CAUTIONARY STATEMENT

This Quarterly Report contains statements relating to future results of Conexant Systems, Inc. (including certain projections and business trends) that are forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended, and are subject to the safe harbor created by those sections. Our actual results may differ materially from those projected as a result of certain risks and uncertainties. These risks and uncertainties include, but are not limited to: the cyclical nature of the semiconductor industry and the markets addressed by our products and our customers; demand for and market acceptance of new and existing products; successful development of new products; the timing of new product introductions; the successful integration of acquisitions; the availability and extent of utilization of manufacturing capacity and raw materials; pricing pressures and other competitive factors; changes in our product mix; fluctuations in manufacturing yields; product obsolescence; our ability to develop and implement new technologies and to obtain protection of the related intellectual property; the successful implementation of our strategic manufacturing realignment, expense reduction and restructuring initiatives; the successful separation of our broadband access and Mindspeed Technologies businesses; the successful separation and merger of our wireless communications business with Alpha Industries, Inc.; our labor relations and those of our customers and suppliers; our ability to attract and retain qualified personnel; the safety and security of our employees and of our facilities; and the uncertainties of litigation, as well as other risks and uncertainties, including those set forth herein and those detailed from time to time in our filings with the Securities and Exchange Commission. These forward-looking statements are made only as of the date hereof, and we undertake no obligation to update or revise the forward-looking statements, whether as a result of new information, future events or otherwise.

Mindspeed Technologies is a trademark of Conexant Systems, Inc. Other brands, names and trademarks contained in this Quarterly Report are the property of their respective owners.

CONEXANT SYSTEMS, INC.
NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS
(unaudited)

1. Basis of Presentation and Significant Accounting Policies

Conexant Systems, Inc. (Conexant or the Company) is a worldwide leader in semiconductor system solutions for communications applications. The Company's expertise in mixed-signal processing allows it to deliver integrated systems and semiconductor products which facilitate communications worldwide through wireline voice and data communications networks, cellular telephony systems and emerging cable, satellite and fixed wireless broadband communications networks. The Company operates in two business segments: the Personal Networking business and Mindspeed Technologies, the Company's Internet infrastructure business.

On December 16, 2001, the Company entered into agreements with Washington Sub, Inc. (Washington), currently a wholly-owned subsidiary of Conexant, and Alpha Industries, Inc. (Alpha), a leading provider of radio frequency (RF) integrated circuit-based solutions, including semiconductors and ceramic components, for the wireless and broadband communications markets. Under the agreements, the Company will contribute to Washington its wireless communications business, including its Newbury Park, California gallium arsenide wafer fabrication facility, but excluding certain assets and liabilities, and will distribute all the outstanding shares of Washington to Conexant shareholders (the Wireless Spin-off). Immediately thereafter, Washington will merge with and into Alpha, with Alpha as the surviving corporation (the Merger). Completion of the Wireless Spin-off and the Merger are subject to, among other things, regulatory approvals, a ruling by the Internal Revenue Service (IRS) that the Wireless Spin-off qualifies as tax-free and approval of the Merger by Alpha's stockholders. Upon completion of the Merger, Alpha will purchase Conexant's semiconductor assembly and test facility, located in Mexicali, Mexico, and certain related operations, for \$150 million. The waiting period for the Hart-Scott-Rodino Antitrust Improvements Act of 1976 terminated on January 29, 2002. There can be no assurance that the other regulatory approvals, the IRS ruling or the approval of the Merger by Alpha's stockholders will be obtained, or that the Wireless Spin-off and the Merger will be successfully completed.

In September 2000, the Company announced a plan for the separation of its Personal Networking and Mindspeed Technologies businesses. Although current business conditions have delayed the separation, the Company remains committed to completing the separation as soon as business and market conditions permit. The separation is also subject to the approval of the Company's shareholders and receipt of a ruling from the IRS that the spin-off will qualify as a tax-free distribution. The IRS ruling has been received and although it is generally binding on the IRS, the continuing validity of the ruling is subject to certain factual representations and assumptions. As of the date of this report, the Company is not aware of any facts or circumstances that would cause these representations and assumptions to be untrue. There can be no assurance that shareholder approval of the separation will be obtained, or that the separation will be successfully completed.

In the opinion of management, the accompanying consolidated condensed financial statements contain all adjustments, consisting of adjustments of a normal recurring nature, as well as the inventory write-downs, special charges, debt conversion costs and extraordinary gain on extinguishment of debt, necessary to present fairly the Company's financial position, results of operations and cash flows. The results of operations for interim periods are not necessarily indicative of the results that may be expected for a full year. These statements should be read in conjunction with the consolidated financial statements and notes thereto included in the Company's Annual Report on Form 10-K for the fiscal year ended September 30, 2001.

Fiscal Periods For presentation purposes, references made to the period ended December 31, 2001 relate to the actual fiscal 2002 first quarter ended December 28, 2001.

Supplemental Cash Flow Information Cash paid for interest, net of amounts capitalized, was \$2.0 million and \$8.4 million for the three months ended December 31, 2001 and 2000, respectively. Cash paid for income taxes for the three months ended December 31, 2001 and 2000 was \$1.8 million and \$0.4 million, respectively.

Recent Accounting Standards In June 2001, the Financial Accounting Standards Board (FASB) issued Statement of Financial Accounting Standards (SFAS) No. 141, Business Combinations and SFAS No. 142, Goodwill and Other Intangible Assets. SFAS 141 requires that all business combinations be accounted for using the purchase

Table of Contents

CONEXANT SYSTEMS, INC.
NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS (continued)
(unaudited)

method and provides new criteria for recording intangible assets separately from goodwill. Existing goodwill and intangible assets will be evaluated against this new criteria, which may result in certain intangible assets being subsumed into goodwill. SFAS 142 addresses financial accounting and reporting for acquired goodwill and other intangible assets. Goodwill and intangible assets that have indefinite useful lives will not be amortized into results of operations, but instead will be evaluated at least annually for impairment and written down when the recorded value exceeds the estimated fair value. The Company will adopt the provisions of each statement which apply to goodwill and intangible assets acquired prior to June 30, 2001 as of the beginning of fiscal 2003. However, SFAS 142 is immediately applicable to any goodwill and intangible assets the Company may acquire after June 30, 2001. Upon adoption, the Company will cease amortizing goodwill against its results of operations, reducing annual amortization expense by approximately \$285 million. The Company is evaluating the full impact of adopting the new standards. In addition, impairment reviews may result in charges against earnings to write down the value of goodwill.

In August 2001, the FASB issued SFAS No. 144, *Accounting for the Impairment or Disposal of Long-Lived Assets*, which supersedes previous guidance on financial accounting and reporting for the impairment or disposal of long-lived assets and for segments of a business to be disposed of. Adoption of SFAS 144 is required no later than the beginning of fiscal 2003. Management does not expect the adoption of SFAS 144 to have a significant impact on the Company's financial position or results of operations. However, future impairment reviews may result in charges against earnings to write down the value of long-lived assets.

Reclassifications Certain prior year amounts have been reclassified to conform to the current period presentation.

2. Supplemental Financial Statement Data

The refundable deposit, currently held by a wafer supplier under an agreement for foundry capacity, is classified as a current asset as of December 31, 2001 because the Company expects the supplier to repay this deposit during fiscal 2002. The refundable deposit was included in other assets at September 30, 2001.

Inventories consist of the following (in thousands):

	December 31, 2001	September 30, 2001
Raw materials	\$ 12,340	\$ 10,727
Work-in-process	79,292	100,012
Finished goods	24,611	11,658
	<u>\$ 116,243</u>	<u>\$ 122,397</u>

3. Contingent Liabilities

Claims have been asserted against the Company alleging the use of the intellectual property rights of others in certain of the Company's products. The resolution of these matters may entail the negotiation of a license agreement, a settlement, or the resolution of such claims through arbitration or litigation. In connection with its spin-off from Rockwell International Corporation (Rockwell), the Company assumed responsibility for all contingent liabilities and current and future litigation (including environmental and intellectual property proceedings) against Rockwell or its subsidiaries in respect of the operations of the semiconductor systems business of Rockwell.

The outcome of litigation cannot be predicted with certainty and some lawsuits, claims or proceedings may be disposed of unfavorably to the Company. Many intellectual property disputes have a risk of injunctive relief and there can be no assurance that a license will be granted. Injunctive relief could have a material adverse effect on the financial condition or results of operations of the Company. Based on its evaluation of matters which are pending or asserted and taking into account the Company's reserves for such matters, management believes the disposition of such matters will not have a material adverse effect on the financial condition or results of operations of the Company.

Table of Contents

CONEXANT SYSTEMS, INC.
NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS (continued)
(unaudited)

4. Comprehensive Income (Loss)

Comprehensive income (loss) for the three months ended December 31, 2001 and 2000 is as follows (in thousands):

	Three months ended December 31,	
	2001	2000
Net loss	\$(204,490)	\$(199,576)
Other comprehensive loss:		
Foreign currency translation adjustments	(2,449)	(8,272)
Change in unrealized gains on available-for-sale securities	(1,135)	(50,568)
Change in unrealized gains on forward exchange contracts	(110)	71
Effect of income taxes	497	19,412
	(3,197)	(39,357)
Other comprehensive loss	(3,197)	(39,357)
Comprehensive loss	\$(207,687)	\$(238,933)

The components of accumulated other comprehensive loss are as follows (in thousands):

	December 31, 2001	September 30, 2001
Unrealized gains on available-for-sale securities, net of tax	\$ 953	\$ 1,591
Unrealized losses on forward exchange contracts	(153)	(43)
Foreign currency translation adjustments	(21,201)	(18,752)
	(20,401)	(17,204)
Accumulated other comprehensive loss	\$(20,401)	\$(17,204)

5. Special Charges

Special charges for the first quarter of fiscal 2002 consist of a restructuring charge of \$1.0 million principally relating to an additional workforce reduction. The charge was based on the estimated cost of severance benefits for approximately 100 affected employees at the Company's El Paso, Texas board-level sub-assembly business. Activity and liability balances related to restructuring actions through December 31, 2001 are as follows (in thousands):

	Workforce reductions	Facility and other	Total
Restructuring balance, September 30, 2001	\$ 6,095	\$5,361	\$11,456
Charged to costs and expenses	828	172	1,000
Cash payments	(2,773)	(436)	(3,209)
	\$ 4,150	\$5,097	\$ 9,247
Restructuring balance, December 31, 2001	\$ 4,150	\$5,097	\$ 9,247

A majority of the amounts accrued for these actions are expected to be paid within one year. Cash payments to complete the restructuring actions will be funded from available cash reserves and funds from operations, and are not expected to significantly impact the Company's liquidity.

Special charges for the quarter ended December 31, 2000 consist of \$7.9 million of costs related to the previously announced separation of the Personal Networking and Mindspeed Technologies businesses into two independent companies.

6. Sales of Assets

In December 2001, the Company sold two buildings for net proceeds of \$19.3 million. A \$2.1 million gain arising from the sale of one building was recognized upon completion of the transaction. The Company will continue to occupy the second building under a 15-year lease. Consequently, the \$7.8 million gain arising from the sale of the leased-back building has been deferred and will be recognized ratably over the lease term. The lease requires the Company to make minimum lease payments aggregating \$1.4 million annually (subject to certain adjustments).

7. Segment Information

The Company operates and tracks its results in two reportable segments - Personal Networking and Mindspeed Technologies. The Personal Networking segment designs, develops and sells semiconductor system solutions for two general personal communications applications markets - wireless communications and broadband access. For

Table of Contents

CONEXANT SYSTEMS, INC.
NOTES TO CONSOLIDATED CONDENSED FINANCIAL STATEMENTS (continued)
(unaudited)

segment reporting purposes, these product groups have been aggregated because of their common characteristics and their reliance on shared operating functions. Mindspeed Technologies designs, develops and sells semiconductor networking solutions that facilitate the aggregation, transmission and switching of data, video and voice from the edge of the Internet to linked metropolitan area networks and long-haul networks.

The Company evaluates segment performance based on segment operating income (loss) excluding amortization of intangible assets, special charges and stock compensation costs. Special charges excluded from segment operating income (loss) consist of restructuring charges and separation costs incurred in connection with the proposed separation of the Personal Networking and Mindspeed Technologies businesses. The tables below present information about reportable segments for the three months ended December 31 (in thousands):

	Net Revenues		Operating Income (Loss)	
	2001	2000	2001	2000
Personal Networking	\$215,341	\$244,456	\$ (45,811)	\$(106,352)
Mindspeed Technologies	14,178	165,905	(55,628)	23,683
Segment totals	\$229,519	\$410,361	(101,439)	(82,669)
Amortization of intangible assets			89,607	82,304
Special charges			1,000	7,927
Stock compensation			2,327	2,487
Operating loss			\$(194,373)	\$(175,387)

Revenues by geographic area, based upon country of destination, are as follows for the three months ended December 31 (in thousands):

	Revenues	
	2001	2000
Americas	\$ 28,877	\$158,966
Europe, Middle East and Africa	19,950	60,817
Japan	13,312	26,332
Asia-Pacific	167,380	164,246
	\$229,519	\$410,361

Table of Contents

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

This information should be read in conjunction with our unaudited consolidated condensed financial statements and the notes thereto included in this Quarterly Report, and our audited consolidated financial statements and notes thereto and Management's Discussion and Analysis of Financial Condition and Results of Operations contained in our Annual Report on Form 10-K for the fiscal year ended September 30, 2001.

Overview

We are a worldwide leader in semiconductor system solutions for communications applications. Our expertise in mixed-signal processing allows us to deliver integrated systems and semiconductor products which facilitate communications worldwide through wireline voice and data communications networks, cellular telephony systems and emerging cable, satellite and fixed wireless broadband communications networks. We operate in two business segments: the Personal Networking business and Mindspeed Technologies, our Internet infrastructure business.

Our Personal Networking business designs, develops and sells semiconductor system solutions for wireless communications and broadband access applications. Our wireless communications products are comprised of components, subsystems and system-level semiconductor solutions for wireless voice and data communication applications, including digital cellular handsets and base stations as well as advanced mobile terminals that support next-generation multimedia and high-speed web browsing. Our broadband access products include semiconductor solutions that connect personal access products such as set-top boxes, residential gateways, personal computers (PCs) and game consoles to voice, video and data processing services over broadband connections and our foundation analog communication products such as PC data and fax modems.

Our Mindspeed Technologies business designs, develops and sells semiconductor networking solutions that facilitate the aggregation, transmission and switching of data, video and voice from the edge of the Internet to linked metropolitan area networks and long-haul networks. Mindspeed Technologies products, ranging from physical-layer devices to higher layer network processors, are sold to infrastructure original equipment manufacturers (OEMs) and can be classified into two general categories: wide area network (WAN) access products and WAN transport products. WAN access products include multi-service access gateway solutions, including voice-over-Internet protocol, and a broad family of multi-megabit digital subscriber line (DSL) products that are used in a variety of network access platforms such as remote access concentrators, voice gateways, digital loop carriers, DSL access multiplexers and integrated access devices. WAN transport products, focused on packet-based networks, include T/E carrier, asynchronous transfer mode (ATM), and synchronous optical networking (SONET)/synchronous digital hierarchy (SDH) transceivers, switch products, network processors and software subsystems. Our customers use these solutions in a variety of network equipment, including high-speed routers, ATM switches, optical switches, add-drop multiplexers, digital cross-connect systems and dense wave division multiplexer equipment.

We market and sell our semiconductor products and system solutions directly to leading OEMs of communication electronics products and third-party electronic manufacturing service providers, and indirectly through electronic components distributors. Sales to distributors accounted for approximately 16% of net revenues in the first quarter of fiscal 2002. One customer accounted for 19% of our net revenues in the first quarter of fiscal 2002; no other customer accounted for 10% or more of our net revenues for the period. Our top 20 customers accounted for 74% of net revenues for the first quarter of fiscal 2002. Revenues derived from customers located in the Americas, Europe, Japan and the Asia-Pacific region were 12%, 9%, 6% and 73%, respectively, of our net revenues for the first quarter of fiscal 2002. We believe a substantial portion of the products we sell to OEMs and third-party manufacturing service providers in the Asia-Pacific region are ultimately shipped to end-markets in the Americas and Europe.

Spin-off and Merger of Wireless Communications Business

On December 16, 2001, we entered into agreements with Washington Sub, Inc. (Washington), currently a wholly-owned subsidiary of ours, and Alpha Industries, Inc. (Alpha), a leading provider of radio frequency (RF) integrated circuit-based solutions, including semiconductors and ceramic components, for the wireless and broadband communications markets. Under the agreements, we will contribute to Washington our wireless communications

Table of Contents

business, including our Newbury Park, California gallium arsenide wafer fabrication facility, but excluding certain assets and liabilities, and will distribute all the outstanding shares of Washington to our shareholders (the Wireless Spin-off). Immediately thereafter, Washington will merge with and into Alpha, with Alpha as the surviving corporation (the Merger). Completion of the Wireless Spin-off and the Merger are subject to, among other things, regulatory approvals, a ruling by the Internal Revenue Service (IRS) that the Wireless Spin-off qualifies as tax-free and approval of the Merger by Alpha's stockholders. Upon completion of the Merger, Alpha will purchase our semiconductor assembly and test facility, located in Mexicali, Mexico, and certain related operations, for \$150 million. The waiting period for the Hart-Scott-Rodino Antitrust Improvements Act of 1976 terminated on January 29, 2002. We cannot assure you that the other regulatory approvals, the IRS ruling or the approval of the Merger by Alpha's stockholders will be obtained, or that we will successfully complete the Wireless Spin-off and the Merger.

Separation of Personal Networking and Mindspeed Technologies Businesses

In September 2000, we announced a plan for the separation of our Personal Networking and Mindspeed Technologies businesses. Although current business conditions have delayed the separation, we remain committed to completing the separation as soon as business and market conditions permit. The separation is also subject to the approval of our shareholders and receipt of a ruling from the IRS that the spin-off will qualify as a tax-free distribution. The IRS ruling has been received and although it is generally binding on the IRS, the continuing validity of the ruling is subject to certain factual representations and assumptions. As of the date of this Quarterly Report, we are not aware of any facts or circumstances that would cause these representations and assumptions to be untrue. We cannot assure you that shareholder approval of the separation will be obtained, or that we will successfully complete the separation.

Results of Operations

We like many of our customers and competitors were adversely impacted throughout all of fiscal 2001 by a broad slowdown affecting the technology sector, including most of the communications electronics end-markets which our products address. Personal Networking net revenues for fiscal 2001 reflect a deterioration in the digital cellular handset market, as compared with fiscal 2000, which resulted from excess channel inventories due to a slowdown in demand for cellular phones and a slower transition to next-generation phones. In addition, sales of our broadband access products were affected by slower than anticipated deployment of broadband services by system providers. Moreover, weak consumer demand for PCs and related peripheral devices and satellite set-top boxes led to lower sales of our products for these applications as compared to prior year levels. Net revenues in our Mindspeed Technologies business were also significantly affected by slowing investment in communications network capacity expansion by Internet service providers (ISPs), competitive local exchange carriers (CLECs) and incumbent local exchange and inter-exchange carriers. In most cases, the effect of weakened end-customer demand was compounded by higher than normal levels of equipment and component inventories among our OEM, subcontractor and distributor customers.

During the first quarter of fiscal 2002, we saw strong demand for our wireless product portfolio and improved demand in a number of the markets addressed by our broadband access products. Although a comparison of our quarterly results of operations on a year-over-year basis will remain unfavorable in the near term, the first quarter of fiscal 2002 represents the second consecutive quarter of sequential revenue growth in our Personal Networking business. Also during the first quarter of fiscal 2002, we experienced what we believe is a bottoming of revenues in our Mindspeed Technologies business. We expect the improvement in our quarterly revenue performance, coupled with the successful implementation of our cost reduction initiatives, will result in a continued improvement in our operating performance in the second quarter of fiscal 2002.

Table of Contents**Net Revenues**

The following table summarizes our net revenues by business segment:

(in millions)	Three months ended			Change from Sept. 2001 Quarter	Change from Dec. 2000 Quarter
	December 31, 2001	September 30, 2001	December 31, 2000		
Net revenues:					
Personal Networking	\$ 215.3	\$ 179.0	\$ 244.5	20%	(12)%
Mindspeed Technologies	14.2	22.0	165.9	(36)%	(91)%
	<u>\$ 229.5</u>	<u>\$ 201.0</u>	<u>\$ 410.4</u>	14%	(44)%
As a percentage of net revenues:					
Personal Networking	94%	89%	60%		
Mindspeed Technologies	6%	11%	40%		

Personal Networking

The following table summarizes the net revenues of our Personal Networking segment by product group:

(in millions)	Three months ended			Change from Sept. 2001 Quarter	Change from Dec. 2000 Quarter
	December 31, 2001	September 30, 2001	December 31, 2000		
Net revenues:					
Wireless communications	\$ 92.3	\$ 65.2	\$ 83.9	42%	10%
Broadband access	123.0	113.8	160.6	8%	(23)%
	<u>\$ 215.3</u>	<u>\$ 179.0</u>	<u>\$ 244.5</u>	20%	(12)%
As a percentage of Conexant's total net revenues:					
Wireless communications	40%	32%	21%		
Broadband access	54%	57%	39%		
	<u>94%</u>	<u>89%</u>	<u>60%</u>		

Our wireless communications product revenues for the first quarter of fiscal 2002, up 10% from the comparable period of fiscal 2001, reflect a substantial increase in unit shipments of our global system for mobile communications (GSM) cellular system solutions. We also experienced increased demand for power amplifier modules for both code division multiple access (CDMA) and GSM applications from a number of key OEM customers. These revenue increases were partially offset by lower sales volume of 900MHz digital cordless telephone chipsets and by the impact of the sale of our global positioning system (GPS) business to SiRF Technology, Inc. in the third quarter of fiscal 2001. Strong demand across all major wireless product lines contributed to a 42% increase in wireless communications revenues from the immediately preceding quarter.

Edgar Filing: CONEXANT SYSTEMS INC - Form 10-Q

Our broadband access product revenues for the first quarter of fiscal 2002 were 23% lower than the comparable period of fiscal 2001. The decline reflects relatively weaker end-market demand for personal access products such as set-top boxes, PCs, game consoles and fax machines compared with the same period in fiscal 2001. Consequently, our broadband access net revenues for the fiscal 2002 first quarter reflect lower unit shipments of our analog dial-up modems and our satellite set-top box tuners and demodulators. These declines were partially offset by higher sales of media processing products, including our broadcast video encoder/decoder and set-top box MPEG 2 solutions. While revenue comparisons on a year-over-year basis remain unfavorable, our broadband access revenues increased 8% over the immediately preceding quarter the second consecutive quarter of sequential revenue growth driven by higher volume in our PC data and fax modems and increased demand for broadcast video encoder/decoder solutions and satellite set-top box products.

Mindspeed Technologies

Over the past four quarters, net revenues for Mindspeed Technologies have been impacted by the sharply lower demand for network equipment which has affected us, our customers and our competitors. ISPs and CLECs have dramatically reduced their investment in network capacity expansion as their business models failed to generate sufficient cash flow. Incumbent local exchange carriers and inter-exchange carriers have also reduced their capital spending. Demand has been further affected by higher-than-normal levels of equipment and component inventories among many OEM, subcontractor and distributor customers. As a result, Mindspeed Technologies net revenues for the first quarter of fiscal 2002 compared with the comparable fiscal 2001 period reflect lower sales volume across the majority of our WAN access and WAN transport products, including multi-service access processors, multi-megabit DSL and optical networking physical media devices, and transceivers.

Table of Contents**Gross Margin**

(in millions)	Three months ended			Change from Sept. 2001 Quarter	Change from Dec. 2000 Quarter
	December 31, 2001	September 30, 2001	December 31, 2000		
Gross margin	\$63.5	\$ 40.5	\$ 113.8	57%	(44)%
Percent of net revenues	28%	20%	28%		

Cost of goods sold consists primarily of purchased materials, labor and overhead (including depreciation) associated with product manufacturing, royalty and other intellectual property costs, warranties and sustaining engineering expenses pertaining to products sold. Gross margin for the first quarter of fiscal 2002 was adversely affected by the impact of the 44% decline in quarterly revenues on a base of relatively fixed manufacturing support costs, which was partially offset by lower depreciation expense as a result of the write-down of manufacturing assets in fiscal 2001. Gross margins for the first quarter of fiscal 2001 included inventory write-downs of approximately \$57.5 million.

The inventory write-downs we recorded in the first quarter of fiscal 2001 resulted from the sharply reduced end-customer demand we experienced, primarily associated with our dial-up modem product portfolio, as a result of the rapidly changing demand environment for PCs during that period. We assess the recoverability of inventories through an on-going review of inventory levels in relation to sales backlog and forecasts, product marketing plans and product life cycles. We record inventory write-downs when the inventory on hand exceeds the demand forecast. Once established, these write-downs are considered permanent adjustments to the cost basis of the excess inventory.

When compared with the immediately preceding quarter, our gross margins for the first quarter of fiscal 2002 improved to 28% of net revenues, reflecting increased quarterly sales and higher utilization of our manufacturing capacity. Gross margins for the first quarter of fiscal 2002 were adversely impacted by provisions for excess and obsolete inventories of \$11.0 million and additional warranty costs of \$14.0 million. The effect of these charges was partially offset by the sale of approximately \$21.5 million of inventories that we had written down to a zero cost basis during fiscal year 2001. Excluding these items, our gross margin for the first quarter of fiscal 2002 was approximately \$67.0 million, or 29% of net revenues.

Research and Development

(in millions)	Three months ended December 31,		
	2001	Change	2000
Research and development	\$ 111.6	(6)%	\$ 118.5
Percent of net revenues	49%		29%

Our research and development (R&D) expenses consist principally of direct personnel costs, costs for pre-production evaluation and testing of new devices and design and test tool costs. Our R&D expenses also include the costs for advanced semiconductor process development, design automation and advanced package development for the benefit of each of our businesses. The decrease in R&D expenses for the first quarter of fiscal 2002 compared to the similar period of fiscal 2001 primarily reflects lower headcount and personnel-related costs resulting from the expense reduction and restructuring actions initiated during fiscal 2001.

Selling, General and Administrative

(in millions)	Three months ended December 31,		
	2001	Change	2000
Selling, general and administrative	\$55.7	(31)%	\$80.4
Percent of net revenues	24%		20%

Edgar Filing: CONEXANT SYSTEMS INC - Form 10-Q

Our selling, general and administrative (SG&A) expenses include personnel costs, sales representative commissions, advertising and other marketing costs. Our SG&A expenses also include costs of corporate functions including legal, accounting, treasury, human resources, real estate, information systems, customer service, sales, marketing, field application engineering and other services. The decrease in SG&A expenses for the first quarter of fiscal 2002 compared to the first quarter of fiscal 2001 primarily reflects lower headcount and personnel-related costs resulting from the expense reduction and restructuring actions initiated during fiscal 2001 and lower provisions for uncollectible accounts receivable.

Table of Contents**Amortization of Intangible Assets**

(in millions)	Three months ended December 31,		
	2001	Change	2000
Amortization of intangible assets	\$ 89.6	9%	\$ 82.3

The higher amortization expense in the fiscal 2002 first quarter primarily resulted from the additional consideration paid during fiscal 2001 in connection with certain of our fiscal 2000 business acquisitions. The value of the additional consideration paid was added to the recorded amounts of goodwill, and is amortized over the remainder of the original estimated lives of the goodwill.

Under the recently-issued Statement of Financial Accounting Standards No. 142, which we will adopt in the first quarter of fiscal 2003, we will cease amortizing goodwill against our results of operations, reducing annual amortization expense by approximately \$285 million. However, we will be required to evaluate goodwill at least annually for impairment, and to write down the value of goodwill with a charge against our results of operations when the recorded value of goodwill exceeds its estimated fair value.

Special Charges

Special charges for the first quarter of fiscal 2002 consist of a restructuring charge of \$1.0 million principally relating to an additional workforce reduction. The charge was based on the estimated cost of severance benefits for approximately 100 affected employees at our El Paso, Texas board-level sub-assembly business.

Activity and liability balances related to our restructuring actions through December 31, 2001 are as follows:

(in thousands)	Workforce reductions	Facility and other	Total
Restructuring balance, September 30, 2001	\$ 6,095	\$ 5,361	\$ 11,456
Charged to costs and expenses	828	172	1,000
Cash payments	(2,773)	(436)	(3,209)
Restructuring balance, December 31, 2001	\$ 4,150	\$ 5,097	\$ 9,247

We expect to pay a majority of the amounts accrued for these actions within one year. Cash payments to complete the restructuring actions will be funded from available cash reserves and funds from operations, and are not expected to significantly impact our liquidity.

Special charges for the first quarter of fiscal 2001 consist of \$7.9 million of costs related to the previously announced separation of our Personal Networking and Mindspeed Technologies businesses into two independent companies.

Debt Conversion Costs

In the first quarter of fiscal 2001, approximately \$255.1 million principal amount of our 4-1/4% Convertible Subordinated Notes due 2006 were converted into approximately 11.0 million shares of our common stock, at a cost of \$42.6 million.

Other Expense, Net

(in millions)	Three months ended December 31,		
	2001	Change	2000

Edgar Filing: CONEXANT SYSTEMS INC - Form 10-Q

Other expense, net	\$ (9.1)	nm	\$ (4.4)
--------------------	----------	----	----------

Other expense, net for the first quarter of fiscal 2002 is comprised primarily of a \$5.7 million write-off of certain non-marketable investments, which we determined to be permanently impaired, and interest expense on our convertible subordinated notes, partially offset by interest income on invested cash balances and gains on sales of assets.

Other expense, net for the first quarter of fiscal 2001 is comprised primarily of a \$5.0 million write-off of certain non-marketable investments, which we determined to be permanently impaired, and net interest expense.

Table of Contents**Provision (Benefit) for Income Taxes**

As a result of our recent operating losses and our expectation of future operating results, we determined that it is more likely than not that the additional income tax benefits which arose during the first quarter of fiscal 2002 will not be realized. Consequently, we have not recognized any income tax benefits relating to our operating loss for the quarter. Our provision for income taxes for the first quarter of fiscal 2002 consists of foreign income taxes incurred by certain of our subsidiaries. For the first quarter of fiscal 2001, we recorded an income tax benefit of \$15.5 million (7% of pretax loss), which reflects our net loss and the impact of non-deductible debt conversion costs and amortization of intangible assets.

We do not expect to recognize any income tax benefits relating to future operating losses until we believe that such benefits are more likely than not to be realized. Consequently, we expect our effective income tax rate will be approximately 0% for fiscal 2002.

Extraordinary Item

During the first quarter of fiscal 2001, we purchased \$35.0 million principal amount of our 4% Convertible Subordinated Notes due 2007 at prevailing market prices, resulting in a gain of \$11.7 million. Such gain has been presented in the accompanying statement of operations as an extraordinary item, net of incomes taxes of \$4.4 million.

Pro Forma Earnings

Pro forma operating income (loss), pro forma income (loss) before extraordinary item, and pro forma income (loss) per share before extraordinary item exclude the amortization of intangible assets, special charges, stock compensation and certain non-operating gains and losses. We believe these measures of earnings provide a better understanding of our underlying operating results and we use these measures internally to evaluate our underlying operating performance. These measures of earnings are not in accordance with, or an alternative for, generally accepted accounting principles and may be different from pro forma measures used by other companies. Pro forma income (loss) before extraordinary item and pro forma income (loss) per share before extraordinary item are calculated as follows:

(in thousands, except per share data)	Three months ended December 31,	
	2001	2000
Loss before extraordinary item	\$(204,490)	\$(206,860)
Amortization of intangible assets	89,607	82,304
Special charges	1,000	7,927
Stock compensation	2,327	2,487
Equity in losses of equity method investees	749	
Gains on sales of assets	(2,537)	
Write-down of investments	5,675	5,000
Debt conversion costs		42,584
Income taxes		9,141
Pro forma loss before extraordinary item	\$(107,669)	\$ (57,417)
Pro forma loss per share before extraordinary item, basic and diluted	\$ (0.42)	\$ (0.24)
Shares used in per share computation	254,362	236,119

Special charges excluded from our pro forma results consist of restructuring charges and separation costs incurred in connection with the proposed separation of our Personal Networking and Mindspeed Technologies businesses. Pro forma results also exclude stock compensation costs, representing the amortization of the value of certain stock options we assumed in connection with business acquisitions and the incremental cost that results from the use of variable, rather than fixed, accounting for a stock-based incentive compensation plan. Under variable accounting, the amount of compensation expense we recognize for awards under the plan will fluctuate over time based upon changes in the value of our common stock. Non-operating gains and losses excluded from pro forma results consist of our equity in the losses of investments accounted for under the equity method, gains on sales of assets, the write-down of certain non-marketable investments and debt conversion costs. For the first quarter of fiscal 2001, the pro forma results reflect an income tax benefit based upon a 30% effective tax rate.

Table of Contents

Liquidity and Capital Resources

Our cash and cash equivalents decreased by \$52.6 million during the first quarter of fiscal 2002. Cash used in operating activities was \$68.1 million for the first quarter of fiscal 2002, compared to cash used in operating activities of \$73.8 million for the comparable period in fiscal 2001. Operating cash flows reflect our net loss of \$204.5 million offset by noncash charges (depreciation and amortization and other) of \$131.4 million, and a net decrease in the non-cash components of working capital of \$5.0 million. Before the effect of the working capital changes, cash used in operations was \$73.1 million for the first quarter of fiscal 2002, compared to cash provided by operations of \$14.8 million for the comparable period in fiscal 2001.

The fiscal 2002 working capital decreases include a \$13.4 million decrease in accounts receivable, principally due to our aggressive accounts receivable collection efforts, and a \$12.6 million increase in accounts payable. These working capital changes were offset by a \$4.8 million increase in inventories, a \$15.8 million decrease in accrued expenses and other current liabilities and other working capital changes.

Cash provided by investing activities of \$10.6 million for the first quarter of fiscal 2002 principally consists of proceeds from the sale of assets of \$20.8 million. Capital expenditures were limited to \$8.1 million as a part of our cost reduction initiatives. Other investing activities included equity investments of \$3.0 million and net sales of marketable securities totaling \$0.9 million. Cash used in investing activities during the fiscal 2001 first quarter consisted of net purchases of marketable securities of \$253.4 million, capital expenditures of \$65.7 million, and payments for investments in and advances to businesses totaling \$86.1 million.

Cash provided by financing activities of \$4.9 million during the first quarter of fiscal 2002 consisted of proceeds from the exercise of stock options. In the first quarter of fiscal 2001, cash used in financing activities consisted of \$65.0 million paid in connection with the conversion and repurchase of a portion of our convertible subordinated notes, offset by \$5.5 million in proceeds from the exercise of stock options.

Our principal sources of liquidity are our existing cash reserves and available-for-sale marketable securities and cash generated from operations. In addition, we expect the repayment of a refundable deposit, currently held by a vendor, will provide us an additional \$150 million of liquidity in the middle of calendar 2002. Combined cash and cash equivalents and marketable securities at December 31, 2001 totaled \$286.1 million compared to \$338.9 million at September 30, 2001. Our working capital at December 31, 2001 was \$520.1 million compared to \$442.4 million at September 30, 2001. The overall working capital increase principally reflects the reclassification of the refundable deposit to current assets, offset by cash used in operations and cash payments for capital expenditures and investments.

Upon completion of the Merger, Alpha will purchase our semiconductor assembly and test facility, located in Mexicali, Mexico, and certain related operations, for \$150 million. We cannot assure you that this transaction will be completed.

While the dramatic changes in end-user demand from the levels we experienced in fiscal 2000 and the continued high levels of channel inventories have reduced visibility into future demand, we expect that these and other factors will continue to affect our revenues in fiscal 2002. We also believe that ongoing underutilization of our manufacturing capacity will adversely affect our gross margin and operating profit. Consequently, we anticipate that we will continue to experience negative cash flows from operations in the near term. During fiscal 2001 and 2002, we implemented a number of expense reduction initiatives, including workforce reductions, temporary shutdowns of our manufacturing facilities, the consolidation of certain facilities and salary reductions of 10% for senior management. We have also reduced our planned capital expenditures based upon our current revenue outlook.

We believe that our existing sources of liquidity, together with anticipated cash flows from the return of a refundable deposit and cash expected to be generated from operations will be sufficient to fund our operations, research and development efforts and anticipated capital expenditures for at least the next twelve months. Although reduced capital expenditures are a key component of our realigned manufacturing and procurement strategy, we will need to continue a focused program of capital expenditures to sustain our current manufacturing capabilities during the transition to a fabless complementary metal-oxide semiconductor (CMOS) business model and to support our continuing specialty-process wafer manufacturing. We may also consider acquisition opportunities to extend our

Table of Contents

technology portfolio and design expertise and to expand our product offerings. In order to fund renewed capital expenditures, increase our working capital or complete any acquisitions, we may seek to obtain additional debt financing or issue additional shares of our common stock. However, we cannot assure you that such financing will be available to us on favorable terms, or at all.

Recent Accounting Standards

See Note 1 of Notes to Consolidated Condensed Financial Statements.

Certain Business Risks

Our business, financial condition and operating results can be impacted by a number of factors including, but not limited to, those set forth below, any one of which could cause our actual results to vary materially from recent results or from our anticipated future results.

You should carefully consider and evaluate all of the information in this Quarterly Report, including the risk factors listed below. Any of these risks could materially and adversely affect our business, financial condition and results of operations, which in turn could materially and adversely affect the price of our common stock or other securities.

We have recently incurred substantial operating losses and we anticipate additional future losses.

Our net revenues for the first quarter of fiscal 2002 were \$229.5 million compared to \$410.4 million for first quarter of fiscal 2001 due to sharply reduced end-customer demand in many of the communications electronics end-markets which our products address. We incurred a net loss of \$204.5 million in the first quarter of fiscal 2002 and a net loss of \$1.4 billion for fiscal 2001.

During fiscal 2001 and continuing into fiscal 2002, we implemented a number of expense reduction and restructuring initiatives to more closely align our cost structure with the current business environment. The cost reduction initiatives include a worldwide workforce reduction, temporary shutdowns of our manufacturing facilities, significant reductions in capital spending, the consolidation of certain facilities and salary reductions for our senior management team until we return to profitability. However, these expense reduction initiatives alone will not return us to profitability. We expect that reduced end-customer demand, underutilization of our manufacturing capacity, changes in our revenue mix and other factors will continue to adversely affect our operating results in the near term and we anticipate incurring additional losses in fiscal 2002. In order to return to profitability, we must achieve substantial revenue growth and we currently face an environment of uncertain demand in the markets our products address. We cannot assure you as to whether or when we will return to profitability or whether we will be able to sustain such profitability, if achieved.

We operate in the highly cyclical semiconductor industry, which is subject to significant downturns.

The semiconductor industry is highly cyclical and is characterized by constant and rapid technological change, rapid product obsolescence and price erosion, evolving technical standards, short product life cycles and wide fluctuations in product supply and demand. From time to time these and other factors, together with changes in general economic conditions, cause significant upturns and downturns in the industry, and in our business in particular. Periods of industry downturns as we experienced in fiscal 2001 and continue to experience have been characterized by diminished product demand, production overcapacity, high inventory levels and accelerated erosion of average selling prices. These factors cause substantial fluctuations in our revenues and our results of operations. We have experienced these cyclical fluctuations in our business in the past and may experience cyclical fluctuations in the future.

During the late 1990 s and extending into 2000, the semiconductor industry in general, and communications applications in particular, enjoyed unprecedented growth, benefiting from the rapid expansion of the Internet and other communication services worldwide. During fiscal 2001 and 2002, we like many of our customers and competitors have been adversely impacted by a global economic slowdown and an abrupt decline in demand for many of the end-user products that incorporate our communications semiconductor products and system solutions. The impact of weakened end-customer demand has been compounded by higher-than-normal levels of equipment

Table of Contents

and component inventories among our OEM, subcontractor and distributor customers. As a result of this sharply reduced demand across our product portfolio, we recorded \$245.1 million of inventory write-downs in fiscal 2001. We expect that reduced end-customer demand, underutilization of our manufacturing capacity, changes in our revenue mix and other factors will continue to adversely affect our operating results in the near term.

In addition, an environment of weak end-customer demand and high levels of channel inventories has, in some cases, led to delays in payments for our products. During fiscal 2001, we recorded \$22.6 million of additional provisions for uncollectible accounts receivable from slow-paying customers. In the event that our customers delay payments to us, or are unable to pay amounts owed to us, we may incur additional losses on our accounts receivable.

Demand for our products in each of the communications electronics end-markets which we address is subject to a unique set of factors, and a downturn in demand affecting one market may be more pronounced, or last longer, than a downturn affecting another of our markets. In particular, we expect that demand for the products sold by our Mindspeed Technologies business, which are incorporated into telecommunications and data communications infrastructure equipment, may recover more slowly than demand for products offered by our Personal Networking business, which are ultimately sold to individual consumers in products such as PCs and digital cellular handsets.

We are subject to intense competition.

The semiconductor industry in general and the markets in which we compete in particular are intensely competitive. We compete worldwide with a number of United States and international semiconductor manufacturers that are both larger and smaller than us in terms of resources and market share. We currently face significant competition in our markets and expect that intense price and product competition will continue. This competition has resulted and is expected to continue to result in declining average selling prices for our products. We also anticipate that additional competitors will enter our markets as a result of growth opportunities in communications electronics, the trend toward global expansion by foreign and domestic competitors, technological and public policy changes and relatively low barriers to entry in certain markets of the industry. Moreover, as with many companies in the semiconductor industry, customers for certain of our products offer other products that compete with similar products offered by us.

We believe that the principal competitive factors for semiconductor suppliers in our market are:

- time-to-market;
- product performance;
- level of integration;
- price and total system cost;
- compliance with industry standards;
- design and engineering capabilities;
- strategic relationships with customers;
- customer support;
- new product innovation; and
- quality.

The specific bases on which we compete vary by market. We cannot assure you that we will be able to successfully address these factors.

Many of our current and potential competitors have certain advantages over us, including:

- longer presence in key markets;
- greater name recognition;

Table of Contents

access to larger customer bases; and

significantly greater financial, sales and marketing, manufacturing, distribution, technical and other resources.

As a result, these competitors may be able to adapt more quickly to new or emerging technologies and changes in customer requirements or may be able to devote greater resources to the development, promotion and sale of their products than we can.

Current and potential competitors also have established or may establish financial or strategic relationships among themselves or with our existing or potential customers, resellers or other third parties. These relationships may affect customers' purchasing decisions. Accordingly, it is possible that new competitors or alliances among competitors could emerge and rapidly acquire significant market share. We cannot assure you that we will be able to compete successfully against current and potential competitors.

A number of our competitors have combined with each other and consolidated their businesses, including the consolidation of competitors with our customers. This is attributable to a number of factors, including the historically high-growth nature of the communications electronics industry and the time-to-market pressures on suppliers to decrease the time required for product conception, research and development, sampling and production launch before a product reaches the market. This consolidation trend is expected to continue, since investments, alliances and acquisitions may enable semiconductor suppliers, including us and our competitors, to augment technical capabilities or to achieve faster time-to-market for their products than would be possible solely through internal development.

Consolidation by industry participants is creating entities with increased market share, customer base, technology and marketing expertise in markets in which we compete. These developments may significantly and adversely affect our current markets, the markets we are seeking to serve and our ability to compete successfully in those markets.

Our success is dependent upon our ability to timely develop new products and reduce costs.

Our operating results will depend largely on our ability to continue to introduce new and enhanced semiconductor products on a timely basis. Successful product development and introduction depends on numerous factors, including, among others:

our ability to anticipate customer and market requirements and changes in technology and industry standards;

our ability to accurately define new products;

our ability to timely complete development of new products and bring our products to market on a timely basis;

our ability to differentiate our products from offerings of our competitors; and

overall market acceptance of our products.

We cannot assure you that we will have sufficient resources to make the substantial investment in research and development in order to develop and bring to market new and enhanced products. Furthermore, we are required to continually evaluate expenditures for planned product development and to choose among alternative technologies based on our expectations of future market growth. We cannot assure you that we will be able to develop and introduce new or enhanced products in a timely and cost-effective manner, that our products will satisfy customer requirements or achieve market acceptance, or that we will be able to anticipate new industry standards and technological changes. We also cannot assure you that we will be able to respond successfully to new product announcements and introductions by competitors.

In addition, prices of established products may decline, sometimes significantly, over time. We believe that in order to remain competitive we must continue to reduce the cost of producing and delivering existing products at the same

Table of Contents

time that we develop and introduce new or enhanced products. We cannot assure you that we will be able to continue to reduce the cost of our products to remain competitive.

We may not be able to keep abreast of the rapid technological changes in our markets.

The demand for our products can change quickly and in ways we may not anticipate because our markets generally exhibit the following characteristics:

rapid technological developments;

evolving industry standards;

changes in customer requirements;

frequent new product introductions and enhancements; and

short product life cycles with declining prices over the life cycle of the product.

Our products could become obsolete sooner than anticipated because of a faster than anticipated change in one or more of the technologies related to our products or in market demand for products based on a particular technology, particularly due to the introduction of new technology that represents a substantial advance over current technology. Currently accepted industry standards are also subject to change, which may contribute to the obsolescence of our products.

We may not be able to attract and retain qualified personnel necessary for the design, development, manufacture and sale of our products. Our success could be negatively affected if key personnel leave.

Our future success depends on our ability to continue to attract, retain and motivate qualified personnel, including executive officers and other key management and technical personnel. As the source of our technological and product innovations, our key technical personnel represent a significant asset. The competition for such personnel is intense in the semiconductor industry. We cannot assure you that we will be able to continue to attract and retain qualified management and other personnel necessary for the design, development, manufacture and sale of our products.

We may have particular difficulty attracting and retaining key personnel during periods of poor operating performance, given, among other things, the significant use of equity-based compensation by our competitors and us. The loss of the services of one or more of our key employees, including Dwight W. Decker, our Chairman and Chief Executive Officer, or certain key design and technical personnel, or our inability to attract, retain and motivate qualified personnel could have a material adverse effect on our ability to operate our business.

If OEMs of communications electronics products do not design our products into their equipment, we will be unable to sell those products. Moreover, a design win from a customer does not guarantee future sales to that customer.

Our products are not sold directly to the end-user but are components of other products. As a result, we rely on OEMs of communications electronics products to select our products from among alternative offerings to be designed into their equipment. Without these design wins from OEMs, we would be unable to sell our products. Once an OEM designs another supplier's semiconductors into its products, it will be more difficult for us to achieve future design wins with that OEM's product platform because changing suppliers involves significant cost, time, effort and risk. Achieving a design win with a customer does not ensure that we will receive significant revenues from that customer. Even after a design win, the customer is not obligated to purchase our products and can choose at any time to stop using our products, for example, if its own products are not commercially successful or for any other reason. We may be unable to achieve design wins or to convert design wins into actual sales.

Table of Contents

Because of the lengthy sales cycles of many of our products, we may incur significant expenses before we generate any revenues related to those products.

Our customers may need six months or longer to test and evaluate our products and an additional six months or more to begin volume production of equipment that incorporates our products. The lengthy period of time required also increases the possibility that a customer may decide to cancel or change product plans, which could reduce or eliminate sales to that customer. As a result of this lengthy sales cycle, we may incur significant research and development, and selling, general and administrative expenses before we generate the related revenues for these products, and we may never generate the anticipated revenues if our customer cancels or changes its product plans.

Uncertainties involving the ordering and shipment of our products could adversely affect our business.

Our sales are typically made pursuant to individual purchase orders and we generally do not have long-term supply arrangements with our customers. Generally, our customers may cancel orders until 30 days prior to shipment. In addition, we sell a portion of our products through distributors, some of whom have rights to return unsold products to us. Sales to distributors accounted for approximately 22% and 16% of our net revenues for fiscal 2001 and the first quarter of fiscal 2002, respectively. We routinely purchase and manufacture inventory based on estimates of customer demand for their products, which is difficult to predict. This difficulty may be compounded when we sell to OEMs indirectly through distributors or contract manufacturers, or both, as our forecasts of demand are then based on estimates provided by multiple parties. In addition, our customers may change their inventory practices on short notice for any reason. The cancellation or deferral of product orders, the return of previously sold products or overproduction due to the failure of anticipated orders to materialize could result in our holding excess or obsolete inventory, which could result in write-downs of inventory.

During fiscal 2001, the communications electronics markets which we address were characterized by dramatic decreases in end-user demand and continued high levels of channel inventories which reduced visibility into future demand for our products. We expect that these and other factors will continue to affect our revenues in the near term. As a result of sharply reduced demand across our product portfolio, we recorded \$245.1 million of inventory write-downs in fiscal 2001.

Our manufacturing processes are extremely complex and specialized.

Our manufacturing operations are complex and subject to disruption due to causes beyond our control. The fabrication of integrated circuits is an extremely complex and precise process consisting of hundreds of separate steps. It requires production in a highly controlled, clean environment. Minute impurities, errors in any step of the fabrication process, defects in the masks used to print circuits on a wafer or a number of other factors can cause a substantial percentage of wafers to be rejected or numerous die on each wafer not to function.

Our operations may be affected by lengthy or recurring disruptions of operations at any of our production facilities or those of our subcontractors. These disruptions may include labor strikes, work stoppages, electrical power outages, fire, earthquake, flooding or other natural disasters. Certain of our manufacturing facilities are located near major earthquake fault lines, including our California and Mexico facilities. We maintain no earthquake insurance coverage on these facilities. Disruptions of our manufacturing operations could cause significant delays in shipments until we could shift the products from an affected facility or subcontractor to another facility or subcontractor.

In the event of these types of delays, we cannot assure you that the required alternate capacity, particularly wafer production capacity, would be available on a timely basis or at all. Even if alternate wafer production capacity is available, we may not be able to obtain it on favorable terms, which could result in a loss of customers. We may be unable to obtain sufficient manufacturing capacity to meet demand, either at our own facilities or through foundry or similar arrangements with others.

In fiscal 2001, we decided to realign our manufacturing and procurement strategies, accelerating our transition from volume digital CMOS manufacturing to a fabless CMOS business model. Over time, it is expected that the majority of our requirements for CMOS wafers, previously manufactured internally, will be sourced from third-party foundries. Specialty-process wafer manufacturing, such as Bipolar CMOS (BiCMOS), RF BiCMOS and silicon germanium processes, will remain an important component of our strategy. Under a fabless CMOS business model,

Table of Contents

our long-term revenue growth will be dependent on our ability to obtain sufficient external manufacturing capacity, including wafer production capacity. During times when the semiconductor industry is experiencing a shortage of wafer fabrication capacity, we may experience delays in shipments or increased manufacturing costs. To facilitate our transition to a fabless CMOS business model, we have entered into long-term supply arrangements with major foundry partners to obtain additional external CMOS wafer manufacturing capacity. We cannot assure you that we will have access to sufficient external CMOS wafer manufacturing capacity on favorable terms, or at all.

Due to the highly specialized nature of the gallium arsenide semiconductor manufacturing process, in the event of a disruption at our Newbury Park, California wafer fabrication facility, alternate gallium arsenide production capacity would not be readily available from third-party sources. Although we have a multi-year agreement with a foundry that guarantees us access to additional gallium arsenide wafer production capacity, a disruption of operations at our Newbury Park wafer fabrication facility or the interruption in the supply of epitaxial wafers used in our gallium arsenide process could have a material adverse effect on our business, financial condition and results of operations, particularly with respect to our wireless communications products.

Other wafer manufacturing processes we use, including the silicon germanium process, are also highly specialized. In the event of a disruption at our Newport Beach, California wafer fabrication facility, we may be required to seek alternate production capacity from third-party sources. These processes are available from a limited number of third-party sources, including a foundry partner to whom we recently licensed our silicon germanium process technology. We cannot assure you that we would be able to obtain adequate external wafer manufacturing capacity on favorable terms, or at all.

We may not be able to achieve manufacturing yields that contribute positively to our gross margin and profitability.

Our operating results are highly dependent upon our ability to produce integrated circuits at acceptable manufacturing yields. Minor deviations in the manufacturing process can cause substantial manufacturing yield loss, and in some cases, cause production to be suspended. Manufacturing yields for new products initially tend to be lower as we complete product development and commence volume manufacturing, and will typically increase as we ramp to full production. Our forward product pricing includes this assumption of improving manufacturing yields and, as a result, material variances between projected and actual manufacturing yields have a direct effect on our gross margin and profitability. The difficulty of forecasting manufacturing yields accurately and maintaining cost competitiveness through improving manufacturing yields will continue to be magnified by the ever-increasing process complexity of manufacturing semiconductor products. Our manufacturing operations also face pressures arising from the compression of product life cycles which requires us to bring new products on line faster and for shorter periods while maintaining acceptable manufacturing yields and quality without, in many cases, reaching the longer-term, high-volume manufacturing conducive to higher manufacturing yields and declining costs.

Under our realigned manufacturing strategy, we will be increasingly dependent upon third parties for the manufacture, assembly and test of our products.

As we transition to a fabless CMOS business model, we will obtain an increasing portion of our CMOS wafer requirements from outside wafer fabrication facilities, known as foundries. To a lesser extent, we also rely upon third-party foundries to supplement our specialty-process wafer manufacturing capacity. There are significant risks associated with our reliance on third-party foundries, including:

the lack of ensured wafer supply, potential wafer shortages and higher wafer prices;

limited control over delivery schedules, manufacturing yields, production costs and product quality; and

the unavailability of, or delays in obtaining, access to key process technologies.

Although we have entered into long-term supply arrangements with major foundry partners to obtain additional external CMOS wafer manufacturing capacity, these and other third-party foundries we use may allocate their limited capacity to the production requirements of other customers that are larger and better financed than we. If we choose to use a new foundry, it typically takes several months to complete the qualification process before we can begin shipping products from the new foundry. The foundries we use may experience financial difficulties or suffer

Table of Contents

damage or destruction to their facilities, particularly since many of them are located in earthquake zones. If these events or any other disruption of wafer fabrication capacity occur, we may not have a second manufacturing source immediately available. We may therefore experience difficulties or delays in securing an adequate supply of our products, which could impair our ability to meet our customers' needs and have a material adverse effect on our operating results.

In addition, the highly complex and technologically demanding nature of semiconductor manufacturing has caused foundries to experience from time to time lower than anticipated manufacturing yields, particularly in connection with the introduction of new products and the installation and start-up of new process technologies. Lower than anticipated manufacturing yields may affect our ability to fulfill our customers' demands for our products on a timely and cost-effective basis.

Currently, third-party subcontractors also assemble and test a substantial portion of our products. Moreover, upon completion of the Wireless Spin-off and the Merger, including Alpha's purchase of our Mexicali, Mexico facility, we will no longer have internal assembly and test facilities and it will be necessary for us to obtain substantially all assembly and test services from third-party subcontractors, including Alpha. Because we rely on others to assemble and test our products, we are subject to many of the same risks as are described above with respect to independent wafer fabrication facilities.

We are dependent upon third parties for the supply of raw materials and components.

We believe we have adequate sources for the supply of raw materials and components for our manufacturing needs with suppliers located around the world. Although we currently purchase wafers used in the production of our CMOS products from one major supplier, such wafers are available from several other suppliers. We are currently dependent on two suppliers for epitaxial wafers used in the gallium arsenide semiconductor manufacturing processes at our Newbury Park, California facility. The number of qualified alternative suppliers for wafers is limited and the process of qualifying a new wafer supplier could require a substantial lead-time. Although we historically have not experienced any significant difficulties in obtaining an adequate supply of raw materials and components necessary for our manufacturing operations, we cannot assure you that we may not lose a significant supplier or that a supplier may be unable to meet performance and quality specifications or delivery schedules.

Our success depends, in part, on our ability to effect suitable investments, alliances and acquisitions; we may have difficulty integrating companies we acquire.

Although we invest significant resources in research and development activities, the complexity and rapidity of technological changes make it impractical for us to pursue development of all technological solutions on our own. On an ongoing basis, we review investment, alliance and acquisition prospects that would complement our existing product offerings, augment our market coverage or enhance our technological capabilities. However, we cannot assure you that we will be able to identify and consummate suitable investment, alliance or acquisition transactions in the future.

Moreover, if we consummate such transactions, they could result in:

issuances of equity securities dilutive to our existing shareholders;

large one-time write-offs;

the incurrence of substantial debt and assumption of unknown liabilities;

the potential loss of key employees from the acquired company;

amortization expenses related to intangible assets; and

the diversion of management's attention from other business concerns.

Additionally, in periods subsequent to an acquisition, we must evaluate goodwill and acquisition-related intangible assets for impairment. When such assets are found to be impaired, they will be written down to estimated fair value, with a charge against earnings.

Table of Contents

Integrating acquired organizations and their products and services may be expensive, time-consuming and a strain on our resources and our relationships with employees and customers, and ultimately may not be successful.

We face a risk that capital needed for our business will not be available when we need it.

We believe that our existing sources of liquidity, together with anticipated cash flows from the return of a refundable deposit and cash expected to be generated from operations will be sufficient to fund our research and development, capital expenditure, working capital and other financing requirements for at least the next twelve months. However, we cannot assure you that this will be the case and we may need to obtain alternate sources of financing in the future. We cannot assure you that we will have access to additional sources of capital on favorable terms or at all.

In addition, any strategic investments and acquisitions that we may make to help us grow our business may require additional capital resources. We cannot assure you that the capital required to fund these investments and acquisitions will be available in the future.

We are subject to the risks of doing business internationally.

For fiscal 2001 and the first quarter of fiscal 2002, approximately 71% and 88% of our net revenues, respectively, were from customers located outside the United States, primarily in the Asia-Pacific and European countries. In addition, we have facilities and suppliers located outside the United States, including our assembly and test facility in Mexicali, Mexico and third-party foundries located in the Asia-Pacific region. Our international sales and operations are subject to a number of risks inherent in selling and operating abroad. These include, but are not limited to, risks regarding:

currency exchange rate fluctuations;

local economic and political conditions;

disruptions of capital and trading markets;

restrictive governmental actions (such as restrictions on transfer of funds and trade protection measures, including export duties and quotas and customs duties and tariffs);

changes in legal or regulatory requirements;

limitations on the repatriation of funds;

difficulty in obtaining distribution and support;

the laws and policies of the United States and other countries affecting trade, foreign investment and loans, and import or export licensing requirements;

tax laws; and

limitations on our ability under local laws to protect our intellectual property.

Because most of our international sales, other than sales to Japan (which are denominated principally in Japanese yen), are currently denominated in U.S. dollars, our products could become less competitive in international markets if the value of the U.S. dollar increases relative to foreign currencies. Moreover, we may be competitively disadvantaged relative to our competitors located outside the United States who may benefit from a devaluation of their local currency. We cannot assure you that the factors described above will not have a material adverse effect on our ability to increase or maintain our foreign sales.

Our past operating performance has been impacted by adverse economic conditions in the Asia-Pacific region, which have increased the uncertainty with respect to the long-term viability of certain of our customers and suppliers in the region. Sales to customers in Japan and other countries in the Asia-Pacific region, principally Taiwan, South Korea and Hong Kong, represented approximately 56% and 79% of our net revenues in fiscal 2001 and the first quarter of fiscal 2002, respectively.

Table of Contents

We enter into foreign currency forward exchange contracts, principally for the Japanese yen, to minimize risk of loss from currency exchange rate fluctuations for foreign currency commitments entered into in the ordinary course of business. We have not entered into foreign currency forward exchange contracts for other purposes and our financial condition and results of operations could be affected (negatively or positively) by currency fluctuations.

Our operating results may be negatively affected by substantial quarterly and annual fluctuations and market downturns.

Our revenues, earnings and other operating results have fluctuated in the past and may fluctuate in the future. These fluctuations are due to a number of factors, many of which are beyond our control. These factors include, among others:

- changes in end-user demand for the products manufactured and sold by our customers;
- the effects of competitive pricing pressures, including decreases in average selling prices of our products;
- production capacity levels and fluctuations in manufacturing yields;
- availability and cost of products from our suppliers;
- the gain or loss of significant customers;
- our ability to develop, introduce and market new products and technologies on a timely basis;
- new product and technology introductions by competitors;
- changes in the mix of products produced and sold;
- market acceptance of our products and our customers' products;
- intellectual property disputes;
- seasonal customer demand;
- the timing of receipt, reduction or cancellation of significant orders by customers; and
- the timing and extent of product development costs.

The foregoing factors are difficult to forecast, and these, as well as other factors, could materially adversely affect our quarterly or annual operating results. If our operating results fail to meet the expectations of analysts or investors, it could materially and adversely affect the price of our common stock and other securities.

The value of our common stock may be adversely affected by market volatility.

The trading price of our common stock fluctuates significantly. Since our common stock began trading publicly, the reported sale price of our common stock on the Nasdaq National Market has been as high as \$132.50 and as low as \$6.57 per share. This price may be influenced by many factors, including:

- our performance and prospects;
- the depth and liquidity of the market for our common stock;
- investor perception of us and the industry in which we operate;
- changes in earnings estimates or buy/sell recommendations by analysts;
- general financial and other market conditions; and
- domestic and international economic conditions.

In addition, public stock markets have experienced, and are currently experiencing, extreme price and trading volume volatility, particularly in the technology sectors of the market. This volatility has significantly affected the market prices of securities of many technology companies for reasons frequently unrelated to or disproportionately impacted by the operating performance of these companies. These broad market

fluctuations may adversely affect the market price of our common stock.

Table of Contents

We may be subject to claims of infringement of third-party intellectual property rights or demands that we license third-party technology, which could result in significant expense and loss of our intellectual property rights.

The semiconductor industry is characterized by vigorous protection and pursuit of intellectual property rights. From time to time, third parties may assert patent, copyright, trademark and other intellectual property rights to technologies that are important to our business and may demand that we license their technology. Any litigation to determine the validity of claims that our products infringe or may infringe these rights, including claims arising through our contractual indemnification of our customers, regardless of their merit or resolution, could be costly and divert the efforts and attention of our management and technical personnel. We cannot assure you that we would prevail in litigation given the complex technical issues and inherent uncertainties in intellectual property litigation. If litigation results in an adverse ruling we could be required to:

pay substantial damages;

cease the manufacture, use or sale of infringing products;

discontinue the use of infringing technology;

expend significant resources to develop non-infringing technology; or

license technology from the third party claiming infringement, which license may not be available on commercially reasonable terms, or at all.

If we are not successful in protecting our intellectual property rights, it may harm our ability to compete.

We rely primarily on patent, copyright, trademark and trade secret laws, as well as nondisclosure and confidentiality agreements and other methods, to protect our proprietary technologies and processes. In addition, we often incorporate the intellectual property of our customers into our designs, and we have obligations with respect to the non-use and non-disclosure of their intellectual property. In the past, we have found it necessary to engage in litigation to enforce our intellectual property rights, to protect our trade secrets or to determine the validity and scope of proprietary rights of others, including our customers. We expect future litigation on similar grounds, which may require us to expend significant resources and to divert the efforts and attention of our management from our business operations. We cannot assure you that:

the steps we take to prevent misappropriation or infringement of our intellectual property or the intellectual property of our customers will be successful;

any existing or future patents will not be challenged, invalidated or circumvented; or

any of the measures described above would provide meaningful protection.

Despite these precautions, it may be possible for a third party to copy or otherwise obtain and use our technology without authorization, develop similar technology independently or design around our patents. If any of our patents fails to protect our technology it would make it easier for our competitors to offer similar products. In addition, effective patent, copyright, trademark and trade secret protection may be unavailable or limited in certain countries.

We may be liable for penalties under environmental laws, rules and regulations, which could adversely impact our business.

We use a variety of chemicals in our manufacturing operations and are subject to a wide range of environmental protection regulations in the United States and Mexico. While we have not experienced any material adverse effect on our operations as a result of such regulations, we cannot assure you that current or future regulations would not have a material adverse effect on our business, financial condition and results of operations.

In the United States, environmental regulations often require parties to fund remedial action regardless of fault. Consequently, it is often difficult to estimate the future impact of environmental matters, including potential liabilities. We cannot assure you that the amount of expense and capital expenditures that might be required to complete remedial actions and to continue to comply with applicable environmental laws will not have a material adverse effect on our business, financial condition and results of operations.

Table of Contents

In connection with our spin-off from Rockwell, we assumed all liabilities in respect of environmental matters related to our current and former operations. We have been designated as a potentially responsible party and are engaged in groundwater remediation at one Superfund site located at a former silicon wafer manufacturing facility and steel fabrication plant in Parker Ford, Pennsylvania formerly occupied by us. In addition, we are engaged in remediations of groundwater contamination at our Newport Beach and Newbury Park, California facilities. We currently estimate the remaining costs for these remediations to be approximately \$3.6 million and have accrued for these costs as of December 31, 2001.

Our management team is subject to a variety of demands for its attention.

Our management currently faces a variety of challenges, including the implementation of our strategic manufacturing realignment, the implementation of our expense reduction and restructuring initiatives, the Wireless Spin-off and the Merger, and the anticipated separation of the Personal Networking and Mindspeed Technologies businesses. While we believe that we have sufficient management resources to execute each of these initiatives, we cannot assure you that we will have these resources or that our initiatives will be successfully implemented.

Certain provisions in our organizational documents and rights agreement and Delaware law may make it difficult for someone to acquire control of us.

We have established certain anti-takeover measures that may affect our common stock and convertible notes. Our restated certificate of incorporation, our by-laws, our rights agreement with Mellon Investor Services LLC, as rights agent, dated as of November 30, 1998, as amended, and the Delaware General Corporation Law contain several provisions that would make more difficult an acquisition of control of us in a transaction not approved by our board of directors. Our restated certificate of incorporation and by-laws include provisions such as:

the division of our board of directors into three classes to be elected on a staggered basis, one class each year;

the ability of our board of directors to issue shares of our preferred stock in one or more series without further authorization of our shareowners;

a prohibition on shareowner action by written consent;

a requirement that shareowners provide advance notice of any shareowner nominations of directors or any proposal of new business to be considered at any meeting of shareowners;

a requirement that a supermajority vote be obtained to remove a director for cause or to amend or repeal certain provisions of our restated certificate of incorporation or by-laws;

elimination of the right of shareowners to call a special meeting of shareowners; and

a fair price provision.

We also have a rights agreement which gives our shareowners certain rights that would substantially increase the cost of acquiring us in a transaction not approved by our board of directors.

In addition to the rights agreement and the provisions in our restated certificate of incorporation and by-laws, Section 203 of the Delaware General Corporation Law generally provides that a corporation shall not engage in any business combination with any interested shareowner during the three-year period following the time that such shareowner becomes an interested shareowner, unless a majority of the directors then in office approves either the business combination or the transaction that results in the shareowner becoming an interested shareowner or specified shareowner approval requirements are met.

Table of Contents**ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK**

Our financial instruments include cash and cash equivalents, marketable securities and long-term debt. Our main investment objectives are the preservation of investment capital and the maximization of after-tax returns on our investment portfolio. Consequently, we invest with only high-credit-quality issuers and we limit the amount of our credit exposure to any one issuer. We do not use derivative instruments for speculative or investment purposes.

Our cash and cash equivalents are not subject to significant interest rate risk due to the short maturities of these instruments. As of December 31, 2001, the carrying value of our cash and cash equivalents approximates fair value.

Our marketable debt securities (consisting of commercial paper, corporate bonds and government securities) principally have remaining terms of two years or less. Consequently, such securities are not subject to significant interest rate risk. All of our marketable securities are classified as available for sale and, as of December 31, 2001, unrealized gains of \$1.0 million (net of related income taxes of \$0.7 million) on these securities are included in accumulated other comprehensive income.

Our long-term debt consists of convertible subordinated notes with interest at fixed rates. Consequently, we do not have significant cash flow exposure on our long-term debt. However, the fair value of our convertible subordinated notes is subject to significant fluctuation due to their convertibility into shares of our common stock.

The following table shows the fair values of our investments and long-term debt as of December 31, 2001:

(in millions)	<u>Carrying Value</u>	<u>Fair Value</u>
Cash and cash equivalents	\$ 129.7	\$ 129.7
Marketable debt securities	156.4	156.4
Long-term debt	709.8	483.5

We transact business in various foreign currencies, and we have established a foreign currency hedging program utilizing foreign currency forward exchange contracts to hedge certain foreign currency transaction exposures (principally the Japanese yen). Under this program, we seek to offset foreign currency transaction gains and losses with gains and losses on the forward contracts, so as to mitigate our overall risk of foreign transaction gains and losses. We do not enter into forward contracts for speculative or trading purposes.

At December 31, 2001, we held foreign currency forward exchange contracts (to sell Japanese yen at specified rates) having an aggregate notional amount of approximately 304 million yen, at a notional weighted-average exchange rate of approximately 125.9 yen to one dollar. The net unrealized gain/loss on the forward contracts outstanding at December 31, 2001 was not material to our consolidated financial statements.

Based on our overall currency rate exposure at December 31, 2001, a 10 percent change in currency rates would not have a significant effect on our consolidated financial position, results of operations or cash flows.

Table of Contents

PART II. OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

On May 30, 1997, Klaus Holtz filed suit against Rockwell in the U.S. District Court for the Northern District of California for patent infringement relating to our modem products utilizing the V.42bis standard for data compression. On September 30, 1998, the Court barred any alleged damages arising before May 30, 1997. On December 17, 1998, the Court issued an order construing the claims of the patent. We filed a motion for Summary Judgment of Non-Infringement on February 22, 1999. A hearing was held thereon on June 14, 1999. On October 25, 1999, the Court found in our favor and the case was dismissed. On July 10, 2000, the District Court granted our motion to declare the case an exceptional case under 35 U.S.C. 285, and awarded us \$250,000. Mr. Holtz filed a notice of appeal to the court of appeals for the Federal Circuit, challenging the District Court's findings on claim construction, non-infringement and laches. We began collection efforts on the approximately \$275,000 owed to us by Mr. Holtz as a result of the litigation so far. On August 22, 2000, Mr. Holtz filed for bankruptcy protection under Chapter 7 of the bankruptcy laws in the State of California. The Federal Circuit appeals were placed under the control of the trustee in bankruptcy, and were stayed pending resolution of the bankruptcy. We have reached an agreement with the bankruptcy trustee, wherein Mr. Holtz' appeals against us will be dismissed and we will receive a license under Mr. Holtz' patents. This agreement, which is being contested by Mr. Holtz, is subject to approval of the Bankruptcy Court.

Various other lawsuits, claims and proceedings have been or may be instituted or asserted against us or our subsidiaries, including those pertaining to product liability, intellectual property, environmental, safety and health, and employment matters. In connection with our spin-off from Rockwell, we assumed responsibility for all current and future litigation (including environmental and intellectual property proceedings) against Rockwell or its subsidiaries in respect of the operations of the semiconductor systems business of Rockwell.

The outcome of litigation cannot be predicted with certainty and some lawsuits, claims or proceedings may be disposed of unfavorably to us. Many intellectual property disputes have a risk of injunctive relief and there can be no assurance that a license will be granted. Injunctive relief could have a material adverse effect on our financial condition or results of operations. Based on our evaluation of matters which are pending or asserted and taking into account our reserves for such matters, we believe the disposition of such matters will not have a material adverse effect on our financial condition or results of operations.
