KULICKE AND SOFFA INDUSTRIES, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Unaudited

NOTE 1: BASIS OF PRESENTATION

These consolidated financial statements include the accounts of Kulicke and Soffa Industries, Inc. and its subsidiaries (the "Company"), with appropriate elimination of intercompany balances and transactions.

The interim consolidated financial statements are unaudited and, in management's opinion, include all adjustments (consisting only of normal and recurring adjustments) necessary for a fair presentation of results for these interim periods. The interim consolidated financial statements do not include all of the information and footnote disclosures normally included in financial statements prepared in accordance with U.S. generally accepted accounting principles ("GAAP") and should be read in conjunction with the consolidated financial statements and notes thereto included in the Annual Report on Form 10-K for the fiscal year ended September 28, 2013, filed with the Securities and Exchange Commission, which includes Consolidated Balance Sheets as of September 28, 2013 and September 29, 2012, and the related Consolidated Statements of Operations, Statements of Other Comprehensive Income, Changes in Shareholders' Equity and Cash Flows for each of the years in the three-year period ended September 28, 2013. The results of operations for any interim period are not necessarily indicative of the results of operations for any other interim period or for a full year.

Fiscal Year

Each of the Company's first three fiscal quarters end on the Saturday that is 13 weeks after the end of the immediately preceding fiscal quarter. The fourth quarter of each fiscal year ends on the Saturday closest to September 30<sup>th</sup>. Fiscal 2014 quarters end on December 28, 2013, March 29, 2014, June 28, 2014 and September 27, 2014. Fiscal 2013 quarters ended on December 29, 2012, March 30, 2013, June 29, 2013 and September 28, 2013. In fiscal years consisting of 53 weeks, the fourth quarter will consist of 14 weeks.

Nature of Business

The Company designs, manufactures and sells capital equipment and expendable tools as well as services, maintains, repairs and upgrades equipment, all used to assemble semiconductor devices. The Company's operating results depend upon the capital and operating expenditures of semiconductor manufacturers and outsourced semiconductor assembly and test providers ("OSATs") worldwide which, in turn, depend on the current and anticipated market demand for semiconductors and products utilizing semiconductors. The semiconductor industry is highly volatile and experiences downturns and slowdowns which have a severe negative effect on the semiconductor industry's demand for semiconductor capital equipment, including assembly equipment manufactured and sold by the Company and, to a lesser extent, expendable tools, including those sold by the Company. These downturns and slowdowns have in the past adversely affected the Company's operating results. The Company believes such volatility will continue to characterize the industry and the Company's operations in the future.

Use of Estimates

The preparation of consolidated financial statements requires management to make assumptions, estimates and judgments that affect the reported amounts of assets and liabilities, net revenue and expenses during the reporting periods, and disclosures of contingent assets and liabilities as of the date of the consolidated financial statements. On an ongoing basis, management evaluates estimates, including but not limited to, those related to accounts receivable, reserves for excess and obsolete inventory, carrying value and lives of fixed assets, goodwill and intangible assets, valuation allowances for deferred tax assets and deferred tax liabilities, repatriation of un-remitted foreign subsidiary earnings, equity-based compensation expense, restructuring, and warranties. Management bases its estimates on historical experience and on various other assumptions believed to be reasonable. As a result, management makes judgments regarding the carrying values of its assets and liabilities that are not readily apparent from other sources. Authoritative pronouncements, historical experience and assumptions are used as the basis for making estimates, and on an ongoing basis, management evaluates these estimates. Actual results may differ from these estimates under different assumptions or conditions.

Vulnerability to Certain Concentrations

Financial instruments which may subject the Company to concentrations of credit risk as of December 28, 2013 and September 28, 2013 consisted primarily of short-term investments and trade receivables. The Company manages credit risk associated with investments by investing its excess cash in highly rated debt instruments of the U.S. Government and its agencies, financial institutions, and corporations. The Company has established investment guidelines relative to diversification and maturities designed to maintain safety and liquidity. These guidelines are periodically reviewed and modified as appropriate. The Company does not have any exposure to sub-prime financial instruments or auction rate securities.

Table of Contents

KULICKE AND SOFFA INDUSTRIES, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Unaudited (continued)

The Company's trade receivables result primarily from the sale of semiconductor equipment, related accessories and replacement parts, and expendable tools to a relatively small number of large manufacturers in a highly concentrated industry. Write-offs of uncollectible accounts have historically not been significant; however, the Company closely monitors its customers' financial strength to reduce the risk of loss.

The Company's products are complex and require raw materials, components and subassemblies having a high degree of reliability, accuracy and performance. The Company relies on subcontractors to manufacture many of these components and subassemblies and it relies on sole source suppliers for some important components and raw material inventory.

The Company's international operations are exposed to changes in foreign currency exchange rates due to transactions denominated in currencies other than the location's functional currency. The Company is also exposed to foreign currency fluctuations that impact the remeasurement of net monetary assets of those operations whose functional currency, the U.S. dollar, differs from their respective local currencies, most notably in Israel, Malaysia, Singapore and Switzerland. In addition to net monetary remeasurement, the Company has exposures related to the translation of subsidiary financial statements from their functional currency, the local currency, into its reporting currency, the U.S. dollar, most notably in China, Taiwan, Japan and Germany. The Company's U.S. operations also have foreign currency exposure due to net monetary assets denominated in currencies other than the U.S. dollar.

Foreign Currency Translation

The majority of the Company's business is transacted in U.S. dollars; however, the functional currencies of some of the Company's subsidiaries are their local currencies. In accordance with ASC No. 830, Foreign Currency Matters ("ASC 830"), for a subsidiary of the Company that has a functional currency other than the U.S. dollar, gains and losses resulting from the translation of the functional currency into U.S. dollars for financial statement presentation are not included in determining net income, but are accumulated in the cumulative translation adjustment account as a separate component of shareholders' equity (accumulated other comprehensive income (loss)). Under ASC 830, cumulative translation adjustments are not adjusted for income taxes as they relate to indefinite investments in non-U.S. subsidiaries. Gains and losses resulting from foreign currency transactions are included in the determination of net income.

Cash Equivalents

The Company considers all highly liquid investments with original maturities of three months or less when purchased to be cash equivalents. Cash equivalents are measured at fair value based on level one measurement, or quoted market prices, as defined by ASC No. 820, Fair Value Measurements and Disclosures. As of December 28, 2013 and September 28, 2013, fair value approximated the cost basis for cash equivalents.

Investments

Investments, other than cash equivalents, are classified as "trading," "available-for-sale" or "held-to-maturity," in accordance with ASC No. 320, Investments-Debt & Equity Securities, and depending upon the nature of the investment, its ultimate maturity date in the case of debt securities, and management's intentions with respect to holding the securities. Investments classified as "trading" are reported at fair market value, with unrealized gains or losses included in earnings. Investments classified as "available-for-sale" are reported at fair market value, with net unrealized gains or losses reflected as a separate component of shareholders' equity (accumulated other comprehensive income (loss)). The fair market value of trading and available-for-sale securities is determined using quoted market prices at the balance sheet date. Investments classified as held-to-maturity are reported at amortized cost. Realized gains and losses are determined on the basis of specific identification of the securities sold.

Allowance for Doubtful Accounts

The Company maintains allowances for doubtful accounts for estimated losses resulting from its customers' failure to make required payments. If the financial condition of the Company's customers were to deteriorate, resulting in an impairment of their ability to make payments, additional allowances may be required. The Company is also subject to

concentrations of customers and sales to a few geographic locations, which could also impact the collectability of certain receivables. If global economic conditions deteriorate or political conditions were to change in some of the countries where the Company does business, it could have a significant impact on the results of operations, and the Company's ability to realize the full value of its accounts receivable.

Table of Contents

KULICKE AND SOFFA INDUSTRIES, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Unaudited (continued)

Inventories

Inventories are stated at the lower of cost (on a first-in first-out basis) or market value. The Company generally provides reserves for obsolete inventory and for inventory considered to be in excess of demand. Demand is generally defined as 18 months forecasted future consumption for equipment, 24 months forecasted future consumption for all spare parts, and 12 months forecasted future consumption for expendable tools. Forecasted consumption is based upon internal projections, historical sales volumes, customer order activity and a review of consumable inventory levels at customers' facilities. The Company communicates forecasts of its future consumption to its suppliers and adjusts commitments to those suppliers accordingly. If required, the Company reserves the difference between the carrying value of its inventory and the lower of cost or market value, based upon assumptions about future consumption, and market conditions. If actual market conditions are less favorable than projections, additional inventory reserves may be required.

Property, Plant and Equipment

Property, plant and equipment are carried at cost. The cost of additions and those improvements which increase the capacity or lengthen the useful lives of assets are capitalized while repair and maintenance costs are expensed as incurred. Depreciation and amortization are provided on a straight-line basis over the estimated useful lives as follows: buildings 25 years; machinery and equipment 3 to 10 years; and leasehold improvements are based on the shorter of the life of lease or life of asset. Purchased computer software costs related to business and financial systems are amortized over a five-year period on a straight-line basis.

Valuation of Long-Lived Assets

In accordance with ASC No. 360, Property, Plant & Equipment ("ASC 360"), the Company's property, plant and equipment is tested for impairment based on undiscounted cash flows when triggering events occur, and if impaired, written down to fair value based on either discounted cash flows or appraised values. ASC 360 also provides a single accounting model for long-lived assets to be disposed of by sale and establishes additional criteria that would have to be met to classify an asset as held for sale. The carrying amount of an asset or asset group is not recoverable to the extent it exceeds the sum of the undiscounted cash flows expected to result from the use and eventual disposition of the asset or asset group. Estimates of future cash flows used to test the recoverability of a long-lived asset or asset group must incorporate the entity's own assumptions about its use of the asset or asset group and must factor in all available evidence.

ASC 360 requires that long-lived assets be tested for recoverability whenever events or changes in circumstances indicate that their carrying amount may not be recoverable. Such events include significant under-performance relative to the expected historical or projected future operating results; significant changes in the manner of use of the assets; significant negative industry or economic trends and significant changes in market capitalization. During the fiscal quarter ended December 28, 2013, no triggering events occurred.

Accounting for Impairment of Goodwill

The Company operates two reportable segments: Equipment and Expendable Tools. Goodwill was recorded in 2009 for the acquisition of Orthodyne Electronics Corporation ("Orthodyne"), which added wedge bonder products (also known as "reporting unit") to the Equipment business.

Accounting Standard Update 2011-08, Testing Goodwill for Impairment ("ASU 2011-08"), provides companies with the option to assess qualitative factors to determine whether it is more likely than not that the fair value of a reporting unit is less than its carrying value. If, after assessing the qualitative factors, a company determines that it is not more likely than not that the fair value of a reporting unit is less than its carrying value, then performing the two-step impairment test is unnecessary. However, if a company concludes otherwise, then it is required to perform the first step of the two-step goodwill impairment test. If the carrying value of a reporting unit exceeds its fair value, then a company is required to perform the second step of the two-step goodwill impairment test.

As part of the annual evaluation, the Company performs an impairment test of its goodwill in the fourth quarter of each fiscal year to coincide with the completion of its annual forecasting and refreshing of its business outlook process. On an ongoing basis, the Company monitors if a “triggering” event has occurred that may have the effect of reducing the fair value of a reporting unit below its respective carrying value. Adverse changes in expected operating results and/or unfavorable changes in other economic factors used to estimate fair values could result in a non-cash impairment charge in the future. During the three months ended December 28, 2013, no triggering events occurred.

Table of Contents

KULICKE AND SOFFA INDUSTRIES, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Unaudited (continued)

Impairment assessments inherently involve judgment as to assumptions about expected future cash flows and the impact of market conditions on those assumptions. Future events and changing market conditions may impact the assumptions as to prices, costs, growth rates or other factors that may result in changes in the estimates of future cash flows. Although the Company believes the assumptions that it has used in testing for impairment are reasonable, significant changes in any one of the assumptions could produce a significantly different result. Indicators of potential impairment may lead the Company to perform interim goodwill impairment assessments, including significant and unforeseen customer losses, a significant adverse change in legal factors or in the business climate, a significant adverse action or assessment by a regulator, a significant stock price decline or unanticipated competition.

For further information on goodwill and other intangible assets, see Note 3 below.

Revenue Recognition

In accordance with ASC No. 605, Revenue Recognition, the Company recognizes revenue when persuasive evidence of an arrangement exists, delivery has occurred or services have been rendered, the price is fixed or determinable, the collectability is reasonably assured, and equipment installation obligations have been completed and customer acceptance, when applicable, has been received or otherwise released from installation or customer acceptance obligations. If terms of the sale provide for a customer acceptance period, revenue is recognized upon the expiration of the acceptance period or customer acceptance, whichever occurs first. The Company's standard terms are ex works (the Company's factory), with title transferring to its customer at the Company's loading dock or upon embarkation. The Company has a small percentage of sales with other terms, and revenue is recognized in accordance with the terms of the related customer purchase order. Revenue related to services is recognized upon performance of the services requested by a customer order. Revenue for extended maintenance service contracts with a term more than one month is recognized on a prorated straight-line basis over the term of the contract.

Shipping and handling costs billed to customers are recognized in net revenue. Shipping and handling costs paid by the Company are included in cost of sales.

Research and Development

The Company charges research and development costs associated with the development of new products to expense when incurred. In certain circumstances, pre-production machines which the Company intends to sell are carried as inventory until sold.

Income Taxes

In accordance with ASC No. 740, Income Taxes, deferred income taxes are determined using the liability method. The Company records a valuation allowance to reduce its deferred tax assets to the amount it expects is more likely than not to be realized. While the Company has considered future taxable income and its ongoing tax planning strategies in assessing the need for the valuation allowance, if it were to determine that it would be able to realize its deferred tax assets in the future in excess of its net recorded amount, an adjustment to the deferred tax asset would increase income in the period such determination was made. Likewise, should the Company determine it would not be able to realize all or part of its net deferred tax assets in the future, an adjustment to the deferred tax asset would decrease income in the period such determination was made.

In accordance with ASC No. 740 Topic 10, Income Taxes, General ("ASC 740.10"), the Company accounts for uncertain tax positions taken or expected to be taken in its income tax return. Under ASC 740.10, the Company utilizes a two-step approach for evaluating uncertain tax positions. Step one, or recognition, requires a company to determine if the weight of available evidence indicates a tax position is more likely than not to be sustained upon audit, including resolution of related appeals or litigation processes, if any. Step two, or measurement, is based on the largest amount of benefit, which is more likely than not to be realized on settlement with the taxing authority.

Equity-Based Compensation

The Company accounts for equity-based compensation under the provisions of ASC No. 718, Compensation - Stock Compensation ("ASC 718"). ASC 718 requires the recognition of the fair value of the equity-based compensation in net

income. Compensation expense associated with market-based restricted stock is determined using a Monte-Carlo valuation model, and compensation expense associated with time-based and performance-based restricted stock is determined based on the number of shares granted and the fair value on the date of grant. The fair value of the Company's stock option awards are estimated using a Black-Scholes option valuation model. In addition, the calculation of equity-based compensation costs requires that the Company estimate the number of awards that will be forfeited during the vesting period. The fair value of equity-based awards is amortized over the vesting period of the award and the Company elected to use the straight-line method for awards granted after the adoption of ASC 718.

Table of Contents

KULICKE AND SOFFA INDUSTRIES, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

Unaudited (continued)

Earnings per Share

Earnings per share (“EPS”) are calculated in accordance with ASC No. 260, Earnings per Share. Basic EPS include only the weighted average number of common shares outstanding during the period. Diluted EPS includes the weighted average number of common shares and the dilutive effect of stock options, restricted stock and share unit awards and convertible subordinated notes outstanding during the period, when such instruments are dilutive.

In accordance with ASC No. 260.10.55, Earnings per Share - Implementation & Guidance, the Company treats all outstanding unvested share-based payment awards that contain rights to nonforfeitable dividends as participating in undistributed earnings with common shareholders. Awards of this nature are considered participating securities and the two-class method of computing basic and diluted EPS must be applied.

Prior Period Adjustment

During the three months ended December 28, 2013, the Company identified a prior period adjustment of \$0.8 million relating to the provision of input tax receivables that resulted in increased selling, general and administrative expense and a reduction of input tax receivable that should have been recorded during the three months ended September 28, 2013. This error was corrected during the quarter ended December 28, 2013 and management has deemed that the adjustment was not material to the previous quarter ended September 28, 2013, the fiscal year ended September 28, 2013, and the expected full year results of the current year ending September 27, 2014.

Recent Accounting Pronouncements

There were no new accounting pronouncements applicable to the Company during the three months ended December 28, 2013.

	\$28,352	\$38,868

All short-term investments were classified as available-for-sale and were measured at fair value based on level one measurement, or quoted market prices, as defined by ASC 820. As of December 28, 2013 and September 28, 2013, (1) fair value approximated the cost basis for short-term investments. The Company did not recognize any realized gains or losses on the sale of investments during the three months ended December 28, 2013 and December 29, 2012.

Pursuant to ASC No. 840, Leases, the Company was considered to be the owner of the building during the construction phase for the Agreement to Develop and Lease (the "ADL") facility being developed by Mapletree (2) Industrial Trust (the "Landlord") in Singapore—see Notes 6 and 11 below. The construction costs incurred to date in relation to the relevant proportion of the Company's lease are recognized on the Consolidated Balance Sheet as of December 28, 2013.

The building was completed on December 1, 2013 and the cost of construction of \$20.0 million was reclassified from construction in progress to buildings and building improvements.

(3) Represents customer advance payments, customer credit program, accrued warranty expense and accrued retrofit costs.

Unaudited (continued)

## NOTE 3: GOODWILL AND INTANGIBLE ASSETS

## Goodwill

Intangible assets classified as goodwill are not amortized. The Company performs an annual impairment test of its goodwill during the fourth quarter of each fiscal year, which coincides with the completion of its annual forecasting and refreshing of business outlook process. The Company performed its annual impairment test in the fourth quarter of fiscal 2013 and concluded that no impairment charge was required. During the three months ended December 28, 2013, the Company reviewed the qualitative factors to ascertain if a "triggering" event may have taken place that may have the effect of reducing the fair value of the reporting unit below its carrying value and concluded that no triggering event had occurred.

In 2008, the Company acquired Orthodyne and added wedge bonder products to the portfolio of business.

## Intangible Assets

Intangible assets with determinable lives are amortized over their estimated useful lives. The Company's intangible assets consist primarily of wedge bonder developed technology and customer relationships.

The following table reflects net intangible assets as of December 28, 2013 and September 28, 2013:

(dollar amounts in thousands)	As of		Average estimated
	December 28, 2013	September 28, 2013	useful lives (in years)
Wedge bonder developed technology	\$33,200	\$33,200	7.0
Accumulated amortization	(24,901	) (23,715	)
Net wedge bonder developed technology	8,299	9,485	
Wedge bonder customer relationships	19,300	19,300	5.0
Accumulated amortization	(19,300	) (19,300	)
Net wedge bonder customer relationships	—	—	
Wedge bonder trade name	4,600	4,600	8.0
Accumulated amortization	(3,019	) (2,876	)
Net wedge bonder trade name	1,581	1,724

## NOTE 4: CASH AND CASH EQUIVALENTS

Cash equivalents consist of instruments with remaining maturities of three months or less at the date of purchase. In general, these investments are free of trading restrictions. We carry these investments at fair value, based on quoted market prices or other readily available market information.

Cash and cash equivalents consisted of the following as of December 28, 2013:

(dollar amounts in thousands)	Amortized Cost	Unrealized Gains	Unrealized Losses	Estimated Fair Value
Current assets:				
Cash	\$ 136,981	\$—	\$—	\$ 136,981
Cash equivalents:				
Money market funds	225,967	—	—	225,967
Time deposits	187,650	—	—	187,650
Total cash and cash equivalents	550,598	—	—	550,598
Short-term investments:				
Time deposits	6,552	—	—	6,552
Total short-term investments	6,552	—	—	6,552
Total cash, cash equivalents and short-term investments	\$557,150	\$—	\$—	\$557,150

Cash and cash equivalents consisted of the following as of September 28, 2013:

(dollar amounts in thousands)	Amortized Cost	Unrealized Gains	Unrealized Losses	Estimated Fair Value
Current assets:				
Cash	\$ 113,295	\$—	\$—	\$ 113,295
Cash equivalents:

Time deposits	182,221	—	—	182,221
Total cash and cash equivalents	\$521,788	\$—	\$—	\$521,788
Short-term investments				
Time deposits	3,252	—	—	3,252
Total short-term investments	3,252	—	—	3,252
Total cash, cash equivalents and short-term investments	\$525,040	\$—	\$—	\$525,040

## NOTE 5: FAIR VALUE MEASUREMENTS

Accounting standards establish three levels of inputs that may be used to measure fair value: quoted prices in active markets for identical assets or liabilities (referred to as Level 1), inputs other than Level 1 that are observable for the asset or liability either directly or indirectly (referred to as Level 2) and unobservable inputs to the valuation methodology that are significant to the measurement of fair value of assets or liabilities (referred to as Level 3).

## Assets and Liabilities Measured and Recorded at Fair Value on a Recurring Basis

We measure certain financial assets and liabilities at fair value on a recurring basis. There were no transfers between fair value measurement levels during the quarter ended December 28, 2013.

## Fair Value Measurements on a Nonrecurring Basis

Our non-financial assets such as intangible assets and property, plant and equipment are carried at cost unless impairment is deemed to have occurred.

Table of Contents

KULICKE AND SOFFA INDUSTRIES, INC.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

## Fair Value of Financial Instruments

Amounts reported as cash and equivalents, short-term investments, receivables, accounts payable and accrued expenses approximate fair value.

The fair value of our financial assets and liabilities at December 28, 2013 were determined using the following inputs: (dollar amounts in thousands)

	Fair Value Measurements at Reporting Date Using			
	Total	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Assets:				
Cash	\$ 136,981	\$ 136,981	\$—	\$—
Cash equivalents:				
Money market funds	225,967	225,967	—	—
Time deposits	187,650	187,650	—	—
Short-term investments:				
Time deposits	6,552	6,552	—	—
Total assets	\$557,150	\$557,150	\$—	\$—

The fair value of our financial assets and liabilities at September 28, 2013 were determined using the following inputs: (dollar amounts in thousands)

	Fair Value Measurements at Reporting Date Using			
	Total	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Assets:				
Cash	\$ 113,295	\$ 113,295	\$—	\$—

Short-term investments				
Time deposits	3,252	3,252	—	—
Total assets	\$ 525,040	\$ 525,040	\$—	\$—

## NOTE 6: DEBT AND OTHER OBLIGATIONS

## Agreement to Develop and Lease and Lease Agreement

On May 7, 2012, Kulicke & Soffa Pte Ltd. (“Pte”), the Company's wholly owned subsidiary, entered into the ADL with DBS Trustee Limited as trustee of Mapletree Industrial Trust (the “Landlord”). Pursuant to the ADL, the Landlord agreed to develop a building at 23A Serangoon North Avenue 5, #01-01 K&S Corporate Headquarters, Singapore 554369 (the “Building”). The lease has a ten year non-cancellable term and contains options to renew for a further two 10-year terms. The annual rent and service charge for the Initial Term range between approximately \$4 million to approximately \$5 million Singapore dollars. The Tenant has a right of first refusal for all space that becomes available in the Building and the Landlord has agreed to make available a certain amount of additional space for rental

by the Tenant at the Tenant's option which may be exercised at certain points during the second half of the Initial Term. Subject to the Tenant renting a minimum amount of space for a certain period, the Tenant has partial surrender rights. In addition, the Tenant has termination rights after renting the Initial Premises for a certain period of time.

Table of ContentsKULICKE AND SOFFA INDUSTRIES, INC.  
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS  
Unaudited (continued)

The Building was completed on December 1, 2013 and Pte signed a Lease Agreement with the Landlord to lease from the Landlord approximately 198,000 square feet (the "Initial Premises"), representing approximately 70% of the Building. In accordance with ASC No. 840, Leases ("ASC 840"), the Company was considered to be the owner of the Building during the construction phase due to its involvement in the asset construction. Once construction was complete we are required to perform a sale-leaseback analysis pursuant to ASC 840-40 to determine if we can remove the Landlord's asset and associated financing obligation from the consolidated balance sheet. Our lease contained collateral, considered a prohibited form of continuing involvement under ASC 840-40 and therefore involvement that precluded us from derecognizing the asset and associated financing obligation.

As such, we reclassified the asset from construction in progress to Property Plant and Equipment and began to depreciate the building over its estimated useful life of twenty five years. We concluded that the term of the financing obligation is 10 years (the "Initial Term"). This is equal to the non-cancellable term of our lease agreement with the Landlord. At the inception of the lease, the asset and financing obligation recorded on the balance sheet was \$20.0 million, which was based on using an interest rate of 6.33% over the initial term. The financing obligation will be settled through a combination of periodic cash rental payments and the return of the leased property at the expiration of the lease. We do not report rent expense for the property which is deemed owned for accounting purposes. Rather, rental payments required under the lease are considered debt service and applied the deemed landlord financing obligation and interest expense. The Building and financing obligation are being amortized in a manner that will not generate a gain or loss upon lease termination.

**Bank Guarantee**

On May 7, 2012, Pte obtained a bank guarantee from DBS Bank Ltd., which was furnished to the Landlord and expired on May 9, 2013, at which time Pte replaced the bank guarantee with a cash deposit of an equivalent amount. The cash deposit was refunded on December 6, 2013.

**Credit facility**

On November 22, 2013, the Company obtained a \$5.0 million credit facility with Citibank in connection with the issuance of a bank guarantee of \$3.4 million Singapore dollars to the Landlord in connection with the Lease Agreement. The bank guarantee is effective from December 1, 2013.

**NOTE 7: SHAREHOLDERS' EQUITY AND EMPLOYEE BENEFIT PLANS****Common Stock and 401(k) Retirement Income Plan**

The Company has a 401(k) retirement income plan (the "Plan") for its employees. Historically, the Company's matching contributions to the Plan were made in the form of issued and contributed shares of Company common stock; however, beginning January 2, 2011, matching contributions to the Plan are made in cash instead of stock. The Plan allows for employee contributions and matching Company contributions up to 4% or 6% of the employee's contributed amount based upon years of service.

The following table reflects the Company's matching contributions to the Plan during the three months ended December 28, 2013 and December 29, 2012:

(in thousands)	Three months ended	
	December 28, 2013	December 29, 2012

## Equity-Based Compensation

As of December 28, 2013, the Company had seven equity-based employee compensation plans (the “Employee Plans”) and three director compensation plans (the “Director Plans”) (collectively, the “Plans”). Under these Plans, market-based share awards (collectively, “market-based restricted stock”), time-based share awards (collectively, “time-based restricted stock”), performance-based share awards (collectively, “performance-based restricted stock”), stock options, or common stock have been granted at 100% of the market price of the Company's common stock on the date of grant. As of December 28, 2013, the Company’s one active plan, the 2009 Equity Plan, had 3.8 million shares of common stock available for grant to its employees and directors.

Market-based restricted stock entitles the employee to receive common shares of the Company on the award vesting date, if market performance objectives which measure relative total shareholder return (“TSR”) are attained. Relative TSR is calculated based upon the 90-calendar day average price of the Company's stock as compared to specific peer companies that comprise the Philadelphia Semiconductor Index. TSR is measured for the Company and each peer company over a performance period, which is generally three years. Vesting percentages range from 0% to 200% of awards granted. The provisions of the market-based restricted stock are reflected in the grant date fair value of the award; therefore, compensation expense is recognized regardless of whether or not the market condition is ultimately satisfied. Compensation expense is reversed if the award is forfeited prior to the vesting date.

In general, stock options and time-based restricted stock awarded to employees vest annually over a three year period provided the employee remains employed by the Company. The Company follows the non-substantive vesting method for stock options and recognizes compensation expense immediately for awards granted to retirement eligible employees, or over the period from the grant date to the date retirement eligibility is achieved.

In general, performance-based restricted stock (“PSU”) entitles the employee to receive common shares of the Company on the three-year anniversary of the grant date (if employed by the Company) if return on invested capital and revenue growth targets set by the Management Development and Compensation Committee (“MDCC”) of the Board of Directors on the date of grant are met. If return on invested capital and revenue growth targets are not met, performance-based restricted stock does not vest. Certain PSUs vest based on achievement of strategic goals over a certain time period or periods set by the MDCC. If the strategic goals are not achieved, the PSUs do not vest. Equity-based compensation expense recognized in the Consolidated Statements of Operations for the three months ended December 28, 2013 and December 29, 2012 was based upon awards ultimately expected to vest. In accordance with ASC No. 718, Stock Based Compensation, forfeitures have been estimated at the time of grant and were based upon historical experience. The Company reviews the forfeiture rates periodically and makes adjustments as necessary.

The following table reflects restricted stock and common stock granted during the three months ended December 28, 2013 and December 29, 2012:

(shares in thousands)	Three months ended	
	December 28, 2013	December 29, 2012

## NOTE 8: EARNINGS PER SHARE

Basic (loss) income per share is calculated using the weighted average number of shares of common stock outstanding during the period. Stock options and restricted stock are included in the calculation of diluted earnings per share, except when their effect would be anti-dilutive. For the three months ended December 28, 2013, 0.1 million stock options and 0.8 million restricted stocks were excluded due to the Company's net loss.

The following tables reflect a reconciliation of the shares used in the basic and diluted net income per share computation for three months ended December 28, 2013 and December 29, 2012:

(in thousands, except per share)	Three months ended			
	December 28, 2013		December 29, 2012	
	Basic	Diluted	Basic	Diluted
<b>NUMERATOR:</b>				
Net (loss) income	\$(1,957)	) \$(1,957)	) \$3,604	\$3,604

Net (loss) income per share - Diluted		\$(0.03)	)	\$0.05

Table of ContentsKULICKE AND SOFFA INDUSTRIES, INC.  
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS  
Unaudited (continued)

## NOTE 9: INCOME TAXES

The following table reflects the provision for income taxes and the effective tax rate for the three months ended December 28, 2013 and December 29, 2012:

(dollar amounts in thousands)	Three months ended		
	December 28, 2013	December 29, 2012	
(Loss) Income from operations before income taxes	\$(2,048)	) \$4,379	
(Benefit) Provision for income taxes	(91)	) 775	
Net (loss) income	\$(1,957)	) \$3,604	
Effective tax rate	4.4	% 17.7	%

For the three months ended December 28, 2013 and December 29, 2012, the effective income tax rate differed from the federal statutory rate primarily due to tax from foreign operations at a lower effective tax rate than the U.S. statutory rate, and the impact of tax holidays, offset by an increase for deferred taxes on unremitted earnings, other U.S. deferred taxes and additional foreign expenses or benefits related to returns filed in the current period.

The effective tax rate for the period ended December 28, 2013 of 4.4% decreased from the effective rate for the fiscal period ended September 28, 2013 of 11.0% primarily due to certain immaterial changes in estimates that were recorded upon filing tax returns in foreign jurisdictions offset by the withholding tax expense recognized in a foreign jurisdiction.

The Company's future effective tax rate would be affected if earnings were lower than anticipated in countries where it has lower statutory rates and higher than anticipated in countries where it has higher statutory rates, by changes in the valuation of its deferred tax assets and liabilities, or by changes in tax laws, regulations, accounting principles, or interpretations thereof. The Company regularly assesses the effects resulting from these factors to determine the adequacy of its provision for income taxes.

## NOTE 10: SEGMENT INFORMATION

The Company operates two reportable segments: Equipment and Expendable Tools. The Equipment segment manufactures and sells a line of ball bonders and heavy wire wedge bonders that are sold to semiconductor device manufacturers, their outsourced semiconductor assembly and test subcontractors, other electronics manufacturers and automotive electronics suppliers. The Company also services, maintains, repairs and upgrades its equipment. The Expendable Tools segment manufactures and sells a variety of expendable tools for a broad range of semiconductor packaging applications.

## NOTE 11: COMMITMENTS, CONTINGENCIES AND CONCENTRATIONS

## Agreement to Develop and Lease

On May 7, 2012, Pte entered into the ADL and a Lease Agreement with DBS Trustee Limited as trustee of the Landlord. Pursuant to the ADL, the Landlord agreed to develop a building at 23A Serangoon North Avenue 5, #01-01 K&S Corporate Headquarters, Singapore 554369 and Pte agreed to lease from the Landlord approximately 198,000 square feet representing approximately 70% of the Building. The Building was completed on December 1, 2013.

## Warranty Expense

The Company's equipment is generally shipped with a one-year warranty against manufacturing defects. The Company establishes reserves for estimated warranty expense when revenue for the related equipment is recognized. The reserve for estimated warranty expense is based upon historical experience and management's estimate of future warranty costs.

The following table reflects the reserve for product warranty activity for the three months ended December 28, 2013 and December 29, 2012:

(in thousands)	Three months ended	
	December 28, 2013	December 29, 2012
Reserve for product warranty, beginning of period	\$1,194	\$2,412
Provision for product warranty	148	65
Product warranty costs paid	(455	) (793
Reserve for product warranty, end of period	\$887	\$1,684

## Other Commitments and Contingencies

The following table reflects obligations not reflected on the Consolidated Balance Sheet as of December 28, 2013:

(in thousands)	Total	Payments due by fiscal year				
		2014	2015	2016	2017	thereafter
Inventory purchase obligation	\$56,832	\$56,832	\$—	\$—	\$—	\$—
(1)						
Operating lease obligations (2)	29,733	2,283	3,345	3,116	2,787	18,202
Total	\$86,565	\$59,115	\$3,345	\$3,116	\$2,787	\$18,202

(1) The Company orders inventory components in the normal course of its business. A portion of these orders are non-cancellable and a portion may have varying penalties and charges in the event of cancellation.

The Company has minimum rental commitments under various leases (excluding taxes, insurance, maintenance (2) and repairs, which are also paid by the Company) primarily for various facility and equipment leases, which expire periodically through 2018 (not including lease extension options, if applicable).

Pursuant to ASC No. 840, Leases, for lessee's involvement in asset construction, the Company was considered the owner of the Building during the construction phase of the ADL. As of December 28, 2013, the Company has recorded a financing obligation of \$19.8 million related to the Building. This financing obligation is not reflected in

the above table.

19

---

Table of ContentsKULICKE AND SOFFA INDUSTRIES, INC.  
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS  
Unaudited (continued)

Under the Lease Agreement signed on December 1, 2013, the term for the rental of the Initial Premises is 10 years, (the "Initial Term"). Pte has the option to renew for two additional ten-year terms. The combined annual rent and service charge for the Initial Term will range between approximately \$4.0 to \$5.0 million Singapore dollars. Subject to renting a minimum amount of space, Pte will have a right of first refusal for all space that becomes available in the Building, and the Landlord has agreed to make available a certain amount of additional space for rental at Pte's option which may be exercised at certain points during the second half of the Initial Term. Subject to renting a minimum amount of space for a certain period, Pte will have partial surrender rights. In addition, Pte will have termination rights after renting the Initial Premises for a certain period of time.

## Concentrations

The following table reflects significant customer concentrations as a percentage of net revenue for the three months ended December 28, 2013 and December 29, 2012:

	Three months ended

Item 2. - MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Forward-Looking Statements

In addition to historical information, this filing contains statements relating to future events or our future results. These statements are forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995, Section 27A of the Securities Act of 1933, as amended (the "Securities Act") and Section 21E of the Securities Exchange Act of 1934, as amended (the "Exchange Act"), and are subject to the safe harbor provisions created by statute. Such forward-looking statements include, but are not limited to, our future revenue, sustained, increasing, continuing or strengthening demand for our products, the continuing transition from gold to copper wire bonding, replacement demand, our research and development efforts, our ability to identify and realize new growth opportunities, our ability to control costs and our operational flexibility as a result of (among other factors): projected growth rates in the overall semiconductor industry, the semiconductor assembly equipment market, and the market for semiconductor packaging materials; and projected demand for ball, wedge and die bonder equipment and for expendable tools.

Generally, words such as "may," "will," "should," "could," "anticipate," "expect," "intend," "estimate," "plan," "continue," "g," "believe," or the negative of or other variations on these and other similar expressions identify forward-looking statements. These forward-looking statements are made only as of the date of this filing. We do not undertake to update or revise the forward-looking statements, whether as a result of new information, future events or otherwise. Forward-looking statements are based on current expectations and involve risks and uncertainties. Our future results could differ significantly from those expressed or implied by our forward-looking statements. These risks and uncertainties include, without limitation, those described below and under the heading "Risk Factors" in our Annual Report on Form 10-K for the fiscal year ended September 28, 2013 (the "Annual Report") and our other reports and registration statements filed from time to time with the Securities and Exchange Commission. This discussion should be read in conjunction with the Consolidated Financial Statements and Notes included in this report, as well as our audited financial statements included in the Annual Report.

We operate in a rapidly changing and competitive environment. New risks emerge from time to time and it is not possible for us to predict all risks that may affect us. Future events and actual results, performance and achievements could differ materially from those set forth in, contemplated by or underlying the forward-looking statements, which speak only as of the date on which they were made. Except as required by law, we assume no obligation to update or revise any forward-looking statement to reflect actual results or changes in, or additions to, the factors affecting such forward-looking statements. Given those risks and uncertainties, investors should not place undue reliance on forward-looking statements as predictions of actual results.

OVERVIEW

Kulicke and Soffa Industries, Inc. (the "Company" or "K&S") designs, manufactures and sells capital equipment and expendable tools used to assemble semiconductor devices, including integrated circuits ("ICs"), high and low powered discrete devices, light-emitting diodes ("LEDs"), and power modules. We also service, maintain, repair and upgrade our equipment. Our customers primarily consist of semiconductor device manufacturers, outsourced semiconductor assembly and test providers ("OSATs"), other electronics manufacturers and automotive electronics suppliers. We operate two main business segments, Equipment and Expendable Tools. Our goal is to be the technology leader and the most competitive supplier in terms of cost and performance in each of our major product lines. Accordingly, we invest in research and engineering projects intended to enhance our position at the leading edge of semiconductor assembly technology. We also remain focused on our cost structure, through consolidating our manufacturing facilities. Cost reduction efforts remain an important part of our normal ongoing operations, and are expected to generate savings without compromising overall product quality and service levels.

Business Environment

The semiconductor business environment is highly volatile, driven by internal dynamics, both cyclical and seasonal, in addition to macroeconomic forces. Over the long term, semiconductor consumption has historically grown, and is forecast to continue to grow. This growth is driven, in part, by regular advances in device performance and by price

declines that result from improvements in manufacturing technology. In order to exploit these trends, semiconductor manufacturers, both integrated device manufacturers (“IDMs”) and OSATs, periodically invest aggressively in latest generation capital equipment. This buying pattern often leads to periods of excess supply and reduced capital spending - the so called semiconductor cycle. Within this broad semiconductor cycle there are also, generally weaker, seasonal effects that are specifically tied to annual, end-consumer purchasing patterns. Typically,

## Table of Contents

semiconductor manufacturers prepare for heightened demand by adding or replacing equipment capacity by the end of the September quarter. Occasionally, this results in subsequent reductions in the December quarter. This annual seasonality can occasionally be overshadowed by effects of the broader semiconductor cycle. Macroeconomic factors also affect the industry, primarily through their effect on business and consumer demand for electronic devices, as well as other products that have significant electronic content such as automobiles, white goods, and telecommunication equipment.

Our Equipment segment is primarily affected by the industry's internal cyclical and seasonal dynamics in addition to broader macroeconomic factors that positively or negatively affect our financial performance. The sales mix of IDM and OSAT customers in any period also impacts financial performance, as this mix can affect our products' average selling prices and gross margins due to differences in volume purchases and machine configurations required by each customer type.

Our Expendable Tools segment is less volatile than our Equipment segment. Expendable Tools sales are more directly tied to semiconductor unit consumption rather than capacity requirements and production capability improvements. We continue to position our business to leverage our research and development leadership and innovation and to focus our efforts on mitigating volatility, improving profitability and ensuring longer-term growth. We remain focused on operational excellence, expanding our product offerings and managing our business efficiently throughout the business cycles. Our visibility into future demand is generally limited, forecasting is difficult, and we may experience typical industry seasonality.

To limit potential adverse cyclical, seasonal and macroeconomic effects on our financial position, we have de-leveraged and strengthened our balance sheet. As of December 28, 2013, our total cash, cash equivalents and investments was \$550.6 million, a \$28.8 million increase from the prior fiscal year end. We believe this strong cash position will allow us to continue to invest in organic product development and non-organic opportunities.

### Technology Leadership

We compete largely by offering our customers among the most advanced equipment and expendable tools available for the wire and wedge bonding processes. Our equipment is typically the most productive and has the highest levels of process capability, and as a result, has a lower cost of ownership compared to other equipment in its market. Our expendable tools are designed to optimize the performance of the equipment in which they are used. We believe our technology leadership contributes to the leading market share positions of our various wire bonder and expendable tools products. To maintain our competitive advantage, we invest in product development activities designed to produce a stream of improvements to existing products and to deliver next-generation products. These investments often focus as much on improvements in the semiconductor assembly process as on specific pieces of assembly equipment or expendable tools. In order to generate these improvements, we often work in close collaboration with customers, end users, and other industry members. In addition to producing technical advances, these collaborative development efforts strengthen customer relationships and enhance our reputation as a technology leader and solutions provider.

In addition to gold, silver alloy wire and aluminum wire, our leadership in the industry's use of copper wire for the bonding process is an example of the benefits of our collaborative efforts. By working with customers, material suppliers, and other equipment suppliers, we have developed a series of robust, high-yielding production processes, which have made copper wire widely accepted and significantly reducing the cost of assembling an integrated circuit. Based on our industry leading copper bonding processes and the continued high price of gold, we believe the demand for copper configured wire bonders is likely to remain solid.

Our leadership has allowed us to maintain a competitive position in the latest generations of gold and copper ball bonders, which enable our customers to handle the leading technologies in terms of Bond pad pitch, silicon with the latest node and complex wire bonding requirement. We continue to see demand for our large bondable area ("LA") configured machines. This LA option is now available on all of our Power Series ("PS") models and allows our customers to gain added efficiencies and to reduce the cost of packaging.

We also leverage the technology leadership of our equipment by optimizing our bonder platforms, and we deliver variants of our products to serve emerging high-growth markets. For example, we have developed extensions of our main ball bonding platforms to address opportunities in LED assembly, in particular for general lighting. We expect

the next wave of growth in the LED market to be high brightness LED for general lighting. We also believe there is an opportunity for growth in wire bonding sales at wafer level using our ATPremier Plus.

Furthermore, we gain synergies by leveraging technologies between our unique platforms. Our leading technology for wedge bonder equipment uses aluminum ribbon or heavy wire as opposed to fine gold and fine copper wire used in ball bonders. In 2013, we launched a new line of high performance wedge bonder products, PowerFusion<sup>PS</sup>. The advanced interconnect capabilities of PowerFusion<sup>PS</sup> improve the processing of high-density power packages, due to an expanded bondable area, wider leadframe capability, superior indexing accuracy and teach mode. We also intend to initiate design of our next power module wedge bonder.

Table of Contents

In both cases, we are making a concerted effort to develop commonality of subsystems and design practices, in order to improve performance and design efficiencies. We believe this will benefit us in maintaining our leadership position in the wedge bonding market and increase synergies between the various engineering product groups. Furthermore, we continually research adjacent market segments where our technologies could be used. Many of these initiatives are in the early stages of development and may become business opportunities in the future.

Another example of our developing equipment for high-growth niche markets is our ATPremier Plus. This machine utilizes a modified wire bonding process to mechanically place bumps on devices in a wafer format, for variants of the flip chip assembly process. Typical applications include complementary metal-oxide semiconductor (“CMOS”) image sensors, surface acoustical wave (“SAW”) filters and high brightness LEDs. These applications are commonly used in most, if not all, smartphones available today in the market. We also expanded the use of ATPremier Plus for wafer level wire bonding for micro-electro-mechanical systems (“MEMS”) and other sensors.

Our technology leadership and bonding process know-how are enabling us to develop highly function-specific equipment with best-in-class throughput and accuracy. This forms the foundation for our advanced packaging equipment development. We have established a dedicated team to develop advanced packaging bonders for the emerging three-dimensional integrated circuit (“3DIC”) market, and in November 2013, we shipped the first C2S (Chip-to-Substrate) alpha machine to a strategic customer. 3DIC saves space and reduces form factor by stacking separate chips in a single package. It also improves performance while reducing power consumption. Mobile devices such as smartphones and tablets are the main drivers of this market.

We bring the same technology focus to our expendable tools business, driving tool design and manufacturing technology to optimize the performance and process capability of the equipment in which our tools are used. For all our equipment products, expendable tools are an integral part of their process capability. We believe our unique ability to simultaneously develop both equipment and tools is a core strength supporting our products' technological differentiation.

**Products and Services**

We supply a range of bonding equipment and expendable tools. The following tables reflect net revenue by business segment for the three months ended December 28, 2013 and December 29, 2012, respectively:

(dollar amounts in thousands)	Three months ended December 28, 2013		December 29, 2012		
	Net revenues	% of total net revenue	Net revenues	% of total net revenue	
Equipment	\$63,145	79.8	% \$99,902	87.6	%
Expendable Tools	15,968	20.2	% 14,137	12.4	%
	\$79,113	100.0	% \$114,039	100.0	%

**Equipment Segment**

We manufacture and sell a line of ball bonders, heavy wire wedge bonders and wafer level bonders that are sold to semiconductor device manufacturers, OSATs, other electronics manufacturers and automotive electronics suppliers. Ball bonders are used to connect very fine wires, typically made of gold or copper, between the bond pads of the semiconductor device, or die, and the leads on its package. Heavy wire wedge bonders use either aluminum wire or ribbon to perform the same function in packages that cannot use gold or copper wire because of either high electrical current requirements or other package reliability issues. Wafer level bonders mechanically apply bumps to die, typically while still in the wafer format, for some variants of the flip chip assembly process. We believe our equipment offers competitive advantages by providing customers with high productivity/throughput, superior package quality/process control, and as a result, a lower cost of ownership.

Table of Contents

Our principal Equipment segment products include:

Business Unit	Product Name (1)	Typical Served Market
Ball bonders	IConn <sup>PS</sup>	Advanced and ultra fine pitch applications
	IConn <sup>PS</sup> ProCu	High-end copper wire applications demanding advanced process capability and high productivity
	IConn <sup>PS</sup> ProCu Plus	High-end copper wire applications demanding advanced process capability and high productivity
	IConn <sup>PS</sup> ProCu LA	Large area substrate and matrix applications for copper wire
	IConn <sup>PS</sup> ProCu Plus LA	Large area substrate and matrix applications for copper wire
	IConn <sup>PS</sup> LA	Large area substrate and matrix applications
	ConnX <sup>PS</sup> Plus	High productivity bonder for low-to-medium pin count applications
	ConnX <sup>PS</sup> LED	LED applications
	ConnX <sup>PS</sup> VLED	Vertical LED applications
	ConnX <sup>PS</sup> Plus LA	Cost performance large area substrate and matrix applications
	AT Premier Plus	Advanced wafer level bonding application
Wedge bonders	3600Plus	Power hybrid and automotive modules using either heavy aluminum wire or PowerRibbon®
	3700Plus	Hybrid and automotive modules using thin aluminum wire
	7200Plus	Power semiconductors using either aluminum wire or PowerRibbon®
	7200HD	Smaller power packages using either aluminum wire or PowerRibbon®
	PowerFusion <sup>PS</sup> TL	Power semiconductors using either aluminum wire or PowerRibbon®
	PowerFusion <sup>PS</sup> HL	Smaller power packages using either aluminum wire or PowerRibbon®

(1) Power Series (“PS”)

## Table of Contents

### Ball Bonders

Automatic ball bonders represent the largest portion of our semiconductor equipment business. Our main product platform for ball bonding is the Power Series - a family of assembly equipment that is setting new standards for performance, productivity, upgradeability, and ease of use. Our Power Series consists of our IConn<sup>PS</sup> high-performance ball bonders and our ConnX<sup>PS</sup> cost-performance ball bonders, both of which can be configured for either gold or copper wire. Our ConnX<sup>PS</sup> LED and our ConnX<sup>PS</sup> VLED are targeted specifically at the fast growing LED market. Our IConn<sup>PS</sup> LA and ConnX<sup>PS</sup> LA are targeted for large bondable area applications. In 2013, we introduced our next generation IConn<sup>PS</sup> ProCu Plus and IConn<sup>PS</sup> ProCu Plus LA, which further improved wire bonding production capability for advanced wafer nodes at 28 nanometer and below.

Our Power Series products are setting new standards in wire bonding.

Our ball bonders are capable of bonding advanced devices with very fine pitch, creating complex loop shapes needed in the assembly of advanced semiconductor packages as well as bonding on the latest 28 nanometer silicon node.

Our installed base of gold wire ball bonders can also be retrofitted for copper wire applications with kits which we sell separately.

Our AT Premier Plus machine utilizes a modified wire bonding process to mechanically place bumps on devices, while still in a wafer format for variants of the flip chip assembly process. Typical applications include CMOS image sensors, SAW filters, MEMS and high brightness LEDs. These applications are commonly used in most, if not all, smartphones available today in the market.

### Heavy Wire Bonders

We are the leaders in the design and manufacture of heavy wire wedge bonders for the power semiconductor and automotive power module markets. Heavy wire wedge bonders may use either aluminum wire or aluminum ribbon to connect semiconductor chips in power packages, power hybrids and automotive modules for products such as motor control modules or inverters for hybrid cars. In addition, we see some potential use for our wedge bonder products in select solar applications.

Our portfolio of wedge bonding products includes:

The 3600Plus: high speed, high accuracy wire bonders designed for power modules, automotive packages and other heavy wire multi-chip module applications.

The 3700Plus: wire bonders designed for hybrid and automotive modules using thin aluminum wire.

The 7200Plus: dual head wedge bonders designed specifically for power semiconductor applications.

The 7200HD: heavy wire wedge bonders designed for smaller power packages using either aluminum wire or ribbon.

The PowerFusion<sup>PS</sup> Semiconductor Wedge Bonders - Configurable in single, dual and multi-head configurations using aluminum wire and PowerRibbon<sup>TM</sup>:

The PowerFusion<sup>PS</sup> TL: designed for low-cost, high volume power semiconductor applications.

The PowerFusion<sup>PS</sup> HL: designed for advanced power semiconductor applications.

While wedge bonding traditionally utilizes aluminum wire, all of our heavy wire wedge bonders are also available to be modified to bond aluminum ribbon using our proprietary PowerRibbon<sup>®</sup> process. Aluminum ribbon offers device makers performance advantages over traditional round wire and is being increasingly used for high current packages and automotive applications.

In 2013, we introduced PowerFusion<sup>PS</sup>, which is driven by new powerful direct-drive motion systems and expanded pattern recognition capabilities. The advanced interconnect capabilities of PowerFusion<sup>PS</sup> improves the processing of high-density power packages, due to an expanded bondable area, wider leadframe capability and superior indexing accuracy and teach mode.

### Other Equipment Products and Services

We also sell manual wire bonders, and we offer spare parts, equipment repair, maintenance and servicing, training services, and upgrades for our equipment through our Support Services business unit.

In 2013, we introduced K&S Care, a new professional service, designed to help customers operate their machines at an optimum level under the care our trained specialists. K&S Care includes a range of programs, offering different levels of service depending on customer needs.

Table of Contents

## Expendable Tools Segment

We manufacture and sell a variety of expendable tools for a broad range of semiconductor packaging applications. Our principal Expendable Tools segment products include:

Capillaries: expendable tools used in ball bonders. Made of ceramic and other elements, a capillary guides the wire during the ball bonding process. Its features help control the bonding process. We design and build capillaries suitable for a broad range of applications, including for use on our competitors' equipment. In addition to capillaries used for gold wire bonding, we have developed capillaries for use with copper wire to achieve optimal performance in copper wire bonding.

Bonding wedges: expendable tools used in heavy wire wedge bonders. Like capillaries, their features are tailored to specific applications. We design and build bonding wedges for use both in our own equipment and in our competitors' equipment.

Dicing blades: expendable tools used by semiconductor manufacturers to cut silicon wafers into individual semiconductor die and to cut semiconductor devices that have been moulded in a matrix configuration into individual units.

In 2013, we introduced the Opto<sub>ceramic</sub> and Opto<sub>PCB</sub> package singulation blades for the LED market. The blades enable an improvement on package singulation quality, precision and productivity by providing a significantly longer life blade, and improved stability.

We also introduced ACS Pro Capillary, which is a new generation of copper capillary for advanced copper wire bonding applications.

## RESULTS OF OPERATIONS

The following table reflects our income from operations for the three months ended December 28, 2013 and December 29, 2012:

(dollar amounts in thousands)	Three months ended		\$ Change	% Change	
	December 28, 2013	December 29, 2012			
Net revenue	\$79,113	\$114,039	\$(34,926)	(30.6)	)%
Cost of sales	40,748	62,514	(21,766)	(34.8)	)%
Gross profit	38,365	51,525	(13,160)	(25.5)	)%
Selling, general and administrative	23,102	29,067	(5,965)	(20.5)	)%
Research and development	17,471	18,253	(782)	(4.3)	)%
Operating expenses	40,573	47,320	(6,747)	(14.3)	)%
(Loss) Income from operations	\$(2,208)	) \$4,205	\$(6,413)	(152.5)	)%

Our net revenues for the three months ended December 28, 2013 decreased significantly as compared to our net revenues for the three months ended December 29, 2012 due to reduced customer demand. The semiconductor industry is volatile and our operating results have fluctuated significantly in the past. Customer demand for our products could continue to remain weak and lead to a decline in our net revenues. If there is a significant slowdown of transition from gold to copper wire bonding by our customers, then our net revenues may continue to decline.

## Net Revenue

Approximately 94.1% and 97.1% of our net revenue for the three months ended December 28, 2013 and December 29, 2012, respectively, was for shipments to customer locations outside of the U.S., primarily in the Asia/Pacific region. We expect sales outside of the U.S. to continue to represent a substantial majority of our future revenue.

The following tables reflect net revenue by business segment for the three months ended December 28, 2013 and December 29, 2012:

(dollar amounts in thousands)	Three months ended		\$ Change	% Change
	December 28, 2013	December 29, 2012		

Edgar Filing: KULICKE & SOFFA INDUSTRIES INC - Form 10-Q

Equipment	\$63,145	\$99,902	\$(36,757	) (36.8	)%
Expendable Tools	15,968	14,137	1,831	13.0	%
Total net revenue	\$79,113	\$114,039	\$(34,926	) (30.6	)%

26

---

Table of Contents

## Equipment

The following table reflects the components of Equipment net revenue change between the three months ended December 28, 2013 and December 29, 2012:

(in thousands)	December 28, 2013 vs. December 29, 2012		
	Three months ended		
	Price	Volume	\$ Change
Equipment	\$(807 )	\$(35,950 )	\$(36,757 )

For the three months ended December 28, 2013, the lower equipment net revenue as compared to the prior year period was primarily due to the lower sales volume of our ball bonders. The sales volume reduction in ball bonders was mainly attributable to the lower equipment utilization rate, therefore lower demand from our customer. In addition to sales volume, pricing on our ball bonders was lower due to customer mix change.

## Expendable Tools

The following table reflects the components of Expendable Tools net revenue change between the three months ended December 28, 2013 and December 29, 2012:

(in thousands)	December 28, 2013 vs. December 29, 2012		
	Three months ended		
	Price	Volume	\$ Change
Expendable Tools	\$433	\$1,398	\$1,831

For the three months ended December 28, 2013, the Expendable Tools net revenue increased 13.0% as compared to the prior year period was primarily due to the sales volume increase in wedge bonder tools. In addition to sales volume increase, we experienced a more favorable product mix.

## Gross Profit

The following table reflects gross profit by business segment for the three months ended December 28, 2013 and December 29, 2012:
