contract establishes terms of the concessions for each of our generation plants. Although the concessions for different generation plants have different expiration dates, these concessions are extendable by the Federal Government for a period of up to 20 years upon our application. This contract grants us free access to land in the public domain, certain rights of way, and existing transmission and distribution systems so that we may transmit the energy produced in our generating stations. In return, among other things, we must maintain a minimum level of regularity, continuity, efficiency and safety and we must set aside funds to account for fuel consumption, use of water resources and contributions to the RGR. We do not pay the Charge for Use of Public Assets (*Usa do Bem Público*), or UBP, when generating under the public service regime.

This contract also provides that ANEEL (formerly DNAEE) or a substitute agency will supervise us in the provision of our energy generation services and that we will be subject to penalties if we fail to comply with certain contractual provisions. As a party to this contract, we serve a public utility function and we must receive authorization from the Federal Government prior to entering into any other entrepreneurial activities. The Federal Government may intervene in our concession at any time in order to ensure that we are providing our electric energy generation services properly and that we are acting in compliance with this contract.

In connection with the unbundling process, this agreement was assigned to Cemig Generation and Transmission. This assignment remains subject to the approval of ANEEL through an amendment to the agreement, which is expected to occur in the near future.

Contract for Concessions of Electric Energy Transmission Services, dated July 10, 1997, between the Federal Government and CEMIG

In July 1997, we entered into a contract with the Federal Government authorizing us to provide our electric energy transmission services to the public until July 8, 2015. This contract also provides the rates at which we may charge our consumers for our services. Upon our application, this contract may be extended by the Federal Government, at its own discretion, for a 20-year period. Pursuant to the contract, we are given free access to land in the public domain and certain rights of way in order to operate our electric energy transmission service. In return, among other things, we must maintain adequate technology, equipment, facilities and operating methods to ensure optimization of the use of existing and future electric energy resources and we must satisfy the demands of the electric energy market. We are also required to enter into a transmission service agreement with the ONS, pursuant to which we must make the facilities of our transmission service available to the interconnected power system.

These contracts also provide that ANEEL or a substitute agency will supervise us in the provision of our energy transmission services and that we will be subject to penalties if we fail to comply with certain contractual provisions. The Federal Government may intervene in our concession at any time in order to ensure that we are providing our electric energy transmission services properly and that we are complying with this contract.

In connection with the unbundling process, this agreement was assigned to Cemig Generation and Transmission. The assignment was approved by ANEEL on November 16, 2005.

Contract on Concessions for Distributing Electric Energy, dated July 10, 1997, between the Federal Government and CEMIG

To enable us to provide electricity distribution service to the public, we have a concession contract with the Brazilian Federal Government. This contract also provides for the rates at which we may charge clients for our services. We may apply for a 20-year extension of the period of this contract, and the Federal Government has the discretion to grant or refuse this extension.

The contract gives us free access to land in the public domain, and certain rights of way, in order to operate our electricity distribution service. In return we are required, among other obligations, to maintain certain specified minimum levels of regularity, continuity, efficiency and safety of service; to keep our infrastructure, equipment and services up-to-date; and to maintain availability to the population as a whole, courtesy in provision of services, and moderateness in the rates we charge.

The concession contract covers the state of Minas Gerais, divided into four areas (the North, South, East, and West of the state).

The rates we charge for our services are regulated by the concession-granting power, which grants: (i) an annual adjustment; and (ii) an overall review every five years. The last five-year review took place on April 8, 2003, and the next will be on April 8, 2008.

This contract also provides that ANEEL or a substitute agency will supervise us in the provision of our energy generation services and that we will be subject to penalties if we fail to comply with certain contractual provisions. As a party to this contract, we serve a public utility function and we must receive authorization from the Federal Government prior to entering into any other entrepreneurial activities. The Federal Government may intervene in our concession at any time in order to ensure that we are providing our electric energy generation services properly and that we are acting in compliance with this contract.

In connection with the unbundling process, this agreement was assigned to Cemig Distribution. The assignment was approved by ANEEL on March 31, 2005.

Contract for the Supply and Exchange of Electricity, and Passthrough and Transport of Power from Itaipu, dated 31 May 1993, between Furnas and CEMIG

In 1993, we signed a contract with Furnas governing the supply and exchange of energy between Furnas and CEMIG, for a period of 10 years, and also the transfer of power and energy generated by Itaipu, for a period of 20 years.

Since 1999, based on Law 9,648 of May 27, 1998, the portion relating to supply and exchange between Furnas and CEMIG has been regulated by a specific contract, known as an Initial Contract. See Initial Contract for Purchase and Sale of Electricity, dated August 2, 2002, between Furnas and CEMIG.

Since January 2003, Decree 4,550 of December 27, 2002 has governed the sale of energy generated by Itaipu, appointing Eletrobrás as a trader of Itaipu's output. The volumes of energy purchased by CEMIG and the prices of such energy are, since then, established annually by ANEEL. Under decree 4,550, contracts executed with Furnas were required to be assigned to Eletrobrás.

Initial Contract for Purchase and Sale of Electricity, dated August 2, 2002, between Furnas and CEMIG

The Initial Contract signed with Furnas in 2002 governs the purchase by CEMIG of a portion of the electric energy generated by Furnas from the period from 1999 to the end of 2005. The volumes contracted under such

contract were subject to a reduction of 25% a year beginning at the end of 2002 in accordance with Law 9,648/98. This agreement expired on December 31, 2005.

Shareholders Agreement, dated June 18, 1997, between the State Government and Southern

In 1999, after a new State Government administration took office, the State Government filed a lawsuit to nullify this shareholders' agreement on the grounds that it violated the state and federal constitutions because the Special Quorum Provisions would constitute an unlawful transfer of the control of CEMIG to Southern. According to the lawsuit, state legislation would be required in order for the State Government to relinquish control of CEMIG to Southern.

After some preliminary decisions unfavorable to the State Government by the lower courts, in 1999 the State Government obtained an injunction from the State Court of Appeals, which suspended the effects of the Special Quorum Provisions pending the result of the lawsuit.

In August 2001, the Minas Gerais State Court of Appeals rendered a decision declaring the shareholders' agreement null and void. Given this decision, the voting rights as set forth in our by-laws, not those contained in the shareholders' agreement, are currently in effect. Our by-laws provide that each common share entitles the holder thereof to one vote at shareholders' meetings. The by-laws do not provide Southern with any extraordinary rights or privileges other than the rights it possesses by virtue of its ownership of our common shares. The decision of the State Court of Appeals has been appealed to a superior court, the Superior Tribunal de Justiça, and a final decision, subject only to a request of amendment, was rendered in December 2003. Therefore the effectiveness of the shareholders' agreement and control of CEMIG remain subject to judicial challenge in the Supreme Court.

Indenture Covering the First Public Issuance of Debentures, Divided into Two Series of the Same Class, Without Guarantee or Preference, of CEMIG, dated October 4, 2001, between CEMIG and Planner Corretora de Valores S.A.

On November 1, 2001, pursuant to an indenture entered into between us and Planner Corretora de Valores S.A, as fiduciary agent, we publicly issued R\$625 million of debentures in two series of R\$312.5 million each. The first series of debentures will mature on November 1, 2009 and the second series of debentures will mature on November 1, 2011. The debentures are subject to early redemption at the option of the debenture holders (in 2005 in the case of the first series and in 2006 in the case of the second series). Upon maturity, we are obligated to pay to the debenture holders an amount equal to the indexed par value of any debentures still outstanding plus compensatory interest. These debentures are not convertible and do not have preferences or guarantees.

Should we make a late payment of any amount due to the debenture holders, we will have to pay, in addition to the amount due, a penalty of 10% of the amount due plus interest calculated from the date payment was due to the date of actual payment at the rate of 1% per month on the amount due. In addition, if we do not pay an amount due on a maturity date, the related debentures must be accepted by us as payment by the debenture holders for electricity that we supply to them.

The proceeds from this issuance were used to finance generation, transmission and distribution projects, including projects in partnership with private sector companies in accordance with our capital investment program for 2001 and 2002.

At the General Meeting of Holders of the Company's First Issue of Non-convertible Debentures held on December 3, 2004, the debenture holders approved an amendment to the indenture providing for the compulsory exchange of the Company's First Issue of Debentures for debentures to be issued by Cemig Generation and Transmission, in connection with the implementation of the process of "unbundling" of the Company. Such exchange must occur in a 180 day period beginning on the date of the transfer of the concessions to Cemig Generation and Transmission, which date will be considered as the date of the publication of the amendments to the concession contracts. If CEMIG fails to make such mandatory exchange in this time period, there will be an automatic early redemption of the debentures. On the other hand, the time period can be extended if a debenture holders meeting so authorizes. In addition, it was provided that the debentures to be issued by Cemig Generation

and Transmission will keep the same characteristics and financial terms of the debentures that will be exchanged and will be guaranteed by CEMIG, the holding company.

On November 1, 2005, the debentures of the first series were subject to early redemption at the option of the debenture holders. As an alternative to redemption, we proposed the following new terms for the debentures of the first series: (i) the second remuneration period (the period following the early redemption option date) would begin on November 1, 2005 and end on November 1, 2009, the date of the final maturity of the debentures of the first series; (ii) the debentures of the first series would earn interest corresponding to 100% of the CDI, plus a spread of 1.20% per year, calculated based on a 252 business day year. Any debenture holders not agreeing to the proposed new terms could redeem the debentures of the first series in accordance with their terms on November 1, 2005. As a result, we acquired 28.49% of the outstanding debentures of the first series for an amount of R\$139.5 million, equal to the monetarily adjusted nominal value plus any accrued and unpaid interest. We have not yet decided whether to cancel the acquired debentures or resell them in the market.

Financing Agreements by Extension of Credit No. 02.2.962.3.1, dated February 7, 2002 and No. 03.2.286.3.1 dated July 1, 2003, between BNDES and CEMIG and Intervening Third Parties

On February 7, 2002 and on July 1, 2003, we entered into two financing agreements pursuant to which BNDES, upon satisfaction of certain conditions, extended two loans to us in the amounts of approximately R\$396.7 million and R\$176.5 million, respectively. We borrowed R\$335 million pursuant to these agreements and used the proceeds to partially settle our outstanding obligations to the CCEE relating to spot market energy we purchased during the period of the Electricity Rationing Plan. This financing was extended to us pursuant to the terms of the General Agreement of the Electricity Sector. The first loan is repayable to BNDES through 60 monthly installments over five years, beginning March 15, 2003, with the final payment due on February 15, 2008. The second loan is repayable to BNDES through 55 monthly installments over five years, beginning August 15, 2003, with the final payment due on February 15, 2008. Interest on the outstanding balance of both financings accrues at a rate of 1% over the Sistema Especial de Liquidação e Custódia (Special System for Settlement and Custody) overnight rate, or SELIC, the Brazilian benchmark interest rate. We may prepay all or a part of the outstanding balance under these agreements.

BNDES has agreed that as a result of the unbundling process, these contracts were assigned to Cemig Generation and Transmission.

Our obligations under these loans were originally guaranteed by the rate revenue relating to electricity sales to final consumers corresponding to 3.27% (as defined in the first loan agreement) and 1.36% (as defined in the second loan agreement) of our monthly sales. As a consequence of the transferring of the debt to Cemig Generation and Transmission, since the revenue of Cemig Generation and Transmission is lower than that of CEMIG which guaranteed the debt prior to the unbundling, the guarantee was increased as follows: the loans will be guaranteed by the rate revenue of Cemig Generation and Transmission relating to electricity sales to final consumers corresponding to 9% (as defined in the first loan agreement) and 5% (as defined in the second loan agreement) of the monthly sales.

Securities Distribution Program

We set up a Local Note Program, according to Instrução CVM No. 400, dated December 29, 2003. The Program is expected to last two years from the date of the filing with the CVM, which occurred on July 19, 2004. Pursuant to the Program, we may issue debentures of up to R\$1.5 billion in a simplified process. The first issuance under the Program is described below. See also Item 5. Operating and Financial Review and Prospects Liquidity and Capital Resources.

Because of the unbundling, we cannot issue additional debentures under the Program. We may in the future establish other local note programs directly or through our subsidiaries.

Indenture Covering the Third Public Issuance of Common Debentures, Without Guarantee or Preference, of CEMIG, dated June 14, 2004, between CEMIG and Pavarini Distribuidora de Títulos e Valores Mobiliários

On June 14, 2004, we and Pavarini Distribuidora de Títulos e Valores Mobiliários, as fiduciary agent, executed an indenture covering the public issuance of 40,000 debentures, in a total amount of R\$400 million. The debentures issued pursuant to this agreement are unsecured, not convertible into shares, with a nominal unit value of R\$10,000. On August 2, 2004, a total of 23,042 debentures were subscribed and fully paid up, representing the total amount of R\$230.4 million issued on June 1, 2004. The remaining debentures, which were not subscribed, were cancelled. The debentures will mature on the first business day of June 2014. Upon maturity, we are obligated to pay to the debenture holders an amount equal to the indexed outstanding par value of the debentures plus interest.

In connection with the unbundling process, the indenture provides for the mandatory exchange of the debentures issued by CEMIG for debentures to be issued by Cemig Distribution. Such exchange must occur within a 330 day period beginning on October 18, 2005. If CEMIG fails to make such mandatory exchange in this time period, there will be an automatic early redemption of the debentures. On the other hand, the time period can be extended if a debenture holders meeting so authorizes. In addition, the indenture provides that the debentures to be issued by Cemig Distribution will keep the same characteristics and financial terms of the debentures that will be exchanged and will be guaranteed by CEMIG, as the holding company.

The proceeds from this issuance were used to roll over part of the debt raised to finance investments in the distribution segment.

Initial Contract between Cemig Generation and Transmission and Cemig Distribution

As a result of the process of unbundling, Cemig Generation and Transmission and Cemig Distribution were required to sign a power purchase agreement under the terms of the Law 9,648/98, referred to as the Initial Contract, corresponding to 866 average MW, or 25% of the capacity owned by Cemig Generation and Transmission. This contract expired on December 31, 2005.

Electricity Sale Contracts in the Regulated Environment (CCEARs)

In 2004, Law 10,848 and Decree 5,163 came into force, altering the structure of the electricity sector, especially the sale of electricity. Under the new regulations, the distributors must buy energy, to serve their markets, through public auctions in the regulated environment, in which the CCEARs are signed. In December 2004, the first auction of existing electricity under the new industry model was held. In this auction Cemig Distribution and Cemig Generation and Transmission made electricity purchase and sale contracts.

Cemig Distribution purchased, to serve its market, 530 average MW in contracts with terms of eight years, with the supply starting on January 1, 2005, at an average price of R\$57.51/MWh, and 919 average MW in contracts with terms of eight years with the supply starting on January 1, 2006 at an average price of R\$67.33 MWh. The contracts were signed with 12 companies holding generation concessions, including Cemig Generation and Transmission.

In the same auction Cemig Generation and Transmission sold 927 average MW in contracts with terms of eight years, with the supply beginning on January 1, 2006. The sale price of the electricity is R\$69.58/MWh, referring to January 2005. The contracts were signed with 35 distributors, including Cemig Distribution, which serve consumers in all the regions of the Brazilian national grid system.

In April 2005, the second auction of existing electricity under the new industry model was held. In this auction Cemig Distribution and Cemig Generation and Transmission signed CCEARs. Cemig Distribution purchased, to serve its market, 105 average MW in contracts with terms of eight years, with the supply starting on January 1, 2008, at an average price of R\$83.13/MWh. The contracts were signed with ten companies holding generation concessions, including Cemig Generation and Transmission. In the same auction Cemig Generation and Transmission sold 105 average MW in contracts with terms of eight years, with the supply beginning on January 1, 2008. The sale price of the electricity is R\$83.50/MWh, referring to April 2005. The contracts were signed with 34 distributors, including Cemig Distribution, which supply consumers in all the regions of the Brazilian national grid system.

In October 2005, the third and fourth auctions of existing electricity took place, however Cemig Distribution and Cemig Generation and Transmission did not participate in these auctions.

In December 2005 the first auction for electricity to be produced by the new generation plants was held, and Cemig Distribution acquired 282.8 average MW in contracts with terms of 30 and 15 years for hydroelectric and thermal energy, respectively, which is equivalent to approximately 76% of its energy needs for 2008, 2009 and 2010 as described in an energy requirements statement provided by Cemig Distribution to the MME.

For more information about the CCEAR and the energy auctions, see Annex A The Brazilian Power Industry .

Contracts for Sale of Energy to Free Consumers

Cemig Generation and Transmission sold, through bilateral contracts, power capacity averaging approximately 1,900 MW to a wide range of Free Consumers, the majority of them being in the State of Minas Gerais, under contracts with terms between six and ten years. The average price of these transactions for the year 2005 is around R\$70/MWh. In 2010, as some of these contracts expire, there will be a reduction of approximately 600 MW in the amount contracted, especially with large clients such as Usiminas, Cosipa and White Martins. Our expectation is that these contracts will be renewed at better prices in 2010 than the present prices, since we do not expect that there will be the same excess of energy in 2010 that exists today.

These contracts provide for flexibility in the clients purchase of energy. The revenue of Cemig Generation and Transmission may vary due to this contractual flexibility.

Gasmig Shareholders Agreement and Association Agreement

As a condition to the investment of Petrobras in Gasmig, we and Petrobras entered into a Shareholders Agreement, pursuant to which the prior approval of Petrobras is required in matters related, among others, to new investments to be conducted by Gasmig, distribution of dividends, nomination of members to the Board of Directors, the issuance of new shares or debentures, annual budget investment plans and any transaction involving more than R\$1.5 million. Under the terms of the Gasmig Shareholders Agreement, our ability to transfer our shares in Gasmig is limited, and Petrobras shall have a right of first refusal in any future transfer of shares. As a result of this Shareholders Agreement, our ability to manage Gasmig was considerably reduced.

On December 15, 2004, CEMIG sold part of its shares in Gasmig, corresponding to 40% of the registered capital, 0.5% to Gaspetro and 39.5% to its subsidiary, TSS Participações S.A. The total value of the transaction was R\$154 million, providing a gain for CEMIG of R\$102 million. This gain was posted in the income statement for 2004 as non-operational revenue.

Gasmig is not a consolidated subsidiary in our financial statements as of the year ended December 31, 2004, in accordance with the FASB's EITF Issue No. 96-16, Investor's Accounting for an Investee When the Investor Has a Majority of the Voting Interest but the Minority Shareholder or Shareholders Have Certain Approval or Veto Rights. We consolidated Gasmig's revenues and expenses for the period from January 1, 2004 to December 15, 2004.

This sale is the result of the Association Agreement between CEMIG, Gasmig, Gaspetro and Petrobras signed on August 25, 2004, the purpose of which is to develop the market for natural gas throughout the State of Minas Gerais. Under the agreement, a Guidelines Plan specifies the markets to be served, the investment to be made by Petrobras and its subsidiaries in gas pipelines and the investment to be made by Gasmig in expansion of the gas distribution networks.

This capital investment will increase the volume of gas sold from its present level of 2.7 million m³/day to 4.2 million m³/day at the end of 2006, and 10.0 million m³/day in 2023. In 2005 Gasmig sold 1.9 million m³/day.

Agreement between CEMIG and companies in the New Agreement of the Electric Sector

Resolution No. 91 of the Electricity Crisis Management Chamber (Câmara de Gestão da Crise de Energia Elétrica), or GCE, of December 21, 2001, and Law 10,438 of April 26, 2002, established the procedures for implementing the General Agreement for the Electricity Sector, which came into force on December 27, 2001, and resulted in the repayment by consumers of losses incurred by distributors and generators during the period of rationing of 2001-2002. These repayments are referred to as an extraordinary rate readjustment, or RTE (Recomposição Tarifária Extraordinária). The RTEs became part of the assets of the companies, and are amortized through extraordinary revenue. See note 4 to our consolidated financial statements.

A condition to receipt of the RTE is that the recipient must not to be involved in any lawsuit with ANEEL that questions the RTE or any related regulation. As CEMIG has contested the clearance process at the CCEE, ANEEL issued an order to suspend the payment of the RTE to CEMIG.

CEMIG executed a settlement agreement with ANEEL, the CCEE and the CCEE participants, to settle the lawsuit CEMIG filed to contest the procedures used by the CCEE during the settlement process. As a condition to the agreement, CEMIG withdrew its lawsuit against ANEEL. As a result of this agreement, ANEEL revoked the ruling that suspended the payment of the RTE to our distribution subsidiary, which will result in a payment of approximately R\$219 million to CEMIG. CEMIG agreed to repay the other CCEE participants the outstanding amounts that ANEEL calculated as being due by CEMIG during the settlement process held by the CCEE between September 2002 and January 2003. The calculation of the exact amount due to the participants of the CCEE was determined by the CCEE to be a total of R\$171 million, and such amount is being paid in up to 50 installments, depending on the total amount due to each creditor and are indexed to the SELIC interest rate plus a spread of 1%. We had fully accrued a liability related to this matter. See Item 8. Financial Information Legal Proceedings Regulatory Matters.

The Cemig CRC Account Securitization Fund, dated as of January 26, 2006.

As part of our tax planning on January 26, 2006 we created the Cemig CRC Account Securitization Fund (*Cemig Fundo de Investimento em Direitos Creditórios Conta CRC*), or the FIDC. The FIDC was arranged and placed by Banco Itaú BBA S.A. and Banco Bradesco S.A., and it is managed by Intrag Distribuidora de Títulos e Valores Mobiliários Ltda., an affiliate of Banco Itaú BBA S.A. The FIDC will continue until the full amortization of the receivables under the Fourth Amendment to the CRC Account Agreement, which is expected to occur no later than June 2035.

We assigned all our receivables under the CRC Account Agreement to the FIDC. The present value of the CRC Account receivables transferred to the FIDC is R\$1,649. The FIDC is composed of 900,000,000 senior quotas and 760,125,012 non-transferable subordinated quotas, with the nominal value of R\$1.00 per each quota. The quotas were fully subscribed and paid in on January 27, 2006 and we subscribed to and hold all the subordinated quotas.

The senior quotas have a benchmark return of the CDI plus 1.70% per year, and will be amortized over a 10 year period in 20 semi-annual payments. Each of the semi-annual payment dates of the senior quotas match the dates on which CEMIG pays its semi-annual dividends, and consequently gets repaid under the Fourth Amendment to the CRC Account Agreement. 65% of the dividends payable to the State Government on each dividend payment date are retained by CEMIG and automatically transferred to the FIDC. In the event that dividends are not sufficient to make a certain scheduled payment with respect to the senior quotas, CEMIG, as a co-obligor, is required to contribute whatever amount is necessary to the make the scheduled payment. The amortization schedule was designed to meet CEMIG's dividend forecast and to minimize the risk of CEMIG being required to make any additional payment. The subordinated quotas will be amortized with any excess of cash available at the FIDC or upon the termination of the FIDC.

Exchange Controls

There are no restrictions on the ownership of preferred shares by legal entities domiciled outside Brazil. However, your right to convert dividend payments and proceeds from the sale of preferred shares into foreign currency and to remit such amounts outside Brazil is subject to restrictions under foreign investment legislation which generally requires, among other things, that you register the relevant investment with the Central Bank and the CVM.

Investments in the preferred shares through the holding of ADSs must be made pursuant to Annex V to Resolution No. 1,289, as amended, of the National Monetary Council, also known as the Annex V Regulations. Direct investments in the preferred shares upon the cancellation of the ADSs may be held by foreign investors under Law No. 4,131 of September 3, 1962 or Resolution No. 2,689 of the National Monetary Council, both of which effectively allow registered foreign investors to invest substantially in any capital market instrument in Brazil and extend a favorable tax treatment to all foreign investors registered and qualified under Resolution No. 2,689, who are not resident in a tax haven, as defined by Brazilian tax laws.

Under Resolution No. 2,689, foreign investors may invest in almost all financial assets and engage in almost all transactions available in the Brazilian financial and capital markets, provided that certain requirements are fulfilled. In accordance with Resolution No. 2,689, the definition of foreign investor includes individuals, legal entities, mutual funds and other collective investment entities that are domiciled or headquartered abroad.

Securities and other financial assets held by Resolution No. 2,689 investors must be registered or maintained in deposit accounts or in the custody of an entity duly licensed by the Central Bank or the CVM. In addition, any transfer of a security that is held pursuant to Resolution No. 2,689 must be made through the stock exchanges or organized OTC markets licensed by the CVM, except for a transfer resulting from a corporate reorganization outside of Brazil or occurring upon the death of a foreign investor by operation of law or will.

Holders of ADSs who have not registered their investment with the Central Bank could be adversely affected by delays in, or refusals to grant, any required government approval for conversions of payments made in *reais* and remittances abroad of these converted amounts.

The Annex V Regulations provide for the issuance of depositary receipts in foreign markets in respect of shares of Brazilian issuers. The ADSs have been approved under the Annex V Regulations by the Central Bank and the CVM.

An electronic certificate of registration has been issued in the name of Citibank, N.A., the depositary bank, with respect to the ADSs and is maintained by Citibank Distribuidora de Títulos e Valores Mobiliários S.A., the Brazilian custodian for the preferred shares, on behalf of the depositary bank. This electronic certificate of registration is registered through the Central Bank Information System. Pursuant to the certificate of registration, the custodian and the depositary bank are able to convert dividends and other distributions or sales proceeds with respect to the preferred shares represented by ADSs into foreign currency and remit the proceeds outside Brazil. In the event that a holder of ADSs exchanges such ADSs for preferred shares, the holder will be entitled to continue to rely on the depositary bank's certificate of registration for five business days after the exchange. Thereafter, the holder may not be able to convert into foreign currency and remit outside Brazil the proceeds from the disposition of, or distributions with respect to, the preferred shares, unless the holder is a duly qualified investor under Resolution No. 2,689 by registering with the CVM and the Central Bank and appointing a representative in Brazil. If not so registered, the holder will be subject to less favorable Brazilian tax treatment than a holder of ADSs. Regardless of qualification under Resolution No. 2,689, residents in tax havens are subject to less favorable tax treatment than other foreign investors. See [Taxation](#) Brazilian Tax Considerations.

Under current Brazilian legislation, the Federal Government may impose temporary restrictions of foreign capital abroad in the event of a serious imbalance or an anticipated serious imbalance of Brazil's balance of payments. For approximately nine months in 1989 and early 1990, the Federal Government froze all dividend and capital repatriations held by the Central Bank that were owed to foreign equity investors, in order to conserve Brazil's foreign currency reserves. These amounts were subsequently released in accordance with Federal

Government directives. We cannot assure you that the Federal Government will not impose similar restrictions on foreign reparations in the future.

Taxation

The following summary contains a description of the material Brazilian and U.S. federal income tax consequences of the purchase, ownership and disposition of preferred shares or ADSs by a U.S. person, as defined in the Internal Revenue Code of 1986, or the Code, or a holder that otherwise will be subject to U.S. federal income tax on a net income basis in respect of preferred shares or ADSs, which we refer to as a U.S. holder, but it does not purport to be a comprehensive description of all of the tax considerations that may be relevant to a decision to purchase preferred shares or ADSs. In particular this summary deals only with U.S. holders that will hold preferred shares or ADSs as capital assets and does not address the tax treatment of U.S. holders that own or are treated as owning 10% or more of the voting shares of the Company or that may be subject to special tax rules, such as banks, insurance companies, dealers in securities or currencies, persons that will hold preferred shares or ADSs as a position in a straddle or a conversion transaction for tax purposes, and persons that have a functional currency other than the U.S. dollar.

The summary is based upon tax laws of Brazil and the United States as in effect on the date hereof which are subject to change possibly with retroactive effect. Prospective purchasers of ADSs should consult their own tax advisors as to the Brazilian, U.S. or other tax consequences of the purchase, ownership and disposition of preferred shares or ADSs, including, in particular, the effect of any foreign, state or local tax laws.

Although there is currently no income tax treaty in force between Brazil and the United States, the tax authorities of both countries have had discussions that may culminate in such a treaty. No assurance can be given, however, as to whether or when a treaty will enter into force or how it will affect the U.S. holders of preferred shares or ADSs.

Brazilian Tax Considerations

General. The following discussion summarizes the main Brazilian tax consequences of the acquisition, ownership and disposition of preferred shares or ADSs, as the case may be, by a holder that is not domiciled in Brazil, which we refer to as a non-Brazilian holder for purposes of Brazilian taxation. In the case of a holder of preferred shares, we assume the investment is registered with the Central Bank. The following discussion does not address all of the Brazilian tax considerations applicable to any particular non-Brazilian holder. Therefore, each non-Brazilian holder should consult his or her own tax adviser concerning the Brazilian tax consequences of an investment in our preferred shares or ADSs.

Taxation of Dividends. Dividends paid by us, including stock dividends and other dividends paid in property to the depositary in respect of the preferred shares, or to a non-Brazilian holder in respect of the preferred shares, are currently exempted from withholding tax in Brazil to the extent that the dividends are paid out of profits earned after January 1, 1996. Dividends relating to profits generated prior to January 1, 1996 may be subject to Brazilian withholding tax at varying rates, depending on the year the profits were generated.

Payments of Interest on Capital. Law No. 9,249, dated as of December 26, 1995, as amended, permits Brazilian corporations to make distributions to shareholders of interest on equity, or interest attributed to shareholders' equity. These distributions may be paid in cash. Such payments represent a deductible expense from the payor's income tax and social contribution tax basis. This interest is limited to the daily pro rata variation of the Federal Government's long-term interest rate, as determined by the Central Bank from time to time, and cannot exceed the greater of:

- 50% of net income (before taxes for social contribution on net profits, income tax, and the deduction of the interest attributable to shareholders' equity) for the period in respect of which the payment is made; or

- 50% of retained earnings as of the date of the beginning of the period in respect of which the payment is made.

Any payment of interest on capital to shareholders (including holders of ADSs in respect of preferred shares) is subject to a withholding tax at a rate of 15%. These payments may be included, at their net value, as part of any mandatory dividend.

To the extent that payments of interest on capital are included as part of a mandatory dividend, we are required to distribute an additional amount to ensure that the net amount received by shareholders, after payment of the applicable withholding tax is at least equal to the mandatory dividend.

Distributions of interest on net equity to foreign holders may be converted into U.S. dollars and remitted outside Brazil, subject to applicable exchange controls, to the extent that the investment is registered with the Brazilian Central Bank.

We cannot assure you that our Board of Directors will not determine that future distributions should be made by means of dividends or interest on net equity.

Taxation of Gains.

For purposes of Brazilian taxation, there are two types of non-Brazilian holders of ADSs or preferred shares:

- market investors, which represent those non-Brazilian residents who register with the Central Bank and the CVM to invest in Brazil, in accordance with Resolution No. 2,689 of the National Monetary Council; and
- ordinary non-Brazilian holders, which include any and all non-residents in Brazil who invest in the country through any other means.

The comments contained below are applicable to all non-Brazilian holders, including non-Brazilian holders investing under Resolution No. 2,689, except where otherwise noted.

Resolution No. 2,689 grants a favorable tax treatment to all non-Brazilian holders of preferred shares provided the respective disposal occurs on the Brazilian stock exchange and the following conditions are met:

- to appoint a representative in Brazil with powers to take action relating to their investment;
- to appoint an authorized custodian in Brazil for their investments;
- to register as a foreign investor with the CVM; and
- to register their investment with the Central Bank.

As mentioned, the sale of preferred shares by U.S. market investors carried out on the Brazilian stock exchange is exempted from the income tax rate. We cannot assure you that the current preferential treatment for U.S. market investors under Resolution No. 2,689 will continue in the future.

The sale of preferred shares that occurs out of the Brazilian stock exchange will be subject to the same tax treatment applicable to Ordinary U.S. Holders. The redemption or distribution of proceeds deriving from the liquidation of preferred shares will be treated as a sale carried out of the Brazilian stock exchange.

Non-Brazilian Holders

Non-Brazilian holders are subject to income tax at a 15% rate, as of January 1, 2005, on gains realized on the sale, redemption or distribution of proceeds deriving from the liquidation of preferred shares.

With respect to the cost of acquisition to be adopted for calculating such gains, Brazilian law has conflicting provisions regarding the currency in which such amount must be determined. Cemig's Brazilian counsel's view is that the capital gains should be based on the positive difference between the cost of acquisition of the preferred shares registered with Brazilian Central Bank in foreign currency and the value of disposition of those preferred shares in the same foreign currency. This view has been supported by a precedent issued by the Brazilian administrative court. However, considering that tax authorities are not bound by such precedent, assessments have been issued adopting the cost of acquisition in Brazilian currency.

As of January 1, 2005 the purchase price of preferred shares sold on the Brazilian stock exchange is subject to a withholding tax rate of 0.005%, except in case of non-Brazilian holders, which invest in Brazil pursuant to Resolution No. 2,689. This tax may be offset against the 15% income tax due on the gains realized upon the sale of the preferred shares. The withholding tax must be withheld by one of the following entities: (i) the agent receiving the sale or disposition order from the client; (ii) the stock exchange responsible for registering the transactions; or (iii) the entity responsible for the settlement and payment of the transactions.

Any exercise of preemptive rights relating to the preferred shares will not be subject to Brazilian taxation. Conversely, any gain on the sale or assignment of preemptive rights relating to the preferred shares by the depositary on behalf of the holders of ADSs or by a non-Brazilian holder of preferred shares will be subject to the same rules of taxation applicable to the sale or assignment of preferred shares. The maximum rate is currently 15%.

Sale of ADS and preferred shares by U.S. Holders to other non-residents in Brazil

Pursuant to Article 26 of Law No. 10,833, published on December 29, 2003, the sale of property located in Brazil involving non-resident investors is subject to Brazilian income tax as of February 1, 2004. Our understanding is that ADSs do not qualify as property located in Brazil and, thus, should not be subject to the Brazilian withholding tax. Insofar, as the regulatory norm referred to in Article 26, is recent and generic and has not been tested through the administrative or judicial courts, we are unable to assure the final outcome of such discussion.

If such argument does not prevail, it is important to mention that with respect to the cost of acquisition to be adopted for calculating such gains, Brazilian law has conflicting provisions regarding the currency in which such amount must be determined. Cemig's Brazilian counsel's view is that the capital gains should be based on the positive difference between the cost of acquisition of the preferred shares registered with Brazilian Central Bank in foreign currency and the value of disposition of those preferred shares in the same foreign currency. This view has been supported by a precedent issued by the Brazilian administrative court. However, considering that tax authorities are not bound by such precedent, assessments have been issued adopting the cost of acquisition in Brazilian currency.

Gains on the exchange of ADS for preferred shares

The exchange of ADSs for preferred shares is not subject to Brazilian tax. Non-Brazilian Holders may exchange its ADSs for the underlying preferred shares, sell the preferred shares on a Brazilian stock exchange and remit abroad the proceeds of the sale within five business days from the date of exchange (in reliance on the depositary's electronic registration), with no tax consequences.

Upon receipt of the underlying preferred shares in exchange for ADSs, Non-Brazilian Holders may also elect to register with the Central Bank the U.S. dollar value of such preferred shares as a foreign portfolio investment under Resolution No. 2689/00, which will entitle them to the tax treatment referred above in connection with U.S. market investors.

Alternatively, the Non-Brazilian Holder is also entitled to register with the Central Bank the U.S. dollar value of such preferred shares as a foreign direct investment under Law 4,131/62, in which case the respective sale would be subject to the tax treatment referred in the section Ordinary Non-Brazilian Holders .

Gains on the exchange of preferred shares for ADS

The deposit of preferred shares in exchange for the ADSs may be subject to Brazilian income tax on capital gains if the amount previously registered with the Central Bank as a foreign investment in preferred shares or, in the case of other market investors under Resolution No. 2,689, the acquisition cost of the preferred shares, as the case may be, is lower than:

- the average price per preferred share on the Brazilian stock exchange on which the greatest number of such preferred shares were sold on the day of deposit; or
- if no preferred shares were sold on that day, the average price on the Brazilian stock exchange on which the greatest number of preferred shares were sold during the 15 preceding trading sessions.

The difference between the amount previously registered, or the acquisition cost, as the case may be, and the average price of the preferred shares, calculated as set forth above, is considered a capital gain subject to income tax at a rate of 15%.

Beneficiaries Residing or Domiciled in Tax Havens or Low-Tax Jurisdictions.

Law No. 9,430, dated as of December 27, 1996, defines low-tax jurisdictions as those that do not tax income or impose a rate lower than 20%.

Law No. 9,779, dated as of January 19, 1999, states that, except under limited circumstances, any income derived from operations by a beneficiary that resides or is domiciled in a country considered to be a tax haven is subject to income tax to be withheld by the source at a rate of 25%.

Accordingly, if the distribution of interest attributed to shareholders equity is made to a beneficiary residing or domiciled in a tax haven, the applicable income tax will be at a rate of 25% instead of 15%. The increased rate also applies for capital gains earned in transactions carried out of the Brazilian stock exchange and paid to residents of low-tax jurisdictions as of February 2004. However, the increased rate does not apply to dividends distributions, which remain exempted even if the beneficiary resides in a low-tax jurisdiction.

In accordance with Law No. 9,959, non-Brazilian holders of ADSs or preferred shares which are resident in tax havens are also excluded from the tax incentives granted to holders of ADSs and investors under Resolution No. 2,689 as of January 1, 2000 and will be subject to the same tax treatment applicable to holders that are resident or domiciled in Brazil in case of transactions carried out on the Brazilian stock exchange.

Taxation of Foreign Exchange Transactions. A financial transaction tax is imposed on the conversion of *reais* into foreign currency and on the conversion of foreign currency into *reais*. Although the current applicable rate for almost all foreign currency exchange transactions is zero, the Ministry of Finance may increase the rate at any time, up to 25%. However, it may only do so with respect to future transactions.

Taxation of Bonds and Securities Transactions. Law No. 8,894, dated as of June 21, 1994, created the Tax on Financial Transactions, or IOF, which may be imposed on any transaction involving bonds and securities, even if the transaction includes Brazilian stock, futures or commodities exchanges. The rate of IOF/Títulos with respect to transactions of preferred shares and ADSs is currently zero, although the executive branch may increase the rate up to 1.5% per day of the terms of the securities, but only with respect to future preferred shares and ADSs transactions.

Other Brazilian Taxes. Some Brazilian states impose gift and inheritance tax on gifts or bequests made by individuals or entities not domiciled or residing in Brazil to individuals or entities domiciled or residing within such states. There are no Brazilian stamp, issue, registration, or similar taxes or duties payable by holders of preferred shares or ADSs.

CPMF is imposed on bank account debits at 0.38%. Constitutional Amendment No. 42/2003 approved the continued imposition of the CPMF tax until December 31, 2007. The responsibility for the collection of the CPMF tax is borne by the financial institution that carries out the relevant financial transaction. Additionally, when the non-Brazilian holder transfers the proceeds from the sale or assignment of preferred shares by a currency exchange transaction, the CPMF tax will be levied on the amount to be remitted abroad in *reais*. If we perform any exchange transaction in connection with ADSs or preferred shares, we will bear the CPMF tax.

Non-Brazilian holders investing in the Brazilian stock exchange are granted a CPMF exemption upon the entrance of funds into Brazil and the remittance abroad.

U.S. Tax Considerations

In general, for U.S. federal income tax purposes, holders of ADRs evidencing ADSs will be treated as the beneficial owners of the preferred shares represented by those ADSs.

Taxation of Distributions. Distributions with respect to the preferred shares or the ADSs (other than distributions in redemption of the preferred shares subject to Section 302(b) of the Code or in a liquidation of the Company) will, to the extent made from current or accumulated earnings and profits of the Company as determined under U.S. federal income tax principles, constitute dividends. Whether such current or accumulated earnings and profits will be sufficient for all such distributions on the preferred shares or ADSs to qualify as dividends for U.S. federal income tax purposes depends on the future profitability of the Company and other factors, many of which are beyond the control of the Company. To the extent that such a distribution exceeds the amount of the Company's earnings and profits, it will be treated as a non-taxable return of capital to the extent of the U.S. holder's basis in the preferred shares or ADSs, and thereafter as capital gain (provided that the preferred shares or ADSs are held as capital assets). As used below, the term *dividend* means a distribution that constitutes a dividend for U.S. federal income tax purposes. Cash dividends (including amounts withheld in respect of Brazilian taxes) paid with respect to (i) the preferred shares generally will be includible in the gross income of a U.S. holder as ordinary income on the day on which the dividends are received by the U.S. holder or (ii) the preferred shares represented by ADSs generally will be includible in the gross income of a U.S. holder as ordinary income on the day on which the dividends are received by the depositary bank and, in either case, will not be eligible for the dividends received deduction allowed to corporations. Dividends paid in *reais* will be includible in the income of a U.S. holder in a U.S. dollar amount calculated by reference to the exchange rate in effect on the day they are received by the U.S. holder, in the case of preferred shares, or the depositary bank, in the case of preferred shares represented by ADSs.

If dividends paid in *reais* are converted into U.S. dollars on the day they are received by the U.S. holder or the depositary bank, as the case may be, U.S. holders generally should not be required to recognize foreign currency gain or loss in respect of the dividend income. U.S. holders should consult their own tax advisors regarding the treatment of any foreign currency gain or loss if any *reais* received by the U.S. holder or the depositary bank are not converted into U.S. dollars on the date of receipt, as well as the tax consequences of the receipt of any additional *reais* from the custodian on account of Brazilian inflation.

Dividends generally will constitute foreign source income and, with certain exceptions, for taxable years beginning on or before December 31, 2006, will be *passive income* or *financial services income*, which is treated separately from other types of income for U.S. foreign tax credit purposes. For taxable years beginning after December 31, 2006, such income generally will constitute *passive category income* or, in the case of certain U.S. holders, *general category income*, for foreign tax credit purposes. In the event Brazilian withholding taxes are imposed on such dividends, such taxes may be treated as a foreign income tax eligible, subject to generally applicable limitations and conditions under U.S. federal income tax law, for credit against a U.S. holder's U.S. federal income tax liability (or at a U.S. holder's election, may be deducted in computing taxable income). The calculation and availability of foreign tax credits and, in the case of a U.S. holder that elects to deduct foreign taxes, the availability of deductions, involves the application of rules that depend on a U.S. holder's particular

circumstances. In the event Brazilian withholding taxes are imposed, U.S. holders should consult their own tax advisors regarding the availability of foreign tax credits with respect to Brazilian withholding taxes.

It is not entirely clear whether the preferred shares will be treated as preferred stock or common stock within the meaning of section 305 of the Code. If the preferred shares are treated as common stock for purposes of section 305, distributions to U.S. holders of additional shares of such common stock or preemptive rights relating to such common stock with respect to their preferred shares or ADSs that are made as part of a pro rata distribution to all shareholders of the Company generally will not be treated as dividend income for U.S. federal income tax purposes, but could result in additional U.S.-source taxable gain upon the sale of such additional shares or preemptive rights. On the other hand, if the preferred shares are treated as preferred stock within the meaning of section 305, or if the U.S. holder receives a distribution of additional shares or preemptive rights other than as described in the preceding sentence, such distributions (including amounts withheld in respect of any Brazilian taxes) will be treated as dividends that are includible in the U.S. holder's gross income to the same extent and in the same manner as distributions payable in cash. In that event, the amount of such distribution (and the basis of the new shares or preemptive rights so received) generally will equal the fair market value of the shares or preemptive rights on the date of distribution.

A holder of preferred shares or ADSs that is not a U.S. holder generally will not be subject to U.S. federal income or withholding tax on dividends received on preferred shares or ADSs, unless such income is effectively connected with the conduct by the holder of a trade or business in the United States.

Qualified Dividend Income. Notwithstanding the foregoing, certain dividends received by individual U.S. holders that constitute qualified dividend income will be subject to a reduced maximum marginal U.S. federal income tax rate. Qualified dividend income generally includes, among other dividends, dividends received during the taxable year from qualified foreign corporations. In general, a foreign corporation is treated as a qualified foreign corporation with respect to any dividend paid by the corporation with respect to stock of the corporation that is readily tradable on an established securities market in the United States. For this purpose, a share is treated as readily tradable on an established securities market in the United States if an ADR backed by such share is so traded.

Notwithstanding this previous rule, dividends received from a foreign corporation that is a passive foreign investment company (as defined in section 1297 of the Code), or in either the taxable year of the corporation in which the dividend was paid or the preceding taxable year will not constitute qualified dividend income. In addition, the term qualified dividend income will not include, among other dividends, any (i) dividends on any share of stock or ADS which is held by a taxpayer for 60 days or less during the 120-day period beginning on the date which is 60 days before the date on which such share or the shares backing the ADS become ex-dividend with respect to such dividends (as measured under section 246(c) of the Code) or (ii) dividends to the extent that the taxpayer is under an obligation (whether pursuant to a short sale or otherwise) to make related payments with respects to positions in substantially similar or related property. Moreover, special rules apply in determining a taxpayer's foreign tax credit limitation under section 904 of the Code in the case of qualified dividend income.

Individual U.S. holders should consult their own tax advisors to determine whether or not amounts received as dividends from us will constitute qualified dividend income subject to a reduced maximum marginal U.S. federal income tax rate and, in such case, the effect, if any, on the individual U.S. holder's foreign tax credit.

Taxation of Capital Gains. Deposits and withdrawals of preferred shares by U.S. holders in exchange for ADSs will not result in the realization of gain or loss for U.S. federal income tax purposes.

Gain or loss realized by a U.S. holder on the sale, redemption or other disposition of preferred shares or ADSs will be subject to U.S. federal income taxation as capital gain or loss in an amount equal to the difference between such U.S. holder's basis in the preferred shares or the ADSs and the amount realized on the disposition. Gain realized by a U.S. holder on a sale, redemption or other disposition of preferred shares or ADSs, including gain that arises because the U.S. holder's basis in the preferred shares or ADSs has been reduced because a distribution is treated as a return of capital rather than as a dividend, generally will be treated as U.S. source income for U.S. foreign tax credit purposes.

If a Brazilian withholding tax or income tax is imposed on the sale or disposition of preferred shares or ADSs as described in Taxation Brazilian Tax Considerations, the amount realized by a U.S. holder will include the gross amount of the proceeds of such sale or disposition before deduction of the Brazilian withholding tax or income tax if applicable. The availability of U.S. foreign tax credits for these Brazilian taxes and any Brazilian taxes imposed on distributions that do not constitute dividends for U.S. tax purposes is subject to certain limitations and involves the application of rules that depend on a U.S. holder's particular circumstances. U.S. holders should consult their own tax advisors regarding the application of the foreign tax credit rules to their investment in, and disposition of, preferred shares or ADSs.

A holder of preferred shares or ADSs that is not a U.S. holder will not be subject to U.S. federal income or withholding tax on gain realized on the sale of preferred shares or ADSs, unless (i) such gain is effectively connected with the conduct by the holder of a trade or business in the United States or (ii) in the case of gain realized by an individual holder, the holder is present in the United States for 183 days or more in the taxable year of the sale and certain other conditions are met.

Information Reporting and Backup Withholding. The information reporting requirements will generally apply to U.S. holders of ADSs. A holder of ADSs that is not a U.S. holder may be required to comply with applicable certification procedures to establish that they are not United States persons in order to avoid the application of U.S. information reporting requirements and backup withholding tax.

Dividends and Paying Agents

We pay dividends on preferred shares in the amounts and in the manner set forth under Item 8. Financial Information Dividend Policy and Payments. We will pay dividends in respect of preferred shares represented by ADSs to the custodian for the depository bank, as record owner of the preferred shares represented by ADSs. As promptly as practicable after receipt of the dividends we pay through Citibank N.A. to the custodian, it will convert these payments into U.S. dollars and remit such amounts to the depository bank for payment to the holders of ADSs in proportion to individual ownership.

Documents on Display

We are subject to the informational requirements of the Securities Exchange Act of 1934, as amended. In accordance with these requirements, we file reports and other information with the Commission. These materials, including this annual report and the accompanying exhibits, may be inspected and copied at the Commission's Public Reference Room at 100 F Street, N.E., Room 1580, Washington, D.C. 20549. Copies of the materials may be obtained from the Commission's Public Reference Room at prescribed rates. The public may obtain information on the operation of the Commission's Public Reference Room by calling the Commission in the United States at 1-800-SEC-0330. In addition, copies of the exhibits that accompany this annual report may be inspected at our principal executive offices located at Avenida Barbacena, 1200, 30190-131 Belo Horizonte, Minas Gerais, Brazil.

Insurance

We have obtained, since February 2004, insurance policies to cover damages to the turbines, generators and transformers of our major power plants and substations caused by fire and risks such as equipment failures. We do not have general third party liability insurance covering accidents and have not solicited bids relating to this type of insurance. However, we may contract for this type of insurance in the future. In addition, we have not solicited bids for, nor do we carry, insurance coverage for major catastrophes affecting our facilities such as earthquakes and floods or for operating system failures. We do not have insurance coverage for business interruption risk, which means damages we suffer and consequential damages suffered by our consumers resulting from an interruption in power distribution are generally not covered by our insurance and we may be subject to significant related losses. See Item 3. Key Information Risk Factors Risks Relating to CEMIG We operate without general third party liability and catastrophe insurance policies.

We believe that, since we have contracted for fire and operational risk insurance, our insurance coverage will be at a level that is customary in Brazil for the type of businesses in which we are engaged.

Difficulties of Enforcing Civil Liabilities Against Non-U.S. Persons

We are a state-controlled mixed capital company established under the laws of Brazil. All of our executive officers and directors presently reside in Brazil. In addition, substantially all of our assets are located in Brazil. As a result, it will be necessary for holders of ADSs to comply with Brazilian law in order to obtain an enforceable judgment against our executive officers or directors or our assets. It may not be possible for holders of ADSs to effect service of process within the United States upon our executive officers and directors, or to realize in the United States upon judgments against these persons obtained in U.S. courts based upon civil liabilities of these persons, including any judgments based upon U.S. federal securities laws, to the extent these judgments exceed these persons' U.S. assets. We have been advised by Brazilian counsel, Machado, Meyer, Sendacz e Opice Advogados, that judgments of U.S. courts for civil liabilities based upon the federal securities laws of the United States may be, subject to the requirements described below, enforced in Brazil. A judgment against us, or the persons described above obtained outside Brazil without reconsideration of the merits, is subject to confirmation by the Brazilian Superior Court of Justice. That confirmation will occur if the foreign judgment:

- fulfills all formalities required for its enforceability under the laws of the country where the foreign judgment is granted;
- is issued by a competent court after proper service of process is made in accordance with Brazilian Law;
- is not subject to appeal;
- is for the payment of a sum certain;
- is authenticated by a Brazilian consular officer in the country where the foreign judgment is issued and is accompanied by a sworn translation into Portuguese; and
- is not contrary to Brazilian national sovereignty, public policy or public morality.

We cannot assure you the confirmation process described above will be conducted in a timely manner or that Brazilian courts would enforce a monetary judgment for violation of the United States securities laws with respect to the ADSs and the preferred shares represented by the ADSs.

We were further advised by respective Brazilian counsel that:

- original actions based on the federal securities laws of the United States may be brought in Brazilian courts and that, subject to Brazilian public policy and national sovereignty, Brazilian courts will enforce liabilities in such actions against us and our officers; and
- the ability of a judgment creditor or the other persons named above to satisfy a judgment by attaching our assets or those of the selling shareholders is limited by provisions of Brazilian law.

A plaintiff (whether Brazilian or non-Brazilian) residing outside Brazil during the course of litigation in Brazil must provide a bond to guarantee court costs and legal fees if the plaintiff owns no real property in Brazil that could secure such payment. The bond must have a value sufficient to satisfy the payment of court fees and defendant's attorney fees, as determined by a Brazil judge. This requirement does not apply to proceeding to enforce a foreign judgment, which has been confirmed by the Brazilian Superior Court of Justice.

Item 11. Quantitative and Qualitative Disclosures about Market Risk

We are exposed to market risk from changes in foreign currency exchange rates and interest rates.

We are exposed to foreign exchange risk because certain of our loans and financings are denominated in currencies (primarily the U.S. dollar) other than the currency in which we earn revenues (the *real*). Despite the fact

that our electricity purchases from Itaipu, which represented R\$825 million in 2005, are denominated in U.S. dollars, the related foreign exchange risk is no longer reflected in our operating revenues and operating expenses due to rate legislation changes in 2001 which allow electricity utilities such as us to record exchange rate losses related to Itaipu purchases as deferred regulatory assets. See Item 5. Operating and Financial Review and Prospects Critical Accounting Estimates.

Exchange Rate Risk

At December 31, 2005, approximately 16.1% of our outstanding indebtedness, or R\$779 million, was denominated in foreign currencies, of which approximately 83.2%, or R\$653 million, was denominated in U.S. dollars. We do not have substantial revenues denominated in any foreign currencies and, due to regulations that require us to keep excess cash on deposit in *real*-denominated accounts at Brazilian banks, we do not have monetary assets denominated in foreign currencies.

In 2005, we used financial instruments such as interest rate swaps to hedge our foreign exchange rate exposure. The purpose of the swaps was to reduce our exposure on the original interest rate of certain financing from an interest rate calculated based on the U.S. dollar/*real* exchange rate to an interest rate calculated based on the Certificado de Depósito Interbancário CDI (Interbank Deposit Certificate) rate. See Notes 2(d), 13, 20, 22 and 23 to our consolidated financial statements.

In 2006, the potential loss we would experience in the event of a hypothetical 20% depreciation of the *real* would be approximately R\$92.2 million related principally to loans and financing and primarily due to an increase in our *real*-denominated interest expense, which would be reflected on our income statement. In 2006, a hypothetical 20% depreciation of the *real* would result in an additional annual cash outflow of approximately R\$428.2 million, reflecting the increased cost in *reais* of servicing foreign currency-denominated indebtedness and increased purchasing power relating to Itaipu. This sensitivity analysis assumes a simultaneous unfavorable 20% fluctuation in each of the exchange rates affecting the foreign currencies in which our indebtedness, the related interest expense and the expenses relating to the purchase of energy from Itaipu are denominated. This sensitivity analysis also assumes that the unfavorable fluctuation in the exchange rate affecting the purchase of energy from Itaipu would affect the annual cash payments but would not affect the expense recorded on the statement of operations, since the additional currency exchange expense would be recorded as a deferred regulatory asset.

The tables below provide summary information regarding our exposure to exchange rate risk as of December 31, 2005:

	2005
U.S. Dollar	
Financing	653
Less Contracted derivative instruments	(241)
	412
Japanese Yen	
Financing	77
Less Contracted derivative instruments	(77)
Other Currencies	
Financing	49
Net liabilities exposed to exchange rate risk	461

Interest Rate Risk

At December 31, 2005, we had R\$4,826 million in loans and financing outstanding, of which approximately R\$4,225 million bore interest at floating rates. Of this R\$4,225 million, R\$4,047 million is subject to

monetary restatement through the application of inflation indices established by the Federal Government, principally the IGP-M, and R\$178 million is subject principally to LIBOR.

At december 31, 2005, we had assets, net of other liabilities, that bore interest at floating rates in the amount of R\$1,328 million. These assets consisted mainly of our account receivable from the State Government and deferred regulatory assets, partially offset by CCEE obligations, bearing interest at rates tied to IGP-DI and SELIC, respectively. As summarized in the tables below, since the assets that bore interest at floating rates were higher than the obligations that bore interest at floating rates, we did not have exposure to interest rate risk as of December 31, 2005.

Total Debt Portfolio

	R\$ Million
Floating rate debt:	
<i>Real-denominated</i>	4,047
Foreign currency-denominated	178
	4,225
Fixed rate debt:	
Foreign currency-denominated	601
	601
Total	4,826

	Total Portfolio Floating Rate (R\$ million)
Assets:	
Cash and cash equivalents	1,249
Account receivable from State Government	1,519
Deferred regulatory assets	3,465
Total	6,233
Liabilities:	
Account payable to suppliers-payment to generator for energy purchased on the CCEE	362
Financings	4,225
Derivative instruments(1)	318
Total liabilities	4,905
Total	1,328

(1) Swaps to reduce our exposure on the original interest rate of certain financing from an interest rate calculated based on the U.S. dollar/*real* exchange rate to an interest rate calculated based on the Certificado de Depósito Interbancário-CDI (Interbank Deposit Certificate) rate.

Item 12. Description of Securities Other than Equity Securities

Not applicable.

PART II**Item 13. Defaults, Dividend Arrearages and Delinquencies****Restrictive Covenants**

Certain of CEMIG's loans, financing agreements and debentures contain certain covenants, calculated according to Brazilian Corporate Law, which the Company has not complied with as of December 31, 2005 as described below:

Description of the Restrictive Clause	Required Ratio	Ratio as of December 31, 2005 according to Brazilian Corporate Law
Cemig Distribution		
- Investment/EBITIDA	Less than or equal to 60%	64.73

EBITDA consists of earnings before interest, taxes, depreciation and amortization. Some of our contracts contain specific criteria to define the EBITDA measure to be used in the covenant calculations.

With respect to the Cemig Distribution financings, waivers have been obtained from their creditors that affirm that such creditors will not exercise their rights to demand accelerated or immediate payment of the total amount due until December 31, 2006.

127

Item 14. Material Modifications to the Rights of Security Holders and Use of Proceeds

Not applicable.

Item 15. Controls and Procedures

Evaluation of disclosure controls and procedures

The conclusions of our Chief Executive Officer and Chief Financial and Investor Relations Officer about the effectiveness of our disclosure controls and procedures, based on their evaluation of these controls and procedures as of December 31, 2005, are as follows:

Our disclosure controls and procedures are designed to ensure that information required to be disclosed by us is recorded, processed, summarized and reported within required timeframes. Our disclosure controls and procedures include controls and procedures designed to ensure that information required to be disclosed is accumulated and communicated to our management, including our Chief Executive Officer and Chief Financial and Investor Relations Officer, as appropriate, to allow timely decisions regarding required disclosure. Based on their assessments of our disclosure controls and procedures, our Chief Executive Officer and Chief Financial and Investor Relations Officer have concluded that the disclosure controls and procedures have functioned effectively and that the consolidated financial statements fairly present our consolidated financial position and the results of our operations for the periods presented.

Changes in internal controls

There has been no change in our internal control over financial reporting during the year ended December 31, 2005 that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

Item 16A. Audit Committee Financial Expert

Our Fiscal Council acts as our audit committee for purposes of the Sarbanes-Oxley Act of 2002. The financial experts of our Fiscal Council are Luiz Otávio Nunes West and Ari Barcelos da Silva.

Item 16B. Code of Ethics

We have adopted a code of ethics, as defined in Item 16B of Form 20-F under the Securities Exchange Act of 1934, as amended. Our code of ethics applies to our Chief Executive Officer, Chief Financial and Investor Relations Officer and persons performing similar functions as well as to our directors and other officers and employees. Our code of ethics was filed with the SEC as Exhibit 11 to our Annual Report on Form 20-F for the fiscal year ended December 31, 2003, and is also available on our website at www.cemig.com.br. If we amend the provisions of our code of ethics that apply to our Chief Executive Officer, Chief Financial Officer and persons performing similar functions, or if we grant any waiver of such provisions, we will disclose such amendment or waiver on our web site at www.cemig.com.br.

Item 16C. Principal Accountant Fees and Services

Audit and Non-Audit Fees

The following table summarizes the aggregate fees billed to us by Deloitte Touche Tohmatsu Auditores Independentes during the fiscal years ended December 31, 2005 and 2004:

128

	Year ended December 31, 2005 (thousands of <i>reais</i>)	2004
Audit fees	466	777
Tax fees
