Edgar Filing: ANGLOGOLD LTD - Form 6-K

LETTER FROM THE CHAIRMAN

AND THE CHIEF EXECUTIVE OFFICER

Dear Shareholder

AngloGold has produced a good set of results for the first quarter of its 1999 financial year. Significant changes have taken place in this quarter in the composition of the company's assets, its accounting convention within which it operates, and shareholders need to take account of these changes in order to see an accurate picture of current performance as well as an indicator of prospects for the remainder of the year. During this quarter the company concluded the acquisition of the Minorco gold assets and their financial results are included for the first time. The quarterly results benefit from both the increased production and production costs of these assets. A significant increase in debt, and in amortisation (which increased by R100 million) and a partial write-off of goodwill (R342 million this quarter) in relation to the Minorco acquisition. Also during the quarter the company agreed to sell its 21, 5% interest in the South African gold producer AngloGold's attributable share of this company's gold production (some 300 000 annual ounces) has been included from this quarter's operational results. As the sale was only approved by shareholders in April, the net proceeds (R68 million), including a deferred tax rate change (R37 million) have been included this quarter against the profit from the sale of approximately R544 million, which will be accounted for next quarter. The net proceeds amount to some R1, 3 billion, R714 million of which was paid in April with the balance to be paid over the next 12 months.

For this quarter the company reports its results exclusively according to International Accounting Standards. It is the Board's view that these standards provide the most reliable, effective and internationally comparable measure of the performance of AngloGold. Last quarter both IAS and appropriation accounting conventions were used. The quarter's profit available for distribution was R414 million (424 cents per share) in appropriation terms and earnings were R510 million (521 cents per share) in IAS terms. It is the IAS available profits that are being compared in this comparison with this set of results.

A further development that has had an impact on the reported results is the change effected to the South African corporate tax rate during this quarter, where the corporate rate was lowered from 35% to 30% with effect from 1 April. This being made to the gold mining tax formula. This lower rate is reflected (in part) in the R82 million reduction in a R460 million reduction in deferred tax.

Edgar Filing: ANGLOGOLD LTD - Form 6-K

Against this background, the profit attributable to shareholders for the March quarter increased 29%), however once the goodwill write-off of R342 million, and the deferred tax adjustment of R46 earnings are R493 million (504 cents per share). This represents a 3% decrease in the earnings of quarter on a comparable basis.

Edgar Filing: ANGLOGOLD LTD - Form 6-K

In terms of the company's operating performance, production problems were experienced at a number of sites during the quarter, leading the company to revise downwards its production target for the quarter from 55 tonnes (1, 7 million ounces) to 52 tonnes (1, 7 million ounces) in a public announcement on 6 April 1999. Since this date, 1, 7 million ounces of this deficit has been made up and management is confident of recovering the remaining ounces by the end of the quarter. The price received on gold sales declined against the previous quarter by 1% to R60 960 per kilogram (\$224 to \$209 per ounce) and total production costs from \$254 to \$238 per ounce.

Capital expenditure for the quarter was R249 million compared to R254 million in the previous quarter. The company has therefore been able to repeat the sound operating performance of the December quarter with an operating profit margin this quarter of 23%, a return on shareholders' equity of 34% and on capital employed (before tax) of 22%.

Management remains confident of achieving the targeted production levels for the year of 7 million ounces at a cost of around \$210 per ounce.

NICKY OPPENHEIMER

Chairman

29 April 1999

Edgar Filing: ANGLOGOLD LTD - Form 6-K

SOUTH AFRICAN OPERATIONS

As part of AngloGold's restructuring process. Western Deep Levels East, West and South mines have been renamed as follows: East Mine is now TauTona ('great lion' in Sotho). West Mine, Savuka (Zulu)

South Mine. Mponeng ('look at me' or 'see me' in Sotho).

Overall performance

The first quarter got off to a disappointing start for the South African operations. The January months were plagued by a series of seismic and infrastructural problems but the quarter finished the second highest production month since June last year.

Due to the initial shortage of quality underground material to the plants, throughputs were maximised by processing of lower-grade surface dump material. This resulted in some dilution of yield.

Gold production at 45, 5 tonnes was 2, 5 tonnes (5%) below the previous quarter, due mainly to underperformance at Matjhabeng, TauTona (Western Deep Levels East Mine) and Elandsrand. Lower production at Ergo and Deelkraal was in line with expectations.

Productivity, in grams per total employee, showed a slight deterioration (2%) from the December quarter due to this underperformance.

Cash operating costs were well controlled and ended 3% lower in absolute terms, while the lower price of gold was unfavourable on unit costs which rose by 2% to R43 116 per kilogram.

Gold operating profit fell by some R163 million. The slightly lower gold price received, lower price of gold and higher inventory levels were the major contributors.

Mine performance

At TauTona (Western Deep Levels East Mine), a drive for improved safety - in line with AngloGold's safety campaign - resulted in reduced face advance in a number of high grade areas. The effect of the reduced face advance was addressed through productivity initiatives in other areas.

As a result of the fail-off in grade during January and February at Elandsrand, a number of panel crews moved to higher-grade panels. This resulted in an improvement in grade but a shortfall in production due to the time taken to establish the higher-grade panels.

Production at Savuka (Western Deep Levels West Mine) was negatively affected by the damage to the shaft caused by the seismic event reported last quarter. The rock mass has now been stabilised through an intensive grouting programme and the shaft steelwork is being repaired. Production performance is expected to improve in the second quarter.

At Mponeng Mine (Western Deep Levels South Mine), a seismic event closed two raise lines in high-grade areas, reducing available face length and consequently, tonnage and grade were lower than planned.

Significant pumping problems were experienced at Deelkraal at the beginning of the year, leading to production losses in some areas. The resulting shortage of underground tonnage was offset by an increase in production from lower-grade surface dump material.

Great Noligwa had an exceptional quarter with a clean-up of the plant boosting production to 8, 7 tonnes. Production is expected to return to below 8 tonnes in the second quarter.

A switch from single-to twin-streaming of ore from Tau Lekoa and Kopanang Mines through the gold accounting at both mines. At Tau Lekoa, an additional 100 kilograms of gold per month are expected to be produced.

Edgar Filing: ANGLOGOLD LTD - Form 6-K

produced, while at Kopanang any negative impact will be offset by increased production.

Bambanani experienced substantial shaft downtime during the quarter as a result of shaft infrastructure impact was minimised by accelerated production.

Seismic activity and repairs to shaft infrastructure had an adverse impact on production at Matjhabeng which had been restored by March.

in the early hours of Friday, 23 April, however, an earth tremor measuring 4, 6 on the Richter Scale

goldfields. All four of Matjhabeng's shafts were affected, Eland shaft the most severely. At the time the teams were still searching for the two employees missing underground. Damage to shaft infrastructure was assessed.

The reduction from two streams to one at Ergo's Daggafontein section - due to declining reserves - has impacted production, as anticipated.

Projects

Capital expenditure at Joel reduced quarter on quarter by R7 million. The shaft-sinking project was affected by ground conditions and technical problems related to the wetcreting operation. Measures are in place to address these issues. Shaft sinking has progressed to 117 level (1 133 metres below surface) and station development is well advanced.

The Mponeng (Western Deep Levels South Mine) Deepening project is progressing, on schedule. Scaling and ground conditions at the Sub shaft have resulted in the re-scheduling of expenditure. The Sub shaft has reached 120 level (1 120 metres below surface) where station development has been completed. Capital expenditure is R4 million for the quarter.

The Moab Khotsong project is progressing very well and is on schedule. The commissioning of the mill has been completed successfully and ahead of schedule. Expenditure on capital for the quarter of R75 million is higher than the previous period.

The carbon technology projects at West Wits are ahead of schedule and within targeted expenditure. The No. 2 Plant have been commissioned and are running at acceptable residue levels. Civil construction has been completed and erection of structural steelwork has begun. Expenditure of R10 million has been incurred for the quarter.

INTERNATIONAL OPERATIONS

Other African operations

The Africa International operations comprise AngloGold's 38% interest in the Sadiola mine in Mali and its 50% interest in the Navachab venture in Namibia.

Both operations have performed well in respect of most key parameters this quarter. The significant changes in comparison with the preceding quarter are primarily associated with the previously reported requirements for waste stripping and revised slimes dam operations at Sadiola, coupled with the lower mill head grades expected at Navachab for 1999. At Navachab, excellent progress was made on pit slope recovery work, scheduled for completion in mid-year.

These factors directly influence labour establishment, costs and productivities, as demonstrated in the preceding quarter.

Nevertheless, the cash costs continuing to be achieved and projected - at Sadiola in particular - are well within target.

At Sadiola, negotiations are in progress to resolve, in the ensuing quarter, two issues with potential to impact on performance. These are: the upgrading of the mine-owned power station's diesel engines, where performance since commissioning

has been disappointing; and interpretation differences with the authorities on several Mali tax and operating convention. Satisfactory resolution is expected and financial exposure is not assessed.

From successful extension exploration programmes initiated two years ago, Sadiola's mineral resource base has been updated and provides, potentially, for the economic exploitation of additional resources. These resources are of high mining and throughput rates currently being achieved by the operation.

The relocation of both Sadiola and Farabakouta villages should be almost completed during the next quarter, satisfying both local environmental and ore resource access undertakings.

The potential Yatela project north-west of Sadiola continues to be subject to feasibility and trade-off studies. An investment decision is expected to be taken this year.

At Navachab, the venture management committee has agreed to go ahead with a significant pit expansion programme while exploiting additional resources and extending the life by some eight years, provides an attractive return on investment.

Additional investment required in additional waste stripping.

Edgar Filing: ANGLOGOLD LTD - Form 6-K

A six-day strike by plant shift workers and some sympathisers at Navachab was resolved by negotia

The Americas

The process of integrating into AngloGold the interests acquired from Minorco in gold operations Americas has proceeded satisfactorily to date and is in line with expectations at the time of acq

firmly in place, with a capacity to bring future expansion and new projects to account.

In aggregate, the production targets for the first quarter were met at cash costs below expectati the previous quarter.

Edgar Filing: ANGLOGOLD LTD - Form 6-K

North America

These operations comprise AngloGold's 70% interest in the Jerritt Canyon joint venture in Nevada in the Cripple Creek and Victor joint venture in Colorado.

Jerritt Canyon performed satisfactorily for the quarter in respect of most key parameters and while of its production is scheduled to cease later this year, the underground sources at the Murray are scheduled to compensate in part. Active exploration and the development of additional underground place.

Cripple Creek and Victor, a low-grade but efficient open-pit and valley heap leach operation, had with new heap areas taking some time to develop the requisite solution flow tenors. It is anticipated production shortfalls should be recovered in the third quarter of 1999. Costs remain firmly under

South America

These operations comprise AngloGold's 100% interest in the Morro Velho mines and the 50% interest in the Grande mines, both in Brazil, as well as the 46, 25% interest in Cerro Vanguardia in southern Argentina.

All operations achieved gold and cash cost targets in the first quarter and costs at the Brazilia benefited to the extent of some US\$20 per ounce as a result of the Real devaluation.

Some work to resolve bottlenecking at the Cerro Vanguardia metallurgical plant remains to be done while potential at this operation is realised. Reagent usage is high at present while the cyanide recovery is optimised. Silver grades and recovery have been below expectations to date, thus lowering the use expected from that source. All these issues are receiving active attention in this, the first year.

A feasibility study on the potential Amapari project north of the Amazon is in progress, as are studies to increase production at the existing operations. Exploration is active.

Edgar Filing: ANGLOGOLD LTD - Form 6-K

For the first quarter of 1999, the spot price of gold continued to fluctuate within a narrow price band. Overall, the price moved lower from the final quarter of 1998, and the average price for the quarter was around \$7 below the previous quarter. The price remains under pressure at the low end of this band.

The reasons for this pressure are not immediately obvious. Whilst there was disappointing news earlier in the year, the announcement by the Indian Government of an increase in import duties on gold into India (which has raised the price of gold in India about 10% above the free market), this tax has not had any measurable impact on the price. The Indian market retains the fallback source of gold smuggled from Dubai in the event that government

metal becomes too onerous, and Indian off-take is still relatively firm after the record demand of

that country during 1998. Physical off-take elsewhere in the world is equally reassuring, with increases in both South-East Asia and the Middle East.

Similarly, the revival of a proposal to sell a limited amount of IMF gold reserves (5 to 10 million ounces over the next few years) in a move to ease the debt burdens of poor countries is not a new issue in the gold market. The amount proposed for the sale is not in itself material, and would almost certainly be absorbed in the current market. The impact on the price. In general, with the exception of the Swiss proposals to sell up to half of

number of years, the prognosis for gold sales from the official sector is encouraging, with no lack of

of the major holders of gold. This is the most positive position we have faced from this sector over

past decade.

The reasons for the malaise in the gold price appear to lie elsewhere, in a banking and investment market which tends to ignore any and all good news on gold and which follows a policy of recommending selling on even the slightest rise in the gold price, no matter how modest. What the motivation might be behind such a negative position is not clear.

However, initiatives are under way to achieve more satisfactory reporting of open positions and forward contracts in the gold markets, and it is to be hoped that with some greater transparency in these markets we may gain a better understanding

of the forces which currently constrain the price of the metal.

The currency markets were generally more stable during this quarter than they were during 1998. The South African rand/dollar exchange rate of R6, 15/US\$ was some 4% weaker than the average in the final quarter of 1998, due to a stronger dollar. In general, investors have favoured the South African currency recently, and the rand has

upheld well against the dollar. In the event of any further upheavals, the rand could well consolidate around current levels against the dollar.

The hedge position reflected below includes an amount of some 142 300 kilograms of forward cover, which is

in excess of forecast production from the newly acquired gold mining assets in the United States and elsewhere.

As at 31 March 1999, the company had outstanding the following net forward pricing commitments against

production. A portion of these sales consists of US dollar-priced contracts which have been converted into rand at average annual forward rand values based on a spot rand/dollar exchange rate of R6, 20 available

at the time of the sales. The increase in hedge cover reflects the growing diversity of gold production by AngloGold

Edgar Filing: ANGLOGOLD LTD - Form 6-K

1. The results have been prepared in accordance with International Accounting Standards. As from 1999, results will no longer be presented in accordance with the appropriation method of accounting.
2. At the general meeting held on Wednesday, 3 February 1999, shareholders approved the transaction for the acquisition by AngloGold of the gold interests of Minorco for a net consideration of US\$492, 4 million. By 31 March 1999 all conditions precedent had been met and the effective date of the transaction was 1999.
3. During the quarter 4 000 ordinary shares were allotted in terms of the Share Incentive Scheme, increasing the number of ordinary shares in issue at 31 March 1999 to 97 857 199.
4. Earnings per share have been calculated using a weighted average number of ordinary shares of 97 857 199.
5. Orders placed and outstanding on capital contracts as at 31 March 1999 totalled R350, 0 million, equivalent to US\$56, 4 million at the rate of exchange ruling on that date.
6. Final dividend No. 85 of 800 South African cents per share was paid on 26 March 1999. The equivalent American Depository Share (ADS) was 63. 85 US cents per ADS. Each ADS represents one-half of an ordinary share.
7. The financial results for the year ended 31 December 1998 are audited. All other results are unaudited.
