Dual Directional Buffered Jump Securities Based on the Performance of the S&P 500[®] Index due April 24, 2020

Fully and Unconditionally Guaranteed by Morgan Stanley

Principal at Risk Securities

The Dual Directional Buffered Jump Securities (the “securities”) are unsecured obligations of Morgan Stanley Finance LLC (“MSFL”) and are fully and unconditionally guaranteed by Morgan Stanley. The securities will pay no interest, provide for the minimum payment at maturity of only 15% of the stated principal amount at maturity and have the terms described in the accompanying product supplement for Jump Securities, index supplement and prospectus, as supplemented or modified by this document. At maturity, if the S&P 500[®] Index, which we refer to as the underlying index, **has appreciated or has not depreciated** in value, you will receive for each security that you hold at maturity the stated principal amount of \$1,000 plus the fixed upside payment of \$49 per security. If the underlying index has **depreciated** in value but by no more than 15%, you will receive the stated principal amount of your investment plus a positive return equal to the absolute value of the percentage decline, which will effectively be limited to a positive return of 15%. However, if the underlying index has **depreciated** by more than 15%, you will lose 1% of the stated principal amount for every 1% decline beyond the specified buffer amount. The securities are for investors who seek an equity index-based return and who are willing to risk their principal and forgo current income and returns above the upside payment in exchange for the upside payment, absolute return and buffer features that in each case apply to a limited range of performance of the underlying index. **You could lose up to 85% of the stated principal amount of the securities.** The securities are notes issued as part of MSFL’s Series A Global Medium-Term Notes program. The securities differ from the Jump Securities described in the accompanying product supplement for Jump Securities in that the securities offer the potential for a positive return at maturity if the underlying index depreciates by up to 15%.

All payments are subject to our credit risk. If we default on our obligations, you could lose some or all of your investment. These securities are not secured obligations and you will not have any security interest in, or otherwise have any access to, any underlying reference asset or assets.

FINAL TERMS

Issuer: Morgan Stanley Finance LLC

Guarantor: Morgan Stanley

Maturity date: April 24, 2020

Valuation date: April 21, 2020, subject to postponement for non-index business days and certain market disruption events

Underlying index: S&P 500® Index

Aggregate principal amount: \$5,017,000

- If the final index value is *greater than or equal to* the initial index value:
\$1,000 + the upside payment
- If the final index value is *less than* the initial index value but has decreased from the initial index value by an amount *less than or equal to* the buffer amount of 15%:
\$1,000 + (\$1,000 x absolute index return)

In this scenario, you will receive a 1% positive return on the securities for each 1% negative return on the underlying index. In no event will this amount exceed the stated principal amount plus \$150.

Payment at maturity:

- If the final index value is *less than* the initial index value and has decreased from the initial index value by an amount *greater than* the buffer amount of 15%:
\$1,000 + [\$1,000 x (index percent change + 15%)]

Because the index performance factor will be less than 85% in this scenario, the payment at maturity will be less, and potentially significantly less, than the stated principal amount of \$1,000, subject to the minimum payment at maturity of \$150 per security.

Upside payment: \$49 per security (4.90% of the stated principal amount)

Index percent change: (final index value – initial index value) / initial index value

Absolute index return: The absolute value of the index percent change. You will receive a positive return on

the securities based on the absolute value of the percentage decline in the underlying index if the final index value is less than the initial index value but has decreased from the initial index value by an amount less than or equal to the buffer amount of 15%.

Initial index value: 2,854.88, which is the index closing value on the pricing date

Final index value: The index closing value on the valuation date 15%. As a result of the buffer amount of 15%, the value at or above which the underlying index must close on the valuation date so that investors do not suffer a loss on their initial investment in the securities 2,426.648, which is 85% of the initial index value.

Buffer amount:

Stated principal amount / Issue price: \$1,000 per security

Minimum payment at maturity: \$150 per security (15% of the stated principal amount)

Pricing date: March 21, 2019

Original issue date: March 26, 2019 (3 business days after the pricing date)

CUSIP / ISIN: 61768D3R4 / US61768D3R41

Listing: The securities will not be listed on any securities exchange.

Agent: Morgan Stanley & Co. LLC (“MS & Co.”), an affiliate of MSFL and a wholly owned subsidiary of Morgan Stanley. See “Supplemental information regarding plan of distribution; conflicts of interest.”

Estimated value on the pricing date: \$992.00 per security. See “Investment Summary” on page 2.

	Agent’s		
Commissions and issue price:	Price to public	commissions	Proceeds to us⁽²⁾
	(1)		
Per security	\$1,000	\$2.50	\$997.50
Total	\$5,017,000	\$12,542.50	\$5,004,457.50

Selected dealers and their financial advisors will collectively receive from the agent, MS & Co., a fixed sales commission of \$2.50 for each security they sell. See “Supplemental information regarding plan of distribution; conflicts of interest.” For additional information, see “Plan of Distribution (Conflicts of Interest)” in the accompanying product supplement for Jump Securities.

(2) *See “Use of proceeds and hedging” on page 14.*

The securities involve risks not associated with an investment in ordinary debt securities. See “Risk Factors” beginning on page 6.

The Securities and Exchange Commission and state securities regulators have not approved or disapproved these securities, or determined if this document or the accompanying product supplement, index supplement and prospectus is truthful or complete. Any representation to the contrary is a criminal offense.

The securities are not deposits or savings accounts and are not insured by the Federal Deposit Insurance Corporation or any other governmental agency or instrumentality, nor are they obligations of, or guaranteed

by, a bank.

You should read this document together with the related product supplement, index supplement and prospectus, each of which can be accessed via the hyperlinks below. Please also see “Additional Terms of the Securities” and “Additional Information About the Securities” at the end of this document.

Morgan Stanley Finance LLC

Dual Directional Buffered Jump Securities Based on the Performance of the S&P 500® Index due April 24, 2020

Principal at Risk Securities

Investment Summary

Dual Directional Buffered Jump Securities

The Dual Directional Buffered Jump Securities Based on the Performance of the S&P 500® Index due April 24, 2020 (the “securities”) can be used:

§ As an alternative to direct exposure to the underlying index that provides a fixed positive return of 4.90% if the underlying index has appreciated or has not depreciated as of the valuation date.

§ To obtain a positive return equal to the absolute index return for a limited range of negative performance of the underlying index.

§ To obtain a buffer against a specified level of negative performance in the underlying index.

§ To potentially outperform the underlying index in a moderately bullish or moderately bearish scenario.

If the underlying index declines in value by more than the buffer amount of 15%, investors will receive an amount that is less than the stated principal amount by an amount that is proportionate to the percentage decrease beyond the buffer amount of 15%. **Accordingly, 85% of your principal is at risk (e.g., a 50% depreciation in the index will result in the payment at maturity of \$650 per security).**

Maturity:	Approximately 13 months
Upside payment:	\$49 per security (4.90% of the stated principal amount)
Minimum payment at maturity:	\$150 per security. You could lose up to 85% of the stated principal amount of the securities.
Buffer amount:	15% of the initial index value
Coupon:	None
Listing:	The securities will not be listed on any securities exchange

All payments on the securities are subject to our credit risk.

The original issue price of each security is \$1,000. This price includes costs associated with issuing, selling, structuring and hedging the securities, which are borne by you, and, consequently, the estimated value of the securities on the pricing date is less than \$1,000. We estimate that the value of each security on the pricing date is \$992.00.

What goes into the estimated value on the pricing date?

In valuing the securities on the pricing date, we take into account that the securities comprise both a debt component and a performance-based component linked to the underlying index. The estimated value of the securities is determined using our own pricing and valuation models, market inputs and assumptions relating to the underlying index, instruments based on the underlying index, volatility and other factors including current and expected interest rates, as well as an interest rate related to our secondary market credit spread, which is the implied interest rate at which our conventional fixed rate debt trades in the secondary market.

What determines the economic terms of the securities?

In determining the economic terms of the securities, including the upside payment, the buffer amount and the minimum payment at maturity, we use an internal funding rate, which is likely to be lower than our secondary market credit spreads and therefore advantageous to us. If the issuing, selling, structuring and hedging costs borne by you were lower or if the internal funding rate were higher, one or more of the economic terms of the securities would be more favorable to you.

What is the relationship between the estimated value on the pricing date and the secondary market price of the securities?

The price at which MS & Co. purchases the securities in the secondary market, absent changes in market conditions, including those related to the underlying index, may vary from, and be lower than, the estimated value on the pricing date, because the secondary market price takes into account our secondary market credit spread as well as the bid-offer spread that MS & Co. would charge in a secondary market transaction of this type and other factors. However, because the costs associated with issuing, selling, structuring and hedging the securities are not fully deducted upon issuance, for a period of up to 6 months following the issue date, to the extent that MS & Co. may buy or sell the securities in the secondary market, absent changes in market conditions, including those related to the underlying index, and to our secondary market credit spreads, it would do so based on values higher than the estimated value. We expect that those higher values will also be reflected in your brokerage account statements.

MS & Co. may, but is not obligated to, make a market in the securities, and, if it once chooses to make a market, may cease doing so at any time.

Morgan Stanley Finance LLC

Dual Directional Buffered Jump Securities Based on the Performance of the S&P 500® Index due April 24, 2020

Principal at Risk Securities

Key Investment Rationale

The securities offer the potential for a positive return at maturity equal to the absolute value of a limited range of the percentage change of the underlying index. At maturity, if the underlying index **has appreciated or has not depreciated** in value, investors will receive a fixed positive return of 4.90%. If the underlying index has **depreciated** in value but by no more than 15%, investors will receive the stated principal amount of their investment plus a positive return equal to the absolute value of the percentage decline, which will effectively be limited to a positive return of 15%. However, if the underlying index has **depreciated** by more than 15%, investors will lose 1% of the stated principal amount for every 1% decline beyond the specified buffer amount. **You could lose up to 85% of the stated principal amount of the securities.** All payments on the securities are subject to our credit risk.

Absolute Return Feature

The securities enable investors to obtain a positive return if the final index value is less than the initial index value **but** has decreased from the initial index value by an amount less than or equal to the buffer amount.

Upside Scenario if the Underlying Index Appreciates or Does Not Depreciate

The final index value is greater than or equal to the initial index value. In this case, you receive for each security that you hold \$1,000 *plus* the fixed upside payment of \$49 (4.90% of the stated principal amount).

Absolute Return Scenario

The final index value is less than the initial index value but has decreased from the initial index value by an amount less than or equal to the buffer amount, which is 85% of the initial index value. In this case, you receive a 1% positive return on the securities for each 1% negative return on the underlying index. For example, if the final index value is 5% less than the initial index value, the securities will provide a positive return of 5% at maturity. The maximum return you may receive in this scenario is a positive 15% return at maturity.

Downside Scenario

The underlying index declines in value by more than 15%, and at maturity, the securities redeem for less than the stated principal amount by an amount that is proportionate to the percentage decrease beyond the buffer amount of 15%, subject to the minimum payment at maturity of \$150 per security. For example, if the final index value is 25% less than the initial index value, the securities will be redeemed at maturity for \$900, or 90% of the stated principal amount. You could lose up to 85% of the stated principal amount of the securities.

How the Securities Work

Payoff Diagram

The payoff diagram below illustrates the payment at maturity on the securities based on the following terms:

Stated principal amount:	\$1,000 per security
Upside payment:	\$49 per security (4.90% of the stated principal amount)
Buffer amount:	15%
Minimum payment at maturity:	\$150 per security. You could lose up to 85% of the stated principal amount of the securities.

March 2019 Page 4

Morgan Stanley Finance LLC

Dual Directional Buffered Jump Securities Based on the Performance of the S&P 500® Index due April 24, 2020

Principal at Risk Securities

How it works

Upside Scenario if the Underlying Index Appreciates or Does Not Depreciate. Under the terms of the securities, § if the final index value is greater than or equal to the initial index value, the investor would receive the \$1,000 stated principal amount *plus* the fixed upside payment of \$49.

§ If the underlying index appreciates 2%, the investor would receive a 4.90% return, or \$1,049 per security.

§ If the underlying index appreciates 45%, the investor would receive only a 4.90% return, or \$1,049 per security.

Absolute Return Scenario. If the final index value is less than the initial index value and has decreased from the § initial index value by an amount less than or equal to the buffer amount of 15%, the investor would receive a 1% positive return on the securities for each 1% negative return on the underlying index.

§ If the underlying index depreciates 10%, the investor would receive a 10% return, or \$1,100 per security.

§ The maximum return you may receive in this scenario is a positive 15% return at maturity.

Downside Scenario. If the final index value is less than the initial index value and has decreased from the initial § index value by an amount greater than the buffer amount of 15%, the investor would receive an amount that is less than the stated principal amount by an amount that is proportionate to the percentage decrease beyond the buffer amount of 15%. However, under no circumstances will the payment at maturity will be less than \$150 per security.

§ If the underlying index depreciates 25%, the investor would lose 10% of the investor's principal and receive only § \$900 per security at maturity, or 90% of the stated principal amount.

March 2019 Page 5

Principal at Risk Securities

Risk Factors

The following is a non-exhaustive list of certain key risk factors for investors in the securities. For further discussion of these and other risks, you should read the section entitled “Risk Factors” in the accompanying product supplement for Jump Securities, index supplement and prospectus. We also urge you to consult your investment, legal, tax, accounting and other advisers in connection with your investment in the securities.

The securities do not pay interest and provide for the minimum payment at maturity of only 15% of your principal. The terms of the securities differ from those of ordinary debt securities in that the securities do not pay interest and will provide for the return of only 15% of the principal amount of the securities at maturity. If the final index value has declined by an amount greater than the buffer amount of 15% from the initial index value, the absolute return feature will no longer be available and the payout at maturity will be an amount in cash that is less than the stated principal amount of each security by an amount proportionate to the decline in the value of the underlying index below 85% of the initial index value. **You could lose up to 85% of the stated principal amount of the securities.**

The appreciation potential is fixed and limited. Where the final index value is greater than or equal to the initial index value, the appreciation potential of the securities is limited to the fixed upside payment of \$49 per security (4.90% of the stated principal amount), even if the final index value is significantly greater than the initial index value. Additionally, the maximum return you can achieve if the underlying index depreciates is limited by the 15% buffer. If the underlying index depreciates by more than 15%, you will lose money on your investment in the securities. See “How the Securities Work” on page 5 above.

The market price of the securities may be influenced by many unpredictable factors. Several factors, many of which are beyond our control, will influence the value of the securities in the secondary market and the price at which MS & Co. may be willing to purchase or sell the securities in the secondary market, including:

§ the value of the underlying index at any time,

§ the volatility (frequency and magnitude of changes in value) of the underlying index,

§ dividend rates on the securities underlying the underlying index,

§ interest and yield rates in the market,

geopolitical conditions and economic, financial, political, regulatory or judicial events that affect the component
§ stocks of the underlying index or securities markets generally and which may affect the value of the underlying
index,

§ the time remaining until the maturity of the securities,

§ the composition of the underlying index and changes in the constituent stocks of the underlying
index, and

§ any actual or anticipated changes in our credit ratings or credit spreads.

Some or all of these factors will influence the price you will receive if you sell your securities prior to maturity. For example, you may have to sell your securities at a substantial discount from the stated principal amount if at the time of sale the value of the underlying index is at or below the initial index value and especially if it has declined by an amount greater than the buffer amount.

You cannot predict the future performance of the underlying index based on its historical performance. If the final index value has declined by an amount greater than the buffer amount of 15% from the initial index value, you will receive for each security that you hold a payment at maturity that is less than the stated principal amount of each security by an amount proportionate to the decline in the value of the underlying index below 85% of the initial index value.

The securities are subject to our credit risk, and any actual or anticipated changes to our credit ratings or credit spreads may adversely affect the market value of the securities. You are dependent on our ability to pay
§ all amounts due on the securities at maturity and therefore you are subject to our credit risk. If we default on our obligations under the securities, your investment would be at risk and you could lose some or all of your

Morgan Stanley Finance LLC

Dual Directional Buffered Jump Securities Based on the Performance of the S&P 500® Index due April 24, 2020

Principal at Risk Securities

investment. As a result, the market value of the securities prior to maturity will be affected by changes in the market's view of our creditworthiness. Any actual or anticipated decline in our credit ratings or increase in the credit spreads charged by the market for taking our credit risk is likely to adversely affect the market value of the securities.

As a finance subsidiary, MSFL has no independent operations and will have no independent assets. As a finance subsidiary, MSFL has no independent operations beyond the issuance and administration of its securities and will have no independent assets available for distributions to holders of MSFL securities if they make claims in respect of such securities in a bankruptcy, resolution or similar proceeding. Accordingly, any recoveries by such holders will be limited to those available under the related guarantee by Morgan Stanley and that guarantee will rank § *pari passu* with all other unsecured, unsubordinated obligations of Morgan Stanley. Holders will have recourse only to a single claim against Morgan Stanley and its assets under the guarantee. Holders of securities issued by MSFL should accordingly assume that in any such proceedings they would not have any priority over and should be treated *pari passu* with the claims of other unsecured, unsubordinated creditors of Morgan Stanley, including holders of Morgan Stanley-issued securities.

The amount payable on the securities is not linked to the value of the underlying index at any time other than the valuation date. The final index value will be the index closing value on the valuation date, subject to postponement for non-index business days and certain market disruption events. Even if the value of the underlying index appreciates prior to the valuation date but then drops by the valuation date by an amount greater than the § buffer amount, the payment at maturity will be significantly less than it would have been had the payment at maturity been linked to the value of the underlying index prior to such drop. Although the actual value of the underlying index on the stated maturity date or at other times during the term of the securities may be higher than the final index value, the payment at maturity will be based solely on the index closing value on the valuation date.

Investing in the securities is not equivalent to investing in the underlying index. Investing in the securities is not equivalent to investing in the underlying index or its component stocks. Investors in the securities will not have § voting rights or rights to receive dividends or other distributions or any other rights with respect to the stocks that constitute the underlying index.

Adjustments to the underlying index could adversely affect the value of the securities. The underlying index publisher may add, delete or substitute the stocks constituting the underlying index or make other methodological changes that could change the value of the underlying index. The underlying index publisher may discontinue or § suspend calculation or publication of the underlying index at any time. In these circumstances, the calculation agent will have the sole discretion to substitute a successor index that is comparable to the discontinued underlying index and will be permitted to consider indices that are calculated and published by the calculation agent or any of its affiliates.

§ **The rate we are willing to pay for securities of this type, maturity and issuance size is likely to be lower than the rate implied by our secondary market credit spreads and advantageous to us. Both the lower rate and the**

inclusion of costs associated with issuing, selling, structuring and hedging the securities in the original issue price reduce the economic terms of the securities, cause the estimated value of the securities to be less than the original issue price and will adversely affect secondary market prices. Assuming no change in market conditions or any other relevant factors, the prices, if any, at which dealers, including MS & Co., may be willing to purchase the securities in secondary market transactions will likely be significantly lower than the original issue price, because secondary market prices will exclude the issuing, selling, structuring and hedging-related costs that are included in the original issue price and borne by you and because the secondary market prices will reflect our secondary market credit spreads and the bid-offer spread that any dealer would charge in a secondary market transaction of this type as well as other factors.

The inclusion of the costs of issuing, selling, structuring and hedging the securities in the original issue price and the lower rate we are willing to pay as issuer make the economic terms of the securities less favorable to you than they otherwise would be.

However, because the costs associated with issuing, selling, structuring and hedging the securities are not fully deducted upon issuance, for a period of up to 6 months following the issue date, to the extent that MS & Co. may buy or sell the securities in the secondary market, absent changes in market conditions, including those related to the underlying index, and to our secondary market credit spreads, it would do so based on values higher than the estimated value, and we expect that those higher values will also be reflected in your brokerage account statements.

Morgan Stanley Finance LLC

Dual Directional Buffered Jump Securities Based on the Performance of the S&P 500® Index due April 24, 2020

Principal at Risk Securities

The estimated value of the securities is determined by reference to our pricing and valuation models, which may differ from those of other dealers and is not a maximum or minimum secondary market price. These pricing and valuation models are proprietary and rely in part on subjective views of certain market inputs and certain assumptions about future events, which may prove to be incorrect. As a result, because there is no market-standard way to value these types of securities, our models may yield a higher estimated value of the securities than those § generated by others, including other dealers in the market, if they attempted to value the securities. In addition, the estimated value on the pricing date does not represent a minimum or maximum price at which dealers, including MS & Co., would be willing to purchase your securities in the secondary market (if any exists) at any time. The value of your securities at any time after the date of this document will vary based on many factors that cannot be predicted with accuracy, including our creditworthiness and changes in market conditions. See also “The market price of the securities may be influenced by many unpredictable factors” above.

The securities will not be listed on any securities exchange and secondary trading may be limited. The securities will not be listed on any securities exchange. Therefore, there may be little or no secondary market for the securities. Morgan Stanley & Co. LLC, which we refer to as MS & Co., may, but is not obligated to, make a market in the securities and, if it once chooses to make a market, may cease doing so at any time. When it does make a market, it will generally do so for transactions of routine secondary market size at prices based on its estimate of the current value of the securities, taking into account its bid/offer spread, our credit spreads, market volatility, the § notional size of the proposed sale, the cost of unwinding any related hedging positions, the time remaining to maturity and the likelihood that it will be able to resell the securities. Even if there is a secondary market, it may not provide enough liquidity to allow you to trade or sell the securities easily. Since other broker-dealers may not participate significantly in the secondary market for the securities, the price at which you may be able to trade your securities is likely to depend on the price, if any, at which MS & Co. is willing to transact. If, at any time, MS & Co. were to cease making a market in the securities, it is likely that there would be no secondary market for the securities. Accordingly, you should be willing to hold your securities to maturity.

The calculation agent, which is a subsidiary of Morgan Stanley and an affiliate of MSFL, will make determinations with respect to the securities. As calculation agent, MS & Co. has determined the initial index value, will determine the final index value and will calculate the amount of cash you receive at maturity. Moreover, certain determinations made by MS & Co., in its capacity as calculation agent, may require it to exercise discretion and make subjective judgments, such as with respect to the occurrence or non-occurrence of market disruption § events and the selection of a successor index or calculation of the final index value in the event of a market disruption event or discontinuance of the underlying index. These potentially subjective determinations may adversely affect the payout to you at maturity. For further information regarding these types of determinations, see “Description of Securities—Postponement of Valuation Date(s),” “—Discontinuance of Any Underlying Index or Basket Index; Alteration of Method of Calculation,” “—Alternate Exchange Calculation in case of an Event of Default” and “—Calculation Agent and Calculations” in the accompanying product supplement. In addition, MS & Co. has determined the estimated value of the securities on the pricing date.

§ **Hedging and trading activity by our affiliates could potentially adversely affect the value of the securities.** One or more of our affiliates and/or third-party dealers have carried out, and will continue to carry out, hedging activities related to the securities (and to other instruments linked to the underlying index or its component stocks), including

trading in the stocks that constitute the underlying index. As a result, these entities may be unwinding or adjusting hedge positions during the term of the securities, and the hedging strategy may involve greater and more frequent dynamic adjustments to the hedge as the valuation date approaches. Some of our affiliates also trade the stocks that constitute the underlying index and other financial instruments related to the underlying index on a regular basis as part of their general broker-dealer and other businesses. Any of these hedging or trading activities on or prior to the pricing date could have increased the initial index value, and, therefore, could have increased the value at or above which the underlying index must close on the valuation date so that investors do not suffer a loss on their initial investment in the securities. Additionally, such hedging or trading activities during the term of the securities, including on the valuation date, could adversely affect the value of the underlying index on the valuation date, and, accordingly, the amount of cash an investor will receive at maturity.

The U.S. federal income tax consequences of an investment in the securities are uncertain. Please read the discussion under “Additional Information—Tax considerations” in this document and the discussion under “United States § Federal Taxation” in the accompanying product supplement for Jump Securities (together, the “Tax Disclosure Sections”) concerning the U.S. federal income tax consequences of an investment in the securities. If

Morgan Stanley Finance LLC

Dual Directional Buffered Jump Securities Based on the Performance of the S&P 500® Index due April 24, 2020

Principal at Risk Securities

the Internal Revenue Service (the “IRS”) were successful in asserting an alternative treatment, the timing and character of income on the securities might differ significantly from the tax treatment described in the Tax Disclosure Sections. There is a risk that the IRS may seek to treat all or a portion of the gain on the securities as ordinary income. For example, there is a substantial risk that the IRS could seek to recharacterize the securities as debt instruments. In that event, U.S. Holders would be required to accrue into income original issue discount on the securities every year at a “comparable yield” determined at the time of issuance and recognize all income and gain in respect of the securities as ordinary income. Additionally, as discussed under “United States Federal Taxation—FATCA” in the accompanying product supplement for Jump Securities, the withholding rules commonly referred to as “FATCA” would apply to the securities if they were recharacterized as debt instruments. However, recently proposed regulations (the preamble to which specifies that taxpayers are permitted to rely on them pending finalization) eliminate the withholding requirement on payments of gross proceeds of a taxable disposition. The risk that financial instruments providing for buffers, triggers or similar downside protection features, such as the securities, would be recharacterized as debt is greater than the risk of recharacterization for comparable financial instruments that do not have such features. We do not plan to request a ruling from the IRS regarding the tax treatment of the securities, and the IRS or a court may not agree with the tax treatment described in the Tax Disclosure Sections.

In 2007, the U.S. Treasury Department and the IRS released a notice requesting comments on the U.S. federal income tax treatment of “prepaid forward contracts” and similar instruments. The notice focuses in particular on whether to require holders of these instruments to accrue income over the term of their investment. It also asks for comments on a number of related topics, including the character of income or loss with respect to these instruments; whether short-term instruments should be subject to any such accrual regime; the relevance of factors such as the exchange-traded status of the instruments and the nature of the underlying property to which the instruments are linked; the degree, if any, to which income (including any mandated accruals) realized by non-U.S. investors should be subject to withholding tax; and whether these instruments are or should be subject to the “constructive ownership” rule, which very generally can operate to recharacterize certain long-term capital gain as ordinary income and impose an interest charge. While the notice requests comments on appropriate transition rules and effective dates, any Treasury regulations or other guidance promulgated after consideration of these issues could materially and adversely affect the tax consequences of an investment in the securities, possibly with retroactive effect. Both U.S. and Non-U.S. Holders should consult their tax advisers regarding the U.S. federal income tax consequences of an investment in the securities, including possible alternative treatments, the issues presented by this notice and any tax consequences arising under the laws of any state, local or non-U.S. taxing jurisdiction.

S&P 500® Index Overview

The S&P 500® Index, which is calculated, maintained and published by S&P Dow Jones Indices LLC (“S&P”), consists of stocks of 500 component companies selected to provide a performance benchmark for the U.S. equity markets. The calculation of the S&P 500® Index is based on the relative value of the float adjusted aggregate market capitalization of the 500 component companies as of a particular time as compared to the aggregate average market capitalization of 500 similar companies during the base period of the years 1941 through 1943. For additional information about the S&P 500® Index, see the information set forth under “S&P 500® Index” in the accompanying index supplement.

Information as of market close on March 21, 2019:

Bloomberg Ticker Symbol:	SPX	52 Week High (on 9/20/2018):	2,930.75
Current Index Value:	2,854.88	52 Week Low (on 12/24/2018):	2,351.10
52 Weeks Ago:	2,711.93		

The following graph sets forth the daily closing values of the underlying index for the period from January 1, 2014 through March 21, 2019. The related table sets forth the published high and low closing values, as well as end-of-quarter closing values, of the underlying index for each quarter in the same period. The closing value of the underlying index on March 21, 2019 was 2,854.88. We obtained the information in the table and graph below from Bloomberg Financial Markets, without independent verification. The underlying index has at times experienced periods of high volatility, and you should not take the historical values of the underlying index as an indication of its future performance.

Additional Terms of the Securities

Please read this information in conjunction with the summary terms on the front cover of this document.

Additional Terms:

If the terms described herein are inconsistent with those described in the accompanying product supplement, index supplement or prospectus, the terms described herein shall control.

Underlying index publisher:

S&P Dow Jones Indices LLC or any successor thereof

Postponement of maturity date:

If, due to a market disruption event or otherwise, the valuation date is postponed so that it falls less than two business days prior to the scheduled maturity date, the maturity date will be postponed to the second business day following the valuation date as postponed.

Denominations:

\$1,000 per security and integral multiples thereof

Trustee:

The Bank of New York Mellon

Calculation agent:

MS & Co.

Issuer notice to registered security holders, the trustee and the depository:

In the event that the maturity date is postponed due to postponement of the valuation date, the issuer shall give notice of such postponement and, once it has been determined, of the date to which the maturity date has been rescheduled (i) to each registered holder of the securities by mailing notice of such postponement by first class mail, postage prepaid, to such registered holder's last address as it shall appear upon the registry books, (ii) to the trustee by facsimile confirmed by mailing such notice to the trustee by first class mail, postage prepaid, at its New York office and (iii) to The Depository Trust Company (the "depository") by telephone or facsimile, confirmed by mailing such notice to the depository by first class mail, postage prepaid. Any notice that is mailed to a registered holder of the securities in the manner herein provided shall be conclusively presumed to have been duly given to such registered holder, whether or not such registered holder receives the notice. The issuer shall give such notice as promptly as possible, and in no case later than (i) with respect to notice of postponement of the maturity date, the business day immediately preceding the scheduled maturity date and (ii) with respect to notice of the date to which the maturity date has been rescheduled, the business day immediately following the actual valuation date for determining the final index value.

The issuer shall, or shall cause the calculation agent to, (i) provide written notice to the trustee and to the depositary of the amount of cash to be delivered with respect to each stated principal amount of the securities, on or prior to 10:30 a.m. (New York City time) on the business day preceding the maturity date, and (ii) deliver the aggregate cash amount due with respect to the securities to the trustee for delivery to the depositary, as holder of the securities, on the maturity date.

Additional Information About the Securities

Additional Information:

Minimum ticketing size: \$1,000 / 1 security

Tax considerations:

There is uncertainty regarding the U.S. federal income tax consequences of an investment in the securities due to the lack of governing authority. We intend to treat securities as a single financial contract that is an “open transaction” for U.S. federal income tax purposes. In the opinion of our counsel, Davis Polk & Wardwell LLP, this treatment of the securities is reasonable under current law; however, our counsel has advised us that it is unable to conclude affirmatively that this treatment is more likely than not to be upheld, and that alternative treatments are possible.

Assuming this treatment of the securities is respected and subject to the discussion in “United States Federal Taxation” in the accompanying product supplement for Jump Securities, the following U.S. federal income tax consequences should result based on current law:

§ A U.S. Holder should not be required to recognize taxable income over the term of the securities prior to settlement, other than pursuant to a sale or exchange.

§ Upon sale, exchange or settlement of the securities, a U.S. Holder should recognize gain or loss equal to the difference between the amount realized and the U.S. Holder’s tax basis in the securities. Such gain or loss should be long-term capital gain or loss if the investor has held the securities for more than one year, and short-term capital gain or loss otherwise.

There is a risk that the Internal Revenue Service (the “IRS”) may seek to treat all or a portion of the gain on the securities as ordinary income. For example, there is a substantial risk that the IRS could seek to recharacterize the securities as debt instruments. In that event, U.S. Holders would be required to accrue into income original issue discount on the securities every year at a “comparable yield” determined at the time of issuance and recognize all income and gain in respect of the securities as ordinary income

In 2007, the U.S. Treasury Department and the IRS released a notice requesting comments on the U.S. federal income tax treatment of “prepaid forward contracts” and similar instruments. The notice focuses in particular on whether to require holders of these instruments to accrue income over the term of their investment. It also asks for comments on a number of related topics, including the character of income or loss with respect to these instruments; whether short-term instruments should be subject to any such accrual regime; the relevance of factors such as the exchange-traded status of the instruments and the nature of the underlying property to which the instruments are linked; the degree, if any, to which income (including any mandated accruals)

realized by non-U.S. investors should be subject to withholding tax; and whether these instruments are or should be subject to the “constructive ownership” rule, which very generally can operate to recharacterize certain long-term capital gain as ordinary income and impose an interest charge. While the notice requests comments on appropriate transition rules and effective dates, any Treasury regulations or other guidance promulgated after consideration of these issues could materially and adversely affect the tax consequences of an investment in the securities, possibly with retroactive effect.

As discussed in the accompanying product supplement for Jump Securities, Section 871(m) of the Internal Revenue Code of 1986, as amended, and Treasury regulations promulgated thereunder (“Section 871(m)”) generally impose a 30% (or a lower applicable treaty rate) withholding tax on dividend equivalents paid or deemed paid to Non-U.S. Holders with respect to certain financial instruments linked to U.S. equities or indices that include U.S. equities (each, an “Underlying Security”). Subject to certain exceptions, Section 871(m) generally applies to securities that substantially replicate the economic performance of one or more Underlying Securities, as determined based on tests set forth in the applicable Treasury regulations (a “Specified Security”). However, pursuant to an IRS notice, Section 871(m) will not apply to securities issued before January 1, 2021 that do not have a delta of one with respect to any Underlying Security. Based on our determination that the securities do not have a delta of one with respect to any Underlying Security, our counsel is of the opinion that the securities should not be Specified Securities and, therefore, should not be subject to Section 871(m).

Our determination is not binding on the IRS, and the IRS may disagree with this determination. Section 871(m) is complex and its application may depend on your particular circumstances, including whether you enter into other transactions with respect to an Underlying Security. If withholding is required, we will not be required to pay any additional amounts with respect to the amounts so withheld. You should consult your tax adviser regarding the potential application of Section 871(m) to the securities.

Both U.S. and non-U.S. investors considering an investment in the securities should read the discussion under “Risk Factors” in this document and the discussion under “United States Federal Taxation” in the accompanying product supplement for Jump Securities and consult their tax advisers regarding all aspects of the U.S. federal income tax consequences of an investment in the securities, including possible alternative treatments, the issues presented by the aforementioned notice and any tax consequences arising under the laws of any state, local & nbs
